There is no testimony in the hearings showing any reason whatever for a five-year program. On the contrary, the hearings are replete with testimony like Admiral Badger's, which shows that no man can tell what the navies of the world will be at the conclusion of the foreign war; that at its conclusion will be the best time to bring about a general agreement for disarmament; that none of the building authorized by the five-year program can, in all human probability, be completed for use either during or immediately on the conclusion of the war; and that the relative fighting value of ships now built may be shown by the lessons of this war to be obsolete altogether; that all building material is 50 to 100 per cent higher now than ever before. Then, why a five-year program? The only reason is that given in the Raleigh News and Observer, that it would "take the wind out of the sails of the critics." It did not even do that. The Secretary said on April 29:

Congress will authorize, in my judgment, all public and private yards can construct.

The President said at St. Louis, February 3:

I want incomparably the most adequate Navy in the world.

Secretary Daniels said, Washington Post, May 19:

The program I presented to Congress represented a minimum and not a maximum of each type.

The war was going on December 10, 1914. At that time the Secretary of the Navy recommended two battleships and said:

I think the war in Europe is going to exhaust the resources of the countries engaged in it, and I think there is less likelihood—I do not think there was much likelihood before—of our country in the future having trouble with these nations.

A YEAR AGO AND NOW.

With our policies and our American ideas, I think the policy recommended in my report and adopted by the last session of Congress is the steady development that is needed.

Two capital ships the year before and two capital ships that year. What has wrought the change?

The President said on December 8, 1914, speaking of our military needs:

There is no new need to discuss it. We shall not alter our attitude toward it because some amongst us are nervous and excited. The question has not changed its aspects, because the times are not normal. Our policy will not be for an occasion.

What is the difference in conditions now and then that made a two-battleship program sufficient and proper then and wholly inadequate at this time? The President has spoken; the Secretary of the Navy has spoken; the sea captains have spoken. What is the difference in conditions now and then? None of them have pointed it out. I have looked, listened, and asked for reasons for the change, but no reason has come from any source except the Raleigh News and Observer, and that does not appeal to me.

Last year the R. M. Thompsons and S. Stanwood Menkens, and the Roosevelts, with their Navy League and their American Defense League, the officers of the Army and Navy, always "prepared" for promotions, were clamoring to Congress for additions to the Military Establishment, but they had not attempted to arouse the electorate, to frighten the people. It was not election year. The only place they could work then was on Congress. The arguments of the R. M. Thompsons, the S. Stanwood Menkens, the Roosevelts, the Navy Leagues, the American Defense Leagues disturbed it not. But, oh, what a difference on election year, when those same forces, with the same motives, have gone to the country with J. Bernard Walker's book, America Fallen; Hudson Maxim's book, Defenseless America; and the powder manufacturers' moving-picture show, the Battle Cry of Peace, shouting patriotism! It is not patriotism; it is promotions, profits, and politics.

The President said on his western trip that the peace which followed this war would be a prolonged peace; that the world would not endure another war like this. Secretary Daniels said before the Naval Affairs Committee:

The conclusion of this war would be the best time in the world's history to bring about a general agreement for disarmament.

Admiral Fletcher said before the committee that the conclusion of this war would be the best time in the world's history to bring about an agreement for disarmament. All the sea captains said that the lessons as to the fighting value of the different types of vessels learned from this war are not yet to be obtained and will not be until the war is over. All are agreed that the developments of this war may make obsolete our fighting ships. No man can tell what the relative strength of the world's navies will be at the conclusion of this war. All are agreed that in all human probability it will close within a year. None of the ships we are now authorizing will be ready for service within that time. Then why lay out a program and make authorizations for continuing contracts for five years in the future?

FEAR OF STOCK SLUMP AFTER WAR.

Mr. Grace, president of the Bethlehem Steel Co., and Mr. Barba, vice president of the Midvale Steel Co., stated that the question with the steel, shipbuilding, ordnance, and powder concerns was how they would utilize their extra forces, their extra equipment, and their extra men that had been added to meet the war's demands when the war stopped. Mr. Grace testified that Bethlehem Steel stock had gone from $30 a share to $530 a share, and like conditions prevailed throughout the entire steel, shipbuilding, ordnance, and powder industries. The board's program would utilize the entire building facilities of the steel concerns, the shipbuilding concerns, the ordnance concerns, and the powder concerns. The Secretary's predic-

tion of what Congress would do and the board's program would solve the question for the munition manufacturers. Will you solve the problem for them? Then to them you are a patriot. I refuse to rake their chestnuts out of the fire at the expense of those who produce and at the expense of our representative Government.

"Billions for munitions!" Of course, to the ordinary mind, billions is meaningless. Analyze it. See how many thousand-dollar homes billions of dollars would buy. "We must spend billions for munitions," says Secretary Daniels. When I think of the underfed, the poorly clad, the badly housed, and the overworked producers that must in the end pay that bill I balk—I can not stand for it. I will not stand for it. The paid newspapers may criticize, abuse, ridicule, and malign me. The representatives of the steel, shipbuilding, ordnance, and powder concerns belittle and belie me; the coat-tail riding politicians may denounce me, but I will not, if I can help it, permit such a bill to be presented to those who commissioned me to represent them.

BUILD FOR POLITICS.

You tell me that it is politics, and we must do it to carry New York, Massachusetts, New Jersey, and Delaware? I am representing 250,000 citizens who want their Government to do even-handed justice and not play politics.

A billion dollars—just one billion—would buy a million thousand-dollar homes. There are 219,575 tenant farmers in Texas. It would buy a thousand-dollar home for every tenant farmer in Texas and leave $780,425,000, or more than three times as much, unspent. There are 2,354,676 tenant farmers in the United States. Three billion, the amount Admiral Fletcher said it would take to build the largest Navy in the world and maintain it for two years, would buy every farm tenant in the United States a thousand-dollar home and stock it.

Do you get any idea of what these munition makers are trying to obtain? More than the annual cotton crop for the Navy alone. Unselfish patriots! These patriots held a meeting in New York on the night of June 10, 1915, and at this one meeting raised thirty-odd thousand dollars in less time than it takes to tell it to push this propaganda.

BANKRUPTCY OR WAR.

The biggest Navy in the world? Admiral Fletcher says it will cost a billion and a half dollars to build it and $750,000,000 a year to maintain it, provided other nations do not go on building. If they go on building there is no telling what it will cost. Will they go on building? Admiral Fiske said in the North American Review of February:

It is vital to Great Britain,whose major policy is that she must be mistress of the seas, that she should be.

Admiral Badger said (hearings, p. 1974) that—

England's very existence depends on her supremacy on the seas.

Lord Roseberry said:

I know nothing more disheartening than the announcement made that the United States, the only great country left in the world free from the hideous, bloody burden of war, is about to embark upon the building of a huge armada. It means that the burden will continue upon the other nations and be increased exactly in proportion to the fleets of the United States.

Will the other nations go on building? If "England's very existence depends on her supremacy on the seas," if "it is vital that she be mistress of the seas," if "it means that the burden will continue in proportion to the fleet of the United States," and we must have "incomparably the most adequate Navy in the world," Admiral Fletcher's estimate is no guide.

Where does such a policy lead to? Admirals Fletcher and Badger testified:

Mr. CALLAWAY. If we start to build against them and they build against us, where will the end be?

Admiral FLETCHER. That is simply repeating the history of the world.

Mr. CALLAWAY. You stated the other day that it meant bankruptcy for the weaker nation, and since we were the most wealthy we would be able to bankrupt all of them.

Admiral FLETCHER. That is one phase it might take.

Mr. CALLAWAY. What is the other phase it might take?

Admiral FLETCHER. That one side would force the issue.

Mr. CALLAWAY. Is it your only hope that we are wealthier than any other nation in the world?

Admiral FLETCHER. That is the only hope of any nation.

Mr. CALLAWAY. Admiral Fiske states in the North American Review for this month that military and naval men have seen for years that these competing nations—that is, England and Germany, competing in naval strength and for commerce—would have to go to war some day in self-defense. Do you agree with that statement?

Admiral FLETCHER. Yes, sir. That has been regarded by many experts as the inevitable outcome of conflicting interests and the expansion of Germany upon the sea.

Mr. CALLAWAY. And as soon as they began to build against each other that became apparent to military and naval men, did it not?

Admiral FLETCHER. Yes, sir.

Mr. CALLAWAY. If they entertain the same general views that you entertain with reference to it, would it be possible for us to ever equal their navy, with the start they have?

Admiral BADGER. I think that the financing burden of greater expansion would hamper them, and that if we adopted such a policy we certainly have the money in this country to carry it out. When we come near equality there might be some racing.

Tolstoi, in his open letter to the world, said:

No enlightened man can help knowing that the universal competition in the armament of States must inevitably lead them to endless wars or to a general bankruptcy, or else to both the one and the other.

Here you have the experts and a philosopher. Building for what? Take it from them, "bankruptcy or war."

They ask us to follow them. We ask where they are leading us. They answer, "Bankruptcy or war." "This is repeating the history of the world," says Admiral Fletcher. God of our fathers, is that what their system promises? That is not only what it promises, that is what it insures. Is the sweat of the masses to be coined into dollars for munitions manufacturers, shipbuilders, ordnance producers, powder makers, and officers bedecked with gold braid, that they may finally lead those whose faces they have ground to the trenches with pick and shovel, to bloody mines, to insanity, to slaughter? Tell me I must vote for it?

Go to, thou wretched babbler, and put thy gall in pickle; pour thy tale into the dull ears of ancient "toadeaters," and with it rob confiding partisans of their sense; but tempt not the righteous indignation of reasoning men.

Tell me I must be a party to it? No; I will not do it. If I must feed into the hopper depicted by Admirals Fletcher, Badger, and Fiske the masses that I represent or be the victim of the newspapers, the steel, the shipbuilding, the ordnance makers, the R. M. Thompsons, the S. Stanwood Menkens, and the Hudson Maxims, then victim let it be. And those who, cringing before the shining teeth of these vicious profit takers, surrender those they were elected to represent, have my pity and contempt.

THE REAL PREPAREDNESS LEADER.

Who is the real leader of this grand galaxy of self-styled patriots? Hudson Maxim. He wrote Defenseless America. He got up the picture show, the Battle Cry of Peace. He put it on in every town in the country, showing foreign soldiers in your bedchambers. Let us look at him. He says in his book he is a patriot. He is the crown prince of this band of preparedness patriots. I want to read a few extracts from his book. You all got one—

This country must first be whipped in order to prepare sufficiently to prevent being whipped. Therefore our business at the present time is to pick our conqueror. I choose England. She would be satisfied with a good big indemnity, which we could well afford to pay for the benefit that we should gain from the war.

He was born in Maine, married an English woman, invented smokeless powder, sold his patents to the Du Pont Powder Co., became stockholder and chief mechanical engineer in the Du Pont Powder Co. He has a brother in England, Sir Hiram Maxim, who is an inventor of ordnance and a partner in the Vickers Limited Ordnance Co., of England. He is the inventor of the Maxim rapid-fire gun, and was knighted because of his inventions. Of course, Hudson Maxim wants England to be the one to whip us. Sir Hiram would want us to be the one to whip England. Hudson and Hiram would furnish the ordnance at both ends of the line.

That is not all the interest that this Maxim bunch has in war materials. A Maxim munition company was incorporated on August 24, 1915, in Delaware, with a capital of $10,000,000. (Standard Corporation Service, Vol. IV, p. 939.)

Hudson Maxim, president (Standard Corporation Service, Vol. V, p. 1306), stated:

We have already acquired the services of a very efficient scientific mechanical staff. Hiram Percy Maxim, the inventor of the Maxim silencer and the son of Sir Hiram Maxim, and his business partner, M. H. Hazler, are among our different technical advisers and supervisors. Edwin B. Hotchkiss, who has had charge of large munition works both here and abroad, and J. S. Cornradi, who was for some time superintendent of the Vickers Gun Works at Dartford and Erith, England, is under contract to do similar work for us. We have sold to a very strong financial syndicate in this city (New York) 200,000 shares of our treasury stock.

Maxim Munitions Co. states:

Hudson Maxim has taken the old Maxim gun and made many very important improvements in it, transforming it practically into a new gun. We have a provisional contract with the Russian Government, which is only awaiting confirmation, to manufacture 15,000 of these guns. The price of them I am not at liberty to state, but a regiment of men would be mowed down if in range of one of them. (Nov. 10, 1915, Standard Corporation Service, Vol. V, p. 1248.)

Says Hudson Maxim—

We could well afford to pay a big indemnity for the benefit we should gain from the war.

Can you imagine what benefit we common-sense common people would get from the war?

Here are the beauties he sees:

The unpleasant truth should be realized that invading armies must, with other luxuries, have women. As a result they leave a large progeny, wrens in the nests of the doves of peace. Hence, inasmuch as soldiers are the pick of the manhood of their country, they are likely to do about as much toward securing the survival of the fit in an enemy's country as they would have in their own country.

There is another very important consideration, which is that war is a great mixer of races, and that usually mixed types benefit enormously from their compound blood.

Furthermore, the mingling of races and peoples serves greatly to spread knowledge of one another, and they have always profited largely from the mingled knowledge.

He should have told us what benefits he expects for himself. He should let us know if he will be satisfied with a bunch of illegitimates. He is the real preparedness leader. He has done more with his moving-picture show to frighten the timid and make the public believe we were defenseless than any other dozen men in America.

We only have to read his book to find the benefits that interest him personally. On page 73 he says:

We have between forty and fifty million pounds of smokeless powder at the present time, whereas we ought to have 500,000,000 pounds.

He is chief mechanical engineer of the Du Pont Powder Co. Five hundred million pounds of smokeless powder, at 53 cents a pound, would amount to something like $250,000,000. Powder stock has gone, in some instances, from $8 a share to $1,100 a share since the foreign war started. The stockholders, of course, fear an invasion of their stock prices at the close of the war. The Book of Books says that where a man's treasure is, there will his heart be also.

Maxim says:

Every Congressman goes to Washington in the interest of his constituents. He goes there to dicker for them, to swap votes with other Congressmen in exchanging congressional concession for congressional concession.

On page 18 Mr. Maxim gives his conception of the temperament and intelligence of the American people. He says:

In a small paragraph in an obscure place on the back page of a leading Boston paper I once saw the announcement that Herbert Spencer, the great philosopher, was very ill and not expected to live. On the front page of the same paper, under bold headlines, was a three-column article on the physical condition of John L. Sullivan. John L. Sullivan was a fighter, while Herbert Spencer was only a philosopher; hence the difference in public interest.

He and those who are like interested with him are trying to organize, crystallize, and capitalize the fighting public interest he saw manifested in that Boston newspaper and frighten the cowardly Congressmen by causing sentiment in their districts.

CONGRESS OBEYS PUBLIC SENTIMENT.

Nine Michigan Representatives voted for a standing army of 250,000 when the Army bill was on its first passage through the House. When it came back from the Senate, after the Ford vote in Michigan, only two voted for 250,000.

Congress is a barometer of public sentiment, if it can determine what the public sentiment is. In this instance these Michigan Representatives got scared too quickly. The Ford vote gave them a different idea from the newspapers of what the public sentiment was.

THE FEAR THAT DISTURBS NEW YORK'S PEACE OF MIND.

The Maxims, Menkins, and Thompsons have attempted to frighten the people into the belief that we were in danger of invasion. That is not the fear that disturbs the peace of mind of the gentlemen on the Naval Affairs Committee who heard the evidence. The fear that disturbs the peace of mind of the gentlemen from Pennsylvania, New York, and Massachusetts is not that our homes will be invaded, our cities bombarded, or our coasts laid waste; it is that the stocks of the Bethlehem, Midvale, Carnegie, Pennsylvania, Maryland, and New Jersey steel, ordnance, and ship manufacturing concerns will shrink when the foreign war closes unless a new market is developed. Bethlehem Steel stock increased, due to war, from $30 a share to $530 a share. Certain powder stocks increased from $8 a share to $1,100 a share.

Mr. Grace, president of the Bethlehem Steel Co., stated before our committee that like conditions existed throughout the entire steel, ordnance, and shipbuilding industries, and that the question with the directors of those industries was what they would do at the close of the foreign war to avoid a slump.

If we should follow the prophecy of Secretary Daniels, or the advice of the Navy General Board, and authorize all the building that shipbuilding, ordnance, and steel concerns in the country could take care of, the problem that confronts them would be solved, and the Congress of the United States, in their eyes, would be a galaxy of patriots for relieving them of the most serious problem that now confronts them.

The fear of a slump in stock values is the thing that is making New York, Boston, Philadelphia, Trenton, Paterson, and other Atlantic coast cities lie awake at night. Think of the concern of an individual who has 100 shares of Bethlehem stock, worth $3,000 before the war, to-day worth $53,000. Let him contemplate during his sleepless hours the sudden proclamation of peace abroad and $50,000 knocked out of his 100 shares of stock. Do not you know he is willing to parade and wants other people to parade? He is willing to encourage newspapers, and wants other people to encourage newspapers; he is willing to be taxed, and wants to encourage other people to be taxed to maintain that stock.

Fear of invasion? I have heretofore referred you to the statement of Admiral Knight, president of the War College, on the difficulties of transporting a fleet across a great expanse of water.

I want also to quote from Capt. McKean, a graduate of the War College, on the manner in which transports would be convoyed across a great expanse of water:

Mr. CALLAWAY. How much area would a fleet of 100 transports cover, with their accompanying fleet? That would carry about 100,000 troops?

Capt. MCKEAN. With the average transport; yes. They might, with bigger ships, actually accommodate more troops, but the transports you would not dare put in columns closer than a thousand yards apart, and 100 of them in a single column would be 100,000 yards long, or, if you put them in four columns a thousand yards between columns, that would be 25,000 yards long, or 5 miles one way and 4 miles the other way, and they would cover 20 square miles of the ocean.

Mr. CALLAWAY. Twenty-five thousand yards is lots more than 5 miles, is it not?

Capt. MCKEAN. It is 12½ miles; yes.

Mr. CALLAWAY. It would be 12½ miles long and how wide?

Capt. MCKEAN. In four columns it would be 3,000 yards wide; but you would probably put them closer together than that and shorten it up. You would probably put five columns.

Mr. CALLAWAY. You would have to have a screen fleet around them?

Capt. MCKEAN. You would have to have an escort that would screen them; yes.

Mr. CALLAWAY. To protect that troop of transports you would have to have a fleet one and one-half times greater than the opposing man's fleet to afford any character of protection, wouldn't you?

Capt. MCKEAN. To be reasonably safe: yes.

You will get from the above the difficulties that confront a commander in chief in an effort to carry troops across an ocean. You will get from Capt. McKean the immense area covered by the transports, surrounded, as they necessarily have to be, by a screen fleet. I now want to quote Capt. Sims, in my judgment one of the most capable men who appeared before our committee, certainly the most direct and straightforward, showing the impossibilities of protecting a fleet from night attack from torpedoes, scouts, and submarines. He said, in a letter of April 2, 1915, specifically describing the operations of a fleet attacked by torpedoes:

From the experience to date I think it may fairly be concluded that there is no solution to the problem of protecting a fleet against torpedo attack in the open sea. It seems equally clear that under similar conditions fatal damage could be inflicted by floating mines alone, and this without material risk to the attacking destroyers. As for seagoing submarines of high speed, it would be quite useless to try to keep them out at night by any form of screen at present known.

He stated to the committee:

It is true if you drive the scouts back on the fleet and your scouts are reporting to you every half hour the course and speed of that fleet, it enables you to wait until the sun goes down and launch an attack of destroyers through that screen, and we do not know of any means by which that attack can be resisted.

I also want to quote Admiral Fletcher, commander in chief of the Atlantic Fleet, and Admiral Badger, ex-commander in chief of the Atlantic Fleet, and at present a member of the Navy General Board:

Mr. CALLAWAY. You stated a moment ago that a fleet of battleships in the face of the auxiliaries would be in a most precarious condition. Now, analyzing that if the screen of the enemy is superior to your screen and drives it in, your battleships are unprotected in the face of the screen of the enemy?

Admiral FLETCHER. If the screen is annihilated, our battleships rely on their speed and the power of their secondary batteries. Under these conditions our battleships would probably withdraw from the scene of operations.

Mr. CALLAWAY. I understood you yesterday that, when we had driven the screen fleet in and the battleships stood bare in the face of destroyers, swift cruisers, and submarines, that it was in a most precarious condition?

Admiral FLETCHER. If all our auxiliaries are destroyed and the enemy's auxiliaries and destroyers are still intact, our fleet would be at a serious disadvantage.

Mr. CALLAWAY. I understood you to say, when I asked you what they would do under conditions of that kind, that they would retire?

Admiral FLETCHER. They probably would; yes, sir; if they could not bring on a day action with the enemy's fleet of battleships.

Mr. CALLAWAY. My attention was called to a statement by Beresford in the Betrayal, in which he said that battleships are worthless against a night attack by cruisers and destroyers. I take it that statement was made prior to the development of the submarine, and to add to that submarines would make it much more forcible, would it not?

Admiral FLETCHER. That is true for unscreened battleships.

The CHAIRMAN. Do you accept that statement as true?

Admiral FLETCHER. He is assuming, and I am willing to agree with the conclusions.

Mr. CALLAWAY. I will follow that out. Do you consider Beresford as an A1 authority?

Admiral FLETCHER. He states that a battleship alone at night is helpless in the presence of destroyers, and I quite agree with that statement.

Mr. CALLAWAY. That is true?

Admiral FLETCHER. Yes, sir.

Mr. CALLAWAY. How about a battleship fighting a submarine?

Admiral BADGER. She will get out of the way just as quickly as she can. There is nothing for her to do but to charge or run, using her guns, of course, when possible; but the best thing is to run, if conditions permit.

Mr. CALLAWAY. How about a battle cruiser fighting a submarine?

Admiral BADGER. The same thing; there is only one way, as far as I know. The submarine, being submerged, can not be hit by gunfire. The only thing to do is to charge it; go for it end on, with the hope that you will ram it, or to run.

If a fleet of battleships in the open sea can not protect themselves against night attack, and no screen fleet has as yet been devised capable of protecting them against night attack by torpedo and submarine, if speed and changing course continuously is their only protection, I can not understand how any sane mortal can get anxious for fear some foreign power will come across either the Atlantic or the Pacific and land on our shores until our entire fleet of destroyers, scouts, and submarines have been cleaned from the ocean. No man who knows the facts has any fears of any foreign power reaching our shores and making a successful landing.

THE INABILITY OF BATTLESHIPS TO STAY IN SUBMARINE TERRITORY.

It has been conclusively demonstrated that battleships can not stay in submarine territory. The statement is often made that when you control the surface of the sea you can destroy the effectiveness of submarines. A look at the operations of the British fleet at the Dardanelles will convince the most obstinate that submarines can drive a battleship fleet, however well protected by small craft, from any place from which submarines are not shut out by means other than the mere control of the surface by destroyers and scouts.

The British made the landing at the Dardanelles April 25, 1915. There were no submarines there. Ashmead-Bartlett, famous English war correspondent, says:

The Dardanelles expedition, if it served no other purpose, is an object lesson on the difficulties encountered by a hostile fleet operating many hundreds of miles from its base in the face of submarine attack.

Up to May 20 an immense fleet of predreadnaught battleships was able to lie off the coast and render the expeditionary army immense moral support by protecting its flanks and encouraging the troops who love to hear the great shells whistling over their heads. On May 13 the *Goliath* was sunk in the Straits during the night by torpedo attack. On May 20 the first submarine was sighted. The entire fleet had to weigh anchor and steer about to avoid giving a sitting shot.

And now we come to these superdreadnaughts that my friend from Illinois [Mr. Foss] told you were the fighting strength of the Navy. Dreadnaughts! The dread nothing. Watch what they did at the Dardanelles:

The more valuable battleships, like the *Queen Elizabeth*, the *Agamemnon*, and the *Lord Nelson* (they are among the finest ships afloat) faded away toward the west and were not seen again. On May 25 the *Vengeance* was narrowly missed by a torpedo, and the battleship *Triumph* was sunk. On May 27 the battleship *Majestic* was also sunk. On the following day there was not a single battleship off the Gallipoli coast. All had been obliged to fly to protected harbors for safety.

The facts are plain; dreadnaught fleets are useless for offensive purposes, provided you are dealing with an enemy supplied with submarines. They are a poor defense as well, because they can only deal with the enemy's fleet as a whole, provided it chooses to come out and fight. Local defense must be left to the submarines destined to remain in home waters.

Now for the submarine in attack. Supposing the United States were engaged in war against a European power or an oriental. If there is to be a naval war at all, it necessitates one of the belligerents crossing either the Atlantic or the Pacific. It would be utterly useless for either a European power or an oriental to dispatch a fleet to the Atlantic seaboard or the Pacific unless they were already in possession of a prepared base where that fleet could lie at anchor in security against submarine attack. * * * To send a great fleet of modern dreadnaughts to an indefinite objective, namely, to cruise up and down the enemy's seaboard on the off-chance of the enemy coming out to risk an engagement would be merely courting disaster. Such a fleet would be in the nerve-racking position of being exposed to submarine attack from the moment it left its own shores to the moment the survivors regained the shelter of home waters. * * * Even supposing there was a base available within short distance of its objective, the attacking force would be little better off, and you would merely have a repetition of the stalemate which exists in the North Sea at the present time.

Col. Isaac Newton Lewis, United States Army, retired, whose machine gun has practically revolutionized certain phases of operations in the European war, and who has just returned from the scene of hostilities, said:

The effectiveness of the submarine as a weapon can never again be disputed. It has now come to the point where it must be considered as the controlling element in sea power.

Admiral Knight, testifying before the Naval Affairs Committee of the House, was asked:

What show has a battleship against a submarine? What can it do in submarine territory?

Admiral KNIGHT. Of course, it is in danger; and that is all you can say of it. The battleship running at high speed and changing course frequently is not in much danger from a submarine.

Capt. Sims, reporting on the practice of our fleet trying out the different craft, said:

As for sea-going submarines of high speed, it would be quite useless to try to keep them out at night by any form of screen at present known.

If the only thing a fleet of battleships can do in submarine territory is run, what value would battleships be in protecting a fleet of transports when they can do nothing in the presence of submarines but run? If submarines are the controlling element in sea power, if it is useless to try to keep them out at night by every form of screen known, and if they are destined to remain in home waters because they must have a base from which to operate, what reason have we to fear attack from across either the Atlantic or Pacific Ocean?

THE VICIOUSNESS AND INTOLERANCE OF THE PREPAREDNESS PATRIOTS.

Col. R. M. Thompson, proprietor and operator of the Navy League, spoke at Poli's Theater May 28, 1916, in behalf of preparedness. He claims to be a man of very high character, inspired in his work by purely patriotic motives. He was discussing the Army bill just passed and the contemptible inadequacy of it, and said sneeringly that Virginia was a great State, once the mother of Presidents, but now she was satisfied with Jim Hay—just Hay. Hay was the chairman of the Military Affairs Committee of the House, one of the purest and best men in the House of Representatives. Parade, pomp, street shows, and make-believe do not appeal to him. He does not suit the chairman of the board of directors of the International Nickel Co., Col. R. M. Thompson.

He does not suit the New York and Chicago papers, either. Referring to the bill, they make the following observations about the measure and those responsible for it:

The New York Globe (Independent) declares that "it will not provide for an adequate system of military defense," and "in the event of trouble it would be necessary to scrap it." The Chicago Herald makes the calm, scientific observation that "a chemist could run the brains of HAY and his little Army pals through a Pasteur filter without getting a trace of an intellectual process above the mental grade of the *Pithecanthropus erectus*."

The preparedness patriots want universal military service. They know a larger force than we now have can not be kept up by voluntary enlistment. That has been clearly shown within the last few months. Expirations and desertions from the Army have been as many as new enlistments. The only way to have a larger force is to force them in by law.

It has become proverbial that the daily press of the country follows its financial interest, but this is the first time it has been so nearly a unit on any question.

It not only puffs everything favoring enormous additions to our Military Establishment but taboos everything coming from the other side.

Members of Congress in private conversation freely state that there is no danger from without and the danger is from within, but they say the country is wild, and they fly before what they think is popular opinion. They get their conception of public opinion from the daily press.

A few independent newspapers have stood out against it. May their tribe increase.

TAX FOR INCREASE IN ARMY AND NAVY.

The President suggested in his December message that the stamp tax on notes, deeds, telephone calls, telegrams, medicines, etc., be continued, and that the tax be extended to bank checks, gasoline, and power engines to get money for Army and Navy increase. I protested against that, and, with 31 other Democrats, notified Mr. KITCHIN, chairman of Ways and Means Committee, that we could and would defeat the measure should that committee report it. We notified him that tax for increase of Army and Navy would have to be placed on war munitions, inheritances, and incomes. He and members of the committee, realizing the potency of that statement from 32 Democrats, placed or agreed to place such tax on munitions, inheritances, and incomes. I am proud of this accomplishment.

GENERAL AGREEMENT FOR DISARMAMENT OF ALL NTIONS.

We have secured a provision in this bill that, I think, may be of inestimable value to the nations of the world in the future. When war abroad ceases, when they are exhausted, sick, and horrified by the grim slaughter, and have stopped long enough to coolly survey the fruitless wreckage, I think they will be ready to consider the question of abandoning the competition in armament.

We have provided in this bill for a commission from this country to intercede for such purpose, and we further provide, should such an agreement be reached, that all building authorized by this bill shall cease.

Nations at peace have already begun to recognize the efficiency and farsightedness of this provision, and wires are coming from across the ocean showing their appreciation.

Think not that helm and harness are signs of valor true,
Peace hath higher tests of manhood than battles ever knew.

SUMMARY.

Our Navy, coast defenses, and Army, equipped as they are, backed by the citizens of the land, are amply adequate to defend this country against any and every assault.

No great nation wants to attack us. They want our friendship. It is necessary to them.

We are divided by great oceans, which the development of torpedoes and submarines makes it impossible to transport great bodies of troops across.

It is necessary before this country can be conquered that great bodies of troops be conveyed across broad oceans.

If you want a Navy or Army to force our trade around the world, or for aggrandizement and conquest, you may elevate your sights—a billion and a half for the Navy and a billion for the Army will not give it to you; and a billion per year will not maintain it.

If you want a military establishment to obtain or defend "something intangible and visionary, some vision of the mind never seen by the physical eye," I can not tell, you can not tell, and no mortal man can tell, where we are going nor what will be necessary.

I can not follow the Army and naval officers who state that they do not consider the amount of money it costs, nor where it is to come from, and that their plan leads in the end to bankruptcy or war.

The High Cost of Living.

EXTENSION OF REMARKS

OF

HON. LADISLAS LAZARO,

OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. LAZARO. Mr. Speaker, I have listened with a great deal of interest to the discussions on the high cost of living, food riots, and the proposed embargo on food products. The differences of opinion as to the causes and remedies make it absolutely necessary that the President's request for an immediate and thorough investigation of this whole question be complied with before permanent legislation can be enacted.

Congressman FITZGERALD, of New York, wants Congress to place an embargo on food products. I think Members of Congress, and especially we of the agricultural South, should look at this question very carefully before we act on it. It may be that it would relieve the situation in his congested city of New York, but at the expense of the agricultural sections of the country, by striking a severe blow at the farmers of the South and West, who, as a result of the demand for their products and the high prices they are receiving for them, are enjoying prosperity for the first time in many years.

Manufacturers of munitions of war are profiting by the European war. Do their Representatives from the East ask for an embargo on their products? No. But now that the agricultural sections are reaping some profit from their products is it just for one of their Representatives from the East to come here and ask for an embargo on agricultural products? "Consistency thou art a jewel." We are not here to legislate in the interests of any one section of our country; we are here to enact laws for all sections of our country and for all the people. No man is fit to be a lawgiver for a great people who yields to the demands under solicitations from the few having access to his ears but is forgetful of that vast multitude who may never hear his voice nor look into his face.

If the Government proceeds to prevent the agricultural products of the country from reaching foreign markets when there is a demand there at good prices, it must assume to protect the farmers in those years when there is an abundance produced, less demand, and low prices. In other words, if it prevents the farmer from making profits in years favorable to him, it should protect him against losses in years unfavorable to him.

Besides, the Representatives from the congested centers should bear in mind, when they bring up this legislation, that the basic prosperity of the United States as a whole depends upon the prosperity of the farmers, because in its last analysis this country is an agricultural country and any laws which will prove detrimental to the farmers will be felt in the factories, mines, and business establishments.

Another matter which should receive the attention of Congress is the alleged combination of certain middlemen who take advantage of just such a situation as exists to-day to demand abnormal prices from the consumers for products which they have bought much cheaper. If there are individuals or corporations violating the antitrust law and robbing the people, the Department of Justice should prosecute them to the fullest extent of the law, and they should not be given the glove but they should be given the gaff of the law. They should not be fined, but they should be sentenced to imprisonment.

But I do not believe it is a good idea to mislead people into believing that the high cost of living can be reduced by law only. There are many causes which should be understood and removed, but which can not be removed by legislation. First, we must become a more economical people. Second, we must produce more, by encouraging our people to remain on the farms instead of moving to the already congested towns and cities. The first census of our country showed about 8 per cent of the population in the towns and cities; the last, about 50 per cent. Of course, we can not expect to keep our boys and girls on the farm unless we give them more advantages, such as comfortable homes, good roads, schools, libraries, and churches. We can not have these improvements unless we derive a fair profit from our farms. I think, too, that our people should be impressed with the importance of living more at home right now. Every head of every family who can should raise all that he can at home, and he should consider certain changes which can be made in his mode of living.

In this connection I notice that a good many people are complaining about the present cost of wheat bread. Bread riots are taking place in some of the cities. Why should they not learn how to cook and eat rice? A pound of rice, which can be bought at a reasonable price, cooked as it should be cooked, will serve as bread for one meal of an average family. The United States, itself a large producer of rice, is one of the poorest consumers of it. The greater consumption of rice as a food for the American people, as in other lands, would mean the saving of millions of dollars annually by providing them with a food as healthy, nutritious, and inviting as any we use. I hope that the rice people will seize the present opportunity to educate the people of this country how to cook and eat rice.

While New Yorkers are rioting for bread and complaining bitterly of paying 5 cents apiece for potatoes, the people of the Argentine Republic are solving the problem by turning to Louisiana for rice, the price of which, as I said before, has advanced but a little. And for the first time in the history of New Orleans a solid cargo of rice will leave the port for Buenos Aires. The cargo will consist of 2,700 tons of rice accumulated along the Southern Pacific Railroad in Louisiana and assembled in Algiers by the Louisiana State Rice Milling Co. It is being loaded on the steamer *Mobila*, for which A. K. Miller & Co. are the agents. The increase in the size of the orders is attributed directly to the systematic campaign of education on the value of rice as a food conducted by the milling company, which was assisted by the Southern Pacific. Everyone lending aid in educating the people to the value of rice as a nutritious food is doing his country good.

I believe that one of the main contributing causes of the present high cost of necessities of life is the car shortage on the railroads. In many instances it is impossible for the farmers or other producers to ship their products at all because of lack of transportation facilities. It is said that there is wheat enough in the Chicago elevators to-day to feed the cities and country more than a year; that there are 60,000,000 bushels awaiting cars; that the country elevators are filled, waiting for cars; that the Minneapolis mills are overflowing with flour which they can not ship, and they are running only one-third of the time, not for lack of wheat or lack of demand from the consumers but for lack of cars. There are other food products in the country that can not be shipped, distributed, or sold for lack of cars. Here I would give the Interstate Commerce Commission power to control the car situation on railroads. When the railroads are compelled to return the cars which have arrived at the seaboard, even if they have to be returned empty, plenty of foodstuff would be shipped to New York and other parts of the country to relieve the people.

Mr. Speaker, this car shortage which is causing so much trouble in our problem of transportation should aid to open the eyes of the country to the need of systematically improving our waterways for transportation. This would be a permanent remedy. It would not only solve the problem of transportation

in the United States but it would regulate rates. Besides that, it would add to our program of preparedness for national defense.

God Almighty, in His infinite wisdom, has given us the most magnificent system of waterways that was ever given to any people in the world, and we have been more negligent in improving them than any other people on the face of the earth.

One of two things must come to pass—either the railroads will have to double-track their roads, or the waterways will have to be made navigable, if the freight of the country is to be carried. The United States has not completed its growth. As great as it is, it is still in its infancy; it is just beginning to develop. The railroad people should assist in the improvement of our waterways, because it will not hurt the railroads. The relation of rail and water transportation should be one of harmony, helpfulness, and cooperation. It is clear to any thinking man that they should work together to give us the necessary transportation facilities to meet the rapid development and commerce of the country. We need both the railroads and the waterways. We all know that railroads have been great civilizers, and have helped to develop this country. But we must not lose sight of the fact that shippers and consumers are entitled to the use of waterways, and that such competition is after all one of the best ways to regulate railroad rates. Now, the question comes up, How can water transportation lower freight rates without injuring the railroad? Because in the economy of transportation the bulky raw material getting the benefit of the lower freight rates would go to the waterways, while the manufactured goods would go to the railroads. On account of the lower rates and our many waterways we could bring more raw material to the factories to be converted into corresponding tons of manufactured goods capable of paying a higher freight rate. Thus one system would aid in the development of the other. This principle is well illustrated on the banks of the Great Lakes, the Erie Canal, and the Hudson.

If we can keep out of war—and let us hope that we will—it will be a very short time when the United States will lead the world in development and prosperity. Now is the time to prepare for the transportation and marketing of our products, not only between the States but between our Nation and other nations. We have not actually finished anything until we have placed it in the hands of the consumer. Transportation, like taxes, mingles with the cost of the goods in every step of their making—from the field, forest, mines, and factories, to the retailers' counters, and then, finally falls upon the consumer. For this reason conveyance from one community to another and from one country to another helps to make a people great, efficient, progressive, prosperous, and powerful. This is why the broad-minded, farseeing, unselfish American citizen now begins to pause, think, and ask for legislation more and more with regard to transportation.

Prevention of War.

OF

HON. EDWARD W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. SAUNDERS. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address by Arthur MacDonald, anthropologist, Washington, D. C.

The address is as follows:

PREVENTION OF WAR.

[By Arthur MacDonald, anthropologist, Washington, D. C.]

The President has done his best to keep us out of war, and to such an extent that he has even been criticized for being so patient. Therefore all citizens should immediately make all possible efforts and personal sacrifice to aid him in the present crisis and its impending consequences by conscientious thinking, argument, and persuasion. Even in war the controlling forces are mental.

In walking on a precipice we have no time to look around; how to bridge the chasm is the sole question. We can cross other bridges when we come to them; one thing at a time.

1. Every corporation, company, or individual should defer any action which might involve immediate danger of war. Because

2. Is it not for the good of this country to keep out of war with honor, when it can be done by none of its citizens traveling into dangerous zones?

3. Is it dishonorable for an American citizen to avoid doing things which otherwise might force his country into war in order to defend its honor? In short—

4. Is it a dishonor to omit doing that which might otherwise require you to defend your honor? But

5. If it is a great evil for any corporation, company, or individual to defer action not only involving loss of money but unfortunately danger of war, it is an infinitely greater evil to so act as to plunge a nation into war. Therefore,

6. As most choices in this world are not between good and evil, but between two evils, let every citizen, no matter what the sacrifice, choose the lesser evil, and thus help the President to keep us out of war. For—

7. What kind of American citizen is he who, in a terrible crisis, takes risks which may plunge 100,000,000 of his fellow citizens into a vortex of blood? Or

8. What kind of a patriot is he who is so greedy to make money as to be willing to sacrifice his country on an altar of blood by plunging it into war? For—

9. War consists of the dead in convulsive states, groans and shrieking of wounded men, screams of dying horses; shrapnel ripping, tearing, lacerating, and penetrating human flesh; pierced bodies, exuding hogsheads of blood, maimed limbs, broken bones, glazing eyes, slow dying from exposure or starvation, inflammatory rheumatism from watery trenches, skulls smashed, brains oozing out, abdomens ripped open and bowels protruding, and so on ad infinitum, producing the most excruciating pains; and it is the healthy and strong who suffer most.

10. If we must choose between war and peace, the lesser evil is peace; but if we make a mistake, it is better to err on the side of peace, for—

11. War is not only a physical hell but a mental hell. It is fear of battle; the dreaded bayonet charge and death; blasted hopes of the wounded, involving great mental torture and a future burden to army, family, and country; terrible disappointments, anxieties, and sadness of mothers and sisters at home. All these physical and mental horrors, not to mention atrocities, demonstrate war to be literally hell.

ANTHROPOLOGY AND WAR.

In the scientific study of humanity one purpose of anthropology, especially criminal anthropology, is to lessen and prevent crime between nations (war) as well as crime within nations by knowledge gained through investigation of causes. As crime is estimated according to detriment to the community, international crime or war is the worst of all crimes.

1. Animals rarely kill their own species as man does; they have better sense.

2. When an army of ants rush upon an ant hill to capture it they do not kill more than is necessary to accomplish their purpose.

3. Among savages the habit of dueling was so strong that if their enemies were not armed they furnished them with arms before attacking them, illustrating a high sense of fair play. But—

4. Retaliation became so frequent that its repetition created a taste for fighting and habit of war, which was primarily for defense of hunting grounds and crops. But—

5. War having lost its judicial character, theft and plunder became its principal aim. Man set out to steal the land itself; then war was for conquest, and enemies were either killed or made slaves.

6. Property holdings grew, great communities and States were formed, aristocracies constituted, chiefs became kings, and armies waged war. Sacerdotal classes and castes were founded and monarchs became likened unto God.

7. While war changed its form according to country, age, and race, there was no real evolution; war is a falling back into savagery (atavism); only the process varies as arms, tactics, strategy.

8. War was once a most honored profession; one was obliged either to fight for the king or to enter the clerical order; military courage took the place of all virtues. St. Augustine said, "If God commands to kill, homicide is a virtue."

9. At first firearms were objected to as placing the brave man and coward on the same level; also the noise was disconcerting. In fact, history shows that—

10. New kinds of deadly arms are called barbarous by those who do not have them or can not apply them; but such armament is sure to be used to the limit by all as soon as it has become general. Thus—

11. Air machines drop explosives, killing women and children at home. They are even more inhuman than submarines, because few persons are compelled to travel, while many must remain at home.

12. Shooting of citizens who fight soldiers is terrible, and with atrocities excites horror and amazement. But these abominable events are the result of war, the flower of militarism. Oppose war, not its results.

13. All nations are guilty of atrocities, but the number is greatly exaggerated; only a few low natures commit them, and often when drunk. Atrocities are circulated to increase hatred between nations, to make soldiers fight harder, and to gain sympathy from neutrals.

14. War may cease as soon as instruments of destruction kill noncombatants at home, causing fear, sleeplessness, and worry; or when a referendum requires those voting for war to go to the front first. For—

15. If a citizen has a right to vote for mayor, governor, or President, he certainly has the right to vote as to whether his body shall be food for cannon.

16. The poor suffer greatest, not only because they do most of the fighting but their families are further impoverished by the rich who make money out of the misery, escape military service and danger, and never fear for want of necessities. Thus hogology which is prevalent in time of peace becomes intensified in war.

17. Man's poor management of the world is shown in his allowing 1 per cent of society (criminals) to cause so much trouble, but the arrangements between nations, called diplomacy, appears infinitely worse. For—

18. Love between nations is a myth; mutual suspicion is the fact, because diplomats do officially by secret alliance what they would be ashamed of privately.

19. Civilization is necessarily superficial, for it has existed only about 6,000 years, while barbarism is hundreds of thousands of years old.

20. Much can be said for military discipline, but how can the superior mental qualities of a nation be developed under passive obedience? For the most noble sentiments in civil life as pity, love, and charity are absolutely opposed to war, the object of military discipline. The soldier must learn to kill with neither emotion nor scruple. The faithful warrior would crucify Christ if commanded.

21. Military genius condemns war. Napoleon said, "Brute force can create nothing durable"; the Duke of Wellington called war "a destestable thing"; Washington considered it "the plague of man-

kind"; Franklin said, "There never was a good war nor bad peace"; we know what Sherman said. Sheridan said war would eliminate itself, and Emerson call it "an epidemic of insanity."

22. Arguments for war are similar to those once employed in defending cannibalism and slavery, and could even be used to uphold crime. War arguments prove too much.

23. War is a much greater evil than disease because it sacrifices the best blood of a nation, leaving behind the wounded and physical weaklings to reproduce their kind, while disease eliminates them.

24. Militarism is estimated according to number of soldiers and sailors relative to population. The size of army to which a nation is entitled varies according to natural defenses and number of bordering countries.

25. The order in militarism is Sweden, France, Bulgaria, Turkey, Germany, Italy, Greece, Austria-Hungary, Russia, Great Britain, Netherlands, and the United States. Therefore—

26. Since we are remote from the war, protected by oceans, and with no large powers near us, we have the least excuse for involving ourselves in this war, especially as we have been enriched thereby.

27. Europe believed for a long time in a general struggle to come and was preparing for a war it did not want but which it could not see how to avoid.

28. Facility of communication by modern telegraph, telephone, and wireless may result in quick diplomacy with inadequate deliberation, and so more danger of precipitate action, from which it is difficult to retreat on account of pride. This with continuity of communication through steamship, airship, and submarine make it more difficult to avoid infringing on the rights of others, especially in war where military necessity knows no law.

29. Leading statesmen of England have repeatedly said that large, prepondering armaments are a menace to peace.

30. The repeated assurance, given time and again, that a great army and navy are the best security for peace are shown to be absolutely false by what is going on in Europe now. In science, facts talk, not theories.

31. The danger from war is here, not in Europe, for Lincoln once said, "If danger ever reaches us it must spring up among ourselves; it can not come from abroad."

32. Admirals Fletcher, Badger, Knight, Fiske, and Gen. Miles and Capt. Simms, the highest authorities in our Navy and Army, have testified that invasion of our coasts would be almost "insuperable."

33. None of the belligerents desire to infringe upon the rights of neutrals, but they are fighting for their lives and military necessity compels them to ignore neutral rights. For—

34. Self-preservation is an inalienable right; if you were fighting for your life and the only effective weapon in reach was forbidden by international law and humanity, would you let your enemy kill you rather than use the weapon? If an individual is thus justified, a nation is much more so.

35. There is not a ruler in Europe who would not surrender his throne for the sake of his people; each has done what he thought right. It is ridiculous, therefore, to blame a whole nation or think of crushing it, for who has the right to usurp the functions of the Almighty?

36. There are four general war attitudes in the United States—pro-ally, pro-German, anti-English, and neutral.

37. We are pro-English by psychological necessity, for the words and ideas fixed in the American mind are English; our knowledge is in the form of English—not German, not French. Thus the sovereignty of English dominates us. The tree gets its nutrition from where it is.

38. These temporary divisions have a right to express their honest opinions, however at variance, for freedom of thought means freedom of thought; to call it license when we do not agree with it begs the question. Yet—

39. We naturally sympathize with one or the other belligerent, and however strong we may feel, sentiment must be wholly excluded from scientific inquiry. But—

40. Many friends have become enemies through discussing the war. It was supposed that man could reason out things without quarreling, while the animal was incapable. But—

41. The persistency of war feeling is so strong that very few persons can change their opinion, and even the most impartial natures seem to lose their equilibrium in consideration of war questions.

42. War feeling seems to be temporary insanity, for nations will believe and say almost anything against their enemies (no matter how honorable); That they are not fit to exist, even women and children. Yet before and after the war they did not believe it, for it was only a hallucination.

43. Long exhaustive wars make future wars more difficult, since the large number killed and wounded causes widespread grief and horror, not to mention weight of enormous debt.

44. If we, the greatest Republic of the world, enter this war, after continually preaching peace to other nations, it will be the most terrible setback to peace the world has ever seen, and will tend to draw in other neutral nations and may even go so far as to involve South America.

45. It is a questionable humanity to plunge a nation into war for the sake of humanity (to murder in order to stop murder, as it were) when that nation is not being invaded and every other nation desires to live in peace with it. Humanity, like charity, begins at home.

46. It is a great evil to have our rights to life and property disregarded on the sea, even if not with malicious intent; but it is a much greater evil to plunge into war.

47. Whatever our opinions as to the war, we must not allow our sympathies for any of the belligerents to smother our Americanism. We must be pro-American first, last, and forever.

48. War is not only abnormal, but belongs under the head of teratology, a science which treats of all kinds of monsters. The monstrosity is militarism and navalism destroying humanity.

49. The cure for war seems to be in its last analysis educational. Thus ignorance, egotism, and selfishness can be lessened by the increase of knowledge and humanitarian feeling, which tend to counteract and undermine the war spirit. For—

50. War, like cannibalism and slavery, will eventually be stopped.

51. Peace is the normal condition of man, war abnormal. For—

52. War involves destruction of the human species and is therefore opposed to the main purpose of nature, which is the increase of the species. Yet—

53. The war feeling has been so long present in the human breast that it destroys not only the joy and peace of humanity, but even the sense of justice.

54. Peace at any price is a jingo sophism, for as nations surrender with honor, they should be able to keep peace with honor.

55. Humility is not humiliation, much less is it cowardice, for some of the most humble people are the bravest. The martyr is superior to the soldier.

56. True patriotism consists in such feelings, thoughts, volitions, and acts as are for the permanent welfare of a country. False patriotism is based upon the selfishness, egotism, ignorance, and stupidity; and yet it is asked that the blood of thousands be shed for such patriotism.

57. The doctrine that might makes right is inherently opposed to all that is highest and ideal in life, and is also in the direction of barbarism, slavery, and war. In addition—

58. War is a violation of the fundamental principles of Christianity, not to mention other great religions.

59. The general opinion of many European experts is, that each belligerent would have acted about the same as any other belligerent under similar conditions.

CHOOSING BETWEEN WAR AND PEACE.

The choice between entering war and remaining neutral—in short, between war and peace—may be a choice between two evils, and the decision should be on the side of the lesser evil.

Let us admit that for a country not to be equipped reasonably or adequately for war may cause it not to receive proper attention and respect from other countries. Let us admit this to be a great evil. Now, let us set over against this evil the injustice that war brings to innocent people, noncombatants, the outrages they suffer, the destruction of their homes, the shooting of them in cold blood, and their awful suffering from fear and terrorism sometimes visited upon them through military necessity. Let us picture, if possible, the almost infinite injustice and suffering that, for instance, the Russian peasants have experienced, when, with only short notice, hundreds of thousands have been ordered by their own generals to quit their homes, where to go they know not, many without conveyances to carry anything; nevertheless they must take what they can carry afoot—old and young, bedridden, sick, and crippled—must depart in the cold, many scantily clad, the poorest, who are in the majority, suffering the worst. Many, of course, die on the way, enduring untold agony from exposure, exhaustion, and starvation. Think of these poor, innocent, peaceful peasants, who only want to be let alone, whose sons and fathers were torn from them to go to the front, are, after making such sacrifices for their own country, now forced by this very country into ruin, starvation, and death, and this all on account of military necessity of their own fatherland. Think of this infinite suffering and injustice to hundreds of thousands and compare it with the admitted evil of humiliation and then pray tell us which is the lesser evil. The long-lasting and paramount effects of war horrors and devastation are infinitely a greater evil than the short and comparatively temporary effect of neglect of dignity and honor, which consists mainly of pride, egotism, and selfishness.

IMPORTANCE OF DIGNITY AND HONOR IDEA EXAGGERATED.

If nations are friendly they often will not resent most discourteous acts, while if unfriendly a trivial matter may "outrage" their honor and dignity. Once two nations came near going to war, it is said, because one ambassador was seated in advance of the other at table.

Consider how little real feeling of humiliation (much less suffering) there is among the great majority of inhabitants of a country whose officials claim to have been humiliated by the words or acts of some other Government. In the present status of humanitarian feeling three-fourths, and probably more, of the citizens who have to do the fighting do not feel this kind of humiliation; they desire to be let alone and pursue their peaceful occupations. If some of them do feel it, it is generally after efforts are made to stir them up to stand on their dignity. This dignity or honor idea is often greatly exaggerated. The officials may feel it especially, but that may be due mainly to their egotism. But how small an evil it is in comparison with the infinite evils and injustices of war upon the great majority of innocent citizens, who must sacrifice their bodies on the battle field or themselves at home.

INSANITY OF WAR.

That war is a temporary form of insanity can be easily shown by numerous historical facts. To refer to one instance only, the Boer War illustrates to what extremes the mind of a nation can go, manifesting such a degree of mental aberration as can be described as an acute form of national insanity.

Thus a conservative, sober, and dignified country like England, during one year or more, believed and said almost everything bad against the Boers; that, for instance, they were not fit to exist, even women and children. But the Boers were a thrifty, independent, and deserving people. The English people were thus possessed of hallucinations enduring a year or more, which they did not believe before and do not believe now.

Memorandum Presented to Mr. Sparkman.

EXTENSION OF REMARKS

OF

HON. ALLEN T. TREADWAY,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. TREADWAY. Mr. Speaker, under permission granted to extend my remarks in the RECORD I insert herewith copy of memorandum presented to Mr. SPARKMAN to-day, accompanying the gift of a handsome clock, and including speeches made by Hon. WILLIAM E. HUMPHREY of Washington, and the reply of Hon. STEPHEN M. SPARKMAN in the Committee on Rivers and Harbors.

The statement is as follows:

HOUSE OF REPRESENTATIVES, UNITED STATES,
WASHINGTON, D. C.

The members of the Committee on Rivers and Harbors of the Sixty-fourth Congress ask its chairman, Hon. STEPHEN M. SPARKMAN, to

accept the clock accompanying this note in token of their personal and official esteem. A faithful and distinguished service in the Congress of 22 years, of which 20 have been on this one committee, is an event deserving of recognition. Those with whom he has been closely associated on the committee, of which he has been the efficient chairman for 6 years, desire in this manner to express their appreciation of his integrity, industry, and loyalty.

GEORGE F. BURGESS, Texas; CHARLES G. EDWARDS, Georgia; JOHN H. SMALL, North Carolina; CHARLES F. BOOHER, Missouri; THOMAS GALLAGHER, Illinois; DANIEL A. DRISCOLL, New York; THOMAS J. SCULLY, New Jersey; CHARLES LIEB, Indiana; WILLIAM KETTNER, California; SAMUEL M. TAYLOR, Arkansas; MURRAY HULBERT, New York; H. GARLAND DUPRÉ, Louisiana; WILLIAM E. HUMPHREY, Washington; CHARLES A. KENNEDY, Iowa; ANDREW J. BARCHFELD, Pennsylvania; ROBERT M. SWITZER, Ohio; ALLEN T. TREADWAY, Massachusetts; JAMES A. FREAR, Wisconsin; DOW H. DRUKKER, New Jersey; PETER E. COSTELLO, Pennsylvania.

The speech of presentation was made by Hon. WILLIAM E. HUMPHREY, of Washington, in the following very appropriate words:

"Mr. HUMPHREY of Washington. Mr. Chairman, I want to interrupt the procedure just for a minute or two.

"Mr. Chairman and members of the committee, as this is the last time that this committee will ever probably meet, and as this is the last time that those here will probably ever assemble, I take this occasion, Mr. Chairman, on behalf of the committee, to present to you a token of our friendship and regard. The committee has selected—I think with great appropriateness—a beautiful clock. As I look at this clock, Mr. Chairman, and as I think of your long and honorable public career, without blot or stain, it recalls the words of Shakespeare:

"His honor, clock to itself, knew the true minute.

"[Applause.]

"Mr. Chairman, it is the hope of the committee in the years to come that this gift will serve to recall the pleasant memories of the happy days that are no more. We hope that when you look upon the face of that clock it will recall to you the faces of your friends that have so often sat with you around this table. As you look upon its hands we hope that they will ever remind you that whatever fate the future may hold for you that those who served with you so long have their hands ever extended in friendship and best wishes. [Applause.] And when it strikes the hour we hope that it will recall to your mind the many pleasant hours of our association that we have spent together in this room and elsewhere.

"And, Mr. Chairman, it is the heartfelt wish of every member of this committee that it may strike many, many hours for you, and that in those hours there may be little of sadness and disappointment and that all of them may be filled with sunshine and happiness. But whether they be jeweled with joy or shadowed with sorrow, the best wishes and the friendship of those who have been associated with you go out to you always. [Applause.] We wish for you health, happiness, and length of days.

"And now, Mr. Chairman, when at last your shadow has lengthened far toward the East, and when at last you have reached your journey's end, and when at last you lay your burdens down, when for you the last hour shall strike and time passes into eternity, then may that last hour be as peaceful and gentle as the cool and quiet twilight of a summer's evening. [Applause.]

"Now, Mr. Chairman, on behalf of this committee I present it to you, and say, Good-by and good luck."

The response of the chairman, Mr. SPARKMAN, follows:

"Mr. SPARKMAN (the chairman). Gentlemen of the committee, to say that I am greatly pleased at this manifestation of your esteem is to but feebly express my feelings on this occasion. I did not and was not expecting any such kindness at your hands. You had already, at this session of Congress and during the consideration of the river and harbor bill, gone a long way in honoring me and had done an unusual thing in placing the project at my home city under continuing contract in so far as it was in the power of the House to do so. That was more than I deserved and more than I expected or could have asked. It was something of great value to the people of my district and was highly appreciated by them, as it was by me. But I can assure you that no evidence of your kindness and good will to me, no token of your esteem, is more highly appreciated than is the clock you have just presented me. I do not, it is true, need anything to remind me of the friends I have here and in Congress, as those friends and their kindly acts will never be forgotten. But this present will, nevertheless, serve as long as life shall last to bring back the pleasant memories of the days we served together on this committee, as it will also serve to remind me of the time and the occasion of this gift. I can not say more, my friends, nor is it necessary that I should, for you understand the high appreciation I have of your kindness.

"Aside from the regret I feel at the severance of the official relations with the many friends I have here the return to private life is in no wise an unpleasant thought to me. But, no matter what feelings of regret I might have had, the kindness that my colleagues on the committee with whom I have served so long, with whom my relations have been so pleasant, have shown me in the past and are showing me to-day will go far to ameliorate, indeed to remove, any such feelings of regret.

"When I leave Congress, as I shall after the 4th of next month, I hope to see you frequently in my home town, Tampa. It is a great and progressive city, and on a corner of two of its prominent avenues—Michigan and Nebraska—there is a home surrounded by tropical verdure, the live oak, the magnolia, the pine, the cedar, and the palm, together with the orange, which is even now in the early spring filling the air with the fragrance of its blossoms. Of course, you will find occasion from time to time to visit that city, and whenever you do I want to say that not only does the latchstring hang on the outside of the door, but I most cordially invite you now, one and all, to visit and make your home with me during your stay in that beautiful city.

"Again, gentlemen, I want to thank you, one and all, for this and the many other kindnesses shown me during our long service as members of this committee and to wish you prosperity and happiness wherever your lots may be cast.

"Nor can I conclude without thanking individually my good friend, Mr. HUMPHREY, for the words used by him in presenting this token of your friendship and esteem. Our relations during his long and distinguished career here have been the most friendly and I greatly appreciate his generous words and kindly expressed wishes for my future welfare and happiness." [Long applause.]

Proposed Remedy for Car Shortage.

EXTENSION OF REMARKS
OF
HON. RICHARD W. AUSTIN,
OF TENNESSEE,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1917.

Mr. AUSTIN. Mr. Speaker, I wish to invite the attention and consideration of the Members of the House, the railroad officials, shippers, and the members of the Interstate Commerce Commission to an able and important article prepared by Prof. J. A. Switzer, of the University of Tennessee, entitled "A practical remedy for the economic disturbance to trade resulting from periodic shortage of the car supply," which reads as follows:

It is within the province of Congress by means of an amendment to the interstate-commerce law to alleviate, if not to entirely relieve, the present car shortage from which the business interests of the country are suffering, and by the same means to largely prevent a recurrence of the trouble. This amendment would act to revise the present demurrage practice of the railroads in such a manner as to raise the efficiency of use of existing rolling stock, thereby permitting the same to meet the country's requirements for freight cars at such times as the present, when business requirements are at a maximum.

The present demurrage practice is an unscientific effort to secure for the railroads the cooperation of the shipping public in the use of freight cars. It is one that does not appeal to the shipping public and does not bring out the measure of cooperation which by a revision of the practice could easily be secured.

The present practice consists in allowing shippers a period of 48 hours, free of charge, in which to load a car, and consignees a period of 48 hours in which to unload the same, and in assessing against either a fine for the detention of a car for a longer period than this. Until recently the demurrage charge has been $1 per day, or fraction thereof, that the car is detained. Effective January 1, 1917, the Interstate Commerce Commission has granted the railroads the right to increase the demurrage charge, so that now the fine for a detention of one day is $2, for one additional day $3, for another additional day $5, and thereafter for each additional day $5 per day.

This is the common demurrage practice. In principle it acts as a penalty clause in the contract between railroad and the railroad's customer. There is no balancing bonus clause. In engineering contracts the courts have held that a penalty clause is not valid unless the contract contains a counterbalancing bonus clause. The equity of this principle of law has received feeble recognition in connection with demurrage practice, for the railroads offer to their larger patrons the advantage of what is known as the average demurrage agreement. The operation of this plan is as follows: The business house entering into the agreement may have a part of its demurrage assessments, during any month, offset to the extent that it succeeds in releasing a part of the cars which it uses within a less time than 48 hours. That is to say, the business concern may detain certain cars overtime without suffering penalty if it releases an equivalent number of other cars ahead of time. But the release of any number of cars ahead of the stipulated 48-hour period during any one month will not serve to benefit him if he delays cars the next month, nor does he receive any benefit for the early release of cars whatever except as an offset to delinquency with other cars. Thus the average demurrage agreement is not truly

reciprocal. A concern which habitually releases cars within a time less than the stipulated 48-hour period receives no advantage, nor any form of compensation in return; and the present practice, therefore, offers no inducement to the railroads' patrons to cooperate with them in securing the maximum possible efficiency of use of the rolling stock.

The amendment here suggested would place the control of demurrage practice in the hands of the Interstate Commerce Commission; it would make all demurrage reciprocal by requiring that the railroads pay a cash bonus for the early return of cars, to offset the fine for their detention; and would be so administered that at the end of each month the demurrage account of each patron of the railroad would be closed by a cash transaction in favor of the railroad if car detentions overbalanced early releases, or in favor of the patron if the reverse.

Further, the amendment would authorize the commission to adopt a sliding scale of demurrage and require the commission to readjust and publish the demurrage rates either quarterly or at semiannual intervals in accordance with the real cash value of the use of cars. This latter provision is of utmost importance. Demurrage practice is based upon the cash-surrender value of the freight car, and the railroads maintain that the value to them of the use of the car is greater than the cash they receive in the form of demurrage. But the cash value of the use of cars varies over a wide range, according to the times. When business is at flood, as at the present time, the return of cars has a high cash value, whereas during periods of business depression the car supply exceeds the requirements, and the prompt release of cars loses all, or nearly all, cash value. At such times the amount of demurrage (both on the bonus and the penalty side) would naturally be fixed at a low figure. The Interstate Commerce Commission should find no difficulty in arriving at a just value for demurrage for any ensuing three-months' or even six-months' period, and any error of judgment in fixing the value would be insignificant.

The revision of demurrage practice here outlined would apply to one branch of railroad management an elementary principle of efficiency management to which at present it is a stranger. The present efficiency of use of freight cars is astonishingly low. A freight car fulfills its function only as it travels; if, on the average, a car travels 4 days out of 10, its efficiency of use is 40 per cent, whereas if it traveled 5 days out of 10 the value would be 50 per cent. A study of the statistics of the subject would appear to indicate that at the present time an increase in the efficiency of use of existing cars of only about 2½ per cent would suffice to relieve the acute car shortage. The proposed revision would immensely benefit the railroads, in that it would reduce the ratio of capital investment in rolling stock to the return upon such investment, and it would secure for the railroads a larger measure of cooperation from the shipping public in the economical use of cars.

Maj. Gen. Frederick Funston.

EXTENSION OF REMARKS
OF
HON. EDWARD KEATING,
OF COLORADO,
IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. KEATING. Mr. Speaker, I desire to insert in the RECORD the following eulogy on Maj. Gen. Frederick Funston, written by Robert H. Watkins, well known as a Washington newspaper correspondent:

There was timely change in the proceedings of the House last Tuesday when the words were repeated round about in awed tones, "Fred Funston is dead; Gen. Funston died suddenly to-day."

It was the most grievous shock that has come to Americans in many a year. There had just been mourning and distinguished obsequies at the death of the country's highest and oldest naval officer. But Admiral Dewey dies full of years as honors, at an age when the end might have been expected at any time. The death of Gen. Funston was in the heyday of mature manhood, with laurels of victory on his brow and the smile of favoring destiny seemed to light his face. He seemed anticipated by his country for yet nobler honors. Members of the House hastened to express, as soon as the news came, their deep sorrow. They paid unfeigned tribute in thoughtful accents to the brilliant service, the sterling character, and the warm heart of the dead soldier, a heart that had given so much of itself for the sake of others it had little left for itself. Spontaneously they testified to qualities of manhood in him that form that American type fittest for onward leadership. He had vividly exemplified resourceful capacity, instant intelligence in action, and what seemed an inspired spirit of self-sacrificing service for humanity against inhumanity everywhere. These were the traits that made Fred Funston the day he was last alive America's greatest volunteer soldier.

But there was another side that most endeared him to cherishing memory. It was his fondness for little children. In this was witness in him worth letters of gold to tell—that love for little children—that sensibility of human character which has sweetened the faith of countless millions ever since the day more than 18 centuries ago Christ took in his arms and blessed little children. There was left a baby Funston many hundreds of miles away in its mother's arms, its eight months of budding into life, not yet having fixed any recollection for the future that it had smiled into the eyes of a proud and loving father. Reported incidents of the general's death include mention that just before he suddenly expired he was playing with a little girl. Together they had paused to catch the wondrous strains of the "Blue Danube," and he had said to the child, "How beautiful it is."

Fred. Funston must have loved the beautiful beyond most men. He showed it throughout a life remarkable in many other ways of worthiness. Full of tenderest sentiment, he was best and brightest and bravest in the manifestation of it. He lived his love of it in adventure abroad and in diversion at home. Nature was beautiful to him in its wildest solitudes amid which alone he daringly trod and lovely around the home rooftree, where the land he fought for burgeoned with the gardens' fruit and flowers and the wide fields' golden harvests. The world kept for his last moments ever unfolding revelations of the beautiful. But nothing was to him lovelier than childhood.

Take him all in all, looking back over his too brief career, crowded with credit enough for a score of men to reach national distinction, the country owes in homage to Fred. Funston a monument of such art out of such marble as will cause all who behold it to think and say in the words he last uttered, "How beautiful it is."

The European War.

EXTENSION OF REMARKS
OF
HON. FRANK BUCHANAN,
OF ILLINOIS,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1917.

Mr. BUCHANAN of Illinois. Mr. Speaker, I shall oppose with every ounce of my ability any proposition tending to plunge this country into war upon the issues that have so far been presented to us as a justification for such a momentous step, and I shall do so because I am convinced that over 90 per cent of the people of the United States are opposed to becoming involved in this horrible conflict, and because I do not propose to betray the confidence the people have reposed in me by doing something that I know is against their will. The hired press sheets, the mouthpieces of the munition traffickers and monopolistic special-privileged interests, have bellowed long and loud of the supposed crimes that have been committed against the American people, and have flourished far and wide their false appeals to the patriotism of the people, but patriotism was ever the last resort of the scoundrel, and, thank God, their contemptible and perfidious methods have not deceived the great masses of the people.

I desire to insert here a letter I received from the Chicago Federation of Labor, an organization of over 300,000 workingmen of Chicago, in which is embodied the sentiment of that organization against war, voiced by a unanimously adopted motion at their meeting, February 18, 1917; also a resolution adopted by the Central Federated Union of New York City, another organization of 300,000 workmen; and one adopted by 4,000 people assembled in mass meeting at Carnegie Hall, New York City, February 5, 1917:

CHICAGO FEDERATION OF LABOR,
Chicago, Ill., February 20, 1917.

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.

DEAR SIR AND BROTHER: At the regular meeting of the Chicago Federation of Labor held Sunday, February 18, 1917, on motion, carried unanimously, the secretary of this Federation of Labor was instructed to send a letter to the President of the United States, Senators LEWIS and SHERMAN, and the Congressmen of Illinois from Cook County, with a request to Congressman BUCHANAN to have same inserted in the CONGRESSIONAL RECORD that the Chicago Federation of Labor is on record as being opposed to war; that we are in sympathy with the principle of bills pending in Congress asking for a referendum vote as to the question of plunging this country into war; and that we most respectfully petition a referendum vote of the people of the United States be held as to whether this country is to take part in the war of Europe.

Thanking you in advance for the consideration of our request, and hoping for favorable action thereon, we beg to remain,

Fraternally yours,

CHICAGO FEDERATION OF LABOR,
E. N. NOCKELS, *Secretary.*

Three hundred thousand trade-unionists of Greater New York expressed themselves, through the Central Federated Union, February 2, as follows:

The Central Federated Union of New York begs you to note well that the metropolitan newspapers in their renewed demand for the participation of our country in the world war do not represent the views of the great mass of the people. The influences controlling the press want war, but the workingmen and women stand unalterably in opposition to entering the shambles.

Resist, Mr. President, the selfish and sinister influences that would plunge our country into the world caldron of murder. This is the plea of the Central Federated Union, representing more than 300,000 wage earners of New York City.

RESOLUTION UNANIMOUSLY ADOPTED BY 4,000 CITIZENS ASSEMBLED IN MASS MEETING AT CARNEGIE HALL, NEW YORK CITY, FEBRUARY 5, 1917.

In view of the expressed desire on the part of both groups of warring nations to retain the friendship of the United States;

And in view of the fact that the losses suffered by this country through the war are not willfully inflicted upon us, but result from the ruthlessness inherent in warfare;

This mass meeting at Carnegie Hall solemnly protests against America entering this war with the immeasurably greater loss involved in blood and treasure; protests against the proposal to send abroad American soldiers pledged by oath to the prosecution of alien quarrels; and protests against the proposed conscription of the youth of

America and against all other encroachment on our traditional rights and liberties, and this meeting enjoins Congress, which has exclusive power to declare war, to submit this declaration by referendum to the people who alone bear its burdens.

This meeting is unwilling that America should abandon her great stand against the conventional dogmas that shame governments to precipitate war and thereby surrender her truly patriotic task of leadership in the cause of the world's peace.

I also desire to insert a number of other telegrams and letters that I have received protesting against any declaration of war without first referring the matter to the people, and with which view I am in complete accord:

TWENTY-EIGHTH WARD REGULAR DEMOCRATIC ORGANIZATION (INC.),
Chicago, February 16, 1917.

Mr. FRANK BUCHANAN,
House of Representatives, Washington, D. C.

DEAR FRIEND: We are more than pleased to see that you are active in trying to keep this country out of an entirely unnecessary and unjustifiable war.

Kindly accept our most sincere thanks; it has been highly deserved.

Hoping that you will continue with your good, noble, and humane efforts, and extending to you our best wishes, we beg to remain,

FRANK T. HUENING, *Secretary.*

—

CHICAGO, ILL., *February 15, 1917.*

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.

SIR: I have just reread your letter of January 13, 1916, to me with the greatest of pleasure. I congratulate you on your position.

Speak against all further preparedness; vote against war. Are we ready to spend $30,000,000 daily, not considering loss of life and limb and destruction to property? Eight hundred millions this week for armaments! Instead of voting millions for armaments and war let the Representatives in Washington devise some means to lower the cost of living. Imagine paying 16 cents a pound for onions, $1 a peck for potatoes, 59 cents for eggs, and 48 cents for butter! It's time we would think of ourselves and our children—our country. Why should we here be made to suffer because Europe is at war? We did not cause her war, although all know that we are now maintaining it.

Stop the export of foodstuffs, at least to Europe, and lower the cost of living.

Yours, very truly,

M. J. ST. GEORGE.

—

CHICAGO, *February 15, 1917.*

Congressman BUCHANAN,
Washington, D. C.

DEAR SIR: I want you to know that as a native-born citizen of Illinois I hope you will not allow the jingo press or President Wilson's faulty judgment of more than a year ago—now insisted on—influence you to vote for war unless much stronger reasons are given.

Very truly, yours,

ALVIN J. BUTZ.

—

153 EAST ERIE STREET,
Chicago, Ill., February 13, 1917.

Hon. Mr. BUCHANAN,
The House of Representatives, Washington, D. C.

MY DEAR MR. BUCHANAN: Let me, as one of your constituents, urge you to use every means in your power to keep this country honorably out of war. Will you not especially lend your support to the resolution that has been introduced providing that before any action is taken committing this country to entry into the European war a popular referendum be taken to ascertain whether the people sanction this policy?

I believe that in this letter I voice the feelings of many men and women who think, as I do, that no technically that has yet arisen justifies the participation of the United States in this war, and that it is the duty of this country, as the most powerful neutral, to strain every nerve to serve the world by maintaining peace.

Very truly, yours,

NATALIE WALKER.

—

MAYWOOD, N. J., *February 17, 1917.*

Hon. FRANK BUCHANAN,
The New Varnum, Washington, D. C.

DEAR SIR: Please be assured of my most positive approval of your expression of sentiment against permitting the President and Mr. Secretary Lansing to usurp the powers of Congress in involving the country in war.

I have to-day written my Congressman to do all in his power to further the favorable consideration of Representative HELGESEN'S resolution that Congress order a referendum to the people of the question as to whether or not we shall declare war.

I expect you to do all you can to keep us out of war.

Very truly, yours,

PAUL BILHUBER.

—

PITTSBURGH, PA., *February 22, 1917.*

Mr. BUCHANAN, M. C.

DEAR SIR: Allow me to congratulate you on your patriotic work in Congress. American lives should not be used to secure safe delivery of munitions in the war zone. The people should have an opportunity to vote on the war issue. At the popular vote the name of the voter should be recorded and after his name how he voted, if for or against. In case of war those having voted for it should be the first to be drafted and sent to the front. The others should not be called upon until those having voted for war are all killed.

Hoping you may have success in keeping this country out of the calamity,

I remain, yours, truly,

C. F. LEMKE,
4621 Center Avenue.

CHICAGO, *February 24, 1917.*

Hon. FRANK BUCHANAN, M. C.,
Washington, D. C.

MY DEAR CONGRESSMAN: It is my sincere impression that the people of this city and county—in fact, the State—do not want war. I have given considerable attention to the people I have come in touch with in the past three weeks and I feel confident that my impression is correct. Let no man delude himself that the people will welcome war.

The continued and persistent publication of news attempting to show that Germany has challenged the United States and is about to attack us should be stopped. I sincerely trust you will see your way to save this country from the greatest of all scourges, war.

With very best wishes and regards, I remain,

Very truly, yours,

MICHAEL F. GIRTEN.

—

4447 IRVING PARK BOULEVARD,
Chicago, Ill., February 12, 1917.

Hon. FRANK BUCHANAN,
House Office Building, Washington, D. C.

MY DEAR SIR: As a member of the working class, I want to voice my sentiment as being one decidedly opposed to war. It would mean the slaughter of the workers or producing class. Why permit Wall Street and manufacturers of munitions of war plunge the real manhood of the world into wholesale murder?

Lest we forget, "Thou shalt not kill."

In the name of humanity.

MRS. MABEL GERMER.

—

CHICAGO, ILL., *February 3, 1917.*

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.:

As an American citizen I must vigorously protest against our country being plunged into war. Let us profit by the costly experience of Europe.

ADOLPH GERMER.

—

CHICAGO, ILL., *February 18, 1917.*

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.:

We, 12,000 citizens of Chicago, assembled in the Coliseum, and with thousands more turned away, believing that not only the lives of our young men and our material wealth but our stores of good will and international sympathy should be treasured, and knowing that if the United States now joins in this world war the lives and property of American citizens will be further endangered and our opportunity for leadership in the establishment of an international organization for the preservation of world peace will be jeopardized, we urge that American citizens and American vessels be warned against entering the war zone; believing also that war should be undertaken only as the expressed and deliberate choice of the people upon whom its burdens will chiefly fall, we urge that the will of the people be ascertained by a referendum vote before a state of war is allowed to develop between this people and any other Government.

GRACE ABBOTT,
Chairman Emergency Antiwar Committee.
FRED A. MOORE,
Chairman Mass Meeting.

—

CHICAGO, ILL., *February 23, 1917.*

FRANK BUCHANAN,
House of Representatives, Washington, D. C.:

Branch 232, Workingmen's Sick and Death Benefit Organization, strongly opposes measures leading to war, in which practically only workers would pay financially and with life. Neither humanity nor right, but money-makers would gain. If dangerous to send food in war zones, keep it here; we need it. We protest emphatically against planned curbing of free speech and free press.

L. BAER, *Secretary.*

—

CHICAGO, ILL., *February 10, 1917.*

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.:

We ask that war be not declared without submitting question to referendum vote as provided in La Follette bill.

NATONAL WOMEN'S TRADE UNION LEAGUE,
EMMA STEGHAGEN, *Secretary.*

—

CHICAGO, ILL., *February 10, 1917.*

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.:

Thousands of Chicago workers assembled in four mass meetings Friday evening, February 9, unanimously went on record against being dragged into the European war. We demand that the United States Government warn all American citizens that those who enter the war zone do so at their own risk. We also demand that the millions of citizens who will have to do the fighting and foot the bills, if we go to war, be given the right to vote on the question whether there should be war.

ROBT. H. HOWE,
Chairman.

—

CHICAGO, ILL., *February 10, 1917.*

Hon. FRANK BUCHANAN,
House of Representatives, Washington, D. C.:

The great majority of the people demand that you keep us out of this —— strictly European war.

Dr. E. F. BAUR.

—

NEW YORK, N. Y., *February 14, 1917.*

Representative BUCHANAN,
Washington, D. C.:

See to-day's New York American editorial. It ought to be read to Congress and put in the RECORD. Are we a republican Government or merely a second edition of the Russian Duma run by the British ambassador? Are we going to repeat the shameful Italian blackhand act by helping our old enemy, the sea pirate, against our oldest friend?

LONESOME AMERICAN.

WASHINGTON, D. C., *February 26, 1917.*

FRANK BUCHANAN,
House Office Building, Washington, D. C.:

Emergency Peace Federation protests against proposal that Congress abdicate any of its constitutional functions. To center in one man tremendous power of virtually waging war is not that new freedom or wider democracy which we were told a few years ago was the goal of the American Nation.

President holds "no one doubts what it is our duty to do"; that "we must defend our commerce and lives of our people."

We assert our rights can not be effectively safeguarded by armed force. We urge all claims for reparation be adjusted as were Alabama claims after the Civil War—by judicial process only. We gratefully recognize patience, courage, and moral wisdom of the President, but we believe he mistakes the temper of those silent masses for whom he desires to speak if he thinks this country is willing to contemplate war or a state of virtual warfare as a solution of our present difficulties.

EMERGENCY PEACE FEDERATION,
LELLA FAYE SECOR, *Secretary.*

As we are not threatened and as there can be no immediate danger of invasion of our country, why not refer the question of becoming involved in this European bloody slaughter to the masses of the people who will bear the burden of the expense entailed, and whose health and lives will be sacrificed if we do become involved?

Undesirable or false patriotism is that which is based upon egomania, mixed with pride, conceit, narrowmindedness, and a general delirium of grandeur, and yet it is asked that the blood of thousands be shed for such patriotism. Anyone who allows his proallyism or his pro-Germanism to influence him more than his pro-Americanism is unwittingly an enemy of his country. The war feeling has been so long present in the human breast that it destroys not only the joy and peace of humanity, but even benumbs the sense of justice.

The United States is the only country with 3,000 miles of water on each side and no powerful nations near; therefore, it has the least excuse for war, the strongest reason for peace, and least cause for running into militarism. The doctrine that "might makes right" is inherently opposed to all that is highest and ideal in life, and is also in the direction of barbarism, slavery, and war. War is a violation of the fundamental principles of Christianity, and to say "we want peace" and then do things that tend toward war, is hypocrisy.

If we must choose between war and peace, the lesser evil is peace, but if we make a mistake, it is better to err on the side of peace, for war is not only a physical hell but a mental hell; it is fear of battle, the dreaded bayonet charge and death; blasted hopes of the wounded, involving great mental torture and a future burden to the Army, the family, and the country; terrible disappointments, anxieties, and sadness of mothers, wives, and sisters at home. All these physical and mental horrors, not to mention atrocities, demonstrate war to be literally hell.

Let us refer this matter to the will of the people, and then, if we should go to war, let us go united and stand firm as a solid phalanx.

Letter From the Remington Arms Plant at Ilion, N. Y., in Regard to Small Arms.

EXTENSION OF REMARKS
OF
HON. HOMER P. SNYDER,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Tuesday, February 27, 1917.

Mr. SNYDER. Mr. Speaker, a few days ago, in discussing the small-arms proposition, I made a statement on information that was given to me with regard to the Remington Arms plant at Ilion, N. Y. I said that the manager, Mr. Haughton, advised me something over a year ago that it would take 60 days to turn the factory over from the manufacture of Lee-Enfield rifles to the Springfield rifle. It seems that there has been some misunderstanding with regard to this, and I herewith put into the RECORD a letter received this morning with regard to the matter, which explains itself:

MY DEAR MR. SNYDER: I have read in the Utica Press of this morning the copy of your speech in Congress last Thursday, which quotes you as saying you were advised by the manager of the Remington Arms plant at Ilion that upon call from the Government they could turn that plant from the Lee-Enfield rifle to the Springfield rifle in 60 days.

I know you were prompted by every desire to set forth only the true facts in the case from both local and patriotic motives, and I well remember having the pleasure of showing you through our plant as well as the great interest you showed in the whole enterprise, but I can not account for your having gained the impression formed that we could turn over from the Lee-Enfield rifle to the Springfield rifle in 60 days. I either did not make the matter clear to you or you misunderstood what I might have said. To manufacture the Springfield even with the machinery which we installed for the Lee-Enfield rifle would require a complete new set of jigs, gauges, fixtures, special cutters, etc., which under favorable conditions would take a year to design and provide, and say six months in addition to turn out rifles in large quantities. I am writing you accordingly in case you may wish to correct a wrong impression.

With kindest regards, I am,
Yours, very truly,

F. A. HAUGHTON,
Works Manager.

The Hon. HOMER P. SNYDER,
House of Representatives, Washington, D. C.

The only further suggestion that I can make with regard to the misunderstanding is that undoubtedly the experience of the manager as well as the manufacturer in the manufacture of these Lee-Enfield rifles for the allies has taught them to be more conservative, and at this period, after two years' or more experience, they undoubtedly have discovered that it is not wise to underestimate necessary time. It is with regret that I publish this missive, due to the fact that I had hoped and believed that my information was correct.

Agricultural Appropriation Bill.

The necessity for Government investigation of the dairies and creameries of the country and proper legislation for the prevention of bovine tuberculosis.

EXTENSION OF REMARKS
OF
HON. J. CHARLES LINTHICUM,
OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1917.

Mr. LINTHICUM. Mr. Speaker, more than eight months have elapsed since I introduced in this House a resolution to provide an investigation of the dairies and creameries of our country. That resolution (H. Res. 137), I regret to say, is still in committee.

I fully appreciate that affairs of the greatest importance, both national and international, have made importunate demands on the time of this body. It has been the duty and the privilege of the Democratic majority to enact constructive legislation, to provide for an adequate defense, to guard and maintain the country's peace, and in addition that party has submitted to the country the record of achievement here written for a verdict by the people, which verdict is that the constructive Democratic Party shall continue in its manifold labors for the Nation's welfare.

Mr. Speaker, it behooves us of the Democratic Party to observe the great victory of our President and our party, not as a ratification of our record but rather as an acceptance by the people of the United States of our solemn promise that we will here highly maintain those principles of constructive legislation to which we stand pledged, that we will steadfastly strive to know the great needs of our country, and, knowing those needs, that we will not hesitate to enact required remedial legislation.

Mr. Speaker, on the 1st day of April of last year I addressed this House on the question of the menace to health in impure and disease-bearing dairy products. At that time I laid before the House as part of my remarks a large amount of evidence which I had collected bearing on the subject of House resolution 137.

I stated to the House that I did not profess to know those facts of my own knowledge, but earnestly besought action on the premises in order that the full facts might be known. The basis of my resolution was the report of the Department of Agriculture for 1912; part of that report is quoted in the preamble of House resolution 137. It has been alleged by opponents of my resolution that a report four years old is too ancient to be of value in arriving at a knowledge of present conditions. It is now my purpose to lay before this House evidence I have collected, all of which bears the year mark A. D. 1916. It is my purpose to again advise this House that while we have remained inactive, the great white plague, tuberculosis, stalks unchallenged through the nurseries of our land, that little children are day by day being inoculated with that dread disease at the hands of their own mothers through the instrumentality of infected, disease-bearing milk and butter. Dirty dairy products constitute a menace to the young life of our Nation.

Conditions have not improved sufficiently since 1912 to warrant the slightest lessening of our grave concern. The Secretary of Agriculture says of the report of 1912:

So far as can now be determined, the report itself is a fair index of conditions existing in the territory surveyed at the time it was issued. The statements are very moderate in the light of the data in the department's files. * * * While it is believed that dairy conditions have improved considerably since the report was issued, it is not thought they have reached a standard of perfection that much can be said on the subject without giving information that would be to some extent unfavorable and objectionable to the interests you represent. (See Exhibit 1.)

Since conditions have not reached the state of perfection where much can be said on the subject without becoming objectionable to the dairy industry, let us see what conditions are.

PRESENT CONDITIONS.

Dr. J. E. Lane-Claypon has published a treatise on "Milk and its Hygienic Relations." This volume is published in London, England, in the year 1916. The scope of the volume is Europe and the United States of America. At page 245 the author states:

Tubercle bacilli: There is no need at the present day to bring forward evidence of bovine tubercle bacilli in milk. Its occurrence in a large number of samples of the general milk supply has been demonstrated beyond reasonable doubt both in this and in other countries. Further there can be no reasonable doubt that such bacilli—of bovine origin—are pathogenic to young children. The findings of both the royal commission on tuberculosis and other observers show that children suffer from disease caused by the tubercle bacilli obtained from cattle, and that the percentage of tubercular disease in children which is caused by the bovine tubercle bacillus is high. On the other hand, the percentage of this disease caused by the bovine tubercle bacillus in adults is very low.

Investigations have shown that the bacilli, when taken in with food, can pass through the walls of the alimentary canal and reach the neighboring glands, where they develop and spread to further parts of the glandular system and to other organs, ultimately causing generalized tuberculosis. It has been shown that the main source of infection by bovine tubercle bacilli must be by means of milk which contains these organisms. The argument that if these organisms are harmless or comparatively so to adults they are not harmful to children, can not be regarded as having any weight. It is well known that children are susceptible to pathogenic influences which leave an adult unaffected.

The author's further conclusions are that fully 50 per cent of children dying from primary abdominal tuberculosis met their death through the bovine tubercle bacillus. That the evidence collected demonstrates milk from tuberculous cows is the infective source of bovine tuberculosis in children. That typhoid fever, scarlet fever, septic sore throat, diphtheria in cases so numerous as to constitute epidemics have been definitely traced to an infected milk supply. Dr. Lane-Claypon gives one remedy for the terrible condition and that is complete pasteurization. (See Exhibit 2.)

Lest my critics—I know I will have them—should object to the great works of Dr. Lane-Claypon as a foreign production, I now call your attention to "Fight for Food," published in 1916 by Leon A. Congdon, M. S., assistant chief food and drug inspector, Kansas State Board of Health.

Congdon states the danger, the present danger, of infection with typhoid fever, diphtheria, septic sore throat, through dirty disease-bearing milk, and of the danger of contracting tuberculosis, through milk supplied by a tubercular herd. He describes specimens of the strainings of milk he has seen, as being "black as tar," and others which contained "all kinds of matter foreign to milk, such as human hair, sand, yarn, flies, manure, alfalfa, cow's hair, dirt," and so forth. I have set out, in Exhibit 3, more fully his findings, and I trust they will be read and considered.

The report of the Bureau of Animal Industry for 1916 is just out. Therein the statement is contained that 10 per cent of our dairy cattle are infected with tuberculosis, and that 9 per cent of the hogs inspected during the past year were found to be so affected; that the cash loss caused thereby is $25,000,000 per annum. The bureau recommends pasteurization of skim milk at the creamery as the most effective check on the spread of tuberculosis among farm animals, and recommends a law to that effect. (See Exhibit 4.) The efficiency of pasteurization at the United States experimental creamery at Grove City, Pa., is shown by Exhibit 5 to be above 99 per cent. Certainly we should have a law requiring pasteurization, but not to save farm animals and $25,000,000 a year. We should have that law to protect the consumers of the milk of those tuberculous cows scattered over the entire country. We ought at once to save the children's lives. We ought to rid ourselves of the reproach that is only too true that we spend millions for the hog and cow and pennies for the babies.

I said that bovine tuberculosis is scattered throughout our country. As proof of that statement, I refer you to Exhibit 6, taken from "Diseases of Cattle," Department of Agriculture, 1916. See the table therein contained, showing actual tests for tuberculosis and see what was found. Twelve per cent in Illinois, 13.8 per cent in Iowa, 21.4 per cent in New Jersey, 50 per cent in Massachusetts, and varying percentages in other States. These are the figures from the 1916 report. The fact is shown that in beef cattle tuberculosis has increased considerably in recent years.

Now follow me further, to Exhibit 7, and read where the Department of Agriculture in 1916 says:

When we consider, therefore, the extent of tuberculosis and the hidden character of the disease, a certain degree of suspicion rests upon all milk.

There is little doubt remaining in the minds of bacteriologists on the question of transformation of the bovine-tubercle bacillus into the human type. The best and most modern investigations are set out in Diseases of Cattle, Department of Agriculture, 1916, where Dr. Theobald Smith, who is head of the Bureau of Animal Pathology of the Rockefeller Foundation, said that bovine tuberculosis may be transmitted to young children, while a great number of investigators have found that bovine and human tubercle bacilli are practically transmutable. (See Exhibit 8.)

The annual report of the Bureau of Animal Industry for 1916 shows 252,686 cattle and hogs were condemned at meat-inspection plants for all causes, and that of this number 111,194 were condemned for tuberculosis.

That is, 43.9 per cent of the condemned animals were tuberculous.

Turning from these technical and official reports to the papers published in the interests of the dairy and creamery industry, let me call your attention to an editorial in the Butter, Cheese, and Egg Journal of Chicago, of August 23, 1916. (Exhibit 9.) Read the statement that the cream shipped any distance was "in the most deplorable and revolting condition imaginable," and suggest for those who insist that conditions are all right a diet of the cream such as was being transported and manufactured during the past summer. Follow that fearless editorial by referring to the report of the address of Dr. H. L. Russell, dean of the Wisconsin College of Agriculture, before the annual convention of the Wisconsin Bankers' Association, published in Hoard's Dairyman of November 24, 1916 (Exhibit 10), and see where in the old and populous dairy district of Wisconsin 9 per cent of the dairy cows tested were proved to be tuberculous. Hoard's Dairyman of November 24, 1916, follows Dr. Russell's address with an editorial on the need of a tubercular-test law (Exhibit 11), which suggestion falls far short of being sufficient to meet the terrible condition now confronting us. Certainly we need a tubercular-test law to find the tuberculous cows in our dairies, but we must not stop short of killing those cows found tuberculous and of enforcing decency in the handling of dairy and creamery products.

The American Food Journal, November, 1916, believes the butter makers are beginning to see the light (see Exhibit 12), and expresses a belief that pasteurization is sure to come; but in the same number, November, 1916, there is published part of a report by Dr. Charles F. Whitney, of the Vermont State laboratory, wherein butter is charged as being the source of tuberculous infection; that bovine tubercle bacilli live for months in butter, and the doctor states:

We must blame only ourselves if we daily ingest a food known to contain the living virulent germs of tuberculosis.

(See Exhibit 13.)

The year 1916 has added another fatal disease to the already long list of milk-borne diseases. On September 12, 1916, there was printed in the New York Herald a letter from Nathan Straus to Surg. Gen. Rupert Blue, in which Mr. Straus called attention to the fact that not one of the 2,500 babies fed on Straus pasteurized milk had contracted infantile paralysis, although the 2,500 babies were in the worst infected district in New York. Mr. Straus called attention to the situation, which is too startling to be a coincidence. It is also well known that the milk most generally sold in New York City is dipped milk; that is, not bottled, but open to all sorts of infection.

Mr. Straus's letter stirred great interest and some opposition. On October 16, 1916, the Washington Post, of this city, published a half column under the head "Finds paralysis germ," in which the statement is flatly made that the germ infantile paralysis is carried in milk or water. (See Exhibit 14.)

The two incidents taken together point to milk as being the source of infection, for where pasteurized milk was given the Straus-fed babies the water failed to infect a single child.

Mr. Speaker, that is the 1916 condition with respect to bovine tuberculosis and disease-carrying dairy products. These papers, documents, and treaties are hardly cold from the press. You have now what I believe to be an accurate statement of present dangerous conditions. No man can read the Exhibits 1 to 14, to which I have referred, without forming a profound conviction that our dairy products are a menace to the public health.

INSANITARY METHODS.

I now call to your attention an almost unspeakably dirty practice in judging tub butter. It is a practice which has long been engaged in and still prevails. In this practice the sampler plunges the trier into a tub of butter, brings it forth holding a long and narrow piece of butter from the heart of the tub. Into this butter the sampler sets his teeth, bites out a segment, mouths it over, runs his fingers along the butter to guess the grain, and runs his nose along the trier on the butter to get an idea of the class or grade of the butter. He then returns to the tub the tooth-marked, nose-marked, saliva-bearing segment of befouled butter. He passes on his teeth marks to the ultimate consumer and his nasal diseases to the ultimate consumer's children. This revolting practice is more fully described in the Butter, Cheese, and Egg Journal of September 13, 1916 (Exhibit 15); the Chicago Dairy Produce of October 24, 1916 (Exhibit 16); the New York Produce Review and American Creamery of September 20, 1916 (Exhibit 17); and in the last-named paper on October 11, 1916 (Exhibit 18).

It is shown that the Department of Agriculture stopped its employees from using this dirty method, but that the method I have in part described is still in vogue. When we put the production of dairy products under Federal inspection we will see the end of such degrading practices as now exist in the dairy and creamery industry, but not until then can we expect relief.

Not only is a large part of milk and butter actively carrying disease, not only are both handled in from careless to filthy fashion, but we are still paying for the water incorporated by mechanical means into market butter. Read Exhibit 19, wherein State Dairy and Food Commissioner Helm, of Michigan, tells of the practice of manipulation by large creameries to the extent that they were putting out a butter emulsion containing 25 per cent water. Read the clipping from the Chicago Dairy Produce of December 12, 1916 (Exhibit 20), telling of butter, or stuff which was sold as butter, containing 50 per cent water.

Read Exhibit 21, quoted from the last annual report of the Commissioner of Internal Revenue, containing the number of manufacturers, dealers, and retailers convicted for selling butter containing 30 to 50 per cent moisture. Water, however, is not the worst thing that finds its way into butter, far worse is the neutralizer used to renovate decomposed cream. H. D. Wendt describes the typical can of rotten cream in the Butter, Cheese, and Egg Journal of September 6, 1916. (See Exhibit 22.) Now and then some one has the temerity to propose wiping out the use of neutralizers. We all know its use is utterly needless, and that cream so rotten and so putrid is forever unfit for food, but it is only once in a considerable time that anyone advocates the prohibition of neutralizer. This, however, is done by D. E. Doner, in Chicago Dairy Produce of November 28, 1916. (See Exhibit 23.) That suggestion is from a butter maker of 25 years standing. He knows conditions from experience and tells us conditions have been growing steadily worse for 10 years past, and that most of the butter made in the West and Middle West is made from neutralized cream and that such butter is not fit for food. Directly opposed to Mr. Doner's suggestions is Prof. G. L. McKay, secretary of the American Manufacturers of Creamery Butter. He would use sodium hypochloride to prevent mold. This same Mr. McKay has—according to Exhibit 24—recommended other chemicals heretofore, and it is as the Butter, Cheese, and Egg Journal of September 6, 1916, states, "A cow would not recognize her own product."

With the present conditions confronting the public, with 10 per cent of dairy cows tuberculous, with a proven disease-carrying agent in unpasteurized milk and butter, with filthy practices in handling, and with the use of chemicals advocated in place of clean methods. In the face of all this, what does the National Dairy Council do? They are raising a fund of $750,000 to advertise milk, butter, cheese, and ice cream. (See Exhibit 25.) The council wants more of its product consumed by the American people—and they are spending their contributions to accomplish this proud end.

Mr. Speaker, I would not leave the impression that there are none in the dairy and creamery industry who are working toward better conditions, for that would be a false impression. Since last April one State—Indiana—has put pasteurization into compulsory effect. (See Exhibit 29.) One other State—California—has passed a law requiring pasteurization, but that law seems to be noneffective. (See Exhibits 26 and 27.) Wisconsin is working under a State license law, which law President Morrison, of the Wisconsin Butter Makers' Association, said, on December 5, 1916, had failed to improve the quality of the butter. (See Exhibit 28.)

Michigan has in effect a State brand (see Exhibits 30 and 31) which can be used if conditions are met, and the conditions laid down are practically perfect, and if complied with throughout all the States would immediately restore the creamery industry to its former high place in the public regard. Nothing, let me say in passing, will ever rehabilitate the dairy industry until our 2,000,000 tuberculous cows are exterminated.

Mr. Speaker, the greatest of the creamery associations now realize the need of pasteurization. Read the resolutions of the National Association of Creamery Butter Makers, passed at their annual convention at Minneapolis, Minn., November 14 to 16, 1916, wherein they reaffirm their stand on pasteurization. (See Exhibit 32.)

The New York State Dairymen's League believe in pasteurization of skim milk when it is to be used as food for live stock (see Exhibit 33), while the Wisconsin Butter Makers' Association, at Sparta, Wis., on December 5, 1916, asks that butter made from neutralized cream be so branded when offered for sale. (See Exhibit 34.)

The Pennsylvania Legislature is to have a bill before it from the State department of agriculture covering all food products. (See Exhibit 35.)

Yet with all this striving is the public any better off? Are consumers assured of better conditions? If one State like Indiana enforces pasteurization, or another State like Minnesota gains a reputation for cleanliness and high-grade product, is this any guarantee against the State where tuberculosis is rampant and unchecked? Is it any safeguard against vile practices in sampling Minnesota high-grade butter? Does it relieve us in any way from decomposed cream, neutralized, regenerated, renovated cream, or decayed butter made over in great centralizers? I say it does not, and every Member of this House who gives due thought to the condition I have presented must agree with me.

Is there, then, a remedy? I say yes. Compulsory pasteurization of all dairy and creamery products going into interstate commerce will correct most of the evils now existing. J. J. Bruner, of Iowa, and Prof. H. A. Harding, of the University of Illinois, made addresses before the last annual gathering of the National Creamery Butter Makers' Association at Minneapolis, Minn., November 14 to 16, 1916. These addresses, entitled "Pasteurization of cream" and "Butter healthfulness," are marked Exhibits 36 and 37, respectively, and are worthy the most careful perusal by all Members of this House.

The question has been raised in this House and elsewhere as to the cost in dollars of freeing our herds of tuberculosis. The assertion has been made that the cost of eliminating the 2,000,000 tuberculous dairy cows is so great as to be beyond the reach and beyond the financial capacity of the Nation. That assertion is based on the utterly false and unsound idea that the tuberculous dairy cow will be killed where found and there burned, as was done with infected cattle in stamping out anthrax and the foot-and-mouth disease. Nothing of the kind need be done with the tuberculous dairy cow. What now becomes of our tuberculous cows?

When for any reason a cow fails longer to make her keep she is shipped to the nearest packing plant. There by United States inspectors two inspections, ante mortem and post-mortem, are made. If under these inspections the cow shows generalized tuberculosis, she goes to the rendering works to be made into fertilizer.

That is what becomes of the tuberculous cow, and therein we have the measure of value of that cow. That value is what she will bring in a United States inspected slaughterhouse. That value is the measure of damages which should be paid to the owner of the animal. The sooner she goes to the killing pen the more she will bring. The ultimate destination of every tuberculous cow in this country is the rendering vat. Fertilizer, grease, and leather is all she is fit for, and the day will come, and it is not far distant, when the hides of our 2,000,000 disease-spreading bovine pests will be adorning the racks of the tanyards, and when that day comes there will be 6,000 less funerals of small children for the parents of this country to attend in each succeeding year.

Let the United States then pay to the owner of the diseased cow all she is worth and let the United States get back this outlay from the sale of the carcass. It will not cost the United States a single dollar.

I confidently assert that tuberculosis can be absolutely eradicated from our herds in from 5 to 10 years at not only no loss to the owners of the diseased stock but at an absolute profit to them of millions of dollars, while to the Government there will be no cost other than the cost of administration. In this period we will stop the spread of the disease by pasteurization, and above all we will stop the annual death toll among the children.

The loss now in children's lives is over 6,000 per annum; the loss to dairy and cattlemen is over $25,000,000 per annum. Is not this loss in lives and money sufficient to require action by this House?

For a full and complete remedy for present conditions, I hope to see:

First. Pasteurization of dairy and creamery products going into interstate commerce.

Second. A compulsory tuberculin-test law providing for the identification and extermination of tuberculous or otherwise diseased animals with compensation to their owners.

Third. Compulsory sanitation and Federal license of all dairies, creameries, and centralizers doing any interstate business.

Fourth. Compulsory sanitation in handling, storing, and marketing interstate dairy and creamery products.

Fifth. Permissive license of dairies and creameries doing an exclusive intrastate business to enable them to gain and claim the high standard required by interstate dairy and creamery products.

Sixth. A United States brand for milk, cream, cheese, ice cream, and butter that will guarantee their wholesomeness.

But prior to this legislation, Mr. Speaker, should come action on my resolution (H. Res. 137). An investigation should be made by a committee of this House and the needed legislation should be drafted by that committee.

EXHIBIT 1.

[From the New York Produce Review and American Creamery, Aug. 23, 1916, p. 678.]

ATTITUDE OF DEPARTMENT OF AGRICULTURE.

Hoard's Dairyman prints a letter from Secretary of Agriculture D. F. Houston to Secretary Creasy of National Dairy Union, commenting upon the resolutions adopted by the representatives of the dairy industry when assembled at Washington last May. The Secretary of Agriculture seems to find little in those resolutions that can inspire any change in administration. He announces a decision to appoint an advisory committee on live-stock sanitary affairs to be constituted of the chiefs of the Bureau of Animal Industry and of the divisions of animal husbandry, dairy, field inspections, and quarantine; but the Secretary gives no intimation that the committee he will form shall have any scope beyond the dealing with animal diseases. And as to the work of any commission to form uniform rules and regulations, such as was urged by the resolutions, the Secretary is of opinion that no action should be taken by the department until Congress has given some expression of judgment on bills now before it providing for investigation and the appointment of a commission to make rules. The Secretary says:

"I can not regard it as a just policy that the producer should dominate the Government's work dealing with his industry, making the consumer's welfare dependent upon those whose financial interests may often lean in a contrary direction."

The request to reorganize the Bureau of Animal Industry by placing its present work under three separate divisions, is met by the statement that the Secretary has no power to do this and would consider it highly unwise if he had. He says: "Past experience in the department has shown that it is unwise to have separate branches, independent of each other, dealing with closely related problems." He states also that, contrary to the intimation contained in the preamble to the resolution, all of the varied activities of the Bureau of Animal Industry have been specifically authorized by Congress.

The resolutions in respect to dealing with tuberculosis are met by a recapitulation of the activities of the bureau in this field and suggestions as to extension of these activities, in which the need of some plan of reimbursement for cattle destroyed is recognized if cooperation of cattle owners is to be expected.

Respecting the report of 1912 on the dairy and creamery industry, so severely condemned in the resolutions, the Secretary says:

"So far as can now be determined, the report itself is a fair index of conditions existing in the territory surveyed at the time it was issued. The statements are very moderate in the light of the data in the department's files. This information was collected by the dairy division staff, by men who were identified with and friendly to the dairy industry. It is unfortunate if this report, issued in 1912, has been distorted or misrepresented or made to appear applicable to existing conditions and necessarily to sections other than those involved in the survey. But I do not see how explanations could be made without repeating to a considerable extent what was said in the report. While it is believed that dairy conditions have improved considerably since the report was issued, it is not thought that they have yet reached a standard of perfection that much can be said on the subject, without giving information that would still be to some extent unfavorable and objectionable to the interests that you represent."

In this connection a letter from Assistant Secretary of Agriculture Carl Vrooman, dealing with the same subject, is of interest. This letter is sent to the dairy press by Secretary Creasy, of National Dairy Union, under the caption "A stinging rebuke," which would seem to be something of an exaggeration when the attitude of the head of the department is considered. True, Mr. Vrooman deplores the use of this 1912 report in the Linthicum resolution, calls attention to the smallness of the basis for its conclusions, and declares that the Federal Department of Agriculture is completely out of sympathy with current "misunderstandings and misinterpretations" of the 1912 report. He also declares that that report does not mean to say that the dairy industry is on a lower level of purity and cleanliness than the other industries of the country, but he seems to think "misunderstanding" of the report more to be condemned than any actual fallacy in the report itself, and when Secretary Houston says its "statements are very moderate in the light of data in the department's files," it is difficult to see any "stinging rebuke" to the most exaggerated use that has been made of this mooted report.

EXHIBIT 2.

The following is taken from a technical treatise published in London, England, in 1916. It is too voluminous to quote in full, but reference is made to the following important statements:

MILK AND ITS HYGIENIC RELATIONS.

[By Dr. J. E. Lane-Claypon, p. 250.]

The general prevalence of tubercle bacilli in milk samples in certain large cities: The incidence of tubercle bacilli in milk samples has been investigated in the milk supply of a number of cities, and the results have been published. It is not necessary to examine a large number of the results obtained in the course of such inquiries, since the prevalence of bovine tuberculosis in one country does not afford any guide as as to the prevalence of tuberculosis in another. Only a few inquiries, therefore, will be considered.

The medical officer of the health of London County Council has reported upon the prevalence of tubercle bacilli in milk samples which have been examined under the auspices of this council. He states that between the date of the coming into force of the L. C. C. general powers act of 1907 and December, 1913, 13,321 samples of milk forwarded from places outside of the county had been examined for the prescence of tubercle bacilli. Of these, 1,323 samples, or 9.9 per cent, had been found to contain tubercle bacilli, as shown by the inoculation of guinea pigs. During the year 1913, 2,900 samples had been examined. Of these the examination of 2,682 were completed at the time of writing his report, of which 251, or 9.3 per cent, had been shown to contain tubercle bacilli.

The presence of tubercle bacilli has been investigated on several occasions in the market milk of New York. In 1909 Hess found the incidence of tubercle bacilli to be about 16 per cent of all the samples examined by him, and in 1912 and 1913 Grund and Wilcox found that 9 out of 78 samples of milk contained, or 11.5 per cent were positive.

Eastwood, in his investigations on the American milk supply obtained figures relating to the number of infected cows in north Wisconsin in the years 1905 to 1908. Out of the 23,351 cows tested with tuberculin, 781, or 3.5 per cent of all investigated, showed a positive reaction. These cows belonged to 1,586 different herds, of which number 88, or 17 per cent of all the herds, contained infected cows. In the southern part of Wisconsin State, which had been settled for a longer period than the other parts and which has a denser population, 43,176 cows had been examined. Of these animals, 4,570, or 10.5 per cent, gave a positive reaction. The cows belonged to 2,164 different herds, of which 941, or 43.4 per cent of all the herds, contained infected animals.

The difference in the rate of incidence of tuberculosis in the cattle of the two portions of the State is very striking.

Campbell, in 1909, investigated the presence of tubercle bacilli in the general milk supply of Philadelphia. He took 130 samples of market milk and found that 18 contained tubercle bacilli. Seven of the inoculated guinea pigs died before they could be examined for tuberculosis, but excluding these the percentage of positive samples was 13.8 per cent. Samples of milk sold as pasteurized milk were also examined, and of these 8.3 per cent gave positive results.

Delepine, dealing with the milk supply of Manchester between the years 1897 and 1913, examined 7,681 samples of milk, of which 671 were found to contain tubercle bacilli, or 8.7 per cent of the total. The figures given show that there had been a considerable fall in the per cent of positive samples since the commencement of the investigation, the percentage for the first two years having been 17.2.

These figures apply only to the milk samples and do not give any indication of the number of individual cows giving tuberculous milk. Delepine points out that one cow giving tuberculous milk can infect a much greater quantity than her own when the milk of several cows is mixed together. In one experiment he took some milk from a cow whose udder was in the state of advanced tuberculous mastitis, and diluted it with various quantities of cow's milk which contained no tubercle bacilli. The mixed milk of the various dilutions was inoculated into different guinea pigs, and the result showed that one part of the tuberculous milk was capable of infecting 100,000 parts of nontuberculous milk. Delepine adds that had the dilution been pushed further it is probable that the milk would have been found capable of infecting 1,000,000 parts of nontuberculous milk.

Page 253. On the infectivity of tuberculous milk:

It has been known for a number of years that certain differences exist between the tubercle bacilli found in cattle and those found in the human species. These have been fully investigated, and for further details anyone interested is referred to the report of the Royal Commission on Tuberculosis. The essential point is the presence of bovine tubercle bacilli in lesions in the human subject. The most extensive observations have been carried out by the workers for the royal commission, and it will be of interest to quote sentences from the report made by the commission. After dealing with the investigations which were conducted upon 108 cases of human tuberculosis in persons of various ages the commissioners say: "Of the total 108 cases of human tuberculosis investigated, 84 yielded human tubercle bacilli, only 19 yielded bovine tubercle bacilli, and 5 both bovine and human tubercle bacilli. Although the bovine tubercle bacilli may, as it appears, be solely responsible for certain cases of pulmonary tuberculosis, and though it may be present with the human tubercle bacillus in the bronchial glands, it is evident from the data recorded that the majority of cases in which the bovine tubercle bacillus is the infective agent in the human being are cases of alimentary tuberculosis. Such are cases of cervical glands and primary abdominal tuberculosis. In the latter class of cases at least the tubercle bacillus has unquestionably been swallowed.

The percentage of these cases of alimentary tuberculosis due to the bovine tubercle bacillus is very large. The percentage appears to be about 50 per cent.

It is not necessary to bring forward evidence to show that bovine tubercle bacilli affect your children rather than adults. The prevalence of gland infection in children and of pulmonary infection in adults is a matter of common medical knowledge.

Dealing further with this subject, the commissioners state: "Of young children dying from primary abdominal tuberculosis, the fatal lesions could in nearly one-half of the cases be referred to the bovine bacillus, and to that type alone. In children, too, and often also in adolescents, suffering from cervical gland tuberculosis, a large proportion of the cases examined by us could be referred to the bovine tubercle bacillus. * * * Whatever, therefore, may be the animal source of tuberculosis in adolescents and in adult man, there can be no doubt that a considerable proportion of the tuberculosis affecting children is of bovine origin, more particularly that which affects primarily the

abdominal organs and the cervical glands. And, further, there can be no doubt that primary abdominal tuberculosis, as well as tuberculosis of the cervical glands, is commonly due to ingestion of tuberculous infective material. Judging by our feeding experiments, there would appear to be strong presumption that as regards most animals comparatively large doses, given either singly or by frequent repetition, are necessary to produce by ingestion acute progressive generalized tuberculosis, though we have recorded instances in which a very small dose administered but once has produced this result. Applying a like presumption to man—and our observations on the monkey and the chimpanzee afford warrant for so doing—it may be asked in what way are children, members of the human family who are especially liable to exhibit acute fatal tuberculosis commencing as an abdominal affection, most likely to obtain a large and fatally infective dose of tubercle bacilli? As already indicated by us, to this question there can be but one answer, namely, that the evidence which we have accumulated goes to demonstrate that a considerable amount of the tuberculosis of childhood is to be ascribed to infection with bacilli of the bovine type transmitted to the children in meals consisting largely of the milk of the cow."

Investigations, together with summaries of other cases investigated by different authors, have been prepared by Park and Krumwiede. These authors have worked up the percentage of bovine infection occurring in children who were found to be affected with tubercle, causing their death, or who had died from other causes, and were found post mortem to contain also tuberculosis lesions. The authors state: "In our series of nonselected fatal cases under 5 years of age bovine infection constituted 12½ per cent. We had nine cases under 6 years of age who were exclusively cow's milk fed, from a foundling asylum. Of these, five were bovine infections. If the fatal cases in this series are deducted from the total cases the bovine infections comprise about 10 per cent. In a nonselected series of fatal cases from the babies' hospital 6¾ per cent were due to bovine infection. Where other investigators have reported nonselected cases the percentages came close to these figures. On the whole, bovine infection caused somewhat less than 10 per cent of the total deaths in young children."

Stiles, in dealing with the question, reviewed some of the work of the observers already mentioned and urged the necessity for attention being directed toward the stamping out of bovine tuberculosis. He considered that if measures were energetically carried through the amount of surgical tuberculosis in children would rapidly diminish. He adds: "I maintain, however, that until such legislation has been in force for some time it is the duty of the medical profession to insist on the boiling of all milk given to children. Prof. Von Pirquet, one of the greatest authorities on tuberculosis in Vienna, states that practically all of the surgical tuberculosis which is met with in children in that city is due to the human bacillus. This statement would at first sight appear to throw doubt upon the reliability of the Edinburgh investigations, but when Prof. Von Pirquet assures us that the whole of the milk of Vienna is boiled we can quite understand why surgical tuberculosis in that city is never of bovine origin.

The work above recorded affords indubitable evidence as to the infection of children by the bovine tubercle bacillus through the alimentary canal.

ON MILK-BORNE EPIDEMICS.

[Page 259.]

For the most part these epidemics have been in the nature of sore throats varying greatly in intensity. Some diphtheria epidemics have also occurred. In some cases the symptoms have been of an extremely severe type, and although the sore throat was the primary symptom this has been succeeded by serious secondary troubles, leading in many cases to death.

Serious epidemics of sore throats, due to streptococci in the milk occurred in America in the year 1911–12.

Hamburger describes an epidemic in Baltimore. The milk concerned in the production of the epidemic all came from one dairy which collected milk from many farms. The milk had been pasteurized at the dairy by the flash method, i. e., just raised to 160° F. Subsequently it was held at a temperature of 145° F for from 20 minutes to half an hour. When the dairy raised the temperature of the pasteurization and the customers were advised to boil the milk, the epidemic subsided, although a few stray cases occurred, apparently by infection by one person to another. Investigation showed that in the few days preceding the outbreak of the epidemic pasteurization had been omitted.

Capps and Miller investigated an outbreak of sore throats due to streptococcal infection of the milk supply. The epidemic presented features of considerable interest and involved about 10,000 cases, which is considered to be a conservative estimate. A number of deaths occurred as the result of the infection. The outbreak was divided into two parts: The first part occurred September 1, rising in intensity to the 25th, when it rapidly subsided. The second outbreak of cases, which was not so numerous, occurred on January 1 and 2, with a slight interruption from the 10th to the 17th of this month. The epidemic was worse in some parts of the city than in others, and was bad in the village of Batavia, which lies just outside of Chicago. The source of infection was traced to a dairy whose pasteurizing plant was in Batavia. It was found that a few days before each of the outbreaks there had been serious defects in the pasteurization, which had been especially bad on December 17 and December 19. The milk appears to have been consumed two or three days after pasteurization and the incubation period to have been about four days. An interesting point arises in the fact that at one of the childrens' hospitals which was supplied with milk from this dairy, the children did not suffer at all, although the nursing and medical staff suffered severely. Investigation showed that the milk supply for the children was delivered raw and pasteurized in the hospital before being given to the children, while the milk supply for the staff was obtained direct from the dairy, where it was supposed to have been pasteurized and did not undergo any further heating. Investigation on the farms which supplied milk to the dairy showed that there had been an unusual number of cases both of mastitis in the cows and of sore throat in several of the persons on the farms supplying the milk to the dairy. Samples of milk supplied from the farms were found to contain pus and streptococci.

Epidemics of scarlet fever and typhoid fever have been traced to infection from the milk supply in a number of cases. Such infection usually occurs from the presence of the organisms in one of the milkers or in one of the inhabitants at the farm. Cases are given both by Savage and Trask, and others have occurred in recent years. Thus Meader reports an outbreak of 139 cases of scarlet fever and 282 cases of sore throat, which may have been a mild form of the disease. The source of the infection was traced to one of the milkers, and the large number of cases arose from the fact that the contaminated milk was mixed with a large volume of other milk.

These epidemics occur in spite of all observances of apparently adequate precautions. Pathogenic streptococci have been shown above to occur in "certified" milk. Winslow, in describing the severe epidemic of tonsillitis which occurred in Boston, Mass., in 1911 and 1912, says:

"I am at a loss to suggest any other precautions that could have been taken to guard against infection with human germs of disease that were not taken in this instance. Excellent regulations were drawn up for the exclusion of contagion, the milkers and the cattle carefully inspected, the dairy was admirably arranged, and the whole process controlled by laboratory examinations under the directions of bacteriologists and sanitarians of the highest standing. If, in spite of such precautions, the milk becomes infected, any raw-milk supply may at any time become infected; and this I believe to be the lesson not only of this outbreak but of many that have preceded it in all parts of the world. It is practically impossible to exclude mild and unrecognized cases of disease in the process of milk production. The larger the supply the greater, of course, is the danger; but even a small supply must meet it at some time. Thus, a cough over the pail, a finger inside the can as it is lifted, and the danger is imminent. There is, in my judgment, but one safeguard against such outbreaks—proper pasteurization."

EXHIBIT 3.

FIGHT FOR FOOD.

[By Leon A. Congdon, M. S. Extract from Milk and Its Importance to the Public Health, ch. 6, p. 66.]

Outbreaks of typhoid fever, diphtheria, scarlatina, septic sore throat, etc., have definitely been traced to infected milk supply. In order to obtain disease from milk the germ of these diseases must come in contact with the milk, either by a direct or indirect route. Typhoid fever can never be contracted unless some of the excreta from patients having the disease enters our body. In a number of cases this is accomplished by the water supply becoming polluted by excreta from the outhouse or privy which drains into well or spring. The polluted water is used in rinsing milk utensils and hence infects the milk supply. Also some unscrupulous dealers who water the milk to make the supply go farther sometimes infect dozens of families with typhoid fever by means of the sometimes polluted water which they use as an adulterant, to say nothing of the robbing of the milk of its food value.

Diphtheria and scarlatina are sometimes contracted through milk supply by the direct route—by means of persons having the disease. There is such a thing as a healthy disease carrier, especially in these two diseases mentioned. The person having diphtheria germs in his throat may be immune to the disease himself, but coughing or sneezing throws the diphtheria germ into the milk, and it grows with great rapidity.

The ulcerated udder of a cow infected scores of persons with septic sore throat in a certain New York State town. The septic sore-throat epidemic was centered along the route of a certain dairyman. The sanitarian went to the dairy and by examining the milk from each cow finally found the cow with the ulcerated udder. After eliminating this cow and sterilizing all utensils, the epidemic of septic sore throat ceased to spread.

There is the lurking danger of contracting tuberculosis through milk that is supplied by a tubercular herd of cows—especially is this true in regard to such infected milk being supplied to babies.

* * * * * * *

There should be no sediment in milk supplied to the consumer. It is a menace to health to find sediment or dirt in milk, since such may bring with it countless numbers of undesirable germs or other organisms. I have seen specimens of the strainings of pint samples of milk which were nearly as black as tar. Other pint samples of milk strainings showed the presence of all kinds of matter foreign to milk, such as human hair, sand, yarn, flies, manure, alfalfa, and other feeding stuffs, pieces of metal from the cans or utensils, cow's hair, dirt, and in some cases pieces of gravel. This indicates careless handling of the milk, and we do not want to trust our health to anyone who handles milk in such a manner, since milk may be prone to undesirable organisms that may upset our health.

EXHIBIT 4.

[Annual Report of the Bureau of Animal Industry for 1916, p. 6.]

THE TUBERCULOSIS PROBLEM.

A practicable and effective method of eradicating tuberculosis of live stock is greatly to be desired. This is a problem to which the bureau has given much study. The protection of human health against tuberculosis from animal sources may be reasonably assured by the pasteurization of milk and the inspection of meats. But there remains the economic problem of eliminating the heavy and increasing losses due to the insidious spread of this disease among farm animals.

Cattle and hogs are the most susceptible species and the only ones that need to be considered. There is abundant evidence of the wide prevalence of tuberculosis among these animals. Statistics of tuberculin testing indicate that on an average over 10 per cent of the dairy cattle in the United States are affected with tuberculosis, and in the Federal meat inspection 2½ per cent of the beef cattle and 9 per cent of the hogs inspected during the past fiscal year were found to be so affected. The annual losses directly caused by this disease are estimated at $25,000,000. In the face of growing demands and higher prices for food products the Nation can not afford to ignore indefinitely such an enormous leakage in its meat and milk supplies.

The most practicable avenues of approach to the problem of tuberculosis eradication seems to be through the pure-bred herds of breeding cattle and the feeding of hogs. This means simply the application of the old principle of purifying the stream at its source. Many herds of fine pedigreed cattle have harbored tuberculosis, and many a stock raiser wishing to improve his stock has instead brought disaster to himself by the introduction of tuberculous pure-bred animals into his herd.

Hogs, because of the early age at which they are slaughtered, do not propagate the disease among their own kind to any appreciable extent, but acquire it from cattle either by drinking infected milk or by following cattle in the feed lot and feeding upon the undigested grain in the droppings. Raw skim milk returned from creameries to patrons and fed to pigs is a prolific source of the disease in swine. The milk from many herds is mixed at the creamery, and if even one lot has the germs of tuberculosis in it the entire quantity may become

infected. The remedy for this is simple—merely to pasteurize all the skim milk before allowing it to leave the creamery. This should be required by law.

The elimination of tuberculosis from the pure-bred herds should be accomplished gradually by utilizing the tuberculin test in conjunction with other appropriate measures. In any event the cooperation of the Federal and State Governments and individual breeders will be necessary. One of the first steps should be to spread among the people concerned a knowledge of the facts as to the nature of tuberculosis, how it is spread, and how it may be prevented.

[Diseases of Cattle, Department of Agriculture, 1916. Page 408.]

TUBERCULOSIS.

Figures available in the United States do not cover a sufficient area of our territory to allow us to make a reliable estimate of the extent of tuberculosis with milch cows. There is little doubt, however, but that the disease has been increasing both with dairy cattle and hogs. From a review by Russell and Hastings, of the Wisconsin Agricultural Experiment Station, of tests of cattle for tuberculosis which have been made in the United States the following summary is presented:

Statistics of tests for tuberculosis in the United States.

State.	Number tested.	Number tuberculous.	Per cent tuberculous.
Vermont	60,000	2,390	3.9
Massachusetts	24,685	12,443	50.0
Massachusetts, entire herds	4,093	1,080	26.4
Connecticut	6,300	.....	14.2
New York, 1894	947	66	6.9
New York, 1897–8	1,200	163	18.4
Pennsylvania	34,000	4,800	14.1
New Jersey	25,000	.....	21.4
Illinois, 1897–8	929	.....	12.0
Illinois, 1899	3,655	560	15.32
Michigan	.....	.....	13.0
Minnesota	3,430	.....	11.1
Iowa	873	122	13.8
Wisconsin:			
Experiment station tests—			
Suspected herds	323	115	35.6
Nonsuspected herds	935	84	9.0
State veterinarian's tests—			
Suspected herds	588	191	32.5
Tests of local veterinarians under State veterinarian of cattle intended for shipment to States requiring tuberculin certificate	3,421	76	2.2

Reports of tuberculin tests made on 400,000 cattle in the United States during the years 1893 to 1908 by Federal, State, and other officers, with tuberculin prepared by the Bureau of Animal Industry, show 37,008 reactions, or 9.25 per cent. These were mostly dairy cattle, and in some cases herds were suspected of being diseased.

All cattle in the District of Columbia, numbering 1,701, were tested with tuberculin in 1909–10, and 18.87 per cent reacted. In 1909–11 herds in Maryland and Virginia, supplying milk to the District of Columbia, were tested, with 19.03 and 15.38 per cent of reactions, respectively, among 4,501 cattle.

The beef cattle of the United States show a much smaller proportion of the disease than dairy cattle, though the percentage of cattle found tuberculous in the Government meat-inspection service has increased considerably in recent years. This increase is due partly, but not wholly, to more stringent inspection. Of 7,781,030 adult cattle slaughtered under Federal inspection during the fiscal year ended June 30, 1911, 76,448 were found tuberculous, a percentage of 0.98.

It has been observed that tuberculosis increases in frequency with the age of the animals. If we take as the unit of comparison the number of cases of animals of a year and under affected with tuberculosis, animals from 1 to 3 years old furnish 10 times; those 3 to 6 years old, 30 times; and those more than 6 years old, 40 times the number of cases.

From the statistics above referred to, and other data, it appears that in the more densely populated areas of Europe and America from 5 to 50 per cent of the dairy cattle are more or less affected with tuberculosis, while the proportion of beef cattle affected is distinctly less, ranging from 0.14 to 30 per cent. This difference is due to a number of causes. Beef cattle average younger when slaughtered. They are not so frequently stabled, and are for that reason less liable to infection, and as the males constitute a large proportion of this class of animals the affect of milk secretion in lowering the vital forces is not so apparent. In the United States it has been estimated that about 10 per cent of the dairy cattle are tuberculous, while only about 2 per cent of the beef cattle are so infected.

—

EXHIBIT 7.

[Diseases of Cattle, Department of Agriculture, 1916, p. 428.]

TUBERCULOSIS.

The increasing amount of evidence pointing to the identity of human and animal tuberculosis, combined with the extraordinary mortality of human beings from this disease, often amounting to 10 to 14 per cent, has raised the question in all civilized countries as to how far animal, and especially bovine, tuberculosis is to blame for this high mortality. The medical and veterinary professions have approached this problem with equal zeal, and much has come to light within recent years which enables us to come to some conclusion.

Concerning the infectious nature of milk secreted by tuberculous cows, authorities have universally agreed that when the udder itself is in the slightest degree involved the milk possesses infectious properties, and is therefore dangerous. Tubercle bacilli in large numbers have been found in the milk and the udder under such circumstances. Unlike other affections of the udder, tuberculosis of this organ does not at once change the appearance and the quality of the milk secreted. Bang states that for at least a month after the disease has appeared the milk is normal in appearance, and may be consumed and sold without arousing the suspicion of the owner. Considerable danger is therefore involved in this disease, and the necessity for the careful inspection of dairy cows seems more urgent than ever.

Authorities are, however, not fully agreed as to whether the milk from tuberculous cows in which the udder is apparently not invaded by the disease should be considered dangerous or not. Some incline to the belief that the milk secreted by healthy udders is never infectious, even when the lungs or other organs are affected; that, in other words, the tubercle bacilli are rarely, if ever, separated from the lesions which they produce, and that the udder itself must be diseased before tubercle bacilli can appear in the milk. Experiments made with the milk of tuberculous cows in which there were no indications of udder disease do not bear out this theory, since tubercle bacilli have been found in their milk. Some authorities still believe that the udder is diseased when the milk is infected, but that the disease escapes observation. However this may be, the fact that the udder may be diseased and the disease not recognizable simply casts suspicion upon all milk from tuberculous animals. We know that the milk of tuberculous cattle may or may not contain tubercle bacilli when the udder is apparently free from disease; but we have no rapid method of determining whether in any given case the milk contains tubercle bacilli or not. Moreover, the bacilli may be absent at one time and present at another in milk from the same cow. When we consider, therefore, the extent of tuberculosis and the hidden character of the disease a certain degree of suspicion rests upon all milk.

—

EXHIBIT 8.

[Diseases of Cattle, Department of Agriculture, 1916, p. 430.]

TUBERCULOSIS.

Recently there has been much discussion of the question as to whether human and animal tuberculosis are identical diseases and as to the possibility of the tuberculosis of animals being transmitted to man or that of man being transmitted to animals.

The fact that tuberculous material from human subjects often failed to produce serious disease in cattle was observed by a number of the earlier investigators who experimented with such virus. It was the experiments and comparative studies of Theobald Smith, however, which attracted special attention to the difference in virulence shown by tubercle bacilli from human and bovine sources when inoculated upon cattle. Smith mentioned also certain morphological and cultural difference in bacilli from these two sources, and in the location and histology of the lesions in cattle produced by such bacilli. He did not conclude, however, that bovine bacilli could not produce in the human subject, but said:

"It seems to me that, accepting the clinical evidence on hand, bovine tuberculosis may be transmitted to children when the body is overpowered by large numbers of bacilli, as in udder tuberculosis, or when certain unknown favorable conditions exist."

A considerable number of investigators, including Chauveau, Vagedes, Ravenel, De Schweinitz, Mohler, De Jong Delepine Orth, Stenstrom, Fibiger and Jensen, Max Wolff, Nocard, Arloing, Behring, Dean and Todd, Hamilton and Young, the German tuberculosis commission, and Theobald Smith, have found tubercle bacilli in the bodies of human beings who died of tuberculosis which proved to have about the same virulence for cattle as had the bacilli from bovine animals affected by the disease.

In order to throw some light, if possible, upon the morphological constancy of the different types of tubercle bacilli Mohler has made comparative studies of bacilli from various sources, and which had been passed through various species of animals, by making the cultures upon dog serum after the method described by Theobald Smith. Some important results have been obtained. One culture of human bacilli which had morphological and cultural peculiarities similar to those of the bovine bacillus, and which produced only local lesions in cattle, was passed through a series of five cats. It was then found to be completely changed in its morphological character, the rods being elongated, slender, more or less beaded, and entirely of the human type. Far from decreasing in virulence, however, as might be expected from its morphological appearance, this bacillus had so increased in its pathogenic activity that it produced generalized tuberculosis in a cow. This cow was inoculated subcutaneously in front of each shoulder with 2 cubic centimeters of a salt-solution emulsion of the tuberculosis omentum of the last cat of the series. The cow rapidly lost flesh, had a temperature of 104° F., with the point of inoculation and adjacent glands greatly swollen. The autopsy revealed generalized tuberculosis, involving the lungs, mediastinal glands, spleen, liver, and kidneys. Tubercle bacilli of the bovine type obtained from the mesenteric glands of a sheep, hog, and cow were similarly transformed in the morphological appearance after being passed through a series of cats and recovered on dog serum. These bacilli also increased in virulence, as the last cat in the series invariably succumbed in a shorter time than the first of the series.

These experiments and observations indicate that the types of tubercle bacilli are very inconstant, and that under suitable conditions they readily change both in morphology and in virulence. A similar conclusion was reached by other investigators working with the avian and piscine types of tubercle bacilli several years ago, and was reasonably to have been expected with the human and bovine types.

It must be plain to all, from these recent developments, that too much has been made of the slight differences in cultural characteristics, in morphology, and in virulence which have been observed in some cases in comparing the human and the bovine bacilli. The observations were interesting and it was important that they be followed up until their significance was made entirely clear, but it was an almost unpardonable error, from a sanitary point of view, to promulgate sweeping generalizations calculated to arrest and abolish important measures for preventing human tuberculosis before the soundness of these generalizations had been established by a thorough course of experimentation.

When Koch said in the British Congress on Tuberculosis that he should estimate the extent of infection by the milk and flesh of tuberculous cattle and the butter made of their milk as hardly greater than that of hereditary transmission, and that he therefore did not deem it advisable to take any measures against it, he went far beyond what was justified by any experiments or observations which he reported

and he did a great deal of harm, which will be manifested for years to come to those who endeavor to guard the human race from the danger of animal tuberculosis. The researches which have been alluded to make these dangers more definite and certain than they have appeared before, and sanitarians should therefore most earnestly endeavor to counteract the erroneous and harmful impression which was made by Koch's address at London and his subsequent address at the International Conference on Tuberculosis at Berlin.

—

EXHIBIT 9.

[Butter, Cheese, and Egg Journal, Aug. 23, 1916, p. 1. Editorial.]

To hear some dairy officials talk, and such talk was quite prevalent at the butter-makers' convention at Mason City, Iowa, last March, some people might think that the creamery business was conducted along the most scientific and sanitary lines. We heard a statement made that poor cream has always been received at the creameries, is poor at the present time, and perhaps always will be poor. What a great satisfaction this must be to some people to assume that there is nothing wrong; that these conditions exist, and simply because they exist there is no need of any effort to correct them. Such a policy is patting oneself on the back and trying to make others believe something that isn't true.

We are living in an age when specializing is of the greatest importance. Men along all walks of life are becoming more proficient in doing things. They learn to do things better than was done in the past, and those who are content to sit in their easy-chairs and assume that everything is all right are reactionists, back numbers, and should be relegated to the rear of the procession of dairy progress so they will not stand in the way and stop others from going ahead, but give them a chance to drop by the the roadside and sink into oblivion.

If anyone can muster courage enough to tell the public that conditions are all right they either have an ulterior motive in view, are entirely incompetent, or are deliberately falsifying. To convince anyone of the conditions it was only necessary to make a brief trip through any part of the Central States during the hot spell where cream is being shipped any distance and see the condition of the cream, which was in the most deplorable and revolting condition imaginable, and we wonder if it would not be advisable to put some of those who contend that conditions are all right upon a diet of the cream such as has been transported and used in the manufacture of butter for the past month or six weeks. Such a procedure might possibly teach some people something about sanitation and the quality of cream as it should be for making into an article of butter for human consumption.

When some one has the courage to bring out the true facts for the purpose of improving conditions, there are those who have the audacity, for the purpose of covering up their own sins, to cry out in favor of oleomargarine. In fact it has become quite popular among certain classes to use that phrase as a leverage to prevent the real facts from becoming known. But such tactics are going to fall and decency must be injected, cleanliness *must* prevail; quality will be sufficient to turn the scale of popular sentiment, and if anyone is imbecile enough to believe that they can get away with some of the conditions that prevail at the present time they will be awakened with a very severe jolt some day, and perhaps would have been awakened before this if it had not been for the European war, which shut from the United States millions of pounds of butter which was being arranged for to be shipped to our shores. This is especially true since the production in the United States has increased to a point of possibly its greatest consumption per capita of present quality butter, but if all of the butter was first class and produced under conditions such as prevailed in the local and cooperative creameries 10 or 15 years ago, when all of the product received at the creameries had to be in a sweet and clean condition, then it could be reasonably expected that the consumption would be greatly increased, as there is an opportunity for much greater consumption than at the present time, as good butter can not be replaced by substitutes of any character. No substitute made from vegetable or animal products will ever take the place of good butter, but they will take the place of a large amount of butter that is manufactured at the present time if the consuming public knows the facts, and they are fast learning the facts since civic leagues and others have sent persons throughout the United States for the purpose of inspecting the conditions under which butter is being made, and the members of such organizations are advised through their officials of the conditions regardless of what effort is made to cover up the insanitary conditions. There has been a tendency on the part of some officials employed by the States to accept the present conditions and have even gone so far as to advise how cream which is in a bad condition may be doctored so it can be made into butter which at least looks good to the eye. But fortunately for the dairy industry there are only a few of this class and most of the officials stand for decency which is productive of high quality, and which will build up the dairy industry of the United States on a firm foundation which can not be rocked or torn down by greedy corporations which have only as their object the lining of their own pockets.

It is about time that the creamery men make a general survey and learn who their friends are, as some of them are wolves garbed in sheep's clothing, but the time will come when the mask will be torn off and their true character will be revealed. There perhaps may be three lists made: One of the staunch friends of the dairymen, who are not afraid to speak the truth and who are not afraid of their little jobs and will not stoop to some of the things that have been done; they may always be counted upon as the friends of the dairy interests. The second list would be made up of the neutral and the indifferent. Some who are afraid to say their soul is their own, fearing that they would lose their positions. They are under a club, and they know it, and there are others who have joined the ranks of those who are willing to dope cream and manipulate it in any way possible to deceive the public. They only have their own interests in view. If the creamery men would make a careful analysis, those engaged in the dairy work, either officially, independently, or connected with some concern, it would not be difficult to pick out the names that would be placed on the different lists.

Let the readers make up their own lists.

—

EXHIBIT 10.

[Hoard's Dairyman, Nov. 24, 1916, p. 619. Address of H. L. Russell, dean of the Wisconsin College of Agriculture.]

BANKERS' OPPORTUNITY TO HELP ERADICATE TUBERCULOSIS.

At the present time the amount of tuberculosis in upper Wisconsin is comparatively small, as is shown by data secured through the courtesy of Commissioner Norgord, of the Department of Agriculture.

These facts speak for themselves. Upper Wisconsin is now relatively free from this disease. To keep this virgin section of the State in this condition would mean much to the dairy interests of the future. For just so sure as the matter is neglected and the "let-alone" policy is allowed to prevail, the scourge of tuberculosis will continue to spread through this new section as fast as breeding stock is brought in from more infested regions. In 1906 to 1908, 16,400 head of cattle were tested in this new dairy region in central and western parts of the State. Then only 2.4 per cent of reaction were found. Now it has more than doubled. Very little of the disease is to be found in the common native stock, but numerous cases are coming to light at frequent intervals which indicate that the seeds of disease are being steadily sown through purchase of affected animals. In the laudable effort to improve the quality of stock by the introduction of new blood the seeds of disease are being steadily sown. Tests made by the various county agricultural representatives who are at work in most of the northern counties show that where reactors are found very frequently they have been purchased.

Tuberculin tests reported to State board of agriculture for 1914 and 1915.

	Number tests.	Number reactors.	Per-centage affected.
			Per cent.
Old dairy section (27 southern and eastern counties)..	48,236	4,306	9.0
Relatively new dairy section (29 central and western counties).....	15,167	746	4.9
Relatively undeveloped section (15 northern counties).....	6,677	188	2.9

EXHIBIT 11.

[Hoard's Dairyman, Nov. 24, 1916, p. 630, editorial.]

A TUBERCULIN-TEST LAW.

Elsewhere in this issue will be found an article by H. L. Russell, dean of the Wisconsin College of Agriculture, giving the sales of dairy cattle made in Wisconsin in 1914 and which were shipped to other States and foreign countries, and the relation of tuberculosis to the live-stock interests of Wisconsin. What is said pertaining to the importance of eradicating tuberculosis from the dairy herds of Wisconsin applies with equal force to all sections of the country.

Several States have made provisions for assisting their live-stock men in eradicating tuberculosis from their herds, but little headway has been made. Failure to accomplish as much as was anticipated when the several States passed tuberculin-test laws has been due to several reasons. First, too many owners of cattle have not realized the importance of eradicating tuberculosis from their herds and have also lacked faith in the tuberculin test. Second, most States have failed in their work because their organizations for applying the tuberculin test and handling diseased herds have been inadequate, and as a result they have been unable to carry out their plans systematically and to direct and advise the farmers fully regarding their part in such an undertaking. The States have, in many instances, done the best they could, but that has been far from reaching up to what the situation demands. Third, the State and Federal Governments have failed to compensate sufficiently the owners of cattle condemned as tubercular. It is true that no live-stock man can afford to harbor tuberculosis in his herd, and it is of more importance to him that his herd be free from tuberculosis than anyone else's; but notwithstanding this, the general public is also benefited. In view of this larger compensation should be allowed for condemned animals than is provided under the present laws.

The Federal Government should give the same kind of assistance to the States in helping them eradicate tuberculosis as it does when cattle are slaughtered with foot-and-mouth disease. Legislation will be necessary to bring this about. Further, the State laws must be revised and made uniform. The right procedure to eradicate tuberculosis from one State is the right procedure for all States. Concerted and uniform action would bring a cooperation between State and Federal Governments and the live-stock interests that has never been enjoyed to the degree necessary to bring the results so highly desirable.

We can hear some say that this method will be too expensive and that it is impossible to eradicate tuberculosis. Let us see. The Government estimates, and upon very good data, that this country for the past 30 years has sustained a loss of $25,000,000 annually as a direct loss from tuberculosis, or a grand total of $750,000,000. The question isn't can we afford to eradicate tuberculosis, but rather can we afford to keep it. The outbreak of foot-and-mouth disease, which some thought would ruin the cattle industry, cost less than $10,000,000 to eradicate. The farmer could see the effects of foot-and-mouth disease, and therefore could comprehend what it meant to him. Tuberculosis is an insidious disease and claims two and one-half times the losses each year than the heaviest loss ever made by foot-and-mouth disease. Who sustains the loss from tuberculosis? The entire population; but the farmer bears the largest toll.

What encouragement have we that tuberculosis can be stamped out? Innumerable examples may be cited, but we will mention only what has been accomplished in Minnesota through the cooperation of that State with its breeders of pure-bred cattle. For nearly 20 years the live-stock sanitary board has been working systematically and cooperatively with the breeders of pure-bred cattle in eradicating tuberculosis from their herds. The number of reactions in recent years has been less than 1 per cent, and 95 per cent of the pure-bred herds have no tuberculosis. What Minnesota has done other States can do, and it behooves them to do it.

—

EXHIBIT 12.

[The American Food Journal, Nov., 1916, p. 548.]

BUTTER MAKERS BEGIN TO SEE LIGHT.

For years the American Food Journal has advocated the pasteurization of cream used in the manufacture of creamery butter as a just and necessary protection against the germs of tuberculosis from infected cows. That advocacy has made enemies of many creamery men, who were unable to read the signs of modern progress, and even of dairy and food commissioners, who thought they were befriending the butter men by opposing a reform which entailed some expense and greater care.

In spite of enmity and opposition, this journal continued its fight for pasteurization, and the greatest pressure from organized interests

never caused it to weaken in its efforts for "a healthful product, which means a pasteurized product." It has spoken its mind when shifty methods in conventions have stifled a full and free discussion of the subject. It has spared no official of State authority or of local organization when that official attempted to bar the adoption of this much needed regulation. It has fought earnestly, consistently, and fairly for this movement to guard the health of the public, because it believed the cause was important and vital.

Many have believed that these efforts were futile, but they took counsel of their hope rather than of their reason. A strong public sentiment in favor of the reform has been created and that sentiment is rapidly crystallizing in action. Publications that represent the creamery interests and the butter trade were antagonistic without exception in the beginning. Now it seems remarkably curious that they could not see the movement was really in the interest of the industry.

Butter is a part of every meal served at every table. No food product is more widely distributed and more generally consumed. Should it carry disease germs—and it is a perfect germ carrier—no home can be guarded against the danger of infection. That danger is recognized and feared, and the result is a check on butter consumption. Were all creamery butter made of pasteurized cream not only would the public health be safeguarded but the consumption of butter would increase and the markets operate under more favorable conditions.

The time is coming when pasteurization will be required by law. Progressive journals in the butter trade realize that the battle has gone against them, and they are accepting the inevitable.

From the Creamery Journal, of Waterloo, Iowa, issued under date of October 15, 1916, the following editorial utterance, headed "Pasteurization to come," is presented as additional evidence that the creamery men are seeing the light:

"Although the resolution putting the members of the Iowa State Dairy Association on record as favoring compulsory pasteurization of dairy products received little or no attention at the time, even by those in attendance at the meeting, it is something which is deserving of serious thought on the part of all concerned.

"Pasteurization is sure to come sooner or later, and it is well for the creamery men to prepare themselves for it; but it is doubtful, even in those States where associations have put themselves on record, as has the Iowa association, whether all the members really appreciate the importance of the movement. They do not seem to realize that should their action result in the passage of a State law to that effect they will be forced to pasteurize or suffer a penalty just as much as though they were caught with high moisture.

"No State dairy commissioner wishes to stand in favor of a law of this kind while a large number of the creameries are still unprepared for it, but this is just what is liable to happen. The creameries go on record as being favorable to such a law, the law is passed, and then some of the very men who voted in favor of the measure cry out that they are not prepared to comply with such a law.

"Let the creamery men give this question serious thought. Pasteurization is certain to come, and it would be better for the creameries to start it of their own volition; but if they do not start before such a law is passed, let them at least give the subject their serious consideration. More important still, if they have anything to say upon the subject, now is the time to do it, either through the creamery papers or their State dairy commissioners. The creamery man who cries out against such a law after it is passed will be liable to receive little consideration."

And all this in spite of the fact that a year ago or a little more a resolution favoring pasteurization was voted down in a convention of Wisconsin butter makers. In spite of the fact that butter interests were able to smother a pasteurization resolution offered before the recent convention of dairy and food officials in Detroit, the question can not be killed or longer ignored. "Pasteurization is certain to come." Consumers "are insisting more strongly each year on having a healthful product, which means a pasteurized product."

The battle is nearly over, and the American Food Journal plumes itself on the part it has taken in the conflict. It led the forces which will soon celebrate a great victory for health.

EXHIBIT 13.

[The American Food Journal, November, 1916, p. 552.]

TUBERCLE BACILLI IN BUTTER.

Dr. Charles F. Whitney, of the Vermont State laboratory, writes as follows in the September, 1916, issue of the quarterly bulletin of the Vermont State Board of Health:

The bacillus which causes tuberculosis when present in milk will rise with the cream and settle with the sediment, so that, whether cream is obtained by gravity or separator methods, the skim milk will contain relatively few of the germs, most of them being carried by the small fat globules into the cream or be found in the sediment. So long as this is true we would expect to find tubercle bacilli in butter, and the large amount of investigation along this line shows this to be correct. Different workers have found them in various percentages of butter examined up to as high as 20 per cent. Salt is the only ingredient that has any germicidal effect, and this is quite weak, so that butter that has been kept over three months will still contain living tubercle bacilli. Sunlight quickly kills the bacteria, and drying destroys them in time, but we find the very opposite environment to hold in butter. We have therefore in butter nothing to destroy the germs except age and the slight effect that salt may have.

While there is no doubt concerning the cause of tuberculosis, there is still a question concerning the route by which the organism enters the body and how long it may remain there before evident disease begins. The large number of deaths which occur annually from tuberculosis and the great amount of suffering during the slow progress while the victim is wasting away, make it the most terrible of all diseases, and nothing should be allowed to continue which by any possibility may be a cause. The theory that the germs which are inhaled and, entering the lungs with the air, are always the cause, has to a large extent given way to the theory that the disease is produced by the germs entering the intestinal tract and from there infecting the glands in the neighborhood, causing glandular tuberculosis, or, passing on through the fluids of the body, lodge in some other focus, ready, when the person becomes run down from some cause, to break out into an active process, which in the majority of cases is tuberculosis of the lungs. Or if the person is strong the focus begun will be destroyed, leaving only a bit of scar tissue. If the latter theory is correct, and many believe it to be, we must blame only ourselves if we daily ingest a food known to contain the living virulent germs of tuberculosis.

The people of the country, as we all know, are at the present time very much aroused over the conditions existing in dairy products. This has been directed largely to the milk problem, but of late they are insisting that butter come from pure, clean, and safe milk. If the dairymen do not see the handwriting on the wall and act accordingly before long, certain demands are bound to be made which it will be hard to carry out if not prepared.

—

EXHIBIT 14.

[From New York Herald of Sept. 12, 1916, p. 6.]

PASTEURIZED MILK SAVES BABIES.

Nathan Straus, who for 25 years has been supplying pasteurized milk to babies, yesterday sent this letter to Surg. Gen. Rupert Blue:

"Having been engaged for the last 25 years in trying to save the lives of babies, I am deeply interested in the efforts that you and your associates are making to end the peril of infantile paralysis.

"I can show you 2,500 babies in New York City, scattered through various tenement districts, but constituting a class by themselves by reason of one circumstance in their lives. I can show you that every one of these 2,500 babies has escaped the plague of infantile paralysis, which seized over 8,000 victims in this city.

"These 2,500 babies are daily supplied with pasteurized milk from my infant milk depots. Their condition is in no way different from other babies in this city, except that they receive milk that has been made safe food by killing the germs likely to be found in raw milk.

"Proper pasteurization of milk has been proven to prevent tuberculosis, typhoid and scarlet fevers, diphtheria, septic sore throat, and summer complaints of children. Does it not seem from my experience in this plague that it also prevents infantile paralysis?

"I submit this to you and to your associaton, inviting your examination of the records of my 18 infant milk depots, hoping that you will find in the freedom of the 'Straus babies' from infantile paralysis a demonstration of the utility of this method of preventing this terrifying plague."

—

[From the Washington Post, Oct. 16, 1916, p. 1.]

FINDS PARALYSIS GERM—BALTIMORE SCIENTIST SAYS IT IS INTRODUCED IN RAW FOODS—NO CONTAGION BY CONTACT—DREADED POLIOMYELITIS, OR INFANTILE PARALYSIS, GIVEN TO BABIES IN MILK AND WATER, TO OTHERS IN UNCOOKED FRUITS AND VEGETABLES—RABBIT WAS INFECTED.

BALTIMORE, *October 15, 1916.*

A rabbit used in the pathological department of Johns Hopkins Hospital to determine the method of transmission of the infantile paralysis germ has developed the disease, it was announced to-night.

Dr. Montrose T. Burrows, of the hospital, who discovered that the germ is taken into the system by the mouth, in milk and water, said that the experiment with the rabbit means another important advance toward solving the whole problem of poliomyelitis.

One of the legs of the rabbit has become paralyzed.

TRY IT ON MONKEYS.

Transmission will be next attempted through two monkeys.

The mystery surrounding the cause of the spread of infantile paralysis has been solved, according to an official of Johns Hopkins Hospital.

Extensive research conducted by Mr. Burrows, pathologist of the hospital, has resulted in discovery of the infantile paralysis germ, the existence of which was established nine years ago by Dr. Simon Flexner, of the Rockefeller Institute.

PRESENT IN RAW FOODS.

Present always in every case of the disease a germ has been found in the big intestine, showing that the disease is spread by some raw food. That that food is milk or water is established by the fact that babies whose only diet has been milk or water died of the disease. Dr. Burrows and his assistants, under the direction of Prof. William H. Welch, have been making autopsies upon every victim of the disease since July. They have conducted a careful microscopic search.

Of the diseased organs it has been found that the germs occur only in the colon. The investigations prove that 100 per cent are infected in this big institute. Since it is only possible for the germ to enter the big intestine by way of the mouth, food and drink must be the carrier.

RAISE QUARANTINE.

The investigators are so certain that this is true and that there is no other way for the disease to be contracted that they suggest that the quarantine be raised against personal contact and that all raw foods, such as milk, water, fruits, etc., be sterilized, boiled, or cooked before being given to children or others.

The investigators find that house flies and other insects undoubtedly help to spread the germ from one food to another. This discovery is the first one that has been given out officially by Johns Hopkins Hospital before it has been published in a recognized medical journal.

The spread of the disease is so much like that of typhoid fever and its method of communication that the investigators are sure they have hit upon a way to make an antipoliomyelitis vaccine like the antityphoid vaccine that stamped out typhoid in the United States Army.

EXHIBIT 15.

[Butter, Cheese, and Egg Journal, Sept. 13, 1916, p. 2, editorial.]

While visiting the principal butter markets in the East recently it was found that the practice of tasting butter by biting into the plug of butter on the trier still prevails. However, a considerable number of the butter buyers have stopped that practice entirely and do not permit it to be used in their place of business.

One can imagine the impression a consumer would get of butter cut from a tub in which he happened to get that portion of the plug from which a piece had been bitten and upon which the teeth marks of the man who tasted the butter remained. Such a condition is possible during the winter months when the butter is hard or butter taken from cold storage which is still hard.

The United States Department of Agriculture, six or seven years ago, put a rule into effect which prohibited men in the Government service to bite into the butter while tasting it; they were instructed to break a piece off of the plug on the trier, and so far as we know that rule still holds good, and the butter dealers and official inspectors should see to it that the old practice is stopped.

—

EXHIBIT 16.

[Chicago Dairy Produce, Oct. 24, 1916, p. 12.]

INSANITARY SAMPLING.

Samuel K. Cohen, a local merchant, in a letter addressed to the Produce Review, calls the trade's attention to the present method of

testing and sampling butter, which is so antiquated, so insanitary, and therefore so ultra important that we reprint the letter, as follows:

"It has often been a cause of wonder to me why in the efforts for reform in the dairy industry made during the past 10 years some notoriety seeker in connection therewith, or some well-meaning advocate, did not focus attention on the present insanitary method of sampling butter. All the while, too, the necessity for improvement has been more than apparent to me. Why is no change made? Because it is easier not to change, once a custom becomes rooted, in whatever field of human endeavor it may be.

"Some years ago, when a lad in the West learning the business, I can remember well that the aptitude of a young man for butter inspection—and for that matter the capability of a veteran—was gauged by the alacrity (or lack of it) with which he would 'take a bite into the trier.' And because this method has been handed down from generation to generation is absolutely no argument in favor of its continuance. As a matter of fact, the argument against its continuance is incontrovertible. The reasons advanced having been published so recently in your journal it is not my purpose now to repeat them. Progress in sanitation in recent years has compelled people to change many of their former views, and so, with respect to this feature of the dairy industry now under discussion, it is high time for a change.

"Reforms from within are always better than reforms from without. The dairy industry has now learned—better perhaps than any other—that failure to correct an evil by voluntary inclination only invites legal compulsion."

—

EXHIBIT 17.

[New York Produce Review and American Creamery, Sept. 20, 1916, p. 822. Editorial.]

SHOULD BE STOPPED.

We notice that one of the western creamery papers has taken up the question of insanitary methods of sampling butter prevalent on many of our wholesale markets. The need of some reform in this matter of sampling is one which the Review has called attention to a number of times in the past. We have emphasized the dangers of the present system of promiscuously biting into the sample and rubbing the nose along the outer edge of the trier full of butter, and we have pointed out that these dangers are by no means confined to possible harm to consumers. The greatest danger, as far as the butter industry is concerned, lies in the possibilities that this malpractice offers to muckrakers or enemies of the dairy business. The man who persists in these insanitary ways of handling a trier full of butter will deserve all the unwelcome publicity that he is bound to get sooner or later at the hands of some relentless newspaper food expert. This mouthing over the butter is unnecessary, and our leading organizations of butter traders should do what they can to stop it by the promulgation of approved and sanitary methods of sampling.

BAD PRACTICE.

DES MOINES, IOWA, *October 2, 1916.*

EDITORS NEW YORK PRODUCE REVIEW AND AMERICAN CREAMERY:

In your edition dated September 20, 1916, there was an article headed "Should Be Stopped." Probably this same article could have been entitled "Should Never Have Been Allowed." This refers to the practice of "mouthing over" the butter which is scored by the commercial judges on the street. Biting into a trierful of butter, rubbing the nose the whole length of the trier, and then fingering the butter to try the body of the butter is a bad, dangerous, and filthy demonstration. Yet this happens in our large markets, and is done time after time by the men on the street. One of these men may have a cold, or a cough, or some disease (known or unknown to himself or others), and these bacteria from his teeth and throat may be transmitted to the body of the butter itself when the trier is again placed back in the tub and the remainder of the butter left there. This butter may travel hundreds of miles to a place where it is cut up and sold in 1-pound prints. The whole tub of butter may not be affected, but that particular print of butter which contains the teeth marks of the commercial judge may go to some home and cause a lot of trouble through sickness. This plan of reasoning has never been reported as a fact, but is it not possible?

—

EXHIBIT 19.

[The American Food Journal, November, 1916, p. 561.]

NOTES FROM FIELD OF FOOD CONTROL—BUTTER EMULSION.

State Dairy and Food Commissioner James W. Helme, of Michigan, sends out the following circular, embodying timely hints anent the high cost of living:

With the prevailing high prices of all food products, consumers are warned to watch very carefully in their purchases for adulterations and short weights. Recent instances which have come to the attention of this department are as follows:

We have discovered that cold-storage butter is being shipped into Michigan from Chicago to several large creameries. These creameries freshen the butter by manipulation, and are able to incorporate a certain amount of extra water, thereby increasing the weight of the butter. Normal butter should not contain to exceed 15 per cent or 16 per cent moisture. By this manipulation process we have taken samples of butter that show 25 per cent moisture. Forty cents a pound is too much to pay for water, and a final warning is given all creameries that this practice must cease or prosecutions will follow. We also find that large numbers of oleo and butter prints are an ounce shy on the pound, which is a practice which must be stopped.

—

EXHIBIT 20.

[Chicago Dairy Produce, Dec. 12, 1916, p. 30.]

FIFTY PER CENT WATER.

One of the cases to come up at the present session of Federal court is that of the Chattanooga (Tenn.) Department of Health *v.* J. W. Brown, Rossville, Tenn., who is charged by health officials with violating the pure-food laws. About six weeks ago complaints were made to the department by people who had purchased a quantity of butter at various grocery stores in the city. On investigation City Bacteriologist Stanton H. Barrett found the butter to contain more than one-half water.

EXHIBIT 21.

[The American Food Journal, December, 1916, p. 614. From article in New York Journal of Commerce on the annual report of the Commissioner of Internal Revenue..]

ADULTERATED BUTTER.

A total of 147 cases against manufacturers, 28 against wholesale dealers, and 38 against retail dealers in adulterated butter were discovered and reported during the year, making a grand total of 213 violations, as against 30 cases against manufacturers, 5 wholesale dealers, and 5 retail dealers, or a total of 40 during 1915. All but 26 of these reported violations consisted of the manufacture and sale of butter as creamery butter which was subsequently found to contain moisture of 16 per cent or more.

Prosecutions were instituted in the 26 cases where the evidence showed the dealers had purchased creamery butter, manipulated it, and added abnormal quantities of water, ranging from 30 to 50 per cent, and afterwards sold the product as pure creamery butter, and these offenders were convicted in every instance. This class of violations has grown with considerable rapidity in some of the large cities, and the indications are that it will take vigorous efforts to suppress this illicit traffic.

—

EXHIBIT 22.

[Butter, Cheese and Egg Journal, Sept. 6, 1916, p. 14. Article contributed by H. D. Wendt, Michigan dairy and food department.]

CAUGHT IN THE NET.

Caught in a net of evidence from which there was no possible escape, the notorious practice of disposing of decomposed, putrid cream to a competing creamery was brought to the bar of justice through a complaint filed in justice court before Judge Clements in the city of Saginaw by the writer on August 24, against Walter Vasold, former secretary of the Michigan Creamery Owners & Managers' Association, now manager of the Michigan Creamery Co. at Saginaw. Vasold at first, in answer to the complaint, entered a plea of "Not guilty," but later, when confronted with the evidence, changed his plea to "Guilty" and was fined $10 and costs.

The complaint charged the defendant with offering for sale to the Fox River Butter Co., of Detroit, a 10-gallon can of stale, decomposed, putrid cream. Mr. E. G. Cooper, manager of the Fox River Butter Co. in Detroit and the present secretary of the Michigan Creamery Owners & Managers' Association, promptly refused it.

The cream in question was originally received by the Michigan Creamery Co. from one of their buying stations and upon examination found to be in such a putrid condition as to leave no hope, even with the resuscitating methods employed by these centralized butter factories, of bringing the stuff "up to date," so it was prepared for shipment to Detroit, where, upon its arrival, it was sensed by some of the department's pure-food sleuths. When found not to contain the regulation death certificate, the can and contents were promptly seized and held for further investigation, which disclosed the fact that the name on the can (Chas. A. Murray) was not that of the real owner of the cream, his name having been used to ward off suspicion in an attempt to lead the Fox River Butter Co. to believe that they were receiving the can of cream from a new customer.

No doubt going on the theory that even the dead want company, another can of cream in the same putrid condition was shipped at the same time, consigned to the Shedd Creamery Co., also of Detroit. This cream, however, somehow escaped the vigilance of the inspectors. No doubt the Shedd Creamery Co. was glad to get it for dissecting purposes, as the full market price was paid for same. Of course, it is possible that with new methods being developed daily for bringing cream in this condition back to life or "up to date," that this can of cream was jerked back into this cruel world where it had, no doubt, endured much suffering from the prevailing hot weather, cast upon an unsuspecting, suffering public, who are led to believe, through the medium of alluring billboard and other forms of advertising, that butter made from such cream, after having been brought "up to date," tested chemically and bateriologically, is purity itself.

H. D. WENDT,
In Charge Dairy Division.

[Chicago Dairy Produce, Nov. 28, 1916, p. 24. Article contributed by D. E. Doner.]

ADVOCATES NEW LAW—WOULD HAVE BUTTER MADE FROM CREAM TREATED WITH LIME MARKED "RENOVATED."

MCCONNELSVILLE, *Ohio, November 14.*

Editor CHICAGO DAIRY PRODUCE:

I have been an interested reader of your magazine for a number of years, and have often taken pleasure in noting your many articles regarding better cream. In your last issue you have a very good editorial under the head of "State brand for butter."

I have been a butter maker for more than 25 years, and during the last 10 years it has been increasingly difficult to get good raw products. The present system of obtaining cream, of which you treat in this article, has educated the farmer away from good production. It has done so because no premium is put on good cream. Until there is a sufficient and actual distinction between the prices of good cream and bad cream the farmer will continue to bring his cream to the creamery in bad condition, and until the public is instructed as to just what kind of butter they are buying it will continue to pay a high price for butter made from poor cream, especially if it is well advertised and made easy to get. This makes it impossible for the small creamery to really grade cream and pay properly for grade.

You know, and every creamery operator knows, the methods of treating old, dirty cream. You know, and every creamery operator knows, too, that neutralized and treated cream does not make butter fit for food; but we all know at the same time that most butter made in the West and Middle West is of this character and is sold as a pure product, and in order to get by with it many firms mark it pasteurized.

Now, if the plant which renovates butter must mark it as such and be under Federal jurisdiction, why should not the plant making butter out of cream which is actually renovated be compelled to mark its package of butter "Made from renovated cream" and put under the same jurisdiction?

A law like this, properly enforced, would instruct the public as to what they are buying, give the farmer an incentive to produce good cream by making a real distinction in prices, and stimulate every creamery to make a pure product. It would also either end the careers

or change the business methods of those plants which are humbugging the American public by giving it a butter made of rotten cream antiseptically treated, and at the same time immeasurably stimulate the proper conduct of dairying.

You have written many fine articles about getting better cream and making better butter. Will you put these good arguments into a workable form by going after a national law which will compel every creamery whitewashing its cream to mark its butter "Made from renovated cream." I believe every conscientious butter maker and creamery manager would be with you.

D. E. DONER, *Butter Maker.*

EXHIBIT 24.

[Butter, Cheese, and Egg Journal, Sept. 6, 1916, p. 1, editorial.]

Prof. G. L. McKay, secretary of the Association of American Manufacturers of Creamery Butter, has broken into print and advocates, or at least mentions the fact, that sodium hypochloride may be used in the preparation of tubs and liners to prevent mold. This is not at all surprising since his advocacy of the use of lime and other dope in cream, but one naturally will wonder what will be recommended next. First, it is lime in cream, then hypochloride for the packages, and we presume the next will be some other chemical for some other purpose, and before the public is aware of it the product which they have always known as butter will be so disguised that a cow would not recognize her own product.

Food adulterators in the days gone by adopted the same tactics. It was first one thing and then another until many of the food products were so doctored up that the President of the United States instructed Congress that if they would not take action before Congress adjourned in 1906 on the bill which was before Congress at that time, he would immediately reconvene Congress after adjournment, and the bill was dug up out of a pigeonhole in the desk of the committee, where it had been laid away with a satisfaction of security that it would never bob up again; but it was passed a few days thereafter. Some such action will be necessary in regard to the use of chemicals in the manufacture of butter, and the day perhaps is not far distant when all butter will have to be made from cream which can be termed as "cream" and made in such a way that no one need be ashamed or make an excuse for the character of the finished article.

EXHIBIT 25.

[New York Produce Review and American Creamery, Oct. 11, 1916, p. 1010.]

THE NATIONAL DAIRY COUNCIL—ITS GENERAL AIMS, PARTICULARLY AS TO INCREASING THE DAIRY INDUSTRY BY AN ADVERTISING EDUCATIONAL CAMPAIGN.

The National Dairy Council is an outgrowth of the national dairy show. Its purposes are set forth in an elaborate pamphlet of 78 pages recently published, which can hardly fail to attract the earnest attention of all interested in the dairy industry.

The object of the council is, in brief, to advance the cause of dairying in America by promoting the dairy cow and all interests dependent upon her, through cooperative and united effort. It is now composed of 280,000 dairymen, dairy cattle breeders, and representatives of all allied dairy interests, banded together to build a greater and better American dairy agriculture and to develop a wider use of dairy products.

To effect the latter purpose a national educational advertising campaign has been organized to be managed by a committee of 10, representing different branches of the industry. In this committee the cattle interests are represented by D. D. Aitken of Flint, Mich., president Holstein-Friesian Association; the milk producers by W. J. Kittle, of Chicago, secretary of Northern Illinois Milk Producers' Association; the milk dealers by John Le Feber, of Milwaukee, Wis.; the butter interests by George E. Haskell, Chicago; the cheese interests by Harmon Wheeler, Plymouth, Wis.; the ice cream interests by John W. Knobbe, Chicago; the farm-machinery interests by Dr. W. E. Taylor, of Moline, Ill.; the dairy-machinery interests by G. B. Sharp, of New York; the feed interests by Sherman T. Edwards, of Chicago; the food commissioners by W. B. Barney, Des Moines, Iowa.

It is proposed to raise a fund of $750,000, and to expend approximately $20,000 a month for 36 months in advertising, general publicity, and organization work.

EXHIBIT 26.

[Butter, Cheese, and Egg Journal, Oct. 25, 1916, p. 4.]

NEW CALIFORNIA LAW IN EFFECT.

October 1 was the date when the California law went into effect, which requires that all milk and cream for consumption or for manufacturing into butter shall be pasteurized, except that which comes from tuberculin-tested cows. The product, it is understood, must be labeled "Pasteurized" or "From tuberculin-tested cows." The containers shall be marked with the name and location of the creamery, or, if an individual dairyman, that his name and address must be given.

There was considerable opposition in some sections of California to the new law, and it seems to be a question if the same can be enforced, as weaknesses have developed which indicate that it is loosely drawn. However, the creameries generally are not only willing to comply with the law, but they are heartily in favor of it, as the creamery men realize that butter made from properly pasteurized cream and otherwise made in accordance with the best practice will possess better keeping qualities and generally give better satisfaction.

EXHIBIT 27.

[Editorial from New York Produce Review and American Creamery, Sept. 27, 1916, p. 858.]

THE NEW CALIFORNIA LAW.

It looks as if the State of California will have to await the action of another legislature before it forces the pasteurization of all milk and cream not from tuberculosis-free cows sold or manufactured into butter throughout the State. The attorney general has been dissecting the measure, which is due to become effective October 1, and, according to Pacific Dairy Review, he finds only one part of the entire act entirely clear in its meaning—that is the clause appropriating money for additional officeholders. He is said to have handed down an opinion that the clause providing for cream pasteurizing or the elimination of tuberculous cows does not apply to butter, and that the milk-grading requirements do not apply to cities or towns not maintaining milk-inspection service.

However, notwithstanding the botch that the California Legislature seems to have made of this initial attempt at compulsory State-wide pasteurization or tuberculin testing, it is certain that efforts toward the object aimed at will not cease. It is, in our opinion, only a question of time before other States besides California will pass compulsory pasteurization measures, and it will be well for our creameries to be prepared.

[Chicago Dairy Produce, Dec. 12, 1916, p. 20. From the address of President Morrison, of the Wisconsin Butter Makers' Association, at the sixteenth annual convention, held in Sparta, Wis., Dec. 5, 1916.]

We have been working under the Wisconsin license law nearly a year, and this has undoubtedly been the means of improving the appearance of the interior of many creameries throughout the State. The enforcement of this law has not inconvenienced any of us; nor do we desire to return to the days of few restrictions and regulations. But, after all, has the enforcement of this law improved the quality of our butter? I believe you will agree with me when I say that it has not to any appreciable extent. The reason is obvious: The law does not reach the root of the evil. It does not affect the cream before it is brought to the well-kept creameries. A sanitary creamery can not do justice to insanitary cream. We need more farm inspectors, men peculiarly adapted to talk and counsel with the farmers, show them how easy and profitable to all concerned it is to produce dairy products in a sanitary manner.

EXHIBIT 29.

[Butter, Cheese, and Egg Journal, Dec. 13, 1916, p. 20: Address by Dr. H. E. Barnard, State food and drug commissioner of Indiana, before the Indiana manufacturers of dairy products, Indianapolis, Ind., Dec. 8, 1916.]

The principal object of milk inspection has been the securing of a substitute which approaches as near as possible breast milk for infant feeding. In our endeavor to secure clean milk for babies, rules and ordinances have been adopted which did not improve the quality of milk, but which did discourage the producer and harass the distributor. We have been studying milk control for 50 years and until within the last 5 years we have made almost no progress at all. Indeed, what improvement has been made has come from within the industry rather than from without.

The practice of pasteurization which I am glad to say to-day certifies the wholesomeness of 96 per cent of our milk supply, has done more to insure a clean and wholesome milk than all the milk inspectors and milk ordinances put together.

[Chicago Dairy Produce, Dec. 12, 1916, p. 2, editorial.]

STATE INSPECTION FOR QUALITY.

At the convention last week of Indiana manufacturers of dairy products held in Indianapolis, Prof. Oscar Erf, of Ohio University, advocated State inspection of dairies as a means of improving the quality of milk. He appeared to believe that inspection would bring quicker and better results than cream grading.

Prof. Erf called attention to, or rather based his argument on results had in one county in Ohio where the whole dairy and food-inspection force of the State was put to work, inspected all the dairy farms and required cleaning up and changes of methods where needed, and the results were most satisfactory. The experiment was carried into the markets, and it was shown that butter in ton lots sent from creameries in the inspected county brought an average of 2 cents per pound more in the New York market than butter in equal lots sent from adjoining counties.

Another result is that the farmers in the inspected county are all advocates of State inspection of dairy farms, and the inspector who enforced inspection upon these farmers is held by them as a benefactor. The farmers in that county will all be found behind a bill to be presented at the coming meeting of the State legislature requiring inspection.

Prof. Erf and others behind this movement, basing their figures on the cost of inspection in the one county and the additional value to dairy products of that county as a result of inspection, estimate that with an additional 40 inspectors, at a cost of $500,000 per year, the whole State can be covered; and that, as a result of this expense, dairy products of the State will bring at least $2,000,000 more per annum. Then figure the $500,000 investment on this basis a good investment, and they have what has been accomplished in one county to prove what can be accomplished in the State.

EXHIBIT 31.

[Chicago Dairy Produce, Nov. 7, 1916, p. 2, editorial.]

STATE BRAND FOR BUTTER.

The idea of a State butter brand seems to be growing. The subject is now being agitated quite generally all over the country. Not many States have it in working order, but some of them have and others have it in the formative stages. We believe the idea to be a good one, and there has been no move made in which the possibilities are so great for the improvement of our butter product as in the State-brand move; but we can see in it a great chance for failure, and this lies in the long length of time it is going to take to get the plans working so as to bring results.

Minnesota was the first State to adopt it in this country; and, although it has been about three years since they started it, we are informed they have only about one-half dozen creameries that have been granted the privilege of using the brand.

This is not to be wondered at when we consider the conditions prevailing in this country. There has been but little incentive here for a long time to produce good cream. Prices of the good and the poorer grades of cream have been so close that farmers received almost as much, and as much in many instances, for the lower grades as they did for the higher. The competition among the creameries has become so keen that the question of quality has hardly entered into the buying. Cream has just been cream, and there has been no good cream or poor cream. Many creamery men have told their patrons and advertised that they could make just as good butter out of old, sour cream as they could out of sweet cream. They have educated the patrons up to this, and in every State there are many patrons who have grown negligent, and they sell nothing but old, stale cream.

[Chicago Dairy Produce, Nov. 14, 1916, p. 20.]

RULES AND REGULATIONS.

CONDITIONS TO BE MET BEFORE A CREAMERY CAN USE MICHIGAN STATE BRAND FOR BUTTER.

SEC. 4. License. The license referred to in the first section of these rules, regulations, and specifications will be and is issued on the express condition that the person, firm, or corporation to whom such license has been granted shall comply with the following:

(a) Sanitation. Maintain proper and satisfactory sanitary conditions in the plant in which the butter is made and proper and satisfactory sanitary surroundings.

(b) Raw material. That no milk or cream be received which is to be made or is made into butter upon which the Michigan brand or trade-mark is to be used that will not comply with the provisions of act No. 222, Public Acts, 1913, given in full in pages 21 and 22.

(c) Pasteurization. That the butter shall be made from milk or cream that has been pasteurized at a temperature not less than 140° F., and shall be held at that temperature for 20 minutes, or to a temperature not less than 170° F. if not held.

* * * * * * *

(g) Adulterants. No preservatives (except pure common butter salt), neutralizers, or adulterants shall be added to the milk or cream from which the butter is made and which is to be sold under the Michigan State trade-mark.

—

EXHIBIT 35.

[Butter, Cheese, and Egg Journal, Oct. 4, 1916, p. 45.]

TO ASK FOR CREAMERY INSPECTION.

In order to bring the sanitary inspection of creameries, cheese factories, condenseries, canneries, and other establishments where food products are manufactured and prepared under State supervision, and to regulate the handling and display of food products by wholesale and retail merchants, the officials of the Pennsylvania department of agriculture will present a bill to the next legislature covering this feature of the control of food products.

Many States already have laws relating to food and drinks, but Pennsylvania has no sanitary law that controls the manufacture, preparation, or handling of food products. Dairy and Food Commissioner James Foust feels that such legislation is badly needed in this State, and that by proper regulation assistance can be given in keeping down the start and spread of epidemics, which often lead to the loss of hundreds of lives. The proposed bill will meet the conditions complained about in Philadelphia and other cities in the State.

Commissioner Foust is now securing copies of the laws in force in other States, and the Pennsylvania bill will be drafted along the most improved lines.

EXHIBIT 36.

[Chicago Dairy Produce, Dec. 5, 1916, p. 10. Article contributed by J. J. Brunner.]

PASTEURIZATION OF CREAM.

[Address by J. J. Brunner before Butter Makers' National Convention in Minneapolis.]

"The pasteurization of cream for butter making" was the subject of an address by J. J. Brunner, of Iowa, at the convention in Minneapolis of National Creamery Butter Makers' Association. Mr. Brunner said:

The subject of pasteurization of cream for butter making is, in my opinion, one of the most important subjects confronting the American butter makers to-day. With the constant agitation of the necessity of pasteurization of all dairy products by nearly every board of health in practically every large city in this country, and especially those in the cities of New York and Chicago, which are our largest markets, I believe it is high time for the American butter makers to take notice and recognize pasteurization of cream for the manufacture of butter not merely as a practice, but also as a necessity. I understand that already we have a certain class of trade in the city of New York, which is demanding that all butter served on their tables must be made from cream that has been thoroughly pasteurized, and we are told that this is a class of trade that is paying the highest price for their product. Surely this is evidence enough to convince every manufacturer of creamery butter that sooner or later we will be confronted with laws that will compel us to pasteurize all cream manufactured into butter, as well as other dairy products.

We find by investigation that pasteurization is already extensively practiced and that creamery managers are beginning to recognize the fact that the market is demanding a higher grade and a more uniform quality of butter, all of which is made possible by proper pasteurization.

I do not like to admit it, but it is a fact that the change from the whole-milk to the hand-separator system of butter making has resulted in a decline in the quality of butter. This is due to the fact that under the whole-milk system it was impossible for the butter maker to handle milk which was sour when delivered, and consequently the farmer was compelled to deliver it more frequently and in a good, sweet condition. While under the hand-separator system we find that at most creameries the cream is delivered anywhere from 1 to 10 or 15 days of age, and consequently is in a very poor condition when it arrives at the factory, and whether it is received at the creamery or not depends upon the local conditions. We find that if a butter maker has no competitor who will receive cream of a poor quality he will reject it, while, on the other hand, in nine cases out of ten he will receive it if his competitor does, and the result will be that sooner or later he will be looking for another job. The quality of the butter made by the creamery will go down until finally it must close its doors because of the fact that the prices paid the farmers for butter fat have not been high enough so that the dairy business has been a paying proposition for him, and he quits the old cow and perhaps goes into some other line of business.

From the results obtained by experiments carried on by the United States Department of Agriculture; the Iowa State College, Ames, Iowa; the Albert Lea State Creamery, Albert Lea, Minn.; and other leading experiment stations, show that pasteurization of cream can be successfully carried on by the creameries of this country, and I hope the day will come, and is not far distant, when we will have a national law compelling that all cream must be pasteurized.

There is no longer any need for the cry that we are not ready for such a law. I believe that the process has been agitated long enough, so that we have had plenty of time to prepare ourselves for it, and that it does not matter how long we wait, we will always have some one who will say that we are not ready for anything of this kind, and it will be the ruination of the dairy industry if such a law should be enacted. I wish to say to the butter makers of this kind that you must remember, if we do not make any improvement in the product manufactured by the local creameries in this country, we will soon have educated the consuming public to eat a substitute for butter which is cheaper and perhaps just as good.

I think this problem is worthy of a most serious consideration, and I would ask you to take it home to the board of directors of your creamery, for the good of the industry which you represent.

Before taking up the method of pasteurization I wish to state that I do not believe it is possible for anyone to lay down any set rules or any process that you can apply in your creamery and be successful in pasteurizing cream. You must, in the first place, fit yourself for the work that you wish to accomplish. What I mean by that is that you must study the process of pasteurization thoroughly, so that when you undertake to carry on the work you will understand why certain things must be done and what causes results of a certain nature.

Pasteurization is a process of heating cream to a temperature which destroys practically all germ life and removes from the cream some of the undesirable odors which are caused by the great number of bacteria in raw cream.

The object of the process is to destroy all undesirable germs in order that we may be able to produce a more uniform and a higher grade of butter, with a better keeping quality, and thus offer to the consuming public a more desirable product.

* * * * * * *

The cost of pasteurization depends somewhat upon the efficiency of the plant and the method employed. From experiments carried on by the Dairy Division of the United States Department of Agriculture and the dairy department of the Iowa State College, it was found that the cost was greater with the continuous method than it was with the vat method. This would depend upon how the plant was handled, the richness of the cream, and the amount of water at hand.

Prof. V. D. Chapples, of Iowa State College, figures that the total cost of pasteurization, figuring interest, depreciation, and labor, was from 10 to 12 cents per pound of butter fat and from 25 to 30 cents per gallon of cream. This is with the vat system, while with the continuous method the cost is about one-third greater.

In conclusion I wish to say that I believe we have yet a great many things to learn about pasteurization, but we are far enough advanced in the work so that we can recommend it to the American butter maker as a successful business proposition, and, in my opinion, there is no need of waiting any longer for the man who says we are not ready, because we will always have a number who will come out with the same cry, "Unpreparedness."

While I am not in favor of a law compelling pasteurization at once, I do believe it would be advisable for Congress to enact such a law to take effect in a year or even in two years. It would then be possible for the creameries which are not prepared at the present time to get ready and meet the conditions when the time arrives.

There is no question but that sooner or later we will be compelled to pasteurize, and, in my opinion, it would be far better to show the consuming public that we are ready to give them what they want before we are going to be forced to it.

EXHIBIT 37.

[Chicago Dairy Produce, Nov. 28, 1916, pp. 18–20. Article contributed by Prof. H. A. Harding.]

BUTTER HEALTHFULNESS.

Healthfulness of butter was the subject discussed by Prof. H. A. Harding, of Illinois University, at the convention of National Creamery Butter Makers' Association in Minneapolis. Prof. Harding said:

Butter is a well-known commercial dairy product, and its ordinary commercial qualities are well known to all of us. Somewhat recently there has arisen a discussion of the healthfulness of butter. Healthfulness is so important an element of food value that any food distinctly dangerous to the public health would be promptly excluded from the market.

* * * * * * *

Butter: This has been rather a long preface to a discussion of the question of the germ life of butter, but it seemed desirable because the germ life in the butter is simply the result of the germ life in the cream. When the physical condition of the butter fat is changed from the individual globules that exist in the cream to the solid mass that exists in the butter, some of the important factors which have facilitated the rapid growth of the bacteria in the milk are changed, and as a result butter is an unfavorable place for the development of germ life. Consequently, the germ life decreases, at first rapidly, then more slowly, and, finally, almost disappears.

* * * * * * *

During the increasing sanitary inspection of the past 20 years the only indictment which has been brought against the healthfulness of butter has had to do with the question of bovine tuberculosis. The

various investigations of the city milk supply throughout the country have shown that in the raw milk germs of bovine tuberculosis occur occasionally and may be obtained from approximately 10 per cent of the samples of such raw milk.

It has also been demonstrated beyond any room for doubt that the action of the centrifugal separator tends to concentrate the germs of bovine tuberculosis in the cream so that they pass over into the butter. It is, indeed, fortunate that this germ is so sensitive to the influence of its surroundings that it will not grow either in the milk, cream, or butter. On this account it does not undergo any multiplication after leaving the cow, so that, due to mechanical losses, the number of germs present in the butter is always less than in the milk. These conditions in cream and butter are so unfavorable for these germs that they die off with a fair degree of rapidity.

However, careful studies have shown that they will remain alive in butter for three months or more under butter-storage conditions.

Whereas our survey of the conditions surrounding the manufacture of butter indicate that it is substance free of all hygienic significance, except for this matter of bovine tuberculosis, the fact must be faced that butter made from raw cream is open to a very serious indictment from the standpoint of the public health.

Post Office Appropriation Bill.

EXTENSION OF REMARKS
OF
HON. EDWARD B. ALMON,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, February 21, 1917,

On the bill (H. R. 19410) making appropriations for the service of the Post Office Department for the fiscal year ending June 30, 1918, and for other purposes.

Mr. ALMON. Mr. Speaker, when the Senate amendment No. 34 to the Post Office appropriation bill, known as the Reed amendment, was under consideration in the House, I was unable to secure any time for the presentation of my views upon said amendment, so I secured permission to extend my remarks in order to make the following statement:

Senate amendment No. 34 to the Post Office appropriation bill, commonly referred to as the Reed amendment, contains two parts.

Part 1 is as follows:

(34) SEC. 5. That no letter, postal card, circular, newspaper, pamphlet, or publication of any kind containing any advertisement of spirituous, vinous, malted, fermented, or other intoxicating liquors of any kind, or containing a solicitation of an order or orders for said liquors, or any of them, shall be deposited in or carried by the mails of the United States, or be delivered by any postmaster or letter carrier, when addressed or directed to any person, firm, corporation, or association, or other addressee, at any place or point in any State or Territory of the United States at which it is by the law in force in the State or Territory at that time unlawful to advertise or solicit orders for such liquors, or any of them, respectively.

If the publisher of any newspaper or other publication or the agent of such publisher, or if any dealer in such liquors or his agent, shall knowingly deposit or cause to be deposited, or shall knowingly send or cause to be sent, anything to be conveyed or delivered by mail in violation of the provisions of this section, or shall knowingly deliver or cause to be delivered by mail anything herein forbidden to be carried by mail, shall be fined not more than $1,000 or imprisoned not more than six months, or both; and for any subsequent offense shall be imprisoned not more than one year. Any person violating any provision of this section may be tried and punished, either in the district in which the unlawful matter or publication was mailed or to which it was carried by mail for delivery, according to direction thereon, or in which it was caused to be delivered by mail to the person to whom it was addressed.

Part No. 2 of said amendment is as follows:

Whoever shall order, purchase, or cause intoxicating liquors to be transported in interstate commerce, except for scientific, sacramental, medicinal, and mechanical purposes, into any State or Territory the laws of which State or Territory prohibit the manufacture or sale therein of intoxicating liquors for beverage purposes shall be punished as aforesaid: *Provided*, That nothing herein shall authorize the shipment of liquor into any State contrary to the laws of such State: *Provided further*, That the Postmaster General is hereby authorized and directed to make public from time to time in suitable bulletins or public notices the names of States in which it is unlawful to advertise or solicit orders for such liquors.

When this amendment was reached for consideration in the House I demanded a division of the amendment in order that there might be a separate vote on each part. The Speaker ruled that this could not be done under the rules of the House.

Mr. SAUNDERS, of Virginia, then offered an amendment to part No. 2 of the amendment providing that liquors could not be shipped into prohibition States or Territories contrary to the laws of such States or Territories. I voted for that amendment, and when Mr. HUMPHREYS of Mississippi demanded a yea-and-nay vote on this amendment I voted to sustain the call, but we failed to secure such a record vote.

Part No. 2 of the amendment prohibiting the sending of whisky circulars and advertisements through interstate mail into prohibition States is the same as the provisions of the Bankhead bill, which passed the Senate on January 11, 1917. No one could vote against part No. 2 of the amendment known as the Reed amendment without voting against part No. 2, containing the provisions of the Bankhead bill protecting prohibition States from whisky circulars and advertisements. Congress alone has authority to exclude such literature from interstate mails into prohibition States. I feared we would not have another opportunity to put an end to this great evil, so for this and other good reasons I decided it was my duty to vote for the amendment, which I did, and it was adopted by a vote of 319 to 72.

Address of Hon. George F. O'Shaunessy, of Rhode Island.

EXTENSION OF REMARKS
OF
HON. CHARLES P. COADY,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,
Wednesday, February 28, 1917.

Mr. COADY. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include an address of Hon. GEORGE F. O'SHAUNESSY, of Rhode Island, at Baltimore, Md.

The address is as follows:

ADDRESS OF HON. GEORGE F. O'SHAUNESSY, OF RHODE ISLAND, AT BALTIMORE, MD., FEBRUARY 22, 1917, AT WASHINGTON'S BIRTHDAY PATRIOTIC CELEBRATION, UNDER THE AUSPICES OF THE KNIGHTS OF COLUMBUS.

As an immigrant son of an immigrant, conscious of the responsibilities of American citizenship, and glorying in the great opportunities this Republic affords, I bring tidings of good cheer from Rhode Island, the land of Roger Williams, to Maryland, the land of Lord Baltimore. Surely there is a welcoming echo from one State to the other, as each rings out in joyous song the acclaim to their founders, so conspicuous in the fight for civil and religious liberty. They builded wisely and well; they were steeled to the fight for liberty of conscience by the bitter memories of despotic rulers who would wrench the minds and consciences of men from their accepted beliefs. Each State did its best in the Revolution to aid Washington. Who reads that marvelous story of patriotic sacrifice without dwelling on the valiant work of Nathanael Greene, Ezek Hopkins, and William Ellery, and the sturdy efforts of Charles Carroll of Carrollton, John Hansen, and Father Carroll.

To-day the Knights of Columbus, the great auxiliary of the Roman Catholic Church, boasting a membership of 375,000, and operating in the United States, Canada, Mexico, and the Philippine Islands, are holding in 31 cities these patriotic exercises to honor the memory of Washington and his compatriots and to awaken in the hearts of their fellow countrymen a renewed sense of devotion to our common flag and our sacred institutions.

Let us on this great day set aside to honor the memory of Washington, give a thought to Columbus, and the friendly monastery of "Santa Maria de la Rábida," which crowns a headland on the coast of Spain. Buffeted by misfortune, Columbus turned for aid to the good monk, Marchena, who called Fernandez, the physician, and Pinzon, the shipbuilder, to listen to the dreaming navigator. These three men sat in the "Columbus" room, so called to-day, preserved by the Spanish nation as a sacred relic, and discussed the plans of Columbus. They turned the scale in his behalf, and made possible through their belief in him the aid which he obtained from the Catholic Spanish court. The old monastery has been aptly termed "the corner stone of American history."

I think it but fitting to link these two names of Columbus and Washington. One discovered a continent and emboldened navigators; he made possible the realization of the dreams of centuries. Within one generation from his death the whole coast, from Cape Breton to the Straits of Magellan, became the scene of maritime activity. He had kindled a fire never to die. Washington, by his sword and genius, evolved a mighty Republic, whose institutions proclaim the equality of man, based upon the greatest liberal principle in government, civil and religious liberty.

To-day in meetings throughout the country the faith of 18,000,000 Catholics is pledged to American institutions, our allegiance is renewed, and the sacred promise made to our country to give our lives and our fortunes to preserve it should the occasion arise. We Knights of Columbus love liberty. We are taught in our lodges, as we have been taught in our homes

to reverence law and order and to respect and obey constituted authority. Our motto is our God and our country. We speak for the upbuilding and perpetuation of the home; it is the unit of society, and he who would undermine it we regard as an enemy to the Republic. In divorce we do not believe. To make matrimony a jest and a trial institution is to mock at the founder of the Christian religion. We believe in a moral citizenship which acts as well as professes.

And so to-day we gather throughout the country in patriotic rejoicing, we Knights of Columbus, of whom a selected committee of Freemasons in California, after an examination of our ritual, said: "The ceremonial of the order teaches a high and noble patriotism, instills a love of country, inculcates a reverence for law and order, urges the conscientious and unselfish performance of civic duty, and holds up the Constitution of our country as the richest and most precious possession of a knight of this order."

This is an appropriate time to honor heroes and to silhouette the worth of men. Never let the book be closed on greatness. Never let business become so engrossing or pleasure so alluring as to deaden memory. Valley Forge should stand out more prominently in our history than ever before. The contemplation of Washington's comfort and his readiness to sacrifice it and everything he possessed for his country should be an inspiration to renewed devotion. It should prove an indictment of those who measure their patriotism by a financial yardstick or by a measure of convenience and pleasure. Not how much will it cost me or how much will it interfere with my luxury should be the question, but a longing springing from the heart to attest a full measure of devotion to our country should be the mainspring of our patriotism. Washington's only security for the $64,000 he gave to his country's cause was his faith in that cause. He served without pay. He bore calumny calmly. He forgave his enemies. He was superior alike to riches and to poverty. He was quick to rise to the grandeur of an American Nation, and to leave behind him forever the limitations of colonialism. He worked marvels with a handful of men. When others faltered he advanced. At Trenton, with 2,400, he saved the Revolution. He directed the work at Saratoga, where the Revolution was established. He had the confidence of his men and invited their comradeship. "I will storm hell if you will plan it," said Mad Anthony Wayne to him, and Stony Point fell.

He answered his country's call as formidably when victory had been won and his glories were turning to ashes, when he sat as the presiding officer of the constitutional convention. There he was a towering figure working out a charter for a Nation's destiny. It has been our guide through storm and sunshine. In the phrase of Lowell he was an "imperial man." His was "a creed heated white hot in the furnace of conviction and hammered into shape on the anvil of life."

The Americanism of Washington was born of sacrifice, a word so foreign to some natures. Let some one else do it was not the slogan of Washington. He had eternal and abiding faith in the right of man to life, liberty, and the pursuit of happiness. He was ready to die for his principles. The aim of his life was service; the law of his life was sacrifice; the compensation of his life was fellowship with God and man.

Prohibition for District of Columbia—Shall Congress Put an End to the Liquor Traffic Here, or Shall We Confess Our Unwillingness to Decide?

EXTENSION OF REMARKS

OF

HON. GUY T. HELVERING,

OF KANSAS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1917.

Mr. HELVERING. Mr. Speaker, in the proposition before us to-day there are, in my opinion, just three questions involved, and they are: Is it in the best interests of the Nation and of the District to have prohibition here? Should Congress use its legislative powers and so decide? Or should it sidestep its constitutional obligations and give to the people of the District the referendum on this one question? Answer these three questions and the entire proposition must be clear to the mind.

The first question involves the advisability of prohibition under any circumstances, and the experience of the Nation would appear to have settled that beyond dispute. The steady trend of the Nation is in the direction of prohibition—absolute prohibition—and it never is away from it. It is steadily winning its way, State by State, and the reasons for this can be found in the moral and economic arguments which have commended themselves to the judgment of the people in all sections of our country.

As to the moral argument in favor of prohibition, it is so plain that it needs no elaboration. No man has ever been able to show where the use of liquor has been of advantage to the human race. On the other hand, we see on all sides of us mental and financial wrecks which have been wholly caused by the use of intoxicants. If you want to find the moral results, go into the home of the drunkard and see the curse which has fallen upon wife and children; go into the jails and the penitentiaries of the Nation and trace down the direct cause which is responsible for the crimes which have led to the incarceration of the criminals. Did you ever find a man or woman in these institutions who was able to say that prohibition had led them into crime? Is it not the absolute fact that the overwhelming percentage of those who are there have been brought to crime as the result of drink?

And when we come to the advantages of prohibition from an economic standpoint the evidence in its favor is overwhelming, as I shall endeavor to show by citing the examples of States and of communities which have adopted it. It has resulted in a decrease in crime; in an increase in the activities which lead to prosperity by means of honest endeavor; it has been hard upon the jail and upon the penitentiary, but it has been a blessing to the legitimate activities of the Nation, as it has added to the safety of the individual, particularly to those who have to travel upon the railroads, and it has also added to the safety of the home—reasons sufficient as to why its extension is advisable.

Now, let us see what has been the experience of some of the States which have adopted prohibition, and also let us inquire into the causes which led them to adopt it.

EXPERIENCE OF PROHIBITION STATES.

Kansas was the pioneer among our Middle West States in adopting prohibition, and what has been the result?

To the south, the younger State of Oklahoma could not but note the advantages accruing to Kansas as the result of prohibition. She showed her appreciation of these advantages by adopting prohibition and by enforcing it, and to-day a proposition to bring back the saloon into Oklahoma would receive but scant support from the splendid people who live there.

To the west, the Centennial State, Colorado, took notice of what Kansas and Oklahoma had been doing, pronounced the work to be good and followed in our footsteps, and after a fair test overwhelmingly defeated the proposition to restore the saloon.

To the north, Nebraska has fallen into line and proposes, by the declared wish of its voters, to drive the saloon, the brewery, and the distillery from within its borders.

And as to the east, while it is true that Missouri has not adopted prohibition as a State policy, nevertheless the influence of environment is in evidence. The wonderful progress of Kansas under prohibition has had a powerful effect and in the November elections of last year Buchanan County and St. Joseph, bordering on Kansas, and Jackson County and its wonderful metropolis, Kansas City, likewise on the Kansas border, all voted in favor of prohibition and the elimination of the saloon.

The lesson is there and can be easily deduced. If prohibition has been a failure in Kansas, as its opponents in the Nation would lead you to believe, it would be known to the people of the territory surrounding. But, as I have shown, the tendency is steadily in the direction of prohibition in all of that territory and it is never in the other direction.

PROHIBITION IN COLORADO.

Speaking with regard to Colorado and the effect of prohibition there, Senator THOMAS of that State said that—

> the development of that State during 1916 in all the elements of material and moral growth and well-being, practically stands without precedent in our previous history.

Continuing, he said:

> There are no empty stores in Denver.
>
> Regarding the question of its effect upon the people, I may say that of those who opposed prohibition in 1914 I think I am within bounds in saying that 60 per cent of them would to-day, if the question were again presented for consideration, vote for, instead of against, prohibition.
>
> In 1910 Denver voted wet by a majority of 17,000, in 1912 by 22,000, in 1914 by 8,500, but in 1916 the vote on the wet amendment showed a majority in opposition of 10,960. In the State the majority against prohibition in 1912 was 40,000; the majority in favor of prohibition in 1914 was 11,500; the majority for prohibition in 1916 was 85,789.

Here are quotations clipped from the press of Denver, and surely the daily press is indicative of the thought of the people to which it caters:

Taxes have decreased.

Business is better than it ever has been.

Every man who wants work can get it.

There are fewer vacant houses and stores than ever before.

Building permits, especially in the last six months, show a decided gain, particularly in the matter of small homes.

Collections are 40 per cent better.

Savings accounts in Denver banks have broken all records.

Divorce suits filed show a decrease of 40 per cent.

Arrests, for all causes, have decreased 31 per cent.

Arrests for drunkenness have decreased 59 per cent.

Arrests for vagrancy have decreased 55 per cent.

The cost of maintaining the city jail has decreased 28 per cent.

The cost of maintaining the county jail has decreased 27 per cent.

The number of murders, suicides, and burglaries has fallen off at an astonishing rate. There have been only two murders in Denver in 1916.

District Attorney Rush stated in open court recently that the work of his office has decreased 50 per cent since the city went dry.

In the face of this can it be claimed that prohibition is not in the interest of the masses of the people, both from a moral and economic standpoint? But I know there are those who will say that Denver is an exceptional case, as far as prohibition goes, and that it is impossible to secure enforcement in a large city.

PROHIBITION IN WASHINGTON.

In connection with that contention I would like to call your attention to the experiences in Seattle, Wash., and I am particularly interested in this, by reason of the fact that the testimony comes from one who was opposed to prohibition, used all of his power to defeat its adoption in Washington, and can not be accused as being a fanatic or as being biased in favor of prohibition.

The man to whom I now refer is Maj. C. F. Blethen, editor of the Seattle Times. According to him he used his paper to fight prohibition on economic grounds. He was of the belief that in a great seaport city, with 350,000 population, prohibition would be destructive and would bring on economic disaster. And what has he learned?

The major has entirely changed his attitude after seeing the law in effect, and is to-day as strong an advocate of it as he was an opponent in the past.

He has found that the number of arrests have decreased under prohibition, that the bank deposits have increased, sales of dry-goods stores and of groceries are breaking records, and that the women and children have been the greatest gainers under prohibition and its enforcement. And this man, who has been converted as the result of actual experiences witnessed, says:

In a very few years there will not be a licensed saloon in the whole Nation, and that will be a fine thing.

I commend the attitude of Maj. Blethen to the opponents of prohibition. They are not to be blamed, because they do not know the benefits to be derived, but I do not think it impossible that when they also have had the evidence before them they will be found with the major enthusiastically supporting the thing that they now condemn.

HOW IT WORKED IN KANSAS.

With reference to my own State, Kansas, I can speak with knowledge secured by practical observation. Out there we had prohibition in theory for many years, but it is only fair to state that it had not been universally enforced until 1907. Up to that time the law followed local custom and the whims of those who were in position to enforce it, and this enforcement was neglected by many who were only too ready to tolerate and connive at defiance of the law.

In the year 1906 ex-Senator Harris was made the Democratic candidate for governor and made his race on a platform declaring in favor of absolute law enforcement. He went into every nook and corner of the State and aroused the people as they never had been before. He failed to win the election, but he so cut down the normal Republican majority that his political opponents saw the handwriting. They recognized the fact that the voters wanted the law to be rigidly enforced, and from that time on it has been enforced until the open saloon can no longer be found in Kansas. Every legislative step taken since that time has been with a view to strengthen the prohibitory law, and the people have ever shown their sympathy.

When they started out to enforce in fact they found that in Kansas City, Kans., the saloon was tolerated and recognized by custom and by the local authorities. Divided as the city is from its "wet" sister on the Missouri side by only an imaginary line, it was evident that here would come the real test as to whether enforcement would be possible and what would be its real effects.

I had a number of good friends in business in Kansas City, Kans., at that time, and they were up in arms at the thought of the closing down of the saloons.

It will ruin us—

They said—

The employees of factories and of the packing houses will go to the Missouri side to get their liquor, and where they buy their intoxicants there also will they buy the things needed for the home.

That argument appeared to me to be founded on a sound basis, and I was very anxious to see how the experiment worked out.

Well, the saloons were driven out of that city, and about two years later I had business which called me there. I mingled with my old friends and inquired as to how they had been getting along in a business way. The answer was to the effect that they never had been so prosperous and that conditions throughout the city were in every way eminently satisfactory.

I then called their attention to the predictions which they had made to me as to what would result in case the prohibitory law was enforced and inquired how it came about that prosperity had come when ruin was expected.

Well—

They said—

we sincerely believed what we then said to you. But, you see, in the old days, when the men got paid off in the various plants they stopped in at this joint and that one before they reached home, with the result that when they did reach there they had entirely forgotten the obligations owed to us, and in many instances they no longer had the money to discharge these obligations. Now, it is true that many of them go to the Missouri side for intoxicating beverages, but before they do this they go home after receiving their pay, dress up and call around to pay their bills. The saloon comes second now, and not first, as in the old days, and the result is that collections are in every way better. Best of all, the families of these men are showing the benefits derived by reason of the fact that they are better clothed and better fed and are in every way the gainers as the result of the elimination of the saloon.

That was one of the practical results in Kansas, and after seeing these things and having been convinced by absolute evidence of the advantages to be derived through prohibition and law enforcement I propose on every opportunity to so use my vote that it will aid in extending these advantages to all.

WHY WE SHOULD ACT.

Convinced as I am of the advantages of prohibition, my vote on the measure before us must be based on the proposition as to whether this Congress shall take the responsibility to extend prohibition to the people of the District of Columbia or whether we shall evade the responsibility of acting and leave the question for them to determine at the polls.

I am favorable to the greatest measure of self-government and believe in home rule; but if we are to have this self-government, then let it apply to all questions and not to one. And if we are going to divorce the Government from the constitutional duty of legislating for the District, let us also divorce ourselves from the obligations assumed in paying one-half of the expenses of this local government. Let the people rule here, as they should rule everywhere, but with that rule should go the responsibility of raising the revenue needed to conduct their government.

I am not opposed to the payment of a legitimate share of this District government, based upon the national holdings, but I object to any arbitrary rate, and I likewise believe that our share should be determined not alone by our governmental holdings in the District, but that share should be diminished in accordance with the added value given to all other holdings by reason of the location of the seat of government here.

But it does not appeal to me to see the desperate efforts made to secure a referendum upon this one particular proposition. If the demand came to us from the people of the District for absolute home rule, I would be more inclined to give consideration to it than I would to this demand, which I feel sure is engineered by the saloon advocates in the hope that it may delay the inevitable.

And I am not at all convinced that it is within our power to give to the people of the District legislative authority unless we alter the Constitution. I know that eminent authorities are to be found on both sides of this question, but when I read Article I, section 1, of the Constitution, which declares that "all legislative powers herein granted shall be vested in a Congress of the United States," and then turn to Article I, section 8, and read that Congress shall have power to exercise exclusive legislation in all cases whatsoever over such District, I am inclined very much to wonder if it is within our power to delegate such legislative

power to others. And when I read such eminent authorities as Cooley, Oberholtzer, Willoughby, and others, who are agreed that legislative powers can not be delegated, it certainly looks to me as if our ability to grant a referendum is of doubtful legality.

But if we did grant such referendum and it resulted in a majority in favor of the abolition of the saloon, we all very well know what would immediately happen. The very men who are now clamoring for a referendum would be the first to demand that the matter be taken to the courts; they would insist that the referendum was unconstitutional, and they would do everything in their power to delay the time when the will of the voters should be put into effect.

SAFEGUARDING A REFERENDUM.

We who have had experience of the difficulties encountered in guarding the sanctity of the ballot know full well that in order to do so there must be gradual education of the electorate as well as election laws which have been wisely framed. Even in the States where the right to vote has been long enjoyed corruption is often very much in evidence. We have seen it in Indiana and in Ohio and in Pennsylvania, and when the great liquor interests of this country start out to engage in a death struggle we can rest assured that money would be squandered to an extent never witnessed before. To keep the saloon in the National Capital, to prevent an adverse vote here would mean more to them in a psychological way than would the winning of half a dozen States, and if we but submit this proposition to the voters we are certain to invite an era of corruption here which will have far-reaching effects.

That this is not a theory is proven by the lessons of the past. They had this prohibition fight in Texas some time since, and an active attorney general managed to get possession of the files of the correspondence of the brewery interests and those who were fighting the brewery battles in Texas. In that collection of letters was one from Adolphus Busch, whose name is familiar to all who have read on billboard or in magazine of the famous Anheuser-Busch product.

Mr. Busch was very much concerned for fear that prohibition should make any gain, and he wrote:

It may cost us millions and even more, but what of it if thereby we elevate our position?

The elevation of the brewery position is usually gained by the lowering of the standards of those who use the brewery products, but Mr. Busch was not much concerned about that. He was willing to show that he was not only ready to advise but to back his judgment with cash, and in the same letter he said:

I will not mind to give one hundred thousand extra, if necessary.

One hundred thousand for what? Would it be given for the purpose of elevating humanity or of corrupting the ballot? Draw your own conclusions.

Mr. Busch in thought and in action is typical of the brewery interests of the country. We have it in his own words what he was willing to do in Texas. Imagine then what the great number of brewer Busches would do if we were to have a referendum here. The good people of Washington might desire a fair ballot, but they would be powerless in view of the forces with whom they would be forced to contend.

FIRST DUTY IS TO NATION.

We owe a duty to the people of the District, it is true, but our first duty it to all of the people of the United States. We should not forget that this District is maintained primarily for governmental purposes and that residence in it is but a secondary consideration. Thousands are here temporarily, employed in the various activities of the Government, and yet they are as much concerned in the safeguarding of human life and in the protection of property in this District as are those who do business here permanently. It is aimed to give those transient residents a vote in case a referendum is had, but that proposition does not ring true. No man can expect to have two voting residences. If these men have severed all home State ties and are bona fide residents of the District then it would be right for them to vote here, but if they are clinging to their right to vote in the State from whence they originally came they would be jeopardizing that right by participating in this referendum.

And while we are considering our duty to the District, we should not forget our duty to the States which we represent. We have a responsibility, and if we evade that responsibility we will give a real basis for the charge that we fear to take a stand.

I am here to speak out as one of the Representatives of Kansas. The people of our State are desirous of seeing their National Capital a city of which we can all be proud. We do not begrudge the share of the expense to make it beautiful which comes from Kansas. But there is one proposition involved to which we have a serious objection. With us the saloon is anathema, and we have barred it from our Commonwealth. And yet here in the District of Columbia you go out and collect $450,000 license tax from 300 saloons and about $50,000 from your wholesale liquor houses, and under the abominable half-and-half plan you come to the States and ask them to contribute $500,000 to match this money which has been obtained by methods which have been condemned by Kansas and all prohibition States. We do not want to be partners in the collection of your saloon money, and we have no desire to be tied to you by any system of partnership which would compel us to match your saloon money.

Oh, but some will say, it will be impossible to enforce prohibition in the District. The people are not ready for it and the city is too large to be governed like a country village. We heard the same thing with regard to Denver, and yet prohibition is well enforced there; we heard it said in connection with Seattle, and yet Seattle is not finding it so difficult to secure enforcement. And here in Washington, it would in the nature of things be much easier to enforce than in either of the cities named, for here its enforcement would be in the direct charge of the Government, and experience has shown us that the men who are often willing to defy local regulation are quickly brought to time when they have to face Federal action and Federal law enforcement. If prohibition is made applicable to the District, I have no doubt as to its enforcement as long as its enforcement is in the hands of the Government.

The people here in Washington can not be more desirous than we are to have here a Washington beautiful, a National Capital of which all of our people may well be proud. But in my opinion it is much finer to work not only for a Washington beautiful but for a Washington clean—clean in the sense that our best efforts are directed toward the encouragement of the things which go for the uplift of humanity and toward the safeguarding of the home. Let us use our best efforts to remove, as far as we can, temptation from youth. The saloon has never aided in the building up of character; it has weakened the moral fiber, never strengthened it; it has been weighed by the nations of the earth, and during the past 10 years there has come such a revolution in human thought that it is well-nigh ostracized. England does not want it; Germany frowns upon it; Russia put it down and out, and in the United States we have seen the steady rise of the tide which is sweeping it to its doom. We have here and now the opportunity to record the wishes of our people and to aid in crushing its power as much as we can; the opportunity is not only here but the weal of humanity and our constitutional duty points the way. It is a matter of pride to me that I will have this opportunity to vote legislation for the National Capital which we have found to be so beneficial in Kansas, and for that reason I favor the Senate proposition.

Arming of American Merchant Ships.

EXTENSION OF REMARKS

OF

HON. CYRUS CLINE,

OF INDIANA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. CLINE. Mr. Speaker, I rise first to state that I support the resolution now pending before the House granting certain powers to the President of the United States in order that he may properly protect the lives and property of American citizens. The very essence of government lies in the duty of its executive officers to protect those sacred rights from invasion or from proscription by a foreign power. Some criticism has been leveled against this resolution on the theory that Congress was attempting to abdicate its constitutional powers and lodge autocratic authority in the President of the United States. Such assumption is wholly unwarranted under the terms of this resolution. It carries with it but three propositions. First, granting to the President of the United States authority to supply merchant ships, the property of citizens of the United States, and bearing American registry with defensive arms and the ammunition and men necessary to defend against unlawful attack. Second, he is also empowered to protect such ships and the citizens of the United States in their lawful and peaceful pursuits on the high seas, and third, the provision to issue $100,000,000 of bonds to defray the expenses thereof.

This is essentially a peace measure—not a war measure, as argued by some of the gentlemen who have spoken on this proposition. The President does not ask that Congress divest itself of the authority invested in it under the Constitution. Nor does he seek to take from Congress any of its lawful rights in the emergency of war. What conditions have given rise to this resolution? The European war has been in progress for two and one-half years. Prior to the breaking out of the war we had the greatest foreign commerce of any nation in the world with the exception of Great Britain. Immediately after the war opened Great Britain notified all neutral powers that the North Sea had been declared a war zone and had been thoroughly mined and that all neutral powers entering that sea with trade did so at their own risk. This was a clear violation of international law. It went further during the progress of the war and seized our noncontraband commerce, took it into its prize court, and appropriated it to its own use.

Not content with that, the English Government has seized our mails, rifled them, and seriously affected our trade, all in absolute violation of the laws governing the rights of neutrals. On the 1st of February the central powers declared the open sea around the British Isles to the extent of 400 miles to be a war zone, and further that it proposed to destroy, without regard to the character of the commerce or the flag which it bore, all trade entering that zone. The result has been that the great trade of the United States has been driven into our own harbors and a blockade established against it that for all purposes is as effectual as though protected by an armed fleet. This condition gave rise to the necessity on the part of this Government of taking such steps as would restore to it some semblance of freedom of commerce. The greatest Nation on earth can not permit the belligerents of the European war on either side to destroy our trade by compelling it, for fear of mines and submarines and the loss shippers would thereby sustain, to be driven from the sea. No man can question but what we ought to take such steps as will relieve us from this embarrassing condition. As I have said, the second provision concerns the lives of our citizens who are lawfully prosecuting their business upon the high seas. The provisions in this resolution do not authorize the President of the United States to become the aggressor in any action, but simply provides that he may defend the property or citizens from an unlawful attack, and that is the only authority hereby conferred upon the President. It is past my understanding why a single member of this committee should be able to satisfy himself that it is his duty to subject the commerce of the country and the lives of American citizens to the depredations and unwarranted attacks from either of the belligerents without signifying his opposition. There is no man in this Chamber but who knows that the President is an ardent and earnest advocate of peace. He was reelected in 1916 because he was for peace and had kept the country out of war with the European nations for more than two years. I do not believe that he would now violate the confidence that the people of the United States have expressed in him because of his attitude on that question. For myself, in this moment of great crisis, I want to see the Congress stand squarely back of the administration in protecting American interests and American life in its peaceful pursuit wherever it may desire to go.

American Rights.

EXTENSION OF REMARKS
OF
HON. THADDEUS H. CARAWAY,
OF ARKANSAS,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. CARAWAY. Mr. Speaker, no one can refuse his support to this measure. To do so would be to be misunderstood at home and abroad. I repeat no one can now refuse his support to this resolution, and I say so because we are all loyal American citizens and guard jealously American rights everywhere. And as such, when an issue is made between our country and another, we hold no divided allegiance. We to a man stand with our country, our flag, and our President.

Some may have questioned the opportuneness of the request, holding that it would have been better for the President to have exercised these implied powers rather than excite apprehensions as to the results to follow an express grant of authority. The time to quibble about that has passed. We must now present a united front. Our country expects us to support the President in his effort to make American rights and American life respected everywhere. Our reply is written in this resolution. It is more than an answer to our own people. It is a warning to all peoples that we are determined to maintain our rights and make our flag respected wherever it kisses the sun.

I am not unmindful that in this vote lurks both peace and war. Which it shall be I do not know. I can not know, nor can you.

That issue rests with those, whoever they may be, that may disregard American rights—destroy American lives. These must decide for peace or declare for war. We shall meet that answer unafraid.

Our duty and inclination meet. We will support the President with unfaltering faith in both his wisdom and his courage. If peace may be maintained with honor, we know he will maintain it; if not, we would not have him do so.

We owe no divided allegiance; we recognize but one flag. There will be no faltering, no stragglers, in our ranks.

May God lead us to peace, but if He wills otherwise may He give us the wisdom and the courage to go forward wherever justice and honor demand that we shall go.

Reasons for Opposing Various Prohibition Measures Before the Sixty-fourth Congress.

EXTENSION OF REMARKS
OF
HON. CLIFTON N. McARTHUR,
OF OREGON,
IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. McARTHUR. Mr. Speaker, under leave to print granted me this day, I desire to publish my answer to a telegram from Mr. L. R. Alexander and other citizens of the State of Oregon asking that I support certain prohibition legislation pending in this Congress:

WASHINGTON, D. C., *March 1, 1917.*

Mr. L. R. Alexander, Mr. A. L. Veazie, Mr. John W. Loder, Mr. J. S. Greenfield, Mr. George H. Himes, Dr. C. A. Woody, Mr. W. H. Morron, Dr. G. H. Templeton, Rev. W. T. Milliken, Mr. M. M. Petty, Mr. C. A. Snell, Mr. W. M. Jackson, Mr. W. F. Norman, Mr. John A. Bell, Mr. J. P. Newell, Mr. J. Allen Harrison, Rev. A. C. Brackenburg, Rev. W. W. Youngson, Rev. A. A. Heist, Dr. T. W. Lane, Mr. W. H. Markell, Mr. Frank H. Hilton, Rev. A. R. MacLean, Dr Joshua Stanfield, Mr. J. K. Gill, Mr. H. F. Johnson, Mr. E. L. Lathrop, Mr. Walter M. Pierce, Mayor H. R. Albee, Hon. J. E. Anderson, Mr. Robert Livingstone, Judge R. G. Morrow, Dr. A. J. Montgomery, Mr. A. J. Robinson, Mr. J. E. Werlein, Dr. Emmet Drake, Mr. Wilson Benefiel, Dr. H. H. Thacker, Dr. Herbert C. Miller, Mr. L. R. Bailey, Mr. Q. W. Davidson, Mr. H. W. Hopkirk, Mr. A. S. Pattullo, Mr. H. W. Stone, Judge J. W. Bell, Mr. S. W. Steele, Mr. J. C. Mann, Mr. C. N. Wonacott, Mr. L. E. Carter, Mr. C. G. Wilson, Mr. S. A. Wilson, Mr. D. A. Pattullo, Mr. R. J. Peterson, Mr. J. T. Wilson, Mr. C. L. Smith, Mr. C. G. Gignoux, Mr. William McMurray, Dr. R. E. Smith, Mr. E. R. Ericson, Dr. W. H. Vose, Mr. Chas. H. Thompson, Mr. Jacob Kreiger, Mr. J. W. Andrews, Mr. W. L. Mallory, Mr. J. W. Day, Rev. H. Hagelganz, *Portland, Oreg.*

GENTLEMEN: In reply to your telegram of February 20, in which you urge me to vote for (1) national prohibition, (2) District of Columbia prohibition, and (3) a measure prohibiting the use of the mails to liquor advertisements, I beg to submit a statement of my position upon these questions.

During the fall campaign of 1916, which resulted in my reelection to Congress, I issued the following statement to the people of Multnomah County, which comprises the third Oregon district:

CONGRESSMAN M'ARTHUR STATES POSITION ON NATIONAL PROHIBITION QUESTION.

PORTLAND, OREG., *October 19, 1916.*

To the people of Multnomah County:

Inasmuch as there has been some inquiry as to my position upon the national prohibition question, I wish to make a public statement as to how I shall vote if this issue is presented to Congress.

In ordinary legislative matters I must rely upon my best judgment as to the views and wishes of my constituents, but where a question has been voted upon at the polls by the people of my district, I, as the Representative of these people, must abide by their instructions.

The people of this district will on November 7 vote upon a proposed amendment to the State constitution prohibiting the importation of liquor into Oregon. In considering this amendment the people will have an opportunity to express their views upon a question that is so closely related to national prohibition that there is no difference between them, in so far as Oregon is concerned.

Reaffirming my belief that the views of all the people are of more concern than the views of any class or faction, I wish to state here and now that if the pending amendment to the constitution of Oregon is approved by the voters of the third congressional district on November 7 I will vote for national prohibition in Congress, and if the pending amendment is rejected by the voters of this district I will oppose the national amendment in Congress.

I do not propose to take an arbitrary stand upon this question or set my judgment above the views of my constituents, and I will abide by the result of the district vote, whatever it may be. My stand on this

question is in keeping with the principles of representative government, and my pledge to the people is made to be kept, not to be disregarded for political expediency.

C. N. McARTHUR.

This statement was published in the Morning Oregonian of October 20, the Evening Telegram of October 20, and the Oregon Daily Journal of October 24, 1916. It was also printed on campaign cards, thousands of which were distributed from the headquarters of the Republican congressional committee in the Yeon Building. My promise to the people was made in good faith, and I had no means of anticipating the result of the vote on the "bone-dry" measure, which was as follows: Affirmative, 31,358; negative, 41,157; majority against measure, 9,799.

Under the circumstances I feel that it would be an act of the utmost bad faith if I were to disregard my pledge and vote for national prohibition, and that by so doing I would stultify myself. There is no denying the fact that a large majority of the people of Multnomah County are opposed to "bone-dry" prohibition, which is nothing more or less than a local application of national prohibition. I therefore feel that if I were to vote for the national amendment, or any other radical prohibition legislation, I would be misrepresenting rather than representing the people of the district.

I can not agree that a vote in Congress for national prohibition is merely a "referendum," and that the responsibility in the matter rests with the States. Under our dual system of government, a proposed amendment to the Federal Constitution must first pass both branches of Congress by a two-thirds vote in each branch, and then be ratified by the legislatures of three-fourths of the States. There is no such thing as a referendum, for this implies a popular vote rather than a vote by the legislature. The act of amendment is, in the first place, an act of Congress, expressing its judgment upon the question at issue, and the action of the States is secondary—a check upon the action of Congress, and not a substitute. The Constitution says nothing about "submitting" an amendment to the States; it says that "the Congress, whenever two-thirds of both Houses shall deem it necessary, shall propose amendments to this Constitution," and that these shall become valid "when ratified by three-fourths of the States." The function of Congress in this matter is not purely ministerial but is an essential element in the process of amendment. Were there any possible room for doubt as to this point, it would be removed by the consideration that a two-thirds vote in each house is required for the adoption of an amendment. Under the theory of "submission to the States" of a proposal for their legislatures to decide, surely a bare majority in Congress would be sufficient; but the idea of the framers of the Constitution was that a proposed amendment should, first of all, stand the test of commanding not only ordinary approval in Congress but the emphatic approval embodied in a two-thirds vote of both Houses.

The constitutional provision which says an amendment may be submitted "whenever two-thirds of both Houses shall deem it necessary" places upon the individual Senator and Representative a responsibility which he can not escape on the plea that he is voting for a "referendum," particularly where no such instrumentality as the referendum exists. The Senator or Representative who heeds the wishes of his constituents, as expressed at the ballot box, is a better friend of popular government than he who seeks to emasculate himself and Congress by indulging in the fallacy that ratification or rejection of an amendment by State legislatures is a "referendum."

In reply to your request that I vote for District of Columbia prohibition, I will say that inasmuch as the friends of this measure were unwilling that it be submitted to a vote of the people of the District—even for an advisory vote—I declined to support it. I do not believe in foisting a measure of this character onto the District unless there is a widespread demand for it, and after a residence of 15 months here in Washington and general inquiry upon the subject among all classes of people I can not bring myself to the belief that any such demand exists. Friends of this bill ought at least to have been willing that Congress authorize an advisory referendum on it.

As to your request that I support a measure denying the use of the mails to liquor advertisements, etc., I will say that I am in favor of such a measure, because it upholds the laws that the various States have enacted upon the subject, and I am a firm believer in law enforcement. I voted against this measure on February 21, however, because it was coupled with an improper piece of legislation known as the Reed amendment to the Post Office appropriation bill. Had these two propositions been divorced, I would have voted to exclude liquor advertisements from the mails in prohibition territory, but refused to stand for the Reed amendment, as it is a stab at the sovereignty of the States. It forces drastic "bone-dry" legislation onto 14 States of the Union, without in any way consulting the wishes of the people of these States, thereby striking at the very root and branch of one of our cherished American institutions—local self-government. This subject is fully covered in a speech which I made in Congress on February 22, copy of which I am mailing you.

I regret that I can not comply with the requests contained in your telegram, but trust that you will appreciate my position.

Yours, faithfully,

C. N. McARTHUR.

Post Office Appropriation Bill.

EXTENSION OF REMARKS

OF

HON. JOSEPH WALSH,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. WALSH. Mr. Speaker, although the appropriation for the Post Office Department of the Government is not now before the House, I desire to bring to the attention of my colleagues certain criticisms of the service in the delivery of the mails between the city of New Bedford, in the district which I have the honor to represent, and the great metropolis of New York.

The criticisms are set forth in three editorials which I append herewith, but they have been also brought to my attention by many of the business interests of that great textile city.

It is absolutely essential for the manufacturers and agents for the cotton brokers, and the representatives of southern cotton growers, as well as other business men, to have their mail from New York and southern and western points delivered at a reasonably early hour in the morning of each business day.

The service has been, as I am advised, dependent on train schedules, which are not sufficiently flexible or capable of adjustment to permit transfers and rerouting. It seems to me that this great Government department should, through its proper executive officers, be able to compel readjustment of mail-train schedules, or provide better facilities for transfer and dispatch. Under the arrangement which has been in force the past few months, towns and villages many miles more distant from New York have been receiving mails hours earlier than New Bedford with its nearly 120,000 population and its numerous and diversified industries. The transmission of the mail ought not, between two points such as New York and New Bedford, be disrupted or sacrificed on the ground of economy, but should be placed on a basis insuring service that can always be relied on for promptness and efficiency.

I am informed that after months of poor service, after numerous long-continued complaints coupled with emphatic protests, an investigation is being made, and I trust prompt action will follow to give the business interests the service to which they are entitled.

[From the New Bedford Standard, Feb. 12, 1917.]

FROM NEW YORK IN 19 HOURS.

How much delay is caused in the handling of a letter by putting on it a special-delivery stamp?

No; this is not a misprint. It is a serious question, prompted by the time stamps on an envelope that reached this office Saturday. It was mailed in New York in time to receive the stamp of Station H in that city at 6.30 p. m. Friday evening, February 9. A backstamp indicates that at 7.30 the same day it was in the Grand Central Station, New York, and another stamp that the New Bedford post office got it at 1.30 p. m. February 10. Delivery at this office, as called for by the special-delivery stamp, was made promptly. The time consumed in forwarding the letter from New York to New Bedford was 19 hours.

In contrast with this showing consider the case of a letter stamped at New York, Station H, at 10 p. m. Friday night, three and a half hours later than the special-delivery letter. It was not backstamped at New Bedford, but it was delivered at this office in the early morning delivery—say, five hours before the special-delivery letter reached its destination.

To answer the question with which we started, the special-delivery stamp in this case seems to have caused an eight-hour delay in the handling of the letter that carried it. Mailed in New York three hours and a half before the letter which had no special-delivery stamp it reached this office, say, five hours after that letter.

The chances are, of course, that it was not the stamp, but the general slipshod mail service that was responsible for the delay. The board of trade has asked for envelopes on which the stamps are evidence of undue delay in mail handling. This one is as good a "horrible example" as is likely to be encountered, and will be turned over. It is hoped that others who have similar experiences will send the evidence to the board of trade for use in a campaign to secure for New Bedford the mail service to which it is entitled.

—

[From the New Bedford Standard, Feb. 15, 1917.]

A SIMPLE REMEDY.

This city has no desire that the cape mail service should be sacrificed in order to improve the New Bedford mail service. Our business and social relations with the cape are and ought to be close, and it would be impolitic, to say the least, to urge that New Bedford would be given preference. At the same time New Bedford has a right to insist and does insist that it ought not to be sacrificed for the sake of the cape. Good service for both is what is wanted.

Our trouble about the early morning mail from New York is that when the railroad does not deliver the mail in Fall River on time the electric mail car which usually brings it to this city does not wait for it, because this car makes the run to the cape and if delayed would miss the cape train connections. The remedy does not appear difficult. Another mail car should be operated, or an arrangement should be made for transferring the New Bedford mail at Fall River to a regular D. & W. car. Either plan would give New Bedford earlier service on days when the trains are late between New York and Providence and would not be a detriment to the cape mail. So far as this particular phase of the poor service is concerned, the Government should have applied the remedy long ago.

—

[From the New Bedford Standard, Feb. 23, 1917.]

THE MAIL'S DELAYS.

Two pieces of first-class mail addressed to this office were stamped at New Bedford 8 a. m. Wednesday, February 21. One was received in the New York office at 5 p. m. February 20, reaching here the next morning; the other was stamped at New York at 5 p. m. February 19. This one took 24 hours longer to reach its destination than the other. It was about 39 hours on the way.

However, we should not repine. A worse case than this is reported from Boston. A postal card mailed in Waltham to a man in that city in April, 1908, has just been delivered. We hate to concede a record in this respect to another city, but it looks as if Waltham had the call. New Bedford, with a piece of first-class mail 39 hours on the way between New York and this city, must take second place.

Joint Memorial of the Utah Legislature Regarding Prohibition.

EXTENSION OF REMARKS
OF
HON. JAMES H. MAYS,
OF UTAH,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. MAYS. Mr. Speaker, I insert in the RECORD joint memorial No. 1 of the Twelfth Utah Legislative Assembly, as follows:

STATE OF UTAH,
EXECUTIVE DEPARTMENT,
SECRETARY OF STATE'S OFFICE.

I, Harden Bennion, secretary of state of the State of Utah, do hereby certify that the attached is a full, true, and correct copy of house joint memorial 1, adopted by the twelfth regular session of the Utah Legislature, as appears of record in my office.

In witness whereof I have hereunto set my hand and affixed the great seal of the State of Utah this 7th day of February, 1917.

[SEAL.] HARDEN BENNION,
Secretary of State.

House joint memorial 1.

A memorial to the Congress of the United States that Congress submit to the States a proposed amendment to the Constitution of the United States prohibiting the sale, manufacture, transportation, importation, and exportation of intoxicating liquors.

To the Senate and House of Representatives of the United States in Congress assembled:

Whereas there is now pending in the Congress of the United States a resolution proposing an amendment to the Constitution of the United States whereby the sale, manufacture, or transportation of intoxicating liquors within, the importation thereof into, and the exportation thereof from the United States and all Territories subject to the jurisdiction thereof for beverage purposes are prohibited; and

Whereas your memorialists favor and desire an amendment to the Constitution of the United States as proposed by said resolution, believing that the happiness, prosperity, and well-being of the people of the United States will be greatly promoted thereby; and

Whereas your memorialists are informed that said resolution has been reported upon favorably by the Judiciary Committees of both Houses of Congress:

Resolved by the Legislature of the State of Utah, That we respectfully memoralize the Congress of the United States that Congress adopt said resolution and that said proposed amendment to the Constitution of the United States be submitted to the legislatures of the States at the earliest possible date for their consideration.

Resolved further, That the secretary of state be, and he is hereby, directed to prepare and transmit forthwith certified copies of this memorial to the President of the United States, to the presiding officers of both branches of Congress, and to each of the Senators and Representatives from Utah.

G. H. DERN,
President of the Senate pro tempore.
J. F. TOLTON,
Speaker of the House.

Mr. Speaker, on the subject of prohibition in general we have just heard read the first memorial to Congress ever adopted by a Utah Legislature. It may be interesting to state that the present is the first Democratic legislature ever assembled in that State, that the Republicans in the late election never returned a single member to either house, and that the legislature has just enacted the first State-wide prohibition law ever placed upon the statute books of that State. The first Democratic governor the State has ever elected has just affixed his signature to the bill. Under this law the State goes as dry as a powderhorn on the 1st of next August.

Mr. Speaker, the people of Utah have given due consideration to the argument of the owners and supporters of the saloons. They have regarded the rights of the manufacturer and the dispenser. These people have hunted the evil down. They have driven it to its lair, where they have found it intrenched behind the influences of wealth and politics. Their servants have executed the sentence of condemnation. The Republican Party played tag with the question for a decade.

The people of my State now memorialize this Congress that, by proper legislation, the saloons thus condemned be abolished throughout the Nation, and as an important step toward that desired event they ask that the saloons be abolished in the Capital City of the country.

To-day Members have dignified the following timeworn arguments:

1. That prohibition does not prohibit. This thought is especially disturbing to manufacturers.

2. That, in fact, it increases the consumption of intoxicating drink. This thought fairly distresses the manufacturers.

3. That it is supported by the real enemies of temperance.

4. That the supporters of prohibition are all booze fighters and hypocrites. These arguments receive the attention of those who respect the ancient, the decrepit, and the antique.

At the same time they tell us not why, if it does not prohibit, the manufacturers of liquor all oppose the enactment of such legislation.

They do not tell us why, if it increases the consumption of their product, the manufacturers still oppose it so vehemently.

They do not tell us why, if it does not prohibit and in fact does increase the consumption, they speak eloquently of confiscation of property and plead pitifully for reimbursement.

These arguments, though they smell of mildew, are regaled to us to-day as if they were as fresh and fragrant as the flowers of June.

The papers of this city and the opponents of this measure suddenly realize their great devotion to the doctrine of local self-government. They ask what right has the Member from "Bucksport," Kans., or of "Rough Edge," Ill., or from "Quitchempaw," Okla., or from "Knobville," Tenn., to dictate the habits of the sovereign people of this District? They demand a referendum.

Did these same people demand a referendum when Congress voted the saloons upon the people of this District? What, then, became of the rights of the people who desired a clean and sober city? Is not this the property of the whole Nation, and have not the people of "Bucksnort," Kans., a right to be heard in its government? The people of the country have a right, through their Representatives, to say whether the Capital of this country, which they must support, shall be drunk or sober. The other night, on a street car of this city, I saw a drunken negro, reeking with the vile odor of the dramshop, reel against a respectable white lady. Have I no right to vote against the condition which naturally produces such circumstances?

These people who protest against Congress governing this District knew when they took residence and acquired property here that Congress was charged with such duty. They took residence and acquired interests here with full understanding and should not now be heard to complain.

I am satisfied that the calls for the referendum are not disinterested. It is not the right of the people but the interests of the saloon keeper that arouse such solicitude. They know there is no machinery for election. They realize the opportunity for fraud. They would expect to marshal the corrupt and purchasable. The liquor interests, together with the frequenters of the saloons, with the help of the purchasable colored population, could control the election in this city. An old colored woman, being asked how many people there were in Washington, said, "Countin' the whites, we have over 300,000." Unfortunately, many of the whites would not be counted in such an election. The liquor people know that a large element, much interested and most respectable, would not vote for fear of losing citizenship in their home communities.

This plea is only a subterfuge, an exhibition of extreme dilatory tactics in the hope of postponing what now appears to be the inevitable.

The other evening in this hall we listened to a most eloquent debate on the general subject of the high cost of living to the poor and middle classes of our country. Various remedies were suggested. The gentleman from New York, Mr. FITZGERALD, would enforce an embargo on foodstuffs. The gentleman from New York, Mr. LONDON, would condemn the foodstuffs and sell at cost. The gentleman from Texas, Mr. DIES, would induce the nonproducers to get out of the congested cities onto the soil.

None referred to the fact that the average workingman is spending more of his weekly wage for liquor than for bread and potatoes, high as these necessaries are, more for that which demoralizes his character and destroys his usefulness than for the prime necessities of his family.

Some two and one-half billions annually are expended for the various intoxicating liquors sold in the United States. It has been calculated that this sum would each year construct a row of cottages, costing $2,000 each, for a distance of 5,000 miles on both sides of the street reaching twice across the continent, with a dwelling every 50 feet, and leaving $500,000,000 with which to pave the street, build sidewalks, plant lawns, flowers, and shrubbery.

This sum represents three times the amount expended for every department of education in our country. It is twice our total annual expenditure for every department of the General Government. It would build six Panama Canals every year. It would pay for the largest navy afloat. If we could for one year divert this worse than useless expenditure toward such purpose, we could possess the most powerful navy in the

The gentleman from Kentucky [Mr. SHERLEY] states that there is a supply of 228,000,000 gallons on hand, 137,000,000 of which are in his State. He says that 40 per cent is being

marketed in dry territory, and asks that these markets in dry territory be kept open until the supply is sold.

He states that each gallon costs about 25 cents to manufacture; that over a dollar a gallon is to be paid the Government for the selling privilege. At the average selling price of $4 per gallon, this would represent a waste to the consumers, mostly wage earners, who feel the pinch of poverty and the burden of the high cost of life's necessities, of more than $1,000,000,000.

This liquid poison has been manufactured in the face of the growing temperance sentiment with due notice of what is coming and I am not weeping over the loss of markets, especially in dry territory, which we hope may be rapidly extended until no market for his "poisonous distillment" shall remain. Though not a cure-all, still by enacting a prohibitory law we will take one stop toward relieving those who now suffer from the high cost of living.

Other great nations, now endeavoring to meet the greatest crisis in their history, have recognized this principle and by law have enforced a prohibition of the manufacture and sale of liquor because the resources of such nations were needed for other purposes, because the use of liquor destroyed the efficiency of their citizens, because the grain heretofore converted into liquid poison was necessary for bread. This is one compensating result of the international tragedy.

Thousands of our fellow citizens are now within the gates of our Capital City. It is to the citizens of the Nation what the capital of the State is to the citizens thereof. No one would say that the majority of the citizens of a State, acting through their Representatives, have not the right and the duty to decide whether their Capital should or should not harbor saloons. So these visiting citizens have a right to behold a saloonless Capital City if they so desire, and their Representatives have the right to enact the necessary legislation.

Over 60 per cent of our people have already spoken on the subject. Over 85 per cent of the territory of our country has already abolished the saloon. The right, therefore, of the owners of the Nation to abolish the saloon from the Capital City, through their authorized Representatives, clothed with authority and charged with the responsibility by the Constitution, can not be denied, and as a vast majority of the people of my State have expressed their verdict and communicated their deliberate conclusions to me, I shall take pleasure in voting for the bill before us.

The Federal Farm Loan Act.

EXTENSION OF REMARKS

OF

HON. P. DAVIS OAKEY,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. OAKEY. Mr. Speaker, I ask unanimous consent to extend my remarks in the RECORD by printing an article in the Atlantic Monthly by Hon. Myron T. Herrick, of Ohio, relating to the Federal farm-loan act.

The article is as follows:

THE FEDERAL FARM-LOAN ACT.

[By Myron T. Herrick.]

I.

On December 2, 1913, in addressing Congress on rural credits, President Wilson said: "The farmers, of course, ask and should be given no special privilege, such as extending to them the credit of the Government itself. What they need and should obtain is legislation which will make their own abundant and substantial credit resources available as a foundation for joint, concerted, local action in their own behalf in getting the capital they must use. It is to this we should now address ourselves. * * * But we must not allow ourselves to depend upon extraordinary expedients."

Secretary of Agriculture Houston said in his report for 1914: "The chief difference of opinion arises over whether there should be special aid furnished [to farmers] by the Government. There seems to be no emergency which requires or justifies Government assistance to the farmers directly through the use of the Government's cash or the Government's credit. The American farmer is sturdy, independent, and self-reliant. He is not in the condition of serfdom or semiserfdom in which were some of the European peoples to whom Government aid was extended in some form or other during the last century. He is not in the condition of many of the Irish peasantry for whom encouragement and aid have been furnished through the land-purchase act. As a matter of fact, the American farmers are more prosperous than any other farming class in the world. As a class they are certainly as prosperous as any other great section of the people; as prosperous as the merchants, the teachers, the clerks, or mechanics. It is necessary only that the Government provide machinery for the benefit of the agricultural classes as satisfactory as that provided for any other class. It is the judgment of the best students of economic conditions here that there is needed to supplement existing agencies a proper land-mortgage banking system operating through private funds, just as other banking institutions operate, and this judgment is shared by the leaders of economic thought abroad."

Secretary of the Treasury McAdoo, in a ship-subsidy speech delivered on February 4, 1915, before the United States Chamber of Commerce, commented on the loss of the Government surplus lent to the States in 1837 and said: "Yet, gentlemen, when we can not get a State of the American Union to pay its just debts to the Government for money loaned to it, you ask us to stand for a proposition to lend money to private corporations or individuals upon the security of mortgage. Never on the face of the earth! And I tell you, gentlemen, if you ever enter upon it, you will have to lend it upon railroads and upon every other enterprise. Bills are referred to me, asking that every conceivable sort of scheme be approved, submitting them for the judgment of the department, for raids upon the United States Treasury in the form of actual loans to be made by the Treasury of the United States on this thing and that thing—farm loans, loans on houses built by workingmen, and so on. They are all entitled to consideration if we are going into the money-lending business. We shall have to lend it to everybody. You can not discriminate under our system of government. Everybody must tap the Treasury till if you adopt any such resolution as this."

All this is sound doctrine, and since it was thus deliberately pronounced as a rule of action for the administration by the foremost three of its leaders, nobody, of course, could have predicted the Federal farm-loan act. That such a law should really exist still seems incredible, not only because it violates every principle of this doctrine, but because it is unjustified by any emergency, except possibly that of a political campaign that is past. Congressman CARAWAY, of Arkansas, was one of its ardent advocates, but in a speech in November before the farm-mortgage bankers' association he confessed that the need for it "does not any more exist as formerly"; that it is "full of defects"; that "they are not going to do any business [under it] in the South"; that it will produce "more tenants and absentee landlords"; and that "it is very likely to be modified [in parts] or repealed, but as long as it exists it is going to be a serious menace to private capital." Then, he added: "I do not believe in the Government's going into private business of any kind, but this is one of the things it is going to do. To tell you the facts about the matter, to be right candid with you all, we were all hoping to be reelected by our activities in this matter. [Laughter and applause.] The farmer is the greatest agitator in the country, and it is always customary near election for all of us to shed a great many tears over his condition. And we did it, and I am proud to say that I had no opposition myself to being returned [laughter] and most of the other gentlemen got back. And it is to be hoped that, if defects appear in the act, by remedying them we may prolong our political lives."

To what extent such motives influenced the voting is not known, since no other legislator has been so frank as Mr. CARAWAY. It might be noted, however, that the act was passed only a few weeks before the political conventions in June. It was approved on July 17. The Federal Farm Loan Board was appointed during the same month. In August, liberally supplied from an appropriation of $100,000, the board started its publicity work and began a tour throughout the country that continued during the campaign. No criticism or questions of doubt were tolerated at its numerous meetings. The thousands of members and officers of granges and other agricultural bodies, farmers, and persons interested in agriculture, who attended, were regaled only with the highest recommendations of the act. This must have had considerable effect on the elections, especially since the board spread broadcast such statements as "The act will attract vast numbers of our people to the farms who have been unable to engage in agriculture because it has been impossible to secure money on farm obligations"; "the hearings disclose interest rates ranging from 5 per cent per annum to 5 per cent a month;" "in every State visited the industrious farmer of modest means but who can offer unquestionable security is unable to get farm credit on any terms;" and "in many States it was found that the farmer is never certain that he can get a loan, however good the mortgage security."

These statements regarding adverse conditions would entail no exaggeration if they referred to credit sought for or extended on security other than real estate, or to mortgages finally exacted to secure such debts, which the farmers, in too many instances, have let run on and accumulate year after year. They would be true if they referred even to any kind of credit in sections remote from money centers before 1910, when the improvement of farm finance was first nationally agitated. But they referred to farm mortgaging at present, the sole subject before the board's meetings, and their unmistakable intention was to create the impression that capital is now scarce and interest excessive for farm-land credit generally, irrespective of State, values, or person. Hence, the statements are flagrantly wrong, if the declarations and investigations of Secretary Houston, asserting and showing the contrary, are right. (See Bulletin 384, United States Department of Agriculture, July 31, 1916, compiled before the act was passed.—The Author.)

But misstatements, misconceptions, and lack of information have characterized the rural-credits movement. Never before was legislation purporting to solve a great problem enacted with such ignorance or disregard of its essentials as to both fact and principle. Aside from a very able argument about legal points, the debate on the act was simply descriptive of its clauses and added nothing to the store of rural-credits knowledge. The other discussions in Congress were also mere descriptions of bills, not a few of which were plans formulated upon novel ideas for raids on the Treasury and taxpayers' capital, or vamped up from the clutter of John Law's Co. of the West, the Massachusetts Land Bank & Manufactory scheme, and other vagaries of bygone days that were dumped into the trash can in 1741 by the extension to the colonies of the British "bubble act." The teachings of history and the best precedents from foreign countries were ignored as a guide for modern thought. The most noteworthy exceptions were the first bills and speeches of Senator FLETCHER and Congressman Moss; but these men changed their views without apology or apparent reason, and yielded to the pressure, not yet explained, that caused Congress to abandon President Wilson's, Secretary McAdoo's, and Secretary Houston's original plans of individual initiative and private enterprise through concerted local action of the farmers, and to depend entirely upon extraordinary expedients.

So the Federal farm-loan act was finally placed on the statute books with only 12 opposing votes in the House and none in the Senate, for the purpose of assisting actual and prospective farmers

(foreign immigrants as well as citizens) by the use of the Government's cash and the Government's credit on a gigantic scale and in a complex way, such as has never been attempted in any other country. Congressman CARAWAY's answer to the manifest objection to selecting one particular industry for Government favors was: "The farmer produces what you eat and what I eat, and what you wear and what I wear, and the cost of what we eat and wear is necessarily influenced by the interest rate that the farmer has to pay. If you cut down his rate of interest, everybody gets the benefit of it; and therefore it is not class legislation to enable him to get money at a lower rate of interest than anybody else engaged in private business." [Renewed and uproarious laughter.]

This answer has not satisfied the American Federation of Labor, whose 2,000,000 members are probably soon to be augmented by all the trade-unionists in the country. This great organization evidently understood Secretary McAdoo to be sincere when he declared that our Government can not discriminate and that all must be allowed to tap the till, if anybody be accorded that favor.

At its Baltimore convention (Nov. 20, 1916) the federation resolved, in substance, that deposits in postal savings banks be advanced to municipalities for the purpose of building model dwellings for their inhabitants; or, as an alternative, that the Federal Government establish such a system of credits that the inhabitants of these municipalities may borrow money for long terms at low interest rates to build homes free of taxation, the resolution beginning and ending: "Inasmuch as the Government has already established a rural-credits system for the benefit of the farmer * * * we believe it is an easy matter for the Government to take such steps to relieve the working people in industrial centers of the insanitary homes that are now unfit for habitation."

Thus the act has borne its natural fruit far more quickly than was anticipated. But the federation is just and fair in its demands, if the Federal farm-loan act is to remain in force. Difficulties would be encountered, of course, in adapting it to conditions in the cities on account of their shifting centers, changing real estate values, large apartment houses, and unstable population. However, the Government must address itself to meeting these demands and difficulties or else get out of the private business of lending money for agricultural purposes.

II.

If this matter were taken to the people, the vote would undoubtedly be either for all or for none. What will Congress do; repeal the act or enlarge its scope? The probabilities are that Congress will do neither, but will make some much-needed amendments and then rest, in the hope that the act will be invalidated by the courts as unconstitutional or be proved so ineffective and dangerous in operation as to become unpopular and little used. Such a hope would not be groundless, as an outline of the act will show. The act, however, is not as exact or as concise as it might be. Indeed, it is susceptible of different meanings at important points. But its intent to subsidize rather than to finance agriculture is quite evident. In spite of an intricate arrangement, the system created is really managed by the Federal Farm Loan Board, and is designed to draw funds from the United States Treasury and to issue bonds backed by the Government for granting loans to its beneficiaries at low interest rates.

The board is composed of the Secretary of the Treasury, chairman ex officio, and four members appointed by the President and confirmed by the Senate, and removable by the President. It forms a bureau at Washington in the Treasury Department for supervising, directing, and controlling a system that is to cover all continental United States except Alaska. In accord with the act it is to divide the country into 12 districts and establish a Federal land bank in each district. Besides these, the system will have such national farm-loan associations within each district and such joint-stock land banks, each with a territory of not more than two contiguous States, as the board may charter, without limit as to number. The board shall appoint one registrar and one or more appraisers for each district; also as many examiners, attorneys, experts, assistants, clerks, laborers, and other employees as it may deem necessary. It need not observe the civil-service rules in appointing or dismissing this force. The registrars, appraisers, and regularly employed examiners are declared to be public officers.

The territory of a national farm-loan association may legally be coextensive with a district, but it will probably be small, since the board is urging the division even of counties, and since no charter can be granted without the consent of the district Federal land bank. The business of an association is to take farm mortgages from members and to gather up current funds for the Federal land bank of the district. The incorporators shall be 10 or more natural persons, applying for loans aggregating at least $20,000. The capital is variable, consisting of $5 double-liability shares, which may be held only by borrowers admitted to membership. The administration is composed of five or more directors, a loan committee of three, and the usual officers, with a secretary-treasurer. All, except the latter, must be members and, consequently, borrowers.

The loan must in all cases be secured by first mortgage on farm land, situated within the territory, and can be made only for purchasing or improving such land, for purchasing equipment, fertilizers, or live stock for it, for liquidating the owner's indebtedness incurred for such purposes, or for any purpose if the indebtedness existed before a charter was granted to any association for the county. However, the board may define the words "improvement" and "equipment" as it pleases. The amount shall not exceed one-half of the value of the land plus one-fifth of the value of all permanent improvements, nor shall one borrower be allowed more than $10,000 or less than $100. The maximum for interest is 6 per cent per annum, but it can never exceed by more than 1 per cent the latest series of the district Federal land banks' bonds. The period shall be between 5 and 40 years. Payment shall be by annual or semiannual installments, with the right to make additional payments in multiples of $25, at any due date after the first five years.

The borrower must use the loan only for the specific purpose for which it was granted. He must, until the debt is paid, cultivate the land and keep the premises insured to the board's satisfaction and free of all back taxes, liens, judgments, and assessments. If not paid, these shall become a part of the loan and, with any defaults, draw simple interest at the rate of 8 per cent per annum. No loan shall be made unless it be approved by the association's committee and by one or more of the Government's appraisers of the district, if it is to be offered to the Federal land bank. The borrower also shall subscribe to one of the association's shares for every $100 of his loan or major fraction thereof. For instance, the subscription on a $1,051 loan would be $55. He may pay this in cash or borrow it from the bank and have it added to the loan, provided the sum does not increase the size of the loan above the property's maximum credit value. Preliminary expenses may also be added, provided they do not increase the loan above any of the prescribed limits.

If the property be sold, the mortgage must be foreclosed unless the land bank allows the purchaser to assume the borrower's obligations on his shares and contract. In event of the borrower's death his heirs or representatives have only 60 days within which to assume these obligations. But this does not mean that they shall become members; there is a prospect, therefore, that the association will eventually be doing business with numerous persons who can not participate in profits or management and who, as a result, will not be concerned with its success.

After being incorporated an association may admit new borrowers to membership upon these same conditions by a two-thirds vote of the directors. Whether such a vote is required for additional loans to members already admitted is not clear.

The borrowers' obligatory shares constitute the minimum for the association's capital—that is to say, 5 per cent of the original amounts of the mortgages; and this must represent cash until the loans are entirely paid off. There is no maximum, since the association may make loans to all qualified natural persons within its territory. Moreover, it may allow each borrower to subscribe voluntarily to as many shares as he pleases; at least, this seems to be implied.

An association desiring money for a member may obtain it from the Federal land bank of the district by indorsing and guaranteeing the mortgage offered as security, and by contributing 5 per cent of the amount to the bank's capital stock. Three-fourths of this stock shall be paid in cash when the loan is granted; the rest may be retained by the association at a charge of 6 per cent per annum. Stock thus issued can not be transferred or hypothecated, but may be retired at the bank's discretion with the approval of the Federal Farm Loan Board. It shall be retired on full payment of the loan, when the association shall pay off and retire the corresponding shares of its own capital that were issued to the member.

An association may also obtain from the land bank what money it needs for its own expenses; such advances to draw 6 per cent per annum, but to be repaid only from dividends belonging to the association. It may retain one-eighth of 1 per cent semiannually on unpaid principal out of every interest payment on any loan indorsed by it; such sums likewise to be paid back only from dividends. Should these permissible favors be actually accorded to associations and their members, they would, of course, impair the capital stock, surplus, and working funds of the Federal land banks and create a serious situation.

Besides obtaining money in these ways from the Federal land bank, and through the issuance of shares, an association may issue deposit certificates bearing interest for no longer than one year at a rate of not more than 4 per cent per annum, convertible into bonds of any of the system's banks when presented at the Federal land bank of the district in multiples of $25. The deposits may be of any amount and come from any person, corporate or individual. They shall be forthwith transmitted to the said bank, which shall hold them for the association's account, subject to check or otherwise, without interest, and shall invest them in such bonds or in farm mortgages. Some contend that the convertibility of the certificates is optional, and that the association may pay them off in cash, since the power to issue such evidences of debt implies the power to redeem them unless expressly forbidden. They also contend that, if certificates are not desired, the association may arrange in any other usual way for the withdrawal and compensation of the depositor's money; the argument being that the power granted to accept deposits is a general one and includes both savings and ordinary deposits, since the act is not specific, exclusive, or prohibitive in respect to either kind, but leaves the matter for contract or for the by-laws which an association may make for regulating the exercise or enjoyment of any of its privileges. The whole question, however, has very little practical importance, because the bonds into which the certificates are convertible may be paid off and retired before maturity, while enormous amounts of them, in denominations of $25 or more, will eventually be constantly maturing. This will afford the banks and the associations ample means of paying off and retiring the certificates even on demand, should they wish to do so.

III.

There is much ambiguity regarding the loan methods of an association, as the act does not specify whether the mortgages shall be executed to it or directly to the land bank. If the former is the case, then nothing would prevent an association from holding mortgages as an investment until repaid. It would have to resort to the services of the bank in investing deposits, but it could handle any other funds itself and use all profits for reserves and dividends. With regard to the Federal land bank, however, the act clearly says that it can not lend on farm mortgages, except through national farm-loan associations of its district, until July 17, 1917. After that it may also lend through banks, trust or mortgage companies, or savings institutions incorporated under State laws and approved as agents by the Federal Farm Loan Board. But the only loans lawful for it to take are of the kind already described, and, after the board decides that its district has become organized, it shall again confine itself to the associations. Hence, the position of the agents will always be precarious. Moreover, other troubles might confront them, since they must guarantee the mortgages, while their borrowers must contribute 5 per cent of their loans to the Federal land bank's capital stock, without right to vote the shares or to demand their repayment. Such conditions would not be generally practicable for any class of agents mentioned, especially because of the long-term character intended for the loans. The outstanding guaranties of an agent may equal ten times its capital and surplus. They could not be made by savings banks or perhaps by ordinary banks, and would be illegal for all unless permitted by State laws.

So, if the system should need aid in addition to that of the 12 Federal land banks and their associations, probably it may be supplied by the so-called joint-stock land banks. These are bond and mortgage companies, each with $250,000 or more of capital stock, which may be formed under the act by private investors with a view to profit. Nevertheless, they enjoy important special privileges. They may circulate bonds up to 15 times the capital stock and surplus, at interest not exceeding 5 per cent a year. They may lend directly on farm land within their respective territories, without restriction as to purpose, use, or individual amount, and regardless of whether the owner be farmer or cultivator. It seems, however, that he must become a stockholder. In all but a few other respects, they must observe the rules for lending laid down for a Federal land bank, except that the

interest rate will be governed by their own bonds. But the act is vague in its provisions on joint-stock land banks; it will have to be amended before they can be considered as parts of the system.

Each of the Federal land banks has a capital stock of $750,000, of which the Government is required to supply any portion not taken by other parties. The shares are of $5 each and nonassessable, with times and conditions of payment fixed by the Federal Farm Loan Board. They may be held by any individual, firm, or corporation, or by the Government of any State or of the United States; but only the latter and national farm-loan associations may vote. Dividends can not be paid on shares held by the United States. The bank is temporarily managed by five directors appointed by the board. When the subscriptions of the associations equal $100,000, they shall elect six directors and the board shall appoint three directors. These nine shall then take over the management. When their subscriptions amount to $750,000 the bank shall apply semiannually one-fourth of all subsequent subscriptions to the retirement of shares representing the original capitalization.

The bank shall, by its articles of agreement, permit issues of new shares for the obligatory subscriptions of associations and borrowers. In addition the board may at its discretion authorize the capital stock to be increased for any reason it sees fit, or decreased to any amount above 5 per cent of outstanding bonds. Consequently the capital stock is variable, and the shares of investors are practically deposit certificates that may be paid for by installments and paid off at specified dates, if the board so desires.

Such shares could alone supply every financial need, but they are not the sole dependence. A Federal land bank may open branches within its district; it may receive deposits in any amount from the holder of just one of its $5 shares. Some say that the deposits can not draw interest; but even were this so, the machinery is there and the doubt could be easily removed by a very slight change in the act. It may borrow money, free of any regulation as to amount, interest, or period. It may be allowed the temporary use of any funds in the United States Treasury not otherwise appropriated, provided the amounts which the Secretary of the Treasury may thus deposit shall not exceed $6,000,000 at any one time. Nobody seems to know what this remarkable clause means. It may issue certificates against such amounts, bearing a rate not to exceed the current rate for other Government deposits, redeemable at the Secretary's discretion. It may also issue bonds, equal to the full face value of their collateral, bearing interest at any rate up to 5 per cent per annum, running for any period above five years, redeemable by their terms in gold or any lawful money, and without any limit as to the total amount so long as the capital stock is maintained at 5 per cent of the circulation. Each Federal land bank shall guarantee, and it may buy, sell, or pay off at or before maturity, the bonds of the 11 others. Thus it may divert funds from its own to any other district.

The farm mortgages used as collateral for the bonds shall be valued by the Government's appraisers and deposited with the Government's registrar as trustee. The bonds may be issued in series of $50,000 or more, on authority of the Farm Loan Board. They must bear the certificate of its executive officer, or Farm Loan Commissioner. The bonds and the mortgages are expressly declared to be "instrumentalities of the Government of the United States." Consequently they are not based on land values or the farmer's credit. They are based on the credit, good faith, and honor of the United States, and are the ultimate, if not the direct, obligations of the Government. This is also the case with private joint-stock land banks, the only important difference being that their bonds shall not be certified by the Farm Loan Commissioner. The bonds of both kinds of land bank may be bought and sold by member banks and, with certain limitations, by reserve banks of the Federal Reserve System; and are lawful as security for public deposits and as investment for fiduciary and trust funds. The bonds and mortgages and all Federal land banks and national farm-loan associations, including capital and reserve or surplus and income derived therefrom, are exempt from national, State, municipal, and local taxation, except taxes on real estate. The Government must pay all the expenses of the bureau and the salaries of all its appointees and employees, and even the outlays for advertising. Nothing is omitted but the salaries of appraisers and the costs of preparing and delivering the bonds. The cost of the bonds will not be heavy, since they are to be engraved by the Secretary of the Treasury.

The Federal Farm Loan Board has been given judicial as well as executive powers over the system, with the right to settle debts or claims of any of its units, in the event of dissolution. The board may call upon the Attorney General, the Secretary of the Treasury, and the Secret Service for free advice, counsel, and assistance. Finally, by making an initial appropriation of $100,000, Congress has adopted the policy of supplying the board with any money needed for establishing and organizing land banks and associations.

IV.

Thus, every source of funds, public and private, has been opened and every special privilege and other known method of extending Government aid has been accorded. If there be an exception, it is that the board has not yet the power to confiscate titles and forcibly to acquire lands for allotment and sale on credit to its beneficiaries; but agrarianism and the redistribution by law of all kinds of landed properties are not improbable outcomes of this extraordinary system in view of the pressure which the millions of trade-unionists, combined with influential colonization societies, have now resolved to exert upon Congress. The farmers did not ask for this system nor was there any general demand for it. They were on the way toward organizing and mobilizing their own resources, when this blow was struck against private enterprise and cooperation. They would have been satisfied simply by facilities for enabling them to utilize their own abundant and substantial credit. But after a feeble attempt at doing the right thing through a national law for bond and mortgage companies, politics seems to have prevailed and the solution of the problem fell into the hands of radicals and persons seeking to distribute immigrant aliens in rural sections at the Government's risk and expense. They accomplished their ulterior motives, in disregard of the correct principles of land credit and to the detriment of the average farmer of native stock.

The result is this system, which is neither cooperative nor purely agricultural, and which must inevitably have the extension foreshadowed by the resolutions of the American Federation of Labor. It is governmental, because, aside from other reasons, no bond can be issued except through the Federal Farm Loan Board, the Farm Loan Commissioner, and the Government's registrars, and because no loan can be made except with the consent of the Government's appraisers and examiners. The right granted to the borrowers to elect the officers of the associations and the majority of the directors of the Federal land banks amounts to nothing, for the reason that they could not manage the business even if they elected every director. So the only effect of the stock subscription is to impose a liability on each borrower for all the loans in a sum equal to 10 per cent of his own.

The lack of promised cooperative features might be pardonable if the act had provided only for farm mortgaging. But such is not the case. The Federal and joint-stock land banks may use United States bonds instead of farm mortgages as collateral for their bonds; invest all their funds in United States bonds; or deposit all their securities and current funds subject to check with member banks of the Federal Reserve System at any agreed interest. The farm mortgages that the Federal land banks may take are of a very restricted kind, indeed. In brief, the act has established a tax-exempted and highly privileged Government banking system for disposing of Government securities and for aiding industrial and commercial enterprises. With its district banks, regional branches, and local agencies it will place all banks and associations operating under State charters at a disadvantage; and yet, as a matter of law, it need not lend one dollar to a farmer.

Nobody can foretell what will constitute the major part of its business in the years to come; but a great proportion of its funds, on account of their withdrawable nature, can never be invested in long-term loans to individuals. The acceptance of deposits is not a proper function of a land-mortgage bank. The issuance of bonds and the pyramiding of debts against deposits or assets are dangerous rights for a savings institution. The purchase of United States bonds and the amassing of credits in the Federal Reserve System can serve no agricultural purpose. Subsidizing special interests is an injustice to the public. The mixing of Government intervention with individual initiative and private enterprise is an absurdity, because no private individual can compete, much less cooperate, with the United States. The system is a hodgepodge of blunders—wrong from any angle of vision. The wisdom and honesty of the board, clothed with arbitrary powers, will be no more capable of avoiding its pernicious possibilities than was the common sense of Congress effective in preventing its establishment.

This combination of Government finance and farm finance defies every construction of the Constitution save the broadest. Congress can not exempt a corporation from the taxing powers of the States or of their political divisions, except for discharging a Federal Government function. Farm mortgaging is not such a function. The framers of the system, however, declare that this will be its chief object, and they pretend that the land banks were authorized to be designated as depositaries and financial agents of the Government, and that their bonds and mortgages were made the Government's instrumentalities, simply with the view of getting around constitutional objections. But the Supreme Court has said in regard to subterfuges of this kind and their use for a private corporation that "the casual circumstance of its being employed by the Government in the transaction of its fiscal affairs would no more exempt its private business from the operation of that power (of the State to tax) than it would exempt the private business of any individual employed in the same manner." Moreover, the court has even doubted that Congress has a right to establish or to privilege a company in any way "having private trade and private profit for its great end and principal object," or to delegate the power which it possesses under the Constitution "to borrow money on the credit of the United States."

The system is liable to attack on all these points. The Government can not realize any pecuniary advantage from it directly. Although the Government must pay all its overhead expenses and advance public funds to it at the lowest interest rates in any amounts deemed advisable by the Secretary of the Treasury, the Government is expressly forbidden dividends on shares. On the other hand, the system may admit any qualified individual as a borrower or investor and allow him to participate in all the profits, increased, as they will be, through the Government's management and bounties. The bonds and mortgages are means for borrowing money. Since they are declared to be "instrumentalities of the Government of the United States," they are not only morally but legally backed by the Government's credit. Consequently Congress ought at least to have specified the total that could be made. But, contrary to sanity if not to the Constitution, Congress has delegated to a bureau in the Treasury Department and to private individuals the power not only to make these Government instrumentalities but also to involve the Government's credit thereby in unlimited amounts for long periods, without any restriction as to interest rate except 5 per cent per annum for the bonds and 6 per cent per annum for mortgages.

Furthermore, little groups of 10 or more farmers, seeking cheap money for purely private purposes, may issue certificates at 4 per cent per annum, which, although they are to be neither certified nor authenticated by public officers, must, upon request of the holders, be converted into instrumentalities of the Government of the United States. Joint-stock land banks will be merely profit-making companies for private investors. This may also be said of the 12 Federal land banks, since their stockholders and the majority of their directors are eventually to be private individuals. So nothing justifies the use of the free services, money, and credit of the Government or the other special privileges made available for the system. Congress has sowed the wind; the country must reap the whirlwind now set brewing by the American Federation of Labor.

Preparedness.

EXTENSION OF REMARKS

OF

HON. FREDERICK C. HICKS.

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. HICKS. Mr. Speaker, availing myself of the permission granted me by the House to extend my remarks by publishing an address delivered on February 12 by Maj. Seaman, of New York, I have pleasure in submitting the very interesting, instructive, and eloquent address delivered by him at the celebration

of Lincoln's birthday and the twentieth anniversary of the Lincoln Memorial University at Cumberland Gap, Tenn.

Few gentlemen in this country are better equipped by both experience and education to speak on the subject of preparedness than is Dr. Seaman. For the past 20 years he has made a study of war, especially from the standpoint of medical science, by personal observation of conditions on the battle fields of all the wars which have been waged since 1898.

The address is as follows:

LINCOLN ON PREPAREDNESS.

[An address by Maj. Louis Livingston Seaman.]

Mr. Chancellor, ladies, and gentlemen, notwithstanding that a thousand books have been written about Lincoln, little has been said relative to his view on preparedness, and yet his life was a living example of that principle, just as this university is a living memorial to it; and from his life can be deduced many lessons vital to our country, in this, perhaps, the most crucial moment of our national existence. Was Lincoln ever known to hesitate when right and honor were at stake? To add anything material to that which has already been so eloquently written would be impossible. Listen to his words when speaking on the perpetuation of our political institutions, so singularly appropriate at this critical hour of our history. In his address before the Young Men's Lyceum of Springfield, Ill., January, 1837, he said:

In the great journal of things happening under the sun, we, the American people, find ourselves in the peaceful possession of the fairest portion of the earth, as regards extent of territory, fertility of soil, and salubrity of climate. We find ourselves under the government of a system of political institutions, conducing more essentially to the ends of civil and religious liberty, than any of which the history of former times tells us. We, when remounting the stage of existence, found ourselves the legal inheritors of these fundamental blessings. We toiled not in the acquirement or the establishment of them; they are a legacy bequeathed to us by a once hardy, brave, and patriotic, but now lamented and departed race of ancestors.

Theirs was the task (and nobly they performed it) to possess themselves, and through themselves us, of this goodly land, and to rear upon its hills and valleys a political edifice of liberty and equal rights; 'tis ours only to transmit these—the former unprofaned by the foot of the invader; the latter undecayed by the lapse of time. This, our duty to ourselves and to our posterity, and love for our species in general, imperatively requires us to perform.

How, then, shall we perform it? At what point shall we expect the approach of danger? By what means shall we fortify against it? Shall we expect some trans-Atlantic military giant to step across the ocean and crush us at a blow? Never. All the armies of Europe, Asia, and Africa combined, with all the treasure of the earth (our own excepted) in their military chest, with a Bonaparte for a commander, could not, by force, take a drink from the Ohio or make a track on the Blue Ridge in a trial of a thousand years.

At what point, then, is the approach of danger to be expected? I answer, if it ever reaches us, it must spring up among us. It can not come from abroad. If destruction be our lot, we must ourselves be its author and finisher. As a nation of freemen, we must live through all time or die by suicide.

There is even now something of all omen among us. I mean the increasing disregard for law which pervades the country; and though grating to our feelings to admit, it would be a violation of truth and an insult to our intelligence to deny.

* * * * * * *

Of our political revolution in '76 we are all justly proud. It has given us a degree of political freedom exceeding that of any other nation of the earth. In it the world has found a solution of the long-mooted problem as to the capability of man to govern himself. In it was the germ which has vegetated and still is to grow and expand into the universal liberty of mankind.

So spake Lincoln.

Our Nation is now entering the most critical period of its history. Many questions are presenting themselves for correct solution, upon which depend our destiny. The American people must determine along what lines the development of the Nation will take place and what shall be its ultimate goal. Shall our people devote their energy to the development of commercialism and materialism at the expense of those things that appertain to the development of the soul, or shall it subordinate itself to self-interests? The support of patriotism will develop those spiritual qualities which make for the betterment of individual and, therefore, of national character. It is the consensus of opinion of the serious observers of our institutions that the great tendency of our people to-day is to make the amassing of wealth and the enjoyment of pleasure their chief goal. This tendency is so strong as to be alarming. Its effect is to benumb the spirit of patriotism and to paralyze the moral and spiritual qualities of our people.

If this country is to meet and solve the great problems which confront us and fulfill our destiny in the history of the world, there must be a universal revival of patriotism and the adoption of a fixed resolve on our part to school ourselves in those civic virtues and sound principles of citizenship, without which our political institutions will have no permanent foundation. The present situation is new. In the past the great issue we have faced has been more provincial, relating to our own country and its development, and we have solved them. But now we are a world power and we face problems new to our diplomacy. They appertain to our foreign relations. The great tragedy of Europe has shaken the foundation of the world, and its result will be felt in every country on the globe, however small and wherever situated.

The United States will be more influenced by it than any other nation except those which are actually participants. We must now take our position internationally; a stand for good or for ill for all time. The problems which this situation presents will tax the ability and ingenuity of our leaders to the utmost. In a democracy like ours, where leadership is determined by public opinion as expressed by the majority of our people, it is essential that the people themselves master the facts which shed light on these problems, in order that they may intelligently provide wise national leaders. This being so, a systematic and thorough study of our foreign affairs and the history of foreign countries is prerequisite for a correct solution of the present-day issues. Knowledge of history is necessary, because the great war has its root in the remote past. There can be no conviction without knowledge, and knowledge will entail upon our people close application and study. In order to acquire knowledge more people must turn their attention seriously to the study of civic affairs and the performance of civic duties. The situation calls for self-sacrifice, self-control, and the development of a keener sense of duty to the Nation.

The American people are a patriotic race. They love their country and they are willing to make sacrifices and endure hardships in order to place it upon a sound and enduring basis.

This was illustrated in the period preceding the Civil War. Lincoln embodied the spirit of the American of that age and gave it the necessary leadership through the trying period. He appreciated the needs of the situation and the spirit of the time. He embodied in his own character those principles of patriotism, civic virtues of discipline and self-control which were essential to create the leadership called for by the times. At no period in our history has political and constructive leadership been more necessary than at the present moment. It can only be produced by the people themselves. When they fully understand the problems which confront us in the present trying ordeal the leadership which the situation demands will not be found wanting.

* * * * * * *

But, my friends, with the tremendous influx of immigration that has flowed into our land during the past 50 years these glorious principles to which Mr. Lincoln so eloquently referred have not been assimilated. With the enormous growth of wealth that has fattened our purses we have forgotten our duties to the State, thereby seriously threatening the very foundations of our liberties.

Only a few months ago I stood on Fifth Avenue as a troop of our boys in khaki marched past on their way to Mexico. The sidewalks were crowded with throngs of strikers, socialists and anarchists, few of whom were even naturalized citizens, and who hissed our brave boys as they passed to the front to preserve the honor and dignity of our flag. Could there be a greater contrast than is presented by this student body, who will be the future protectors of our land? Is the best blood of our Nation to be spilled for the preservation of our homes and our liberties for the foreign leeches on our industries, and if not, how can this element be educated into decent citizenship and taught respect for law and order? It can only be accomplished through the application of universal training and service. The safety of our country lies in the application and universal adoption of this service to the flag, where rich and poor shall serve alike, side by side, with equal rights, the rights which form the foundation of democracy. In the great struggle now convulsing Europe, which also has embroiled us, the stake is autocracy versus democracy, dictatorship, supported by brutal militarism, versus equal rights and justice for all, barbarism versus civilization. As stated by the immortal Lincoln, "I go for all sharing the privileges of government who assist in bearing its burdens." Universal service in the formative period of youth, when habits are in the making, would be of inestimable value both in the development of the civilian's health, his respect for law, for the opinion of others, for self-discipline and good citizenship.

Remember, as Lincoln has said, "many a free country has lost its liberties by failing to protect them." Nothing is truer than that eternal vigilance is the price of freedom.

The adoption of the law of universal training and service in our land would free us from this danger.

The American Army is maintained to protect American rights from foreign aggression and to enforce law and order within American boundaries. In this fair land alone the question of peace or war is determined by the will of the people. The

American soldier is not, therefore, an automaton, but is a man, away from his home, on the business of his country.

In times of peace the American people will not allow the maintenance of a large standing Army, its presence being considered, justly or otherwise, a menace to republican institutions. It is therefore more necessary for us than for any other country to have the most perfect and most efficient military system in the world, a system whose elasticity will be sufficiently great to permit of its rapid expansion in the emergency of war, when its great working forces must be drawn from civil life.

Lest we forget that in one of the wars of our history the sacrifice of life from preventable causes amounted to thirteen times the number lost through the casualties of battle, and in the name of that vast army of American dead, whose lives have thus been needlessly sacrificed through preventable diseases, red tape, and incompetency, I appeal to our lawmakers to enact the necessary reforms in the Medical and other departments of our Army that will prevent a repetition of such unnecessary sacrifice and the adoption of the law of universal training and service for our national safety.

What boots it at one gate to make defense,
And at another to let in the foe?

Abraham Lincoln said on the historic field of Gettysburg:

These dead have not died in vain—

But—

that this Nation, under God, shall have a new birth of freedom and that government of the people, by the people, for the people, shall not perish from the earth.

Need for Water-Power Legislation.

EXTENSION OF REMARKS

OF

HON. ALBERT JOHNSON,

OF WASHINGTON,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. JOHNSON of Washington. Mr. Speaker, I have received a certified copy of the following joint memorial of the fifteenth session of the Legislature of the State of Washington:

House joint memorial 2.

To the honorable the Senate and House of Representatives of the United States in Congress assembled:

Your memorialists, the Senate and House of Representatives of the State of Washington, respectfully represent that—

Whereas the development of water-power resources is a subject of vital interest to the Western States; and

Whereas the State of Washington is bountifully supplied with such resources and their development has progressed rapidly in recent years, adding a great impetus to the industrial development of the State; and

Whereas further development is arrested for the reason that most of the remaining power sites are located upon public domain, and legislation by your honorable body is necessary to remove the bar against further development: Therefore

We, your memorialists, the Senate and the House of Representatives of the State of Washington in fifteenth biennial session convened, most respectfully urge upon you the neccessity of formulating some constructive policy relative to this important subject and the enactment of the necessary legislation to carry on its development.

Passed the house January 25, 1917.

GUY E. KELLY,
Speaker of the House.

Passed the senate February 21, 1917.

LOUIS F. HART,
President of the Senate.

Filed in the office of the secretary of state February 24, 1917, at 1.35 p. m.

I. M. HOWELL,
Secretary of State.

And Ye Shall Know the Truth.

EXTENSION OF REMARKS

OF

HON. S. TAYLOR NORTH,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. NORTH. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I desire at this time to refute a letter circulated in my district a day or so preceding the last primary election held in our State, in which my attitude and record on temperance legislation was misrepresented to my constituents. This is the letter I refer to:

JEFFERSON COUNTY NO-LICENSE LAW AND
ORDER LEAGUE OF PENNSYLVANIA,
Brookville, Pa., May 13, 1916.

DEAR SIR: Our attention has been called to a letter that one Samuel Wilson, of Clarion, is sending out, stating that S. TAYLOR NORTH, a candidate for nomination for Congress, is a temperance candidate. If Mr. Wilson were as conversant with the anti-temperance record of Mr. NORTH in Jefferson County as we are, neither he nor any other sane man would claim Mr. NORTH for temperance legislation.

Some friends of Mr. NORTH'S have pretended that he will support a national prohibition amendment to the Constitution of the United States, but so far Mr. NORTH himself has not made any public statement, and Mr. Wilson is in error in making the claim he does in the letter he sends out. Whether Mr. Wilson purposely or unintentionally tried to mislead the voters of the county, we do not know.

S. TAYLOR NORTH was a member of the Pennsylvania Legislature from this county during the session of 1913, and he not only voted against the county local-option bill but he voted against all temperance legislation; and, in addition, worked against that kind of measures. The Anti-Saloon League of the State, in a letter dated May 10, 1916, and signed by Rev. B. L. Scott, of the Erie district, says, in regard to the stand of S. TAYLOR NORTH on temperance legislation, "We can get no satisfaction from S. TAYLOR NORTH'S reply. Avoid him." The American Issue for May, 1916, which is published by the Anti-Saloon League of Pennsylvania, says in regard to Mr. NORTH: "Hon. S. TAYLOR NORTH has not openly committed himself in favor of the prohibitory amendment. As a member of the legislature he was against local option."

The Jefferson County No-License Law and Order League is not advocating the nomination of any particular candidate for Congress. All three candidates reside in this county, and we know each personally. Here are the facts about each, and then you can judge which is the best temperance candidate:

1. S. TAYLOR NORTH has been opposed to temperance legislation, and he energetically fought and antagonized the men and measures the temperance people of this county favored.

2. W. O. Smith in his newspaper, the Punxsutawney Spirit, not only vigorously and vehemently opposed the election of a temperance judge in this county last fall, but he personally and publicly in many editorials advocated the election of a candidate backed by whisky interests.

3. N. L. Strong has given us his verbal and written pledge that he will work for and vote for a national prohibition amendment to the Constitution.

Very truly, yours,

JEFFERSON COUNTY NO-LICENSE LAW AND ORDER LEAGUE,
L. MAYNE JONES, *President.*
Rev. CHARLES D. REED, *Secretary.*
Rev. JAMES E. MILLER, *Treasurer.*

Every reference and statement in this letter as to my personal attitude and record is a malicious falsehood, as my record then, as well as when I retire from this Congress, will show to anyone who desires to investigate the same and learn the truth. I would respectfully refer the investigator to the Pennsylvania Legislative Journal for the sessions of 1905, 1906, 1907, 1911, and 1913, as well as the CONGRESSIONAL RECORD of the Sixty-fourth Congress, for authentic information.

I have observed that no one in public life escapes more or less misrepresentation, and as a general thing I pay no attention to misrepresentations of what I do or say, but when it comes to distorting my record I am constrained to refute the statements, and especially those made in this letter. The purpose of the circulation of this letter in my district a day or so before our primary election is apparent to every Member of this House. It is libelous in that it reflects on my character and integrity. I make it a general rule not to express decided opinions in regard to proposed legislation until I have an opportunity to hear both sides and get all the information possible; and I rarely express a definite opinion on a matter until it comes before the House for action.

WASHINGTON, D. C., *January 26, 1917.*

Hon. S. TAYLOR NORTH,
House of Representatives, Washington, D. C.

MY DEAR SIR: I want to extend to you, both personally and on behalf of the constituencies I have the honor to represent, our thanks for your interest and helpful cooperation in perfecting and securing report of the bill for prohibition in Hawaii as a member of the Committee on Territories. In view of all the difficulties involved, this greatly desired result would have been impossible of achievement had it not been for your patience and courtesy and uniform desire to have our efforts issue in success. Please be assured that it is all thoroughly appreciated and this letter but simply expresses our gratitude therefor.

With assurances of kind regards and best wishes, I am,

Very cordially, yours,

EDWIN C. DINWIDDIE,
Legislative Superintendent Antisaloon League of America,
Washington, D. C.

PHILADELPHIA, PA., *February 7, 1917.*

Hon. S. TAYLOR NORTH,
Washington, D. C.

DEAR FRIEND NORTH: I am dropping you this letter of appreciation to-day as I read the magnificent help which you gave in reference to prohibition for Hawaii in your recent committee meetings. I greatly appreciate this, as an old friend of yours, and am glad to take this opportunity of expressing my personal gratification because of the splendid support you have given this measure. It is by your active support and help in connection with others that this bill was pushed forward toward a final issue.

Thanking you again for your kindly and helpful service in this great movement, I am,

Fraternally, yours,

C. F. SWIFT,
State Superintendent Pennsylvania Anti-Saloon League.

HOUSE OF REPRESENTATIVES, UNITED STATES,
Washington, D. C., February 27, 1917.

Hon. S. TAYLOR NORTH,
House of Representatives.

MY DEAR MR. NORTH: I wish to thank you for the earnest assistance you gave me in the matter of the report on the Alaska prohibition bill and its passage through the House of Representatives. Not only in that matter but in all others relating to the Territory of Alaska, you have been of very great assistance to me and to the people of the Territory in aid of its development, and I wish you to know that I thoroughly appreciate your friendship and support.

The prohibition bill, thanks to your assistance, has passed Congress and been signed by the President, and on the 1st day of next January it will have full force and effect in the great Territory of Alaska. As you know, the people there voted on this matter at a referendum election, and prohibition carried by a majority of 2 to 1 in a vote of more than 12,000.

Again I thank you for your courtesy and support in that and other matters.

Respectfully,

JAMES WICKERSHAM,
Delegate from Alaska.

[From the Indiana (Pa.) Messenger.]

Congressman S. TAYLOR NORTH voted for the Alaska prohibition bill. We are glad to note that since he has been in Congress Mr. NORTH has voted for every prohibition measure that has come before the House, so far as we have seen the record of the vote. In doing this, he is undoubtedly reflecting the wishes of his constituents of the twenty-seventh district. (Brookville Republican.) Mr. NORTH, whose term expires on March 4, has been a faithful Representative of the people. He is always on the job and has voted right on every moral and political question. (Kittanning Tribune.)

Location of a Nitrate Plant.

EXTENSION OF REMARKS
OF
HON. HARRY E. HULL,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, March 2, 1917.

Mr. HULL of Iowa. Mr. Speaker, my deep interest in the manufacture of nitrate for Government purposes and my sincere belief that such a plant should be located in the great Mississippi Valley, which is in the central part of the United States, and far from any possible danger of attack, has led me to make a very thorough and complete investigation of the subject and has also led me to figure out the relative cost of manufacture and the cost of a plant that would meet the requirements of the United States. Many of you have discussed the advisability of locating this plant in different localities in the United States, but it is my belief, after careful investigation, that the most desirable and economical place is on the Mississippi River, between Illinois and Iowa, not far from the city of Davenport. It seems to me that this immense plant, which will have much to do with the future military problems of the United States, should be located solely on its merits; that it should be placed where nitrate could be produced the most economically, and where the by-products could be distributed most judiciously. I do not believe in dealing with generalities, nor do I think any other influence should have anything to do with the location of this plant. Thus, in order to verify my conclusion, at my request, Mr. H. F. Putnam, a member of one of the largest and most creditable firms of consulting engineers in New York City, has prepared a very accurate statement on the cost of the production of nitrate on the Mississippi River, and I am submitting herewith his report:

ADVANTAGES OF LOCATING A NITRATE PLANT AT ROCK ISLAND ARSENAL, ILL.

(1) The Rock Island Arsenal reservation has an area of 990 acres and is the largest and best located arsenal in the United States.

(2) The location is far removed from the north, south, east, and west boundaries of the country.

(3) The Mississippi River and the Hennepin and Illinois Canals furnish water transportation to the Great Lakes and all portions of the Mississippi River Valley and the Gulf States.

(4) Railroad facilities are unequaled and direct connection exists over several lines to all points east, west, north, and south.

(5) Rock Island Arsenal is centrally located on an island between the towns of Rock Island, Moline, East Moline, Davenport, and Bettendorf—all of them manufacturing centers with a combined population of over 125,000. These towns furnish an excellent skilled and unskilled labor market.

(6) The United States Government is making the Rock Island Arsenal one of the principal, if not the principal, arsenal of the country.

(7) An excellent water power exists at Rock Island, capable of being economically developed to 150,000 horsepower.

(8) The development of the water power at Rock Island will solve the problem of navigation on the Mississippi River, now handicapped by the limitations imposed by the Rock Island Rapids.

(9) Improvements are now under way to improve navigation on the Rock Island Rapids at an estimated cost of $1,500,000. One million dollars of this amount has been authorized, of which approximately $250,000 has been expended. The expenditure of approximately $1,500,000 will be saved by the development of the water power herein contemplated.

(10) Provision must be made at once to take care of the increasing demands for power for the use of the Government at the Rock Island Arsenal. For this purpose an appropriation of $250,000 has been made, and the cost may ultimately reach $500,000. This expenditure will be eliminated by the construction of the water-power plant and auxiliary plants as proposed.

(11) Rock Island is situated on the edge of the Illinois coal fields, and an abundant supply of coal is found within a radius of from 60 to 100 miles.

(12) The Illinois coal contains from 1.3 per cent to 1.5 per cent nitrogen content. It is a noncoking coal and is entirely suitable for the manufacture of nitrogenous products from the gasification of coal.

(13) The near-by coal fields furnish an unexcelled location for the construction of an auxiliary steam-power plant to insure the absolute continuity, throughout 24 hours of every day, of the 150,000-horsepower water-power development on the Mississippi River.

(14) The combination of the water-power plant, with its steam auxiliary plant, is the most economical method of producing power. The power is produced at a total estimated cost, including capital costs, of less than 0.125 cent per kilowatt hour. This does not include credits for by-products.

(15) The fact that a combination of both water and steam power is used absolutely insures the supply of power at all times, even in case one plant or the other is totally destroyed.

(16) A 200,000 horsepower combined water-power and steam auxiliary plant and a by-product plant can be constructed at an estimated cost of $19,478,000. This amount will be reduced to $17,478,000 by the credits in (9) and (10). The combined plant will furnish electric power for the manufacture of nitrates at an estimated net cost to the Government of $2.16 per horsepower year, exclusive of the above-mentioned credit for the cost of construction eliminated.

(17) As an initial installation, a 100,000 horsepower combined water-power and auxiliary steam plants and gas-producer plant can be constructed at an estimated cost of $11,670,000. This will be reduced to $9,670,000 by the credits in (9) and (10). Such a plant will produce electric power at an estimated net cost of $4.90 per horsepower year, exclusive of the above construction credits.

(18) As already stated, the towns of Moline, Rock Island, Davenport, and Bettendorf are manufacturing centers, and any surplus power in excess of the requirements of the United States Government could be readily sold.

(19) By extending the steam plant in the coal field the amount of power developed can be increased without material increase in cost per kilowatt or horsepower year to 400,000 or 500,000 kilowatts, or to any amount desired.

(20) The plan of development proposed permits of the development of power in progressive steps, from 30,000 horsepower to 100,000 horsepower, or to 500,000 horsepower, or to any intermediate amount desired, without materially affecting the cost of a horsepower per year. This is an unusual flexibility of development.

(21) The progressive plan of development permits the Government to pursue, in an economical and efficient manner, such preliminary research into methods for the artificial production of nitrates as it may deem necessary. At the same time, the Rock Island Arsenal will be supplied with much-needed additional power at low cost, and the Rock Island Rapids will be economically and permanently improved by slack-water navigation over its entire length. Incidentally, $2,000,000 of contemplated expenditures for these improvements and additional amounts annually for maintenance will be saved.

(22) All materials for the manufacture of nitrates are found in the immediate vicinity or can be obtained by cheap water transportation within a short distance. Excellent limestone underlies the entire district around Rock Island, and Rock River furnishes an abundant supply of pure water for the manufacture of ammunition.

(23) Rock Island is situated in the center of the great agricultural and food-producing region of the United States. In the near future the use of fertilizers will be necessary if this country is to produce its own food supply. Unexcelled water and rail transportation radiates from Rock Island in all directions.

(24) On account of its central location, the fine labor market available, the unexcelled transportation facilities in all directions, both by rail and water, the safety of the location, and the fact that at Rock Island the Government has its finest and best-located arsenal and largest arsenal reservation, and because of the low cost of power produced at this site, it is urged that Rock Island be given careful consideration in the selection of the location for the nitrate plant authorized to be constructed by Congress.

THE WATER POWER AVAILABLE AT ROCK ISLAND, THE COMBINATION OF POWER PLANTS PROPOSED, AND ESTIMATED COSTS.

AUTHORIZATION.

In "An act for making further and more effectual provision for the national defense, and for other purposes," approved June 3, 1916, Congress appropriated $20,000,000 for the purpose of constructing a plant "for the production of nitrates and other products for munitions of war and useful in the manufacture of fertilizers and other useful products." Under the authority of the act the President, by Executive order dated January 15, 1917, appointed an interdepartmental board, consisting of the Secretary of War, the Secretary of the Interior, and the Secretary of Agriculture, for the purpose of making the necessary investigations and submitting recommendations relative to the selection of water-power sites suitable for the purposes prescribed by the statute.

In accordance with the above act of Congress and the Executive order creating the interdepartmental board, the following reasons for the selection of the site at Rock Island Arsenal for the purposed nitrate plant are submitted:

GENERAL PLAN PROPOSED.

It is proposed to develop the large amount of water power now available in the Mississippi River at Rock Island and insure the continuous supply of such power by the construction of an auxiliary steam plant at the mines in the coal fields of Illinois. In connection with the auxiliary steam-power plant it is proposed to construct a plant for the destructive gasification of coal, for the recovery of such fixed nitrogen and other by-products as exist in coal, and the production of a fuel gas to be used under the boilers in the auxiliary steam-power plant. The combined plant will recover the fixed nitrogen from the coal before it is used for power purposes in the steam-power plant, and the hydroelectric plant, supplemented by the steam-power plant, will

furnish an almost unlimited amount of cheap power for the recovery of nitrogen from the atmosphere by any process which the Government may select. The location at Rock Island is proposed because of its central position, the water power which can be developed, the nearness of a suitable coal supply, the abundant labor available, the unexcelled water and rail transportation in all directions, the safety of the location, and, finally, the fact that the most important arsenal in the country is located on Rock Island.

WATER POWER OF 200,000 HORSEPOWER AVAILABLE.

The Rock Island Arsenal is located on an island in the Mississippi, at the foot of the Rock Island Rapids. The water power at this point is now used by the United States Government, and is but partially developed. It is practicable to develop the water power in the Mississippi River at Rock Island to between 100,000 and 125,000 kilowatts. Under present conditions the most economical development, which produces power at the lowest cost per kilowatt-hour and per horsepower per year is approximately 100,000 kilowatts. The cost of the hydraulic works in the river will not be excessive, and the amount of power developed can be increased from a beginning of 30,000 kilowatts to 100,000 kilowatts or more, as the demand for such power increases. (See fig. 1, map of Rock Island Arsenal.)

AUXILIARY STEAM PLANT.

An auxiliary steam plant should be constructed in connection with the water-power development to insure the supply of the full amount of power every day of the year and for 24 hours each day.

The auxiliary steam plant should be constructed in the near-by coal fields of Illinois, within 60 to 100 miles of Rock Island, and preferably on the Illinois River. The steam plant should be equipped with apparatus of the highest grade and efficiency. The plant should be located with reference to the coal mines, so that coal can be taken directly from the mine to the power plant and handled in bulk, thus avoiding the cost of rehandling, transportation charges, and the uncertainty of transportation service. An auxiliary steam plant so designed and located can be operated at a minimum cost. The steam plant should be designed for extension to 200,000 kilowatts, or even to 500,000 kilowatts, should that amount of power be required. (See fig. 2, map of northern Illinois, and fig. 3, map of Illinois coal fields.)

BY-PRODUCT GAS-PRODUCER COAL PLANT.

A by-product gas-producer plant should be constructed in connection with the auxiliary steam power plant.

Plants of the gas-producer type have been developed and perfected which extract the nitrogen from the coal in the form of ammonium sulphate, a common form of fertilizer, and produce an abundant supply of gas which is available for use under the boilers in the steam power plant. The market value of the ammonium sulphate produced will balance the entire annual cost of the by-product plant, including interest, depreciation, coal, supplies, maintenance, and operating expenses.

The gas produced, therefore, can be regarded as a waste product utilized in the steam power plant. The power so produced, combined with the hydroelectric power developed on the Mississippi River, utilizing the water power now going to waste, will produce power at a minimum of cost and will represent the highest type of true conservation, making use, as it does, of our natural resources in the best, most economical, and most efficient manner, and for the most part utilizing the natural resources which are now being wasted.

Such by-product coal plants can make use of coals of low grade, and unmarketable coals, and consequently the cost of fuel is reduced to a minimum. At the same time, mining waste will be reduced to a minimum.

While a gas-producer plant of special type is referred to above, any other suitable process which accomplishes the purposes suggested can be used. It is believed, however, that the process which secures the maximum amount of fixed nitrogen from the coal and produces the maximum amount of fuel gas will best serve the combination of plants here proposed.

TRANSMISSION LINE AND SUBSTATION.

The plans propose a high-tension transmission line connecting the hydroelectric plant with the steam auxiliary plant. The transmission line should be constructed with ample factors of safety and adequate reserve, and the highest type of construction should be used to insure continuity of service. The substation, or substations, should be equipped with apparatus of the highest grade. The substations should be located at points convenient to the plants constructed for the manufacture of nitrates for use in the production of fertilizers and ammunition. (See fig. 2—Map of northern Illinois.)

LOCATION OF NITRATE PLANTS.

The plants for the manufacture of nitrates used in the production of ammunition and fertilizers can be placed at any point within reasonable distance of Rock Island that may be thought desirable. The valley of the Illinois River and the valley of the Rock River, which will be crossed by the transmission line, offer excellent locations for such plants. The plans here proposed permit of wide latitude in the selection of actual sites for these nitrate plants, in case it should be thought best not to locate them on the arsenal reservation and to still have them directly under the management and control of the arsenal authorities. The actual sites selected will, of course, depend upon the method or process, or combination of processes, of manufacture finally decided upon by the United States Government, and the general policy of administration determined upon.

THE PROCESS OF THE MANUFACTURE OF NITRATES.

Many processes have been developed for the manufacture of nitrates by artificial means.

There is some uncertainty as to the best methods to employ. This is due mostly to uncertainty as to the cost of the several methods and exists mostly as to details of the several processes proposed. Practically all methods which have been used involve either the recovery of nitrogen from the coal deposits by the gasification or distillation of coal or the recovery of nitrogen from the atmosphere by some one of several electric-power processes. The nitrogen supply in the atmosphere is unlimited in amount, and the product so obtained is unexcelled in purity. The supply of coal in this country, while enormous in extent, is limited, and once burned can never be restored. The fixed nitrogen obtained from coal in the form of ammonium sulphate is entirely suitable for fertilizers without any special treatment. This source of supply can be converted into nitric acid for the manufacture of ammunition by well-known processes. It is probable that this process will be used for ammunition only in case of emergency. Commercially, the recovery of nitrogen from the atmosphere in the form of nitric acid suitable for the manufacture of ammunition or fertilizers, as desired, requires cheap power. It is in the purpose of the plan here proposed to furnish such cheap power. The coal will be burned in the most efficient manner and the amount used reduced by the development of water power now being wasted. Before the heat value of the coal is used in the steam-power plant its many valuable by-products, and especially nitrogen content, will be extracted.

In the manner here proposed the truest and highest grade of conservation of natural resources is accomplished, and at the same time a cheap and economical supply of nitrates is provided for use in the domestic industries or for the manufacture of ammunition.

ENGINEERING FEATURES.

WATERPOWER PLANT.

The Rock Island Arsenal is located at the foot of the Rock Island Rapids of the Mississippi River and has an area of approximately 990 acres (see fig. 1, map of Rock Island Arsenal). The Rock Island Rapids of the Mississippi River extend from the pool at Le Claire to slack water at Davenport, a distance of 14.8 miles. (See fig. 4, profile of Rock Island Rapids.)

At low water the difference in level between the Le Claire Pool and the river at the Rock Island bridge is 20.738 feet. During the maximum recorded flood of 1880, with an estimated discharge of 251,348 cubic feet per second, the above-mentioned difference in levels was reduced to 16.13 feet. It is proposed to construct a dam above the railroad bridge between Davenport and the island of Rock Island, with a crest elevation of 21.63 feet above low water. This elevation will be increased to 27.63 feet by the use of automatic steel flash boards, which lower automatically to allow floods to pass. In addition to the automatic flash boards, discharge gates will be placed in the dam to relieve flood conditions.

Careful gauge readings have been kept under the supervision of the United States Government, and from these records a discharge curve has been produced for the discharge of the Mississippi River at Rock Island. This curve is based upon the daily gauge readings taken at Rock Island for the 15 years extending from 1901 to 1915, inclusive. (See figs. 5 and 6, Rating and average discharge curves of Mississippi River at Rock Island.)

The plan of development proposed contemplates the construction of a dam and spillway between the island of Rock Island and the Iowa shore, at a point above the railroad bridge, and the construction of walls and dikes above the dam, for the protection of property and the reduction of property damage. (See figs. 7, 8, and 9, Maps of Rock Island Rapids.)

Careful consideration, however, should be given to a plan under which the dam would be constructed opposite Moline and the channel behind the island of Rock Island used as a tailrace. This plan will reduce the property damage and the protecting walls required. At the same time better relief will be afforded at times of flood and the effective head will be increased.

ESTIMATED CONSTRUCTION COST AND ANNUAL COST OF OPERATION.

The estimated cost of construction is based upon the present high cost of material and apparatus, due to conditions produced by the war in Europe. It is assumed that money is worth 3 per cent to the United States Government. Depreciation charges are based upon the economical life of the apparatus employed. The cost of coal has been taken at $1 per ton at the mine. It is believed that this price can be realized or even reduced, as low-grade and waste coal can be utilized.

It has been found that under the above conditions the most economical development of the water power at Rock Island will be approximately 100,000 kilowatts (135,000 horsepower). (See fig. 10—Annual cost per kilowatt and per horsepower year.) The estimated cost of constructing a 100,000-kilowatt power plant in accordance with the plans suggested will be as follows:

100,000-kilowatt water-power development.

100,000-kilowatt hydroelectric plant, complete	$9,726,760
Auxiliary steam plant in coal fields (100,000 kw.)	5,527,420
Transmission line, 60 miles, with reserve line	906,470
	16,162,650
1,350,000-ton gas producer plant	3,315,700
Total estimated cost	[1] 19,478,350

Annual costs.

	Output 100,000 kw. W. P. and S. Aux.	Output average 173,000 kw. W. P. and S. Aux.	Output average 173,000 kw. W. P. and S. Aux. and gas producer.
TOTAL ANNUAL COSTS, INCLUDING INTEREST, DEPRECIATION, MAINTENANCE, OPERATION, ETC.			
Hydroelectric plant	$448,470	$448,470	$448,470
Auxiliary steam plant, excepting coal	410,560	621,840	621,840
Transmission line, 60 miles	50,180	50,900	50,900
Gas producer plant, excepting coal			1,246,190
Coal at $1 per ton	224,180	793,380	1,346,750
	1,134,110	1,914,590	3,716,150
CREDITS.			
Ammonium sulphate, at $60 per ton			3,034,800
Tar, at $4 per ton			180,000
			3,214,800
Net cost of power	1,134,110	1,914,590	[1] 501,350
Cost per kilowatt year	11.34	11.07	2.90
Cost per horsepower year	8.46	8.26	2.16

[1] The expenditure of $2,000,000 for river improvements, etc., now authorized, will be unnecessary and should be credited to the cost of this development.

From the above table of annual costs the great advantage obtained by using a by-product gas-producer plant in connection with the auxiliary steam plant is clearly shown. In the latter case both the water-power plant and the steam plant are run continuously, the reserves being placed in operation. The average load is thus increased from 100,000 kilowatts to 173,000 kilowatts. Under these conditions the load will be 200,000 kilowatts for a period of about two months, and will gradually fall off to approximately 130,000 kilowatts for a period of a few days.

INITIAL INSTALLATION—WATER POWER 40,000 KILOWATTS—AUXILIARY STEAM PLANT AND GAS PRODUCER.

A 40,000-kilowatt water-power development, with an auxiliary steam plant of corresponding size and a gas-producer plant, can be constructed at an estimated cost of $11,663,090. The expenditure of $2,000,000 otherwise necessary for improvements should be credited to this amount. In a plant of this size, operated at its full capacity, and developing an average of 80,000 kilowatts throughout the year, the water-power deficiency being negligible, after due credit is made for the sale of by-products, power will be produced at an estimated cost of $6.54 per kilowatt, or $4.88 per horsepower. The following table gives the estimated construction cost and annual costs of such a plant when operated at 40,000 kilowatts and when operated at 80,000 kilowatts without reserve:

40,000-kilowatt water-power development.

40,000-kilowatt hydroelectric plant, complete	$8,208,580
Auxiliary steam plant in coal fields (40,000 kw.)	2,737,000
Transmission line, 60 miles (including reserve line)	717,510
	11,663,090
By-product gas producer plant (551,400 tons)	1,560,380
Total estimated cost	[1] 13,223,470

	Output 40,000 kw. W. P. & S. Aux.	Output average 80,000 kw. W. P. & S. Aux.	Output 80,000 kw. W. P. & S. Aux. and gas producer.
TOTAL ANNUAL COSTS, INCLUDING INTEREST, DEPRECIATION, MAINTENANCE, OPERATION, ETC.			
Hydroelectric plant	$335,970	$335,970	$335,970
Auxiliary steam plant, except coal	185,860	297,840	297,840
Transmission line, 60 miles	32,660	32,660	32,660
Gas producer plant, except coal			621,470
Coal, at $1 per ton	13,680	324,350	551,400
	568,170	990,820	1,838,940
CREDITS.			
Ammonium sulphate, at $60 per ton			1,240,800
Tar, at $4 per ton			74,840
			1,315,640
Net cost of power	568,170	990,820	523,300
Cost per kilowatt year	14.20	12.39	6.54
Cost per horsepower year	10.60	9.23	4.88

CONSTRUCTION PROGRAM.

At the present time there exists a water-power development at the Rock Island Arsenal from which the arsenal obtains its supply of power. A portion of the power so developed is used for public utility purposes. Appropriations have been made for increasing the water power for arsenal use, and the construction involved will require approximately two years. This construction will be unnecessary if the plan herein proposed is followed. The arsenal is urgently in need of more power at once, and power will be required, also, for the hydraulic construction herein proposed in the river. To meet the existing conditions the following construction program is suggested:

(1) Construct the first portion of the auxiliary steam plant in the coal fields at once, and install therein from 25,000 to 50,000 kilowatts. This initial plant must be designed for ultimate extension to two or three hundred thousand kilowatts or more. The ultimate development planned should be carefully considered in selecting the size of units to be installed. A high-tension transmission line should be constructed at once to connect the power plant with a substation to be constructed at the Rock Island Arsenal. This plant will take care of all the power developed at the present water power, amounting to 6,000 or 8,000 kilowatts, will supply the additional power required at the arsenal at an early date and will furnish such power as is needed in the construction of the water power. Such a steam plant can be constructed in one year under normal conditions. In case of emergency it could be constructed within six months.

(2) The work of constructing the water-power development can then proceed to completion without interruption to the existing power requirements at the arsenal or to navigation. This work should require approximately two years to complete.

(3) During this preliminary stage the Government can conduct on the arsenal reservation such experiments and investigations as it may deem necessary to determine the best and most economical method or methods of producing nitrates, and also the most practicable form of by-product plant to use. It is possible that development work along both lines may be necessary. Such work can be carried on in the seclusion of the arsenal reservation.

(4) By the time the construction of the power plants is completed the Government should have the plans and methods to be employed in the production of nitrates fully developed, so that operation can be started promptly and in the best and most economical manner.

CONCLUSION.

In the project here suggested for the development of the water power at Rock Island it is believed that approximately 200,000 horsepower for the nitrate plant to be constructed by the Government can be obtained under the conditions set forth at a net cost to the Government of not in excess of $2.25 per horsepower year. The development of power can be extended to any amount desired.

On account of its central location, the fine labor market available, the unexcelled transportation facilities in all directions, both by rail and water, the safety of the location, and the fact that at Rock Island the Government has its finest and best located arsenal and largest arsenal reservation, and because of the low cost of power produced at this site, it is urged that Rock Island be given careful consideration in the selection of the location for the nitrate plant authorized to be constructed by Congress.

H. S. PUTNAM.

FEBRUARY 20, 1917, *100 Broadway, New York.*

[1] The expenditure of $2,000,000 for river improvements, etc., now authorized will be unnecessary and should be credited to the cost of this development.

Muddling Through.

EXTENSION OF REMARKS
OF
HON. RICHARD OLNEY, 2D,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. OLNEY. Mr. Speaker, under leave granted to me to-day by the House, I extend my remarks by offering an article appearing in the National Service Magazine for February entitled "Muddling Through," by Sydney Brooks.

This admirable article was brought to my attention by J. Lloyd Derby, of New York, one of the original founders and a strong, loyal supporter of the Plattsburg Summer Military Training Camp Association.

The article is as follows:

MUDDLING THROUGH—THE LESSON OF ENGLAND.

[By Sydney Brooks.]

Next to the victory of the allies an Englishman can wish nothing better for America than that she may profit by British experience in this war. "For God's sake, do not let yourselves be caught as we were caught," is the burden of the message of friendly entreaty and of sharp warning that Great Britain to-day bears to the United States. And never at any moment in the 20 years that I have known America was the message more needed than now. With the events of the past two and a half years knocking incessantly against the cells of his brain, it is with consternation, it is almost with horror, that an Englishman to-day revisits the United States and finds himself faced with conditions of unpreparedness far more chaotic than any he can recall in his own country. "Has America," he is inclined to ask, "learned nothing from the war? Has the lesson of our blundering and confusion and of the hideous risks that a long refusal to face realities compelled us to run—has this lesson been wholly thrown away? With so tremendous an example before their eyes, will Americans still persist in their failure to realize that there is no political problem of any kind that is for one moment comparable with the problem of national security?"

The inquiring visitor may pose these questions but he receives from his American friends no very reassuring answers. Some of them will even protest to him that the United States is less ready for war to-day than it was three years ago, and that in spite of all the talk about preparedness in Congress and the press there has been an actual retrocession and not an advance. It is no part of my purpose to inquire whether this be really so. But the more he looks into present-day conditions in the United States, the more painfully is it impressed upon an Englishman that if the state of British preparedness in August, 1914, could be represented by the figure 100, that of American preparedness at this moment would stand no higher in the scale than somewhere between 20 and 30. There may, in other words, be points at which the United States is nearly one-third as ready for war as we were two and a half years ago, but in most particulars she emerges from any thorough comparison only about one-fifth as ready. For it must not be forgotten that the British Navy, which was our main line of defense, was, when the war broke out, as completely and as instantly adequate to its task as the German Army. Nor must it be forgotten that our expeditionary force was also immediately available, organized down to the last button, and in many ways probably as perfect an instrument of war as has ever been fashioned. The trouble with us was not that we prepared badly, but that we did not prepare enough; that defense had failed to keep pace with policy; that we had never accurately measured our liabilities; and that the greatest of all wars found us with a military equipment admirably fitted to cope with trouble on the Indian frontier or to carry out comparatively small punitive expeditions, but utterly disproportionate to the task, which none the less it was forced to assume, of sustaining a part in a European struggle not of armies but of nations.

American unpreparedness, so far as my observation goes, is on an even more comprehensive scale than was our own. To the defect of insufficiency it adds the further defect of inefficiency. Not only is it ludicrously and lamentably inadequate for a war with even the weakest of the first-class powers but, as we have recently seen along the Mexican border, it breaks down beneath the simplest of military tests. I see no sign that any considerable item in either the naval or the military apparatus of America even begins to approach the degree of efficiency in which the outbreak of the war discovered the British Navy, the general scheme of British naval policy and administration, and the British expeditionary force; and I see every sign that the organization of American defense as a whole falls far short of what is needed if the United States is to uphold her policies and not merely assert them, and if she is to guard not only against the risks inseparable from all international activities and, indeed, from all international existence, but also against certain specific obvious and imminent dangers. What I further see is the reproduction in the United States in an aggravated form of practically all the phenomena against which Lord Roberts

tried, and tried in vain, to rouse his countrymen. I see the same plethoric, pot-bellied equanimity on the part of the average citizen, the same refusal to associate citizenship with duties, the same lazy, hazy belief that peace can be had by willing it, the same debilitating doctrine that defense is the business of the Government and not the concern of the community as a whole and of each individual man and woman in it. But an Englishman is perhaps most taken back by the presence in the United States to-day of certain features of life and opinion from which his own country has happily been exempt. I do not think that in the British Isles we were ever quite so bemused by sentiment as large sections of the American people appear to be. I do not think we ever wandered quite so guilelessly in such a cloud-land of unrealities as that which now envelops the Middle West. I do not think we ever believed with such satisfying innocence that we were protected, without further efforts of our own, by some magic cloak or some providential dispensation of invulnerability. And I am sure that the spirit of British nationality and the unity of British feeling have never been rotted by the disintegrating agencies now visibly at work in the United States. We have had weak and short-sighted Governments, but never one so seemingly indifferent to national security as that which now holds power in Washington. We have had many Parliaments that failed to think out the British military problems, but not one that bungled it so hopelessly as the present Congress has bungled the military problem of the United States. We have known times when the national interest in questions of defense was overshadowed by the national interest in questions of social reform. But we have never known a time when the popular mind was so difficult to rouse or seemed so wrapped in a complacent apathy or so immersed in materialism as in the United States of to-day. We have had those among us who preached a muddy and mawkish internationalism, but I question whether in Great Britain patriotism, and the spirit of service and sacrifice, and a realistic sense of national honor and of the conditions of national existence had at any time been impaired as they seem to have been impaired in the United States. The war has undoubtedly cleared the British air of a multitude of unwholesome vapors. Is there no process that will purify the far more heavily impregnated atmosphere of America at a less terrible cost? Does it need a war to make America efficient? Will the United States, like Great Britain, fail to convert democracy into a reality and citizenship from a meaningless accident into an honor and a responsibility, except under the compulsion of the battle field? Those, I think, are the ultimate questions propounded by this war for the judgment of the American people.

We in Great Britain lived before the war unarmed or armed only for defense, while the Continent of Europe was one vast arsenal of war. Not dissimilar is the position of the United States. We relied for such striking power as we might need upon a small and highly trained professional army, with a somewhat larger but imperfectly organized body of citizen soldiery in the background. So does the United States. Like America, we were a trading community, meditating no aggression and wholly disinclined to consider war or protection against war as the chief end of our national being. While all the leading powers of Europe had adopted universal military service, we trusted in an army raised on the voluntary system. That also is the present policy of America. Secure, as we thought, in our island home, shielded by an unequaled Navy, and possessed of abnormal wealth, we felt that on our chosen element, the sea, we could always give a good account of ourselves, that our expeditionary force would be a valuable addition to the armies of any European power, that our wealth and industrial resources could furnish any alliance of which we were a member with the indispensable sinews of war, that, beyond that, nothing would ever be required of us, and that we could afford to bless the happy fate that had exempted us from "the burden of conscription." I imagine that many Americans, looking to the size of their country, its aloof and seemingly impregnable position, and its potential reserves of man power and material, argue in much the same way. But we were wrong and you also will be proved wrong if you elect to be guided by any such easy-going faith. If and when you become involved in a war with a power of the first rank that is able to challenge your very existence as an independent State, you will find, as we found in 1914, that the defenses you have elaborated are insufficient and that nothing less than the arraying of the entire Nation in arms will meet the needs of the crisis. You will be driven, as we ultimately were driven, to universal and compulsory military service. And then, like us, you will rise up and curse your folly in not having adopted, years beforehand, the only military system that consorts with real democracy, that can guarantee security, and that acts, if not as an infallible preventive, at least as a most formidable deterrent, of aggression. It is a moderately safe speculation that, had Great Britain adopted compulsion 10 years ago, Europe to-day would be at peace. It is an even safer speculation that the United States has only to introduce the same system to render herself immune from attack for all time.

To compute all that our persistence in clinging to the voluntary principle has cost us would be to compile one of the most mournful catalogues of missed opportunities in human history. It meant first and fundamentally that as a nation we knew nothing of war. No nation except the American Nation of to-day and perhaps China could have known less. The British people as a whole had but one strong conviction—or possibly instinct would be the better word—on the subject of national defense. That was that the British Navy should always be supreme. Otherwise they handed over the problem of insuring the national safety to their political leaders. They never made it their own affair. And in a democracy anything that is not the affair of the people, anything that does not arouse and hold a deep popular interest, is pretty sure to be neglected and mishandled. That is because it is the essence of democracy that movements should proceed from the bottom upward, just as it is the essence of autocracy that policies should be imposed by those at the top on an acquiescent nation below. It is not the statesmen of Great Britain who have built up through the centuries the British Navy. It is the British people themselves. Without that passionate faith of theirs, bred into the bones of every Briton, that Great Britain as a free power perishes on the day she loses command of the seas, our naval policy would have been a thing of shreds and patches, of backing and filling, a point of contention among parties, a something shoved by the "leaders" into the background as a quite secondary consideration. And that precisely has been the fate which for some hundreds of years, I should say since the days of Henry the Eighth, has overtaken our military policy. The British people before the war were almost as uninterested in the problems of the Army as are the American people to-day. It was a side issue in the national life. Its discussion bored them. Its technicalities repelled them. The idea that the army either could or should be the nation never occurred to them. When Lord Roberts attempted to popularize it, he was met with "blank indifference or with blame reproved." What an army was, how it fought, of what its equipment consisted or ought to consist—these were questions that the average man in Great Britain left comfortably to the experts and the politicians. He had had no personal experience of soldiering. He was without any inherited set of traditions on the general question of the place of the Army in the scheme of national policy—except the tradition that compulsory military service was a degrading form of discipline unworthy of a free-born Briton, likely to lead to "militarism" and foreign adventures, and superfluous in any event because the safety of the nation was already assured by an unconquerable navy.

When, therefore, the war burst upon us, demanding from our people an unheard-of military effort, it found them obliged to improvise pretty nearly everything. It plunged them not merely into an unforeseen crisis, but into a new world, the very atmosphere of which was strange to them. The national mind had never been set to work on the problems that now confronted it, problems that had to be solved as soon as they were formulated and long before they could be thought out. What the authorities had foreseen and prepared for—the mobilization of the regular army, the dispatch to the front of the expeditionary force and its proper equipment with the infinitely varied paraphernalia of modern war—was in general admirably carried out. But there both they and the nation had stopped.

A war involving the employment and the maintenance of more than 150,000 troops had not entered into their calculations. The creation of huge armies running into the millions was an enterprise they had never even troubled to think of, so wildly improbable had it seemed that any such obligation would ever be laid upon Great Britain. They would as soon have dreamed of drawing up plans to resist an invasion from Mars. The plant, the organization, the machinery for recruiting the men, the officers to train them, the far more difficult problem of arming and equipping them—all these had to be grappled with at a moment's notice, in a frantic scramble, and at a prodigious cost. Had we had compulsory and universal service, the men would have been ready, the arms would have been ready, the uniforms and the camps would have been ready, and we should have saved millions of pounds, months of delay, and the imminent risk of disaster. More than that, our people would have mastered the elements, at least, of the military art. They would have known something of what war is. They would have possessed some standards by which to judge of its incidents and progress. They would have been spared the experience of being violently shuttlecocked between facile optimism and an equally unreasoning depression. They would have been quicker to realize the magnitude of the crisis and to adjust their lives to the new conditions. And these are no small matters. When it is no longer armies but nations that go to war, the temper and the resolution and mental attitude of those who are left at home are the chief among those moral factors that determine the issue.

As it was we had to rush blindly, stumblingly, in the dark, snatching at anything and everything that would put us in shape to fight. Only the inventive genius of our people and their ready gifts of initiative and organization saved them. We did not even know what resources of man power the country could count upon. It seems incredible now that any nation could have remained in such utter ignorance on a matter so vital to its existence. Or, rather, it would seem incredible were not the United States even now, even after the object lessons of the past 30 months, in precisely the same position. It was not until the war had been going on for nearly a year, not until after a vast army of men had enlisted, that we passed the national-registration act, which for the first time placed recruiting on a more or less scientific and orderly basis. Under its terms not only had the actual occupation of every male and female between the ages of 15 and 65 to be declared, but also their capacity for any other business which might be serviceable to the country. A complete survey was thus made of the whole nation and of every eligible man and woman in it. At the same time various committees were busily at work weighing the comparative needs of the army, munition works, agriculture, and other civil industries. Their recommendations, when put side by side with the results of the register, made it possible to draw up lists of trades in the order of their national importance and to decide in the case of some of them that no workers, even though of military age, should be drafted from them into the army. All the belligerents in this war have found that to extract the maximum of fighting power you must observe a just proportion between the claims of the army and the claims of industry. It is the sheerest waste of time, money, and energy, under any system, compulsory or voluntary, to train men to fight and then to discover that they would be more useful making munitions or carrying on their normal trades. We made that blunder, and so did France and Germany. But it will be little less than a crime if the United States repeats it. I am very confident that every man who has been behind the scenes of this war would assert that, for a country like America, the first and essential starting point in any program of preparedness is the compilation of a roster that will show at once the numbers, addresses, and occupations of all the men and women of military age in each State. Get that done and you would know where you were; each State could tell about at a glance which men could be spared for the Army and which ought to be retained in the trades that support the main fabric of the Nation's commerce or furnish the material of war; you would obtain a bird's-eye view of the whole situation and could form an exact estimate of your military and industrial power and of the contribution toward it that each man and woman—and nowadays you can not wage war without women—was capable of making. If not British experience merely, but the experience of all the present belligerents goes for anything, that is the foundation of real preparedness.

I should be the last person in the world to belittle the splendor of the response made by the British people to the national call. Before the war it used, I believe, to be a point of substantial agreement among military experts that even a country with compulsory service could not put into the ranks more than 10 per cent of its population. We in Great Britain exceeded that percentage and still maintained the voluntary system. Over 5,000,000 men in the British Isles came forward and enlisted in the army of their own free will and before compulsion was applied. That was a demonstration of national spirit that has never in its way been equaled or even approached in the history of any land. Nor need one subscribe to the idiotic dictum of a British statesman that "one volunteer is equal to three conscripts" in order to feel and to declare that there was something peculiarly inspiring in this uprising of a free people in defense of the liberties of Europe and under no other compulsion than that which was applied by their own patriotism and sense of duty. Americans would have to raise an army of at least 11,500,000 men in order to equal the British

achievement. Before the war about 30,000 men enlisted in the regular forces annually. After the war began more than that number of recruits presented themselves in a single day. There was one week when a quarter of a million men joined up. Very little provision had been made, or, giving the swamping suddenness of the crisis, could have been made, to receive them. Thousands of them lay down to sleep in ditches after walking 20 miles and waiting for hours in a blazing sun till their turn came. So great, indeed, was the rush of recruits that the war office felt impelled before the war was six weeks old to repeat, though in a modified form, Stanton's blunder at the end of the first year of the Civil War. Stanton absolutely shut down on recruiting and closed the recruiting offices. The war office was not quite so foolish, but before the middle of September, 1914, it raised the standard of height and chest measurement and physical fitness in a way that but too successfully checked the flow of recruits, that went far toward convincing the British public that the extreme need for men was satisfied, and the deterrent effects of which were only undone by a prodigious campaign of oratory, posters, and newspaper advertisements. It was while this campaign was in progress that the defects of the voluntary system became most clearly manifest.

The best men joined the army at once; the slackers and the shirkers hung back; married men displayed an almost suspicious eagerness to enlist; single men proved unaccountably reluctant. Moreover, as time went on it became perfectly clear that the voluntary system was voluntary only in name and that it was being worked by a form of social compulsion that had most of the defects and none of the virtues of universal military service. Men who were not in khaki were jeered at in the streets and presented with white feathers by excited young women. That fearsome instrument of terrorism, "the opinion of the neighborhood," was brought to bear, unjustly often, harshly sometimes, ignorantly and indiscriminately always, upon all men who seemed to be of military age and who had not some visible token in the way of badge or uniform that they were "doing their bit." The public conscience revolted by degrees against the inequalities and inconsistencies of a system that allowed every man to do as he pleased, to volunteer or not to volunteer just as his inclination might dictate, and that penalized patriotism and self-sacrifice by shielding the loafer and the coward. The public taste and the public dignity were not less outraged by the highly effective but essentially vulgar and unworthy appeals for recruits that stared from every wall, resounded from every platform, and headed the advertisement columns of every paper. It was felt, not at first, but gradually, and at last irresistibly, that the war was not a thing to be "boomed" and trumpeted like a cinema actress or a new table water, but a great crisis in human history, calling upon every man as of right to offer up himself and all he had. Slowly we advanced to the inevitable decision. We postponed it as long as we could, honestly believing that there was some virtue in a volunteer that a soldier who was a soldier merely because the law made him one did not possess. We tried first a plan of attesting all the unenrolled manhood of the country and dividing them according to age in groups for the military authorities to call to the colors when they were wanted. It was a good plan and, had we adopted it at the beginning of the war, it might have seen us through. But we found that many thousands of single men of military age had failed to signify their readiness to serve when called upon. The absurdity of summoning the benedicts to redeem their promise while an appreciable number of bachelors had escaped giving any promise at all was too patent to be withstood. Compulsion was at once applied to the unmarried shirkers, and a few months later, in May, 1915, was extended to all men in Great Britain between the ages of 18 and 41. From that moment the national conscience was at rest. No one could possibly say that the British people were not pulling their weight or bringing their full power into play when they had thrown aside the most cherished of all national prejudices and stamped with their emphatic approval the principle of universal service. Then at last the burden was fairly distributed; all men stood on an equality of sacrifice; and British democracy received its final consecration.

No Englishman, however, looking back on it all, even while he recognizes the stupendous efforts put forth by the Government and by the people to keep the voluntary system in being, can help reflecting on the waste and muddle and injustices that might have been obviated had the war found us with universal and compulsory service in full operation. For in that case most of the questions that distracted the public mind during the first 18 months of the war would never have been raised at all and most of the problems that diverted the Government from its supreme objective of killing Germans would have automatically settled themselves. Every man would have known where he belonged and what his duty was, where to report himself, and where to obtain his uniform and arms. There would have been no hurried pitching of camps on unhealthy sites, no dearth of officers to lick the recruits into shape or to put the more seasoned troops through their final paces, no drilling for months on end without rifles or kit or equipment, no shortage of food and doctors and transports, no such sense of bitterness and resentment as only the volunteer knows when he hears of soft civilian jobs filled by slackers who had heard the call of their country but had chosen not to heed it, no picking men raw from the streets and flinging them half trained or a quarter trained into the battle, no tumult of confusion and frenzied improvisation of makeshifts, but the setting in motion of a tested machine and its smooth and progressive rise to a calculated maximum of power. In mere money it would have paid us a hundred times over to have borne the undoubted burden of compulsory service for a couple of decades rather than to have faced such a storm as broke upon us in August, 1914, with nothing at our backs but the voluntary system. Unless Americans can be absolutely certain that they will never be drawn into a first-class war and that because they are peaceable, because they are wealthy, because they are unarmed, they are therefore safe from any attack by powers poorer than themselves, infinitely better prepared for war, and by no means so pacific—unless they are convinced of the soundness of these doubtful hypotheses, then the cheapest investment I can recommend to them is the immediate adoption of compulsory service. Financially it would have saved us billions of dollars had our people after the Boer War divested themselves of the liberty not to fight for their country. But the financial gain would have been but a fraction of the increment we should have reaped from the systematic and obligatory training of our manhood in arms. We should have saved time—and time is the most precious of military as it is of industrial commodities; we should have saved energy—and energy in a life and death struggle is precisely what you can not afford to waste; we should have gone forward briskly and confidently in the light instead of groping and fumbling in the dark; we should have dispatched with a clear-cut swiftness and efficiency a business that sheer ignorance of its essentials compelled us to bungle and prolong. More than that, as I have already said, we might, I believe we should, have averted the war altogether. I can not believe that even Germany would have provoked one of the most stubborn of the fighting nations of the world had that nation been ready for war. Still less can I believe that any power will venture to attack the United States when the United States rests upon the broad basis of a citizen soldiery and shows itself alert to the conditions around it and determined to be their master and not their victim. You have in your hands the key to what is virtually an eternity of peace if—but only if—you arm and organize. Should you refuse, then all history is a lie if there is not stored up against you a day, and an early day, of terrible awakening.

There is another aspect of this question on which I should like to say a word or two. Ask any sane man in any of the warring countries what lesson has been most deeply driven into his mind by the events of the past 30 months, and he will answer unhesitatingly, "The value, the vital necessity, of encouraging during the years of peace as many private manufacturers as possible to engage in the production of war material." I am almost tempted, indeed, to say that that is the beginning and end of preparedness. By hook or crook you can always get the men. It is a much lengthier and an infinitely more difficult business to arm and equip them. Modern war is a war of factories. It levies an unceasing toll on every ounce of industrial knowledge and skill that a country possesses. It is a struggle of mechanics and chemists and artisans just as truly as it is a struggle of soldiers, and victory goes to the nation that knows how to turn the resources of its manufacturers and the efficiency of its workmen to the best account, and that has at its disposal the largest number of plants engaged in or capable of being adapted to the production of the vast and varied catalogue of implements required by the armies in the field. The industrial side of war is just as essential as its military side. But nothing can be plainer than that if your military preparations are on a small scale your industrial preparations likewise will be on a small scale. The one conditions the other. If you rely on a diminutive Regular Army and have no idea of how many volunteers will be needed to supplement it in war time, then you limit your industrial preparedness to the obvious and tangible needs of the moment. You see to it that your Regular Army and your Navy are adequately provided for. But there you call a halt. You can not attempt to forecast a future that is a mere blank wall of unknown and incalculable quantities. You do not build plants and train labor on the off chance that some day 500,000 volunteers, or 5,000,000, will be clamoring for guns and shells and rifles and uniforms in a hurry. We found in Great Britain that dependence upon the voluntary system meant preparing for war only after war had begun, meant that there was a huge gap in our industrial equipment that had to be filled immediately and at any cost. How we have filled it, how we have erected over 100 colossal war works, how more than 4,000 firms that before August, 1914, never dreamed of producing war material are now engaged in producing nothing else, how we have turned all our industrial arrangements and practices upside down to meet the emergency—all this it would need a volume, and a singularly fascinating and instructive volume, to set forth. Yet with all our efforts it will not be till this summer, three years exactly since the outbreak of the war, that we shall reach our maximum power; and what our failure to foresee the industrial demands of modern war has cost us in lives, in treasure, in spent attacks, is something no Englishman cares to think about. But it was a failure inevitable under the picayune standards of the voluntary system. Only if you adopt compulsory service can you measure your liabilities and shape your industrial preparations accordingly. Only if you know exactly the number of men that at a crisis will be called to the colors can you coordinate military and industrial policies and avoid the disastrous blunder of allowing the former to outrun the latter. Under the voluntary system you are working blindfold, never knowing at what moment or on what scale you may have to make demands upon your manufacturers that they can not possibly fulfill. Under the compulsory system, with a definite quota of men annually entering the ranks, with the aggregate force at your disposal in time of war accurately ascertained beforehand, the output of war material automatically keeps pace with the numbers of men who will one day need it more than they ever needed anything in their lives.

It has been extremely interesting to watch the change that has come over the British mind since the adoption of universal and compulsory service. It is a change that might better be described as a revolution. Formerly, as I have said, the average Englishman looked down upon "conscripts" as little better than serfs. He exulted in his own freedom from "military bondage." This attitude on his part was quite natural and quite sincere. It marched with entire harmony alongside of his general sense of irresponsibility and his aversion to a disciplinary officialdom. That citizenship had its duties and its obligations as well as its privileges, that between himself and the State there would one day arise a question of debts to be paid and services to be rendered—this was as foreign from the ordinary British as it still is from the ordinary American view. Freedom in the eyes of the "man in the street" meant freedom to do pretty much as he pleased. He was a ferocious individualist. The conception of the State as a brotherhood that embraced himself and had the right to exact from him sacrifices which he, on his part, should have been glad to make had well-nigh vanished from his consciousness. He was voluble on what the nation owed to him; he was reticent on what he owed to the nation. Eloquent about his "rights" and developing a progressively bitter spirit of class antagonism—an antagonism that was poisoning the industrial relationship at its source—he threatened to become about as futile and unpleasant a citizen as any that encumber this planet. But the war has given him a new perspective. He realizes that to take up arms at the bidding of the State is not to be subjected to a form of slavery, but to exercise a proud privilege. He sees now that there is no freedom but in service and no happiness but in sacrifice. He has grown nationally self-conscious. He has felt for almost the first time that he was a working and considered unit in a great democratic whole, and that there was something else in life beyond the satisfaction of his own petty appetites. One can not even begin to estimate the enormous contribution that universal service has made to the cause of British democracy; how it has blotted out class feeling, has made wealth and birth of no account, and has unified the nation by imposing upon all its members an equality of obligation. In that new England which will emerge from the furnace of this war, an England physically made over, inured to discipline, making character and achievement the test of honor, scornful of old distinctions, and insistent upon the bonds that link and not upon the divisions that separate rich and poor, employer and employed, the palace and the slum—in that vigorous and triumphant democracy compulsory military service, I hope and believe, will take a fixed place in the national fabric.

But if England has gained much and stands to gain still more by her conversion to universal training, what may it not be expected to produce in America? For in America, as it seems to me, the need for just some such leveling and energizing experiment is greater to-day than it has ever been in any white man's land. All the phenomena that a few years ago made one wonder whether England might not really be as

decadent as the Germans thought she was—the waning of a robust patriotism, the State blindness of the average citizen, the growth of an untrammeled egotism that hurled class violently against class, the absorption in pleasure and money making, unwillingness to look disagreeable facts in the face, the yet greater unwillingness to sacrifice private ends for the public good—all these phenomena luxuriate in the United States of to-day with a rankness rarely, I suppose, equaled and never surpassed in history. And, in addition, America suffers from a plague which happily has never infected us in England—I mean the plague of racial schism, of divided allegiances, of an imperfect unity of thought and emotion. How to weld this medley of races, scattered over so vast and isolated a continent, into a genuinely American totality—that is the problem. The schools have done much to solve it, but it is clear that the factors which impede the development of a really national consciousness are growing yearly too strong for them. I see myself no agency in sight that can do even half as much as compulsory military service to restore a juster sense of values to social life, to take the edge off class strife, to instill the spirit of service into your self-centered millions, to sharpen the wits and add to the physical well-being of the average man, to make the democratic theory a fact, and to bring all the disparate elements of the Commonwealth within the folds of a visible and realized Americanism. Not since slavery has any issue appeared that so closely touches the security of the American people and the quality of American democracy.

The Increase of Federal Judges.

EXTENSION OF REMARKS
OF
HON. JAMES J. BRITT,
OF NORTH CAROLINA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. BRITT. Mr. Speaker, I shall say but few words on this bill. But little need be said. That it is an unwise, vicious, and partisan measure is so plain that he who runs may read. Its title is a misnomer. It ought to be called a bill to punish merit and prevent efficiency. It proposes a direct reversal of the principle that merit should be rewarded, that efficiency should be promoted, and that our nonpartisan judiciary should be maintained. It goes further than that. It makes judicial appointments the football of party politics and divests Congress of its constitutional power to create judgeships, and reposes that power in the hands of the President of the United States.

Mr. Speaker, our judiciary is preeminently the one branch of our Government where experience and uninterrupted tenure count for most. The suggestion that a sane and healthy judge who has attained the age of 70 is incapacitated for service by the weight of years is flatly contradicted by common experience. The whole history of our judiciary refutes the contention. It is little short of absurd. The ablest judgments of our courts, those mighty expositions of the Constitution that have shaped our institutions and given direction to our national life, have all been the product of judges advanced in years. The law is a difficult and laborious science. So is its administration on the bench. No man can master it in a day, or a year, or a decade. It requires long, patient, and unremitting toil. This bill flouts experience and disregards ability. Far from promoting the administration of justice, it would seriously hinder it. That judges of 70 should not be forcibly retired is illustrated by the case of District Judge James Edward Boyd, of the western district of North Carolina. Although past 70, he is vigorous, strong, active, and enthusiastically anxious to serve. Yet, under the provisions of this bill, his services would almost certainly be dispensed with and his place filled with some untried and inexperienced lawyer.

Mr. Speaker, if these additional judges are needed, why not make the provision outright and final? Why make the establishment of judgships dependent upon Executive caprice? If they are needed, why not create them absolutely and let the matter end there? The advocates of this bill, although always posing as the protectors of the powers of Congress, are helping to override the Constitution and destroy the proper balance of the powers of our Government by giving to the President such power as kings, and kings only, should have. They are committing solely to him the power to say whether there shall or shall not be appointed a large number of Federal judges who will hold in their hands the construction and application of the Constitution and laws of the United States.

Mr. Speaker, this is a partisan measure, pure and simple. Its purpose is to displace 16 Republican judges and fill their places with 16 Democrats. Gentlemen on the other side would have done better had they fully disclosed the purpose which they have so poorly veiled. To make our judiciary the subject of political exploitation is to do incalculable harm to our institutions. It is turning back the wheels of progress. No political party has ever before attempted it, and I hope this effort will fail, and fail signally.

The Referendum.

EXTENSION OF REMARKS
OF
HON. THOMAS D. SCHALL,
OF MINNESOTA.

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. SCHALL. Mr. Speaker, the principle that underlies true democracy is representation. Our fathers fought in 1775 for the principle that taxation without representation is tyranny. That is what progress means, that government shall be based on the will of the people. There has always been a menace to liberty when a man or group of men have set themselves up as judges and have proceeded to pass out laws to the rest of the people, and tried to force them under the yoke.

Through our system of elections any question that is a party issue is voted upon directly. The people know how you, their Representatives, stand upon the matter, and they have a chance to express their opinion on it. When platforms are definite the vote itself is a referendum.

But when you get outside of party questions, in some way the people must have their say. Until one party or the other takes up these prominent questions, and by votes of the people at election time a referendum is had in effect, they should not be the subject of statutory provision.

On a question that is not at issue, that is not a party principle, the people have no way to find out your attitude. Is it fair that you should attempt to represent those who have had no opportunity to express themselves? We are not here to voice our opinion, but to try faithfully to record the will of the majority of those who sent us here. The referendum principle lies at the heart of the need for political division, for it is in the very conflict of men and of parties, wherein lies the secret of American liberty, American institutions, and American success.

Even if there is no moral issue involved—and to arrogate to ourselves this privilege might result in a downright benefit—it is never any lasting advantage to build a right on a false foundation. Soon or late the whole thing comes toppling. Who can tell what sweep of prejudice shall turn a right into a hideous injustice? The cure would be worse than the evil if we should establish in this free country that a few shall dictate to the millions. Can not we trust the people? They are as able and as worthy to decide for themselves as we are to decide for them. Shall we set ourselves up as little gods and say, "Go to, this shalt thou do; this shalt thou not do"? Do not so mistrust the American character. He does not need the strait-jacket. Let him breathe free air. That is what our ancestors came over here for, that they might worship God as they chose, carve out for themselves a future, and conquer a wilderness. God was their common master, and each was the equal of his brother. It is a coward's trick to rope and tie a people like ours. Let them act, let them have a voice. That is only American fair play. What business have we to blind ourselves to the inherent right of all Americans and deny them the privilege of deciding for themselves. I believe in the referendum. No law should be forced on any people—I don't care how good the law is—until the people who are to be controlled by it have had the privilege to express themselves on it. The law that does not have the approval of the people can not be enforced. The equity of this principle no true American can deny. If a referendum is good in one place it is good in every place.

Gentlemen say that it is part of the Constitution that the District of Columbia shall have no voice in its own government. Because the people have no voice in their taxes it is argued that they should have no right to speak ever upon any subject. Thus they make a fetich of the law and bow down to convention as abjectly as the veriest Confucianist. Because a thing has been is no argument that it is right and should continue to be. An argument that is good for submitting suffrage or prohibition to the people by Federal amendment gets the support of the same people who oppose giving to the people of the District of Columbia the same rights they want for their own people. Are the people in the District not Americans? I believe they should have a voice in the Government of which they are a part and to which they render their support.

One of the principles upon which the Conservatives and the Progressives split was that the Progressives believe in the principle that government of the people, by the people, and for the people should not perish from the earth, and that the way to preserve this democratic government to the majority of

the people is through referendum. I am advocating and must continue to advocate, if I stand square with myself and with my God, the principle of referendum. I would be doing harm not only to myself and my conscience but to a great principle of freedom and democratic government, for which the world has so long suffered and bled, should I renounce this doctrine.

Arming of American Merchant Ships.

EXTENSION OF REMARKS

OF

HON. ISAAC SIEGEL,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. SIEGEL. Mr. Speaker, I shall vote for the resolution for the reasons stated by me on the floor of the House, and in response to the question as to why I have voted for the Cooper amendment my answer is that the chairman of the Committee on Foreign Affairs stated on the floor of the House that he did not believe that the President intended to convoy merchant vessels that carried munitions of war or to supply guns and ammunition to such vessels. He further stated that good international lawyers contended that to convoy a vessel loaded with arms and ammunition was an unlawful act, and that it would be an act of war.

For those who are further interested I would respectfully refer them to the CONGRESSIONAL RECORD of March 1, at pages 5228 and 5229.

I feel, Mr. Speaker, that if a statement of fact is made on the floor of the House no harm can come from expressing it in the resolution, as it would in that manner merely emphasize the real meaning of the resolution.

There have been some statements made in the press regarding Japan in this European trouble of ours, and I feel that an article which appeared in the New York Evening Sun of February, 1917, would tend to eliminate some of the mistaken impressions that seem to exist regarding the Japanese immigration problem, and I therefore read it in full:

WHY JAPAN PROTESTED—SHE INTENDS TO KEEP THE "GENTLEMEN'S AGREEMENT" AS TO IMMIGRATION, BUT SHE WILL NOT HAVE EXCLUSION RECOGNIZED BY LAW.

[By T. Iyenaga.]

[The author of this article has been an official of the foreign department of the Japanese Government and for years a lecturer at American universities.]

While the immigration act recently enacted over the veto of the President was pending in Congress Japan lodged a protest with the American Government against certain provisions in the original bill. Nor was this the first time that such a protest had been made.

It was indeed unfortunate, to say the least, that Japan was forced to take such a step, for it is liable to create a wrong impression upon some sections of the American community. Those Americans who get a glimpse of current events through headlines of newspapers and are too busy to examine the question carefully are apt to regard Japan's protest as the presumptuous act of a foreign power to meddle in the domestic legislation of this great Republic, or as a maneuver on the part of Japan to defeat the enactment of the immigration act, with the view of keeping the door open for the unrestricted immigration of her subjects into this country.

Both constructions are entirely erroneous. It is well for us, therefore, to know clearly and exactly what was the point involved in Japan's protest and what is her attitude toward the immigration question.

Let us first try to understand what is Japan's own policy toward the emigration of her own people, especially emigration to the United States. That Japan is hard pressed by overpopulation and hence needs a suitable outlet for it is too apparent. The Japanese Empire, including its outlying territories, covers an area of about 257,073 square miles. Japan proper is less than half the size of the State of Texas, and the land fit therein for raising crops is only about 15 per cent of the whole. In spite of this small area and the limited extent of its arable land, Japan proper alone contains a population of not less than half that of the United States. In 1916 it was 55,965,292, or about 387 per square mile. Furthermore, the population of the Empire is to-day increasing at the rate of 800,000 per annum.

It is then not at all surprising that this ever-increasing population has sent out streams of emigrants to different parts of the world, especially to new countries which are sparsely inhabited and where economic opportunities are abundant. No country on the face of the globe, it needs no emphasis in saying, affords such an inviting field for emigrants as this vast land of untold opportunities. No sooner, therefore, had Japan abandoned the policy of seclusion of the old régime and the knowledge of America became diffused among her people than her sons began to arrive on this shore of the Pacific.

At first Japanese immigrants received special encouragement as an outcome of American legislation. In 1884 the United States enacted the Chinese-exclusion law. The large landowners of California, having been thus deprived of Chinese farm hands, sought a substitute elsewhere, and found in the Japanese excellent laborers to be utilized on their farms and in their orchards, and they tried to encourage Japanese immigration by offering alluring terms. About the same time western railroad companies, then busily engaged in the construction of transcontinental systems, also found out that the Japanese made excellent section hands, and tried every means to obtain as many Japanese as possible.

Thus encouraged, the number of Japanese immigrants increased year by year until it grew to such an alarming proportion as to arouse strong antagonism of labor and trade unions on the Pacific coast. This anti-Japanese movement alarmed the Governments at Washington and Tokyo, and they entered, in 1907, into the so-called "gentlemen's agreement," by which the Tokyo Government agreed to voluntarily prohibit further importation into America of Japanese laborers.

This is the simple story of Japanese immigration into America.

A decade ago, then, Japan's policy on emigration, so far as America is concerned, was definitely settled. Viewed from the high standpoint of her imperial interest, Japan saw the wisdom of avoiding the cause of international friction with the United States which would tend to jeopardize her vital interests involved in Japanese-American trade. How important this trade is to Japan is evident from the fact that it constitutes one-third of her foreign commerce and that the United States has always been the best customer of Japan's staple products—silk, tea, and art objects.

To safeguard this commercial interest and to foster its growth would, then, be of far greater and more practical value to Japan than an insistence on an academic principle of freedom of egress for her subjects to any part of the world, or the benefits that might accrue from the incoming of a few thousands of Japanese laborers into this country. The compromise patched up between the Governments at Washington and Tokyo, as embodied in the so-called "gentlemen's agreement," was dictated, it is apparent, by far-sighted statesmanship. It was not merely the concession on the part of Japan to meet the wishes of the American Government to restrict Japanese immigration.

So long therefore as the cause of international friction arising out of the presence of a large number of Japanese laborers remains active we may rest assured the "gentlemen's agreement" will be rigidly kept. In fact, the agreement has for the past 10 years been most faithfully lived up to, as is sufficiently proved by the decrease rather than the increase of Japanese residents since 1907. The above considerations can not be too strongly presented to the American public, for there are publicists and lawmakers who are constantly harping upon their own assumption that Japan is bent on forcing the issue of unrestricted immigration of her subjects into this land.

It can be definitely asserted that there has been not a single instance in the Japanese-American negotiations in which attempt has been made to augment the number of Japanese immigrants. All diplomatic moves of Japan have been directed either to secure the protection, in obedience to the existing treaty, of a small number of Japanese domiciled in this country, or to prevent American legislation which is found so inequitable and discriminatory against the Japanese as would obviously injure the prestige and honor of the island Empire.

So far as the essential features of the immigration law just enacted are concerned, they have not the least effect upon Japan. As to the literacy test, which had been the matter of so much discussion among American leaders themselves, we Japanese have no concern whatever with it. The enactment of such requirement may prove a stumbling block to Italians, Portuguese, and Russians, but it has no effect upon Japanese.

The immigration act on the whole, as it stands to-day, appeals to me as the embodiment of the wisdom and farsightedness of the American people, for the time is long past when America could admit unrestrainedly hordes of uncultured Europeans and Asiatics who are complete strangers to her ideals and traditions and system of government without the danger of these basic ideas being upset at their hands.

What, then, was the point involved in Japan's protest? It referred to certain passages in the original bill which, while they had no important bearing upon the act itself, were found derogatory to Japan's honor and dignity and reflected, by implication, a doubt of the fulfillment of her plighted faith. Japan stands to-day in the rank of first-rate powers, and she naturally does not want her subjects to be classified with those people who have not yet attained that standard.

Nor does Japan want the spirit of the "gentlemen's agreement" lost by its formal insertion in an American statute. That compact was made between America and Japan with the same spirit as two gentlemen put mutual trust in the fulfillment of the agreement they enter into. The very purpose of the "gentlemen's agreement," whereby Japan was to control emigration, was to avoid any explicit discrimination against Japanese by treaty or otherwise. The settlement has worked satisfactorily to both parties, and there was no ground for disturbing it.

Any reference to the agreement in an act of Congress which specifically substitutes all previous legislation on immigration would have been tantamount to the formal recognition of Japanese exclusion. Such a clause could not but evoke Japan's protest. As Congress has most gracefully amended in one way or another all those objectionable passages and provisions at the representation of the State Department, it serves no purpose to dilate upon them any longer. We have only to express our gratitude to the wise statesmanship of Washington authorities and of lawmakers in Congress who have treated Japan justly and fairly.

Finally, one might well ask, if Japan acquiesces in the policy of not sending her surplus population to America or other countries where Japanese are not welcomed, what is she going to do with it? Marquis Komura, who more than any other statesman is responsible for the formulation of Japan's foreign policy, long ago declared that the proper field for her surplus population is Asia. This policy seems to have been faithfully adhered to by his successors in the foreign office. It is confirmed by Japan's activities in South Manchuria and Eastern Mongolia, where she lately acquired the rights and privileges which will make the colonization and movement of her subjects therein much easier. The recent Russo-Japanese treaty, too, will probably make the egress of Japanese subjects into the vast and sparsely populated regions of Siberia much freer than heretofore.

Furthermore, the present phenomenal development in commerce and industry of Japan brought about by the great war would tend to make the retention at home of Japanese laborers almost imperative. The ever-increasing population of Japan will thus adjust itself in one way or another. At any rate America has no need to be haunted by the specter some fertile brains have created that the yellow hordes of Asia will one day burst forth from their bounds and overrun this blessed land of the free and the rich.

Mr. Speaker, the New York Times published a poem a few days ago which is expressive of the thoughts of all men who

remember Lawrence's words, "Don't give up the ship." It is entitled—

UNDER THE FLAG.

[By Florence Earle Coates.]

Under our own flag, still we will sail her—
Gallantly sail her, our own Ship of State;
Faiths we have lived by still shall avail her,
Hope at her prow, wing'd expectant, elate!

Over the deeps of a perilous ocean,
Honor compelling, we still will sail on;
Giving, unfearing, a loyal devotion,
Until, in life—in death, danger is gone.

Deem not that we, whom our fathers before us
Taught to love freedom and died to make free,
Coward shall fly, while the Heavens are o'er us,
Craft of the ether or boats under sea;

There is in valor that hearkens to duty—
Something that dearer may be than long years;
And in Man's service there may be a beauty
Higher than glory, and deeper than tears.

The Crucifixion of Belgium.

EXTENSION OF REMARKS
OF
HON. AUGUSTUS P. GARDNER,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. GARDNER. Mr. Speaker, under the leave to extend my remarks granted me on February 20, in compliance with a request, I present the following document:

THE CRUCIFIXION OF BELGIUM.

[An address on Germany's deportation of the innocent people of Belgium and northern France by Maj. Louis Livingston Seaman, United States Volunteers, at the Church of St. John the Evangelist, Protestant Episcopal (Rev. John A. Wade, rector), and protest of the American Rights League, George Haven Putnam, president.]

The wholesale deportation by Germany of the innocent people of Belgium constitutes a state of international lawlessness unsurpassed since the abolition of the piratical slave raids in the jungles of Africa. It may justly be placed on a par with that practice, when we consider the teachings of the high priests of Germany, Treitschke, Nietzsche, and Bernhardi, whose philosophy has instilled into the hearts of the nation the belief that war is legitimate and good business. In the estimation of many thinking people the present tragedy of Europe is the most logical war in history; for it is simply carrying out the doctrine instilled into the people of Germany for the last half century—a doctrine that justifies the commission of all kinds of brutality in order to accomplish its end.

Nations in their development from barbarism to civilization have established laws and courts, where murder, assassination, arson, rape, robbery, and other crimes are summarily dealt with, but with the sacrilegious and blasphemous self-styled representative of the Almighty who now rules Germany these laws are trampled under foot as having no significance. German atrocities, ruthless murders, and bitter wrongs against humanity have transformed her into a monster. So that the present war is not a war between nations, but a death struggle between civilization and barbarism, between men and beasts.

I have just returned from France, where I found her people thinking of the atrocities and the crimes and horrors of the German invasion. France is fighting "not a nation, but an idea—the idea of militarism and bestiality and brutality expressed in the action of the Germans."

I recently visited Belgium, whose civilians in the conquered parts of the country are being separated from their families and deported into slavery in Germany, and yet scarcely a word of protest has been made by our safety-first-and-honor-last Executive against these monstrous acts of inhumanity.

The German slave driver, Gen. von Bissing, is carrying out the policy of his ruler, sending hundreds of thousands of Belgian civilians from their homes and their families and forcing them into exile and slavery in Germany. Cardinal Mercier states that "soldiers enter homes by force, tearing youth from parent, husband from wife, father from children. They bar with the bayonet the door through which wives and mothers wish to pass to say farewell to those departing. They herd their captives in groups of tens and twenties and push them into cars. As soon as the train is filled the officer in charge waves the signal for departure. Thus thousands of Belgians are reduced to slavery. Each deported workman on arrival in Germany releases a soldier for the German Army."

One great reason war continues is the fact that the nations fighting Germany do not think primarily of Germany as a nation, but they regard Germans as a tribe which practices the abominations which have made the fate of Belgium a world-wide tragedy. Peace is no nearer, notwithstanding the oceans of blood that have been shed and the millions that have suffered, because no peace under these conditions is possible. Such practices must perish or civilization must perish. There can be no peace while Germany remains the exponent of principles that mean the destruction of civilization as exemplified by her treatment and torture of Belgium to-day.

The unlawful brutalities of Germany, however, need cause no surprise to those who are familiar with its military history for the last 50 years. Some of you may recall the statement Bismarck made to his troops when they left Berlin for their conquest of France in 1870. In an address to them before their departure, he said, "Leave to the people who you conquer naught but their eyes with which to see and to weep," and that is the policy they are now enacting in Belgium.

The German nation regards with great pride the so-called ceremonial of the baptism of fire for its army.

There have been but two occasions between the war of 1870 and the present one in which the German troops have experienced this ceremony, and it was my fortune, or misfortune, to be present on both these occasions.

One was in 1900, in the so-called Boxer War, when the allied armies of the world crucified Christianity in China in their monstrous treatment of the Chinese, who, in their misguided judgment, were merely trying to save their country from vivisection by the vultures of Europe.

In an address which the Emperor of Germany delivered to his troops on their departure for that expedition, he told them to "behave like Huns," and their record of murder and devastation in that country has left a blot on their escutcheon which will never be erased. Their army arrived in Peking several months after the so-called war was over, but they at once began a system of punitive expeditions on the helpless Chinese, among whom there was no more fight than in a warren of rabbits, and continued it for months, committing crimes of murder, rape, and looting that would shame the record of Attila.

The other occasion occurred in German Africa, when I also chanced to be present. The Hereros, one of the finest native tribes of that country, had protested against the monstrous hut tax which the colonial government had imposed upon them. That government had robbed them of their land and prevented them shooting the game. It had restricted them from all the privileges they had enjoyed for immemorial ages, and imposed upon them a tax so large that it required the wage of half a year's work in the cotton fields or in the making of the roads, for which they received about a penny a day, to accumulate enough to pay the tax.

The natives protested against this payment and other cruelties and restrictions and attempted to create a rebellion. On learning this, the German authorities promptly arrested all the leading men of the tribe—the chiefs, the medicine men, the priests, and the heads of families of the section of the tribe where this massacre occurred—and held them awaiting the arrival of the colonial governor. He was a fellow passenger with me on a steamer running down the African coast, and when we reached the place, at about 8 o'clock in the morning, the situation was immediately placed before him. In less than an hour 208 of these representative natives, the most influential and powerful of the tribe, were brought from the prison and hung to the limbs of the mango trees in the village. The priests and medicine men had told the natives that they need not fear the effect of the German guns, as they shot only water. To prove that this was not true and to instill terror among the remaining inhabitants, the wives, the children, and the parents of the condemned men—indeed, all the inhabitants of the village—were invited down to the mango trees where their husbands and fathers had been hung, and a detachment of German soldiers was ordered to fire upon the suspended bodies until they were literally blown to pieces, so it is not surprising to me to see the same monstrous policy developed in Belgium, where the methods seem to be naught but to terrorize and to exterminate.

How long, oh Lord! how long, will America stand by and see these crimes committed without a protest so vigorous as to compel their cessation? As a veteran or observer, I have been in nine wars, in almose every section of the civilized and uncivilized world, from the Moros of the Philippines to the jungles of Africa, but it has been reserved for this war to furnish cruelties and barbarities which surpass anything I have witnessed elsewhere and prove that civilization is a failure unless the nations who are free from the direct sufferings of the war will protest with sufficient vigor to compel some regard for international law and for the salvation of humanity.

On August 28, 1914, when the recrudescence of barbarism now devastating Europe had shocked the civilized world, I sent the following cablegram from Antwerp to President Wilson. It had the indorsement of the Belgian military authorities, and every word in it has been verified by Viscount Bryce in his report to Parliament. It is as follows:

ANTWERP, *August 28, 1914.*

MY DEAR MR. PRESIDENT: Unless the barbarism of the German Kaiser ceases, the civilization of Europe will be set back a century. The rules of The Hague Tribunal have been grossly ignored. Innocent women and children have been bayoneted. Old men and noncombatants have been shot. The white flag and Red Cross ambulances have been fired upon. A Belgian Red Cross officer was shot while assisting at the burial of a dead German. Villages of noncombatants have been burned and historic monuments desecrated. Churches have been sacked and hostages murdered. This morning bombs dropped from a Zeppelin in an attempt to assassinate the royal family, killed 11 citizens and desperately wounded many more. This is not war, but murder. As vice president of the Peace and Arbitration League of the United States, I implore you in the name of humanity and justice to back American protest so vigorously that German vandalism must cease, and the future disarmament of Europe made possible.

Respectfully, yours, LOUIS A. SEAMAN.

Mr. Wilson at that time had every opportunity to prove the truth of my report, but it was disregarded, and he failed to protest against the greatest crime of history—the monstrous infringement on international law and the fundamental rights of humanity. Had he then protested in the name of The Hague Tribunal and civilization, and made immediate preparations to enforce his protest, his name would have gone down to history coupled with that of Washington and Lincoln. Instead it is more likely to be coupled with that of Dr. Jekyll and Mr. Hyde. There would have been no *Lusitania* and *Arabic* murders to commemorate and no Belgian deportations to shock the world, and America would have maintained the ideals for which your forbears and mine since the days of Magna Charta were not too proud to fight.

Some day the murderous cataclysm now raging in Europe will cease, and what will be the conditions existing then? It will find most of the continental nations hopelessly wrecked financially and saddled with debts, many of which will never be liquidated. It will find America prosperous and in possession of wealth beyond the dreams of avarice, but without a friend in the world. It will find Europe jealous of our prosperity and envious of our riches. Prosperity without protection is a peril. Envy and jealousy are the most fruitful causes of war. Unless we are prepared to resist unjust demands war

will undoubtedly follow. Congress and the President have already wasted most valuable time in failing to make adequate preparation for the preservation of our peace. Unless this is done, and done immediately, our country will certainly receive the treatment it will deserve—vivisection, with but little sympathy for the patient under the scalpel. You may remember Bismarck's significant reply when asked what he thought of America. "America," said he, "is a fine, fat hog, and when we're ready we will stick it."

While in the hospital at La Panne with Surg. Gen. de Page a few weeks ago I was invited to a private audience with Her Majesty Queen Elizabeth, Belgium's noble queen. She spoke in keenest praise of America's generosity to her people, who, but for this wonderful assistance, would have perished from the earth, and of the deep obligation of her suffering country to our land. She is a rare jewel without the setting, proving the royal character without its pageantry, a fitting mate for the king who will pass into history as the greatest hero of this monstrous war. She is living by the sea, in a villa near the hospitals, which she visits almost daily in her work of devotion, and her soul is wrapped in the welfare of her suffering people and her desire to help them.

One Sunday evening we dined with Madame Henri Carton De Wiart, wife of the Belgian Minister of Justice, in an ancient castle near Havre, given to her by the French. It was in strange contrast to the prison for criminals in Berlin, where for three months she was incarcerated in a cell but little larger than her dining table for mailing a copy of the pastoral letter of Cardinal Mercier, who is now himself a victim of German tyranny. When asked by the tribunal which convicted her whether she had sent the letter she answered, "Yes; and I am ready to pay the penalty." Our embassy and that of Spain intervened on her behalf, but when our ambassador called to see her the interview was allowed only in the presence of a German officer. When asked regarding her food she said, "I had not known these dishes before, but I know them now." The following day the German officer visited her again and said, "Madam, you will be allowed the privilege of purchasing your own food." She answered, "For a privilege one must say thank you. I can not say thank you to a German. You say I may pay for my food. That money would go to a German. I would rather starve than have my money go to a German." She endured her imprisonment to the end, thus typifying again the spirit of Belgium, which neither shell nor torture can conquer.

On the seashore near the hospital at La Panne stands a rude little chapel, recently erected. It is known as the Relic Church, and its pulpit, its font, and its altar were rescued from the wreckage of Nieuport and Ypres and the ruined churches of Belgium. Many sacred pictures of rare beauty and age are there and ancient crucifixes, marred and scarred by the enemies' shells. In strange contrast, in one corner was piled a heap of brown stone cannon balls that had been unearthed by the soldiers while digging the trenches near Nieuport and which had been used in the Battle of the Dunes centuries before. For more than a thousand years Belgium has been the cockpit of Europe, but the spirit of its people is still unconquered.

From La Panne we visited Havre, the present seat of the Belgian Government, where we met several of the ministers of state, and were told of the work already inaugurated for the restoration of the Belgian people and of the colonies of orphans in various centers in France, where they are being carefully educated. On a hill overlooking the city Le Comte de Renesse Breidack has built an institution that reflects the spirit of Belgium better than words can picture. Here the human wreckage of the army is being made over into self-supporting, self-respecting wage earners in various trades, in an atmosphere of self-content and happiness. Shops for various industries are filled with legless shoemakers and tailors and printers, who are now earning a fair competence. Basket and barrel making, metal-lathe workers, cooks and bakers, and toy makers are here, and many peaceful arts are being taught to artisans who are lame and blind, but whose indomitable wills are conquering their cruel fate. The spirit of the count, who from wealth and power was driven to poverty, is bringing inspiration through his personality to thousands of men, from the depths of despair to contentment and self-support.

When in London we visited St. Dunstan's, memorialized by Thackeray in Vanity Fair, but now a home for the blinded soldiers and sailors of Great Britain, of which Sir Arthur Pierson, who is also blind, is the chairman.

"This place," said he, "is the happiest house in London, probably in the world, and I'll tell you why—it is so full of sympathy."

The institution typifies the moral tone and spirit of all the allies to-day—it is the spirit of hope, of life, of victory. "It is the spirit of our ancestors of '76, the spirit of confidence, of success, of the irresistible determination to rescue freedom and civilization from this terrible tragedy—the spirit of Lincoln at Gettysburg when he prophesied for our country a government of the people, by the people, for the people, which shall not perish from the face of the earth."

The aim of the allies to-day is to secure for themselves that same birth of freedom as was pictured by Lincoln, and the attainment of that purpose affects our country as deeply as it does the allies. It is as much our fight as theirs; for the predatory aggression of the Hun will not cease at the crucifixion of Belgium or the three-mile limit, and in our deplorable state of helplessness, a state that resembles that of China, we not only invite war but also defeat and vassalage.

I am a man of peace—the vice president of the Peace and Arbitration League of America. As an officer or observer, I have participated in nine wars and, Heaven knows, I want to see no more! But until the end of this piratical conflict in which the ideals of liberty and freedom and honor, for which my ancestors fought and died, are at stake, I am heart and soul with the allies. The traditional friendship between the allies and America, strengthened by the destruction of scraps of paper formerly called treaties, would have been only a memory had not the great war relief societies of our country kept it alive; and it is to them and to our surgeons and hospitals and nurses, our splendid ambulance corps, and brave avions, and not to the weak-kneed, vacillating, waiting, and wabbling policy of our present administration that we are indebted for the preservation of what remains of the friendship and the entente cordial that exists between our countries to-day.

King Albert, through M. Henri Carton de Wiart, his minister of justice, and M. Louis de Sadeleer, his minister of state, now in New York, asks America in this crucial moment to compel a regard for international law by Germany, and thus prevent the further deportation and enslavement of his people. Is this humane and righteous request of Belgium's King to be heard and Germany be made to respect the laws of honor and civilization regarded as sacred by all other nations, or is the world to relapse to barbarism and the savagery of the Dark Ages? That is the question America, which too long has been morally asleep, is now expected to help to answer.

A petition to the President of the United States on behalf of the Belgians and other peoples oppressed by the Teutonic Governments.

[The American Rights League, Geo. Haven Putnam, President.]

Whereas Germany has shown her contempt for treaties by her unprovoked invasion of Belgium and her continued violation of the rights of a small but high-minded people;

Whereas Germany, in Belgium and elsewhere, has revived the practices of barbaric warfare by exacting war contributions from conquered cities, by shooting noncombatants, by seizing and executing hostages, killing even priests, for no greater crime than loyalty to their country;

Whereas Germany has permitted her troops to commit unspeakable outrages;

Whereas Germany has sunk hospital ships and fired upon hospitals;

Whereas Germany has destroyed by fire and has bombarded unresisting and unfortified towns and villages and has sunk without warning passenger and merchant vessels, both neutral and belligerent, in these and other ways killing noncombatant men and even women and children;

Whereas even our own fellow citizens are victims of these crimes;

Whereas plots against the peace and order of our own country have been hatched by German agents; and

Whereas now, while continuing these and many other like deeds too numerous to catalogue, Germany is deporting peaceable and law-abiding Belgians into what substantially is slavery in a foreign land, obliging them to aid the enemies of their country; and

Whereas Germany, by persisting in these practices, makes herself an outlaw among nations;

Whereas, moreover, this country stands and has always stood for the rights of man and the freedom of the individual, and has supported nations resisting oppression or struggling for liberty; and

Whereas it is vital to the interests of this nation to uphold the rights of mankind and international law: Now therefore

We, the undersigned citizens of the United States, pledge our support to the President in any steps he may take in the effort to bring about a cessation of the inhuman treatment of the Belgians and the people of Northern France, Poland, and other nationalities oppressed by the Germanic powers; and

We earnestly pray the President and Congress to say in clear terms to Germany and to Austria that the people of the United States can no longer remain on terms of comity, even merely official, with nations which persist in violating not only international law but the ordinary sentiments of humanity which have always been respected by civilized nations; and

We urge the President to state definitely that, unless the Germanic Governments agree to cease at once the deportations of Belgians, to return to their homes those already deported, and to give effective assurances that international law and the dictates of humanity will in future be respected, diplomatic relations with Germany and with Austria will at once be terminated.

Arming of American Merchant Ships.

EXTENSION OF REMARKS

OF

HON. WILLIAM C. ADAMSON,

OF GEORGIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. ADAMSON. Mr. Speaker, the pending proposition is to give authority to the President to defend American citizens and ships against unlawful assaults on the high seas. How any honest and patriotic man with any respect for himself or his country could object to that balks my powers of conjecture. It is not a proposition to make war on anybody. Neither the President nor the people of the United States have any desire to do that. We desire to continue in the pursuits of peace, prosperity, and happiness without interfering with other people or inviting interference by them.

The people who assume it is necessary for them to expatiate against war and prosecute a propaganda in favor of peace and against the course of the President, by implication if not express, assume unjustly and gratuitously that the President desires war. The truth is he has worked and is working more zealously, patriotically, and wisely to preserve the peace of this country with all the world than it would have been possible, in my judgment, for any other living man to do. No pacifist loves his country more; no pacifist of my acquaintance is half as wise; no pacifist is more patriotic or peaceable. They may be aiming at the same ends as those sought by the President, but the trouble about their propaganda is they misunderstand and misrepresent him. The people of the United States can rely upon the President more than upon any other public man of our day to guide the ship of state and moor it safely in the harbor of permanent peace and prosperity with all nations if we solidly trust and stand behind him. The danger of war, in fact the greatest menace to peaceable relations, has been the agitation by some people of the idea, unjust as it was, that he was liable to get us into war and a disposition to divide our people.

Our only safety against war is and has been a united announcement and a firm determination to stand by the policy of

doing no act of aggression, no act to violate the rights of other people or nation, and no act which would be a breach of the peace, but stand ready without favor, partiality, or prejudice as among all the belligerents to defend the rights of our citizens on land and sea against any unlawful assailant. If the belligerents could be assured that our people would be divided, we would have immediate war, ruthless and horrible. Confidence in our determination to fight if necessary, as well as to keep the peace if possible with honor is our insurance against aggression. We would have been at war last spring if any considerable part of Congress or the people had supported the idea of notifying American citizens that their injury or death would not be avenged if unlawfully assailed on a ship of commerce. Congress wisely stood behind the President then and averted war by exhibiting a determination to defend our rights.

The principles at stake are few and simple, well established now and established for ages. The citizens of neutral nations are the law-abiding people of the world and have a right to trade and travel on all the seas unmolested by anybody. The belligerents are supposed to be fighting one another and not neutrals, and under the recognized rules of civilization they are to limit their combats to one another and be careful not to extend their slaughter to innocent bystanding nations. The belligerents are the outlaws, not the neutrals; and the belligerents are responsible to the neutrals for their unlawful conduct.

Belligerents often resort to blockades in order to cripple the enemy. That has been tried twice since the present European war began. England attempted to blockade Germany, Austria, and Turkey, and her efforts were so successful that we were bound to respect them. An effective blockade becomes international law. An ineffective blockade is no law, and to sink a ship or kill a man on the pretext that a blockade is violated, when that blockade exists only on paper is piracy and murder. The recent attempt of Germany to blockade England and France and certain other territory by ruthless and relentless submarine warfare has permitted over 90 per cent of all ships which attempted to pass successfully to do so. Under no pretense could that be claimed to be a lawful blockade, and if an American ship with American citizens does what it sees over 90 per cent of all other ships doing, sail into and out of those ports, and is sunk or attacked without notice or warning, it is an unlawful act and just as much an aggression upon American rights as if an army of a million men had landed on our shores to invade our territory and destroy our property and kill our people. The difference is not in principle but in the magnitude and extent of the invasion and destruction. For the United States tamely to submit to such conduct, or even the threat or assertion of the right of such conduct, would be to repudiate our standing, honor, and dignity as a nation, and we had as well go out of business.

There is one other difference, and I am noting these differences not in a spirit of preference or prejudice, but merely to state facts with which we have to deal. When England intercepts a ship seeking to run the blockade, or a ship laden with contraband, it does not sneak up under water or under cover and destroy life and property without notice, but they seize the ship and carry it into port and give it a hearing in court and stand ready to answer in damages if the seizure is wrong. On the other hand, when the ruthless submarine warfare destroys a ship, with the ship freighted with human lives, and destroys the lives with the ship, there is quite a difference and a more reprehensible course of conduct. There is no such thing as exact compensation in money for that. We can not charge that up financially and allow it to go on indefinitely; that is too serious a matter. If the Germans would seize a ship which they think is trying to run the blockade, or carrying contraband, and carry it into port and give it a hearing, preserve the lives of the passengers and hold the Empire in readiness to settle for delay and damages if the seizure be wrong, it would be in accordance with the customs and usages of civilization; but she pursues no such policy and this Government can not brook the conduct announced by her.

These two principal differences as described, fully portray the situation. Will we tamely submit to the ignominy of having our ships and our people destroyed on the sea, or the alternative, equally humiliating, of having our ships driven from the sea and hiding in port through fear of the execution of the threat? If we do, we had better haul down the flag and dissolve the Government, acknowledge allegiance to some other Government, and go out of business. There can be no peace without honor. Those who strive to keep peace without honor find themselves kicked and cuffed about through all time until national extermination transfers the misgoverned people to another authority. The only safety for our commerce, and only assurance of our peace, the only guarantee of national prosperity and honor, and the perpetuity of our institutions is to stand solidly with the President, the greatest Executive who has ever ruled any country since the world began; a man who appears to have been raised up by Providence for this extremity, and all we have to do is to follow and trust him, then we will be safe.

Statement of My Position on Our Foreign Relations.

EXTENSION OF REMARKS

OF

HON. HENRY T. HELGESEN,

OF NORTH DAKOTA,

IN THE HOUSE OF REPRESENTATIVES,

Monday, February 26, 1917.

Mr. HELGESEN. Mr. Speaker, as I have been viciously attacked by some of the newspapers of the country because it has been reported that I have not entirely agreed with the President of the United States on his management of our foreign affairs, as a matter of personal privilege I take this method to set myself right before my colleagues in the House.

Having written an open letter on this subject to one of our North Dakota papers, I shall use that as a part of my remarks, said letter reading as follows:

To the Editor of the Grand Forks Herald, Grand Forks, N. Dak.:

My attention has been called to your editorial comment on a purported interview with me, published in various North Dakota and Minnesota papers, in which interview I am quoted as saying:

"I do not agree with President Wilson. The United States could have waived her legal rights to the freedom of the seas without losing any of them and without the loss of dignity. Germany should have been informed on this attitude long ago. I do not believe the American people want war, and I stand with them."

My conversation with the newspaper reporter who has published this interview was in regard to the general manner in which President Wilson has conducted our foreign relations since the war began and not in regard to the recent break with Germany alone. The reporter evidently attempted to condense my remarks into a few words of his own, which, of course, made it impossible for him to give the correct idea conveyed by my statement. I therefore wish to make my position clear.

If President Wilson had handled our foreign relations as the executive official of a strictly neutral nation should have handled them, we should have had no greater occasion for war at this time than we have had at previous times during the progress of the European war.

On November 2, 1914, the British Admiralty made a public announcement, in which I find the following:

"It [the British Admiralty] therefore gives notice that the whole of the North Sea must be considered a military area. Within this area merchant shipping of all kinds, traders of all countries, fishing craft, and other vessels will be exposed to the gravest dangers from mines it has been necessary to lay and from warships searching vigilantly by night and day for suspicious craft.

"All merchant and fishing vessels of every description are hereby warned of the dangers they encounter by entering this area, except in strict accordance with Admiralty direction. Every effort will be made to convey this warning to neutral countries and to vessels on the seas, but from November 5 onward the Admiralty announces that all ships passing a line drawn from the northern point of the Hebrides, through the Farne Islands, to Iceland do so at their own peril."

This order of the British Admiralty violated the rights of every neutral nation whose ships sail the high seas, and seems to have been quite as good a cause for severing diplomatic relations with England as was the recent announcement by Germany, for Great Britain did plant thousands of mines in the North Sea, which is a part of the so-called "high seas," and many a neutral ship has been lost because of those mines which were planted contrary to international law. The North Sea has remained a "closed area" from November, 1914, up to the present time, and if no American lives have been lost it is only because American citizens have accepted the warning and have remained away from the restricted area.

The order of the British Admiralty of November 2, 1914, and the German order of January 31, 1917, were both issued in wanton disregard of our rights, but I do not believe that the British order of two years ago, to which we have patiently—not to say tamely—submitted, nor the German order of January 31, 1917, which the President has answered by the severance of diplomatic relations *"by Executive order,"* was intended as an insult to the United States.

The only reason why we have had no occasion for war with Great Britain during the last two years is because we have respected her warning and have kept away from the "military area" designated by her. If we feel that we can no longer submit to having first one and then the other of the belligerents close certain areas of the high seas to our commerce, we can say to both that we shall no longer tolerate their interference with our commerce and request both to immediately rescind their respective orders, clear the high seas of mines sown by them, and withdraw their submarines.

Now, let us see who has waived our rights on the high seas, which have heretofore been established by international law. In a note sent by President Wilson to the British Government on December 26, 1914, I find the following:

"It is needless to point out to His Majesty's Government, usually the champion of the freedom of the seas and the rights of trade, that peace, not war, is the normal relation between nations, and that the commerce between countries which are not belligerents should not be interfered with by those at war, *unless such interference is manifestly an imperative necessity to protect their national safety, and then only to the extent that it is necessary.*"

"It is with no lack of appreciation of the momentous nature of the present struggle in which Great Britain is engaged, and with no

selfish desire to gain undue commercial advantage that this Government is reluctantly forced to the conclusion that the present policy of His Majesty's Government toward neutral ships and cargoes exceeds the manifest necessity of a belligerent, and constitutes restrictions upon the rights of American citizens on the high seas which are not justified by the rules of international law *or required under the principle of self-preservation.*"

You will note that the protest is against the closing of a part of the high seas to our ships and commerce "*unless such interference is manifestly an imperative necessity to protect their national safety,*" etc.

So far as I am aware this is the first time that any neutral nation has waived its rights on the high seas for any reason whatever, but under this most extraordinary waiver all that Great Britain or any other nation need do is to show that the matter complained of is "an imperative necessity to protect their national safety," when, according to President Wilson's waiver, a neutral nation has no cause whatever for breaking off diplomatic relations or declaring war. You will note from the foregoing quotation from President Wilson's note to Great Britain that he has twice stated "the principle of self-preservation" as a justifiable cause for violation of international law, and that when such "principle" can be invoked by any nation he waives our every right as a neutral nation under said international law.

If the American people are to accept President Wilson's waiver of our rights under international law whenever the principle of "self-preservation" can be invoked by any belligerent, then he ought to treat both sides with equal fairness and apply the same rule in all cases.

If you support Mr. Wilson's permanent waiver of our rights under international law as stated by him, you go far beyond any suggestion I have ever made.

When, under the circumstances, President Wilson permitted Great Britain to close a part of the "high seas" to our ships and commerce, contrary to international law, with only a protest and without breaking off diplomatic relations with her, or declaring war, I think he acted wisely; but there is a difference between entering a protest to protect our rights to indemnity and making a permanent waiver of our rights under international law, such as was made by the President's note to Great Britain, which I have just quoted. Why does he now treat Germany in a harsher and more drastic manner than he treated Great Britain at that time?

The protest which he made to Great Britain preserves our legal rights on the sea after the war is over, and places us in a position to collect any damages we may sustain because of any illegal act on her part, which is the view taken by all the other neutral nations.

In his later note to Germany of January 18, 1916, President Wilson said:

"It would appear to be a reasonable and reciprocally just arrangement if it could be agreed by the opposing belligerents that submarines should be caused to adhere strictly to the rules of international law in the matter of stopping and searching merchant vessels, determining their belligerent nationality, and removing the crews and passengers to places of safety before sinking the vessels as prizes of war, and that merchant vessels of belligerent nationality should be prohibited from carrying any armament whatsoever.

"In proposing this formula as a basis of conditional declarations by the belligerent Government, I do so in the full conviction that each government will consider primarily the humane purposes of saving the lives of innocent people rather than the *insistence upon doubtful legal right*, which may be denied on account of new conditions.

"I should add that my Government is impressed with the reasonableness of the argument that a merchant vessel *carrying an armament of any sort*, in view of the character of the submarine warfare and the defensive weakness of undersea craft, should be held to be *an auxiliary cruiser*, and so treated by a neutral as well as by a belligerent Government, and is seriously considering instructing its officials accordingly."

You will notice that the President in this note takes the position that to permit merchantmen to arm in such a manner as to be able to defend themselves against submarines is "a doubtful legal right," which may be denied on account of new conditions. Yet it is now seriously proposed that we go to war in defense of these same "doubtful legal rights."

Since the President has taken this position in speaking for the United States, he can not consistently reverse himself by yielding to the pressure of a lot of fanatics who apparently do not care whether this country is neutral or unneutral, whether we go to war for a just grievance and a legal right of such importance that no other honorable course is open to us, or whether we go to war for a "doubtful legal right," their only concern being to involve this country, with or without a just and legal right.

In regard to Germany's recent announcement, although President Wilson, in his message to Congress stated that he hoped the other neutral nations of the world would follow his example, not one of them has taken such action, notwithstanding no insult has been offered to us, and no invasion of our rights made, which have not been made and offered to the other neutral nations of the world.

Some of these neutral nations have entered strong protests against Germany's recent announcement, and these protests will serve to protect their indemnity rights when the war is over, but they apparently have sufficient common sense and good judgment to refrain from rushing into this awful world conflict at a time when the great nations of Europe are fighting for their very existence. Early in the war Sweden advised her citizens against unnecessary travel on armed, belligerent merchantmen, and we could well afford to follow her example, for no one suggests that she has lost any of her rights on the high seas under international law because of her action.

By way of contrast, only a few days ago, after the recent announcement by Germany, a number of American citizens actually canceled their reservations on an American ship, and rather than brook a few days' delay, deliberately engaged passage on a foreign ship, destined to pass through the proscribed area designated by Germany. No sane man can be so foolish as to argue that this Government ought to go to war if any of these American citizens perish within the said war zone, when they deliberately canceled their passage on an American ship which could sail through that area with comparative safety, and that, too, when the delay was slight, and the steamship company paid the expenses of those passengers who retained their reservations on the American ship rather than take the greater risk of passage in the belligerent-owned ship.

This country is big enough, powerful enough, and ought to be wise enough to voluntarily defer some rights, temporarily, without relinquishing them. We followed such a course in the case of Great Britain, when she closed the North Sea two years ago, rather than declare war; and if the matter was submitted to the people of the country in the case of Germany, the verdict in favor of a similar course would, I believe, be practically unanimous.

Instead of requesting other nations to follow our example, we should have acted more wisely if we had consulted with the other neutral nations of the world, and adopted the course generally pursued by them.

I have never agreed with President Wilson in his manner of dealing with some of the points I have mentioned, nor on his permanent waiver of our rights under international law, whenever a nation declares that it is fighting for self-preservation, and although my disagreement with him on these issues apparently leads you to believe that you have reason to brand me as a traitor, I am firmly convinced that the great majority of the people indorse my views, and that you and a few others who profess to be so anxious to have the Nation rush into war are in a hopeless minority.

An artificial war sentiment has been engendered in this country which threatens to grow, artificial though it is, until it involves this Nation in the European war, and that, too, without consideration of or consultation with the people, who ought to have a voice in deciding when and why we are to take a step which will lead to the untimely death of hundreds of thousands of our best citizens—the young men on whom the future welfare of our Nation depends—and will create a debt so heavy that it will burden the toiling masses of our people for generations to come.

In the final analysis Congress will have to determine whether peace or war shall be our policy; therefore it is the duty of Congress not to blindly follow the President's lead, but to determine for itself our exact legal rights and the extent to which we shall insist on those legal rights in an emergency such as now exists.

Whenever war becomes necessary in order to protect and preserve the honor, integrity, and safety of this country, and when no other honorable course is open I will vote for war and will support our Government in such action as loyally as a loyal American citizen can support it, but we have not yet reached that stage.

Respectfully,

H. T. HELGESEN.

Since the foregoing article was published the expected has happened and the *Laconia* has been sunk. This was the belligerent ship to which several Americans transferred their passage rather than brook the inconvenience of a short delay, during which their expenses would have been paid by the American steamship company. It is now proposed that we shall declare war because of just such cases as these, if these same impatient American citizens have lost their lives.

On February 23 twenty-five English women and children were removed by the British authorities from a steamer sailing from Halifax to England, while American women were allowed to remain on board. Australia will not permit English women or children to travel on the seas under present conditions, regardless of the country to which they are destined. The (British) Indian Government recently adopted a law forbidding women or children to sail for England except on the most urgent business.

Why does not the United States Government protect its citizens in the same manner that Great Britain does hers, and prohibit their entrance into the war zone for any purpose except the "most urgent reasons"?

It should be made a criminal offense for a man to do as did a certain newspaper man of Chicago, who sailed on the *Laconia* because she seemed the most probable ship to be torpedoed, in order that he might write a sensational story for his paper, regardless of the fact that by his foolhardiness he might involve this Nation in war.

In contending for our right to the "freedom of the seas" we are apt to overlook the fact that we have not had said freedom for some time, so far as Great Britain is concerned, for American shippers can not make shipments of any kind through either Atlantic or Pacific waters in safety unless their shipping papers have been viséed by the British ambassador. This restriction on our shipping rights applies to shipments made from San Francisco, Chicago, or New York, and yet we have heard no war-mad cry that England is blocking our rights to the "freedom of the seas." If this Government had treated all belligerents with a strict and impartial neutrality, and used the same good judgment that other nations have used in warning and even prohibiting its citizens from travel on belligerent-owned ships, we should have no cause for war at the present time, even in the opinion of the most rabid war element.

On February 16 I introduced a resolution in the House which read:

Joint resolution (H. J. Res. 371) ordering a referendum of the question of whether or not we shall declare war.

Whereas the United States has been insidiously dragged toward entanglement in the European war; and

Whereas through various propagandic agitations a war sentiment is being artificially engendered in this country; and

Whereas the horrors of war have never been more fitly described than in the immortal words of the late illustrious Gen. Sherman, who said that "war is hell"; and

Whereas a declaration of war by the United States will bring untold sorrow and misery into thousands and thousands of American homes, and hundred of thousands of American wives and mothers will see their sons and husbands torn from them to die in the trenches; and

Whereas the question as to whom belongs the right to decide our foreign policies and whether war shall be declared or shall not be declared is lost sight of; and

Whereas we have but one authority with power to declare war, namely, the authority granted by the Constitution only to the Congress of these United States; and

Whereas the Declaration of Independence and the Constitution of these United States recognize the inherent, inalienable right of the people of the United States to instruct their Government to do the will of the people: Therefore be it

Resolved, etc., That the Congress order a referendum of the question as to whether or not we shall declare war to the people of these United States (except in case of threatened invasion), so that the will of the people on this vital question may be made known to the Congress.

SEC. 2. That (except in case of threatened invasion) the President shall take no action that may tend to involve the United States in war until the result of said referendum shall be made known to the Congress.

As a result of above letter and resolution I have received innumerable letters and telegrams all the way from Los Angeles to Boston and New York; and from St. Paul to New Orleans, commending my position. I can only quote a few of them, but these few are indicative of the hundreds which have reached me:

Your able and illuminating defense of your position in the Grand Forks Herald of February 20 read, and I wish to thank you for same. Thank God for a few men who can think clearly when all the world has gone mad. Yours, in the hope and prayer that right may prevail.

R. CARLETON,
Pastor M. E. Church, Starkweather, N. Dak.

—

I am fully in sympathy with your resolution relative to demanding a referendum on the question of whether this country shall go to war with any European power for causes now known, introduced in Congress the other day. I am quite sure the common people, even in these New England States, will approve this measure. Give us a chance to express our interests and you will have a mighty "No" against war.

A. W. SMALL,
Chelmsford, Mass.

—

People here are practically unanimous against war. Loyal Americans will not go into restricted zone. Others should at their own peril.

M. F. MURPHY,
Grand Forks, N. Dak.

—

As a peace-loving and patriotic American citizen I feel that I am expressing the sentiment of a great majority of the citizenship when I maintain that the United States of America has no part on the stage in the drama of war being enacted in Europe. I see no reason why a few daring and unsophisticated adventurers should bring gloom and remorse and all the horrors of war upon this great American Nation. And I urge you to use every honorable means to hold our land of the free aloof from this great struggle.

F. C. RECTOR,
Lisbon, N. Dak.

—

Your resolution calling for a referendum on the question of going to war is timely and patriotic. We do not want war. We also beg you to use your influence in preventing complete power—practically a one-man power—passing into the President's hands. The power of our Constitution and our Congress must not be hampered. No President can be greater than they. He is our leading Executive only, elected to help run the business of the people for the people, and there ought to be cooperation between the two.

E. MEYNER, *New York City.*

—

Please accept my thanks for the stand you took to-day to protect our boys and what little honor we have left. Ninety per cent of the people are with you.

C. M. CRONK, *Norwalk, Wis.*

—

Please be assured of my most positive approval of your expression of sentiment against permitting the President and Secretary Lansing to usurp the powers of Congress in involving the country in war. I have to-day written my Congressman to do all in his power to further the favorable consideration of your resolution that Congress order a referendum to the people of the question as to whether or not we shall declare war. I expect you to do all you can to keep us out of war.

PAUL BILHUBER, *Maywood, N. J.*

—

Thousands support you in your brave stand against capital and British influence. For heaven's sake continue your efforts for referendum vote.

CLAIRE BENEDICT,
Great-grandniece of Fenimore Cooper,
White Sulphur Springs, W. Va.

—

I want to congratulate you on the stand you have taken in our international affairs, and I assure you that you are representing the views of the bulk of your constituency. Trusting that you will keep on opposing the hellish designs of the bond buyers and munitions manufacturers, I am,

WM. ANDERSON, *Grandin, N. Dak.*

—

We are very grateful to you for your resolution calling for a referendum vote to determine sentiment in regard to war.

E. DOCKETY, *Brooklyn, N. Y.*

—

My grandfather occupies a soldier's grave. He fought in the Civil War; so you see if parentage counts anything, I am an American. As a true American I congratulate you for your effort to let the people decide whether they want to go to war or not.

DANIEL REHEIS, *Newark, N. J.*

—

I have just read your answer to the several editorials in the Grand Forks Herald, and I am constrained to write you and congratulate you because of the sane stand which you have taken during the present crisis, when so many men in public life are being carried about by the sentiment and opinion of others. I believe the people are with you in the stand you have taken and I assure you that you shall have even heartier support from me than formerly.

B. F. STUMP,
Pastor First Baptist Church,
Cavalier, N. Dak.

—

I have read your letter in the Grand Forks Herald. I believe I have been as consistent in fighting you as any man or newspaper in North Dakota. I have never let an opportunity pass to give you a dig. * * * I believe you correctly represent the sentiment of 90 per cent of the people in your district. I hope you will continue to stand right where you are; that you will give the people who are expected to do the fighting and pay the bill an opportunity to say whether they want war before war is declared. And I would make it compulsory for those voting for war to be first to enlist. The term "national honor" was never perverted to such base purposes as by the power which is behind the movement to rush this country into war. The chances are that you do not care a rap whether your attitude suits me or not. But I hope in any event you will not change it because I agree with you.

J. H. BLOOM,
Editor Devils Lake Journal,
Devils Lake, N. Dak.

—

I have read with much interest your reply to the Grand Forks Herald. I want to assure you that you have hit the spot, and you have my good wishes. You are certainly right in your position in this matter, and it would seem to me that anyone with common sense would agree with you.

O. GARDEN, *Billings, Mont.*

—

I read your article in the Grand Forks Herald yesterday and was very much in favor of it. Ninety per cent of the people whom I have talked with are of the same opinion.

AUGUST MORITZ, *Dresden, N. Dak.*

—

I just read your letter in the Grand Forks Herald. Let me congratulate you that there are a few men in Congress who have the backbone to speak and are not willing to plunge this country into war because a few adventurers get hurt, or because a certain clique wants war for unusual gain. If we must have war let the people say so.

Rev. J. F. L. BOHNHOFF,
Valley City, N. Dak.

—

Can you send us message of cheer for peace meeting to be held by American citizens in this city Sunday, February 25? Resolution to be adopted favoring referendum to people of declaration of war.

M. E. SOCHA,
Los Angeles, Cal.

—

Either Congress can not or will not see that the United States should avoid giving a false reason for going to war, or it is unable to distinguish between the false and the true.

WILLIAM THUM,
Pasadena, Cal.

—

After reading the (Grand Forks) Herald this morning, I am constrained to write you a word of encouragement in your attitude on the position the people of our country should take in the European war. I can not repress my admiration for our Representatives in Washington that have the moral courage to speak and act against the unrighteous element that are doing so much to draw our country into this horrible war. I am convinced that a majority of the citizens of our State are with you in your attitude on this question. I know it takes a great deal of courage to stand up against a majority, but I hope and pray that the consciousness that you are right will sustain you in every righteous cause.

W. E. DE LONG,
Grand Forks, N. Dak.

—

I read with interest and keen satisfaction your answer to the Grand Forks Herald's accusation and want to make this suggestion, if it is within the custom and rules to have a great number of your letter to the Herald printed and distributed among the people, not only of North Dakota but elsewhere.

C. K. VIERHUS,
Brocket, N. Dak.

—

I just want to thank you and compliment you on the stand you have taken in opposition to embroiling ourselves in the awful European riot. You are, I am convinced, eternally right in the matter; and you have stated your position in a wonderfully clear and convincing way. Again I, for one, thank you.

Cordially, yours,

PEER STROMME.

I also quote from two letters received from two members of the faculty of the University of North Dakota:

I read your open letter with pleasure. I think you made your position very strong, fully justifying your stand. There was enough new material in your letter to show me what I know to be true—that much of the important information never reaches the rank and file of the people. It seems to me true beyond any question that *the people* of this State do not want war. There is absolutely no question in my mind but that the vote against war would be overwhelming, not only in this State but over the whole country. I therefore hope most earnestly that before this country is plunged into the conflict a referendum vote be taken on the matter; in other words, that your bill will pass. I wish that we could have the real facts of our international relations. Our President, it seems, comes to his conclusions on the strength of facts that do not seem to reach the people. I wish there might be a weekly summary of facts sent broadcast either to individuals or to the newspapers, and that they might be induced to print the same impartially.

Most sincerely,

——— ———.

—

I wish to congratulate you upon the stand that you are taking on the question of plunging our beloved country into war. I read your recent article in the Grand Forks Herald with intense interest, and, in

my opinion, your arguments are simply unanswerable. I believe that I voice the feeling of all the millions in this country whose opinion upon the question is without prejudice; that is, *all except those who profit by war either directly or indirectly*, and those who are so intensely pro-British that they do not hesitate to embroil this country in the conflict for the sake of assisting the allies.

With best wishes for your success in your noble endeavors, I am,

Yours, very cordially,

——— ———.

I have received hundreds of similar letters which I could quote, but the foregoing show the trend of at least 99 per cent of those received. I therefore feel that I am safe in the assumption that the American people do not want war for any but a just cause, and as yet we have no such cause.

Preparedness.

EXTENSION OF REMARKS

OF

HON. JOHN Q. TILSON,

OF CONNECTICUT,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. TILSON. Mr. Speaker, prior to the present war in Europe it was the almost universal belief of people generally, and at least acquiesced in by the Army and Navy, that preparation for war was a military man's job. To those who have grasped the real problems of that great conflict it is now clear that such is not the case, except to a modified degree. The greatest lesson learned from it is that industrial preparedness is the first absolutely essential prerequisite to carrying on a modern war successfully. The experience of each belligerent impresses the same lesson in a variety of ways. We know that this country is not and can not be an exception. At least half the task of preparing for national defense belongs not to a general or an admiral, but to a captain of industry. It is largely a manufacturer's job. Such manufacturing as the Government does in our arsenals, for instance, is necessarily on a small scale. Army officers, efficient as they are, have no opportunity and should not be expected to become Carnegies or Schwabs in what is essentially an industrial field. A great war would require the marshaling of our industrial resources on a large scale. It can not be well done in the stress and turmoil of actual war. It must be done in advance in time of peace. We have been much too slow in undertaking the task. We are not now progressing as rapidly as we should. For more than a year I have applied myself to a careful study of the subject, and on numerous occasions have called the attention of the House to the importance of some of its problems. Since the formation of the Council of National Defense I have felt far more sanguine in regard to intelligently facing and finally solving these problems.

In a colloquy with the gentleman from New York [Mr. FITZGERALD] a few days ago when the sundry civil appropriation bill was under consideration I referred to the Council of National Defense as one of the most encouraging steps recently taken in the direction of preparedness for an effective national defense. Subsequent investigation of the subject, including a number of conferences with individual members of the council, only confirms my belief. The members of this council are taking up the problems that lie at the basis of any workable plan for the effective mobilization of our resources for the national defense. They should have the support of Congress and the country in their work.

In pursuance of the leave granted to extend my remarks in the RECORD, I submit two letters of Mr. Howard E. Coffin, chairman of the advisory committee of the Council of National Defense, together with extracts from hearings before the House Committee on Naval Affairs. These indicate a thorough grasp of the problems confronting us along the lines to which I have referred, as well as something of the means to be employed in working them out:

COUNCIL OF NATIONAL DEFENSE,
Washington, February 27, 1917.

Hon. JOHN Q. TILSON,
House of Representatives, Washington, D. C.

DEAR MR. TILSON: I am handing you herewith certain documents which have, I believe, some bearing upon matters in which I know you to be deeply interested. Permit me first to call your attention to certain passages in testimony given by me before the House Committee on Naval Affairs in a hearing of March 15, 1916, nearly one year ago. Since that date the program therein outlined has been so far completed that there are now in this office between 27,000 and 28,000 "inventories" of manufacturing and producing concerns, and of this number some 18,600 have been analyzed and classified by officers assigned for the purpose by the War Department.

Sample tables made up from these analyses, merely to the end of showing their practical use in the hands of the naval and military authorities, will be found on the last four pages of the report on the Government manufacture of arms, munitions, and equipment, by the Col. Kernan Board. (S. Doc. No. 664, 64th Cong., 2d sess.)

You will find in these two documents practically the entire story of industrial preparedness, based upon a common-sense business policy. I am thoroughly convinced that no amount of money expended in naval and military expansions can, in the slightest degree, make good our fatal neglect of the factors which lie at the very root and foundation of our entire structure for the defense of this Nation. No one doubts for a moment that, in the event of war, Congress and the people of this country will provide money without limit. But money, unbacked by a careful peace-time prearrangement and education in our great industrial machine, will, as in the case of England during the first year of the war, prove a useless commodity in the face of the material needs of the men who must lay down their lives, as hundreds of thousands of English lives have been laid down, in stemming the tide of the invader.

Our War and Navy Departments are, after all, great business institutions, and those same principles of sound business policy and practice apply as to any private industry.

Engineering design, working drawings, specifications, gauges, and operation sheets covering war materials, all complete and in accordance with the requirements of quantity commercial manufacture, must be supplied to private plants in time of peace. In no other way can our vast industrial machine be made a national asset in emergency. In no other way can we, as near ruin in other countries has taught us we must, be prepared, with the least possible delay, to harness 80 per cent of our great manufacturing resources to meet our possible future need.

I am inclosing also extract (secs. 120 and 123) of the Army reorganization bill, passed at the last Congress. As I understand, section 123, providing for gauges, dies, jigs, etc., was placed in the bill as an amendment offered by you from the floor of the House. It seems to me that it is clearly the present duty of the War Department to move, in accordance with the provisions of your amendment. If there was ever a time in American history when dictates of business and political prudence would seem to require quick action along these lines, it is now. Under the provisions of the Army appropriation bill of the last Congress some $450,000 is available for this work. Under the provisions of the Army bill now pending, I believe that a similar amount has been provided.

All plans of preparedness for the defense of this country must be based upon industrial preparedness—upon the abilities of the now unskilled and uneducated industries of this country to supply the munitions of war without delay and in great quantities. But industrial preparedness is only possible through peace-time organization and education and upon the ability of the War and Navy Departments to supply the manufacturers with complete sets of corrected working drawings, in which tolerances and details of design have been based upon commercial quantity production requirements, and with such master gauges and other special equipment as may be necessary to permit manufacturing concerns to swing quickly from peace-time products to the materials of war required by the Government.

It seems to me that the provisions of the law are ample and that appropriations made under this law are sufficient for the production and correction of working drawings and specifications. This step is fundamental and is a prerequisite even in the procurement of gauges, to say nothing of the procurement of Government supplies in large quantities from private manufacturing concerns.

Very truly, yours,

H. E. COFFIN.

The following are extracts from hearings before the House Committee on Naval Affairs, held March 15, 1916, showing that almost a year ago Mr. Coffin was among those who had begun to see the significance of the industrial side of national defense.

Statement of Mr. Howard E. Coffin, vice president, Hudson Motor Car Co.; member Naval Consulting Board:

* * * * * * *

Mr. COFFIN. I remember very well the time—this is five or six years ago—when if a motor-car manufacturer wanted even a minor part for his car, a draftsman would sit down, make a drawing, and get out a blue print, which was in due course passed along to the purchasing department. Whether or not this drawing was like any other drawing ever made did not greatly interest the designer. Every little part or attachment required special dies, varying in sizes, resulting in a great deal of delay and expense. These different things having to be manufactured specially, the result was that there was usually six months' delay in getting material, and at a very high cost. This thing held true right down the line. As a case in point, I will state that five years ago there were in the mills of the Shelby Steel Tube Co. some 1,600 different sizes of steel tubing, which that concern was making for the motor-car industry alone. I do not suppose there is a necessity for 50 to-day; that is, the manufacturer to-day buys standard tubing off the shelf at the lowest possible cost, and with no delay in delivery. As one other instance, a little lock washer which goes under a nut is used in great quantities. A concern in New Jersey had 800 sets of dies in its plant for the manufacture of lock washers, between the sizes of five-sixteenths of an inch to five-eighths—800 sizes of dies for the making of such foolishly special designs. Now I think there are hardly a dozen sizes in existence in this same range. That is what you can accomplish if you can standardize. But the good work must begin with the engineer and the designer.

Mr. Edison mentioned gauges. Let me touch on that for a second. I do not think any of us have a real conception of what it means to gauge up American industry for the production of war materials. We have a feeling that if Congress will vote for an increase in the Army and an increase in the Navy—and a very large portion of the country has this feeling—that we are then prepared, and all we have to do is to sit down until the navy yards build the ships. Those two things are two of the very simplest of the troubles which confront this country. Those things can be done by an act of Congress, and if we have the money to pay for them, and the time, we can have them, but we have not then even started on the question of basic preparedness. Eighty per cent, or even, as some claim, almost 90 per cent, of the industries of Europe are working day and night on the production of materials for the fighting line. These materials are practically all for

the armies, because there have been few naval engagements and very little wastage. So you can say that 80 per cent of the industries in Europe are working on munitions for the armies. Now, we have no reason to believe that in case we are drawn into any future war—in case we are really honest in our desire that we shall be prepared—that we can count on any other condition in this country than that existing abroad. In short, we must be prepared to produce faster and in greater quantity the arms and munitions of war than can any other nation or any other two nations which might attack us. We have in this country manufacturing and producing resources greater than those of any other two countries in the world. If we have these resources so organized through an educational campaign—the safest and at the same time the cheapest kind of preparedness we can have—so that half, or in some important lines more than half, of the industrial equipment and resources of the world can step in behind our Army and Navy, gentlemen, we might term it the greatest insurance against war this country could possibly have.

* * * * * * *

Let me go back now to this question of how to standardize our munition methods and of how we may best utilize the American industries behind our fighting line. As I have said, some 80 per cent of the producing equipment of foreign countries is now working in the service of the armies. Through our observations of these conditions during the past year we have been forced to revise nearly all our ideas of modern warfare. I am not speaking for the Navy and Army officers, because they must have known in some degree what was coming. But the manufacturers of this country have at last, through observation of foreign happenings, come to have some realization of the changed conditions of warfare. We have felt heretofore that with a big Army and Navy we would surely be well prepared. We have now found that with a big Army and Navy we may be in a worse position than without them, or may be even yet in a position where some of the pacifists would have us. With a big Army and Navy we might try to run some bluff which would be called, and when the show-down came we would find that the Army and Navy were merely the first breaker, and that behind the lines we had nothing to back them up. Industrial preparedness in this country means we shall have to be so prepared through an educational policy that our industries will be in a position within a month or two months or three months, as the case may be, to swing from their regular lines of production onto the production of the munitions required for military purposes, and go on without delay with such deliveries as will keep our fighting lines supplied.

We are not now in that position and can not be in that position without a long period of educational work. Whatever our individual views may be upon Government-owned plants, in the last equation, no Government in the world can afford to own all the plants for the production of army and navy materials in sufficient quantities to carry any army through a modern war. In the last analysis it must be the private plants upon which we must depend to furnish the materials needed. We must place drawings, instructions, and gauges in the hands of the skilled workmen of the manufacturing plants throughout this country, and do it in time of peace or they will never be able to meet our needs in the munitions of war in time of emergency. We must place small educational orders with these various factories, together with the blue prints, jigs, and gauges if we are to enable them to get such a general practical working knowledge of what is required that in time of stress they may be enabled to jump in quickly and pick up the work without fatal delay.

As an illustration of what it means not to be prepared to handle these things, I want to tell you that many concerns in our country taking orders from foreign Governments—orders placed a year and a half ago—have scarcely done anything in the way of quantity delivery. Heavy shipments have been made to European powers, but the great mass of such shipments has been of stuff which is not strictly munitions of war in the popular conception of the term, but materials like barbed wire or other things of such kind as we were pretty well able to supply off the shelf. When it has come to the production of shells and munitions of war and rifles, I think you have had some facts presented to you down here which go to show that many of these concerns are way behind what they expected they would be able to do. This applies also to many of our arms manufacturers, whom some of our overly optimistic people would say could manufacture in a week enough arms to supply an army. I know one concern in Cleveland which took a big shell order. They promised deliveries of something like 1,500 a day at a certain date. The job looked very easy, but it took them four months beyond the promised delivery date to get even 200 shells a day through the plant. It is just to some few of these many sad experiences I wish to call your attention, and then go on to the Naval Consulting Board and what it has been doing in this work.

There is one body of men in the United States who have the ability, through their training and through the fact that they have been instrumental in the development of all American industries, qualified to render the most efficient service to the Army and Navy. I refer to our engineers. The officers of the Army and Navy, as Mr. Edison has said, are the equal in personnel of the officers of any similar positions in the world. Many of us think they are the superiors. They have been educated at West Point and Annapolis. They have lived with these problems of naval warfare and land warfare, and they have studied fighting and all the rules of strategy and are masters in their line. But, generally speaking, these men have not had the hard knocks in the commercial end and in that manufacture of goods in quantity which will best fit them to go out and institute a general mobilization of the industrial resources of this country. They can not be expected to do that, but they are specialists in their own line. We, upon our part, as engineers and manufacturers, do not know anything about the fighting end of the business. We could not come in and tell these gentlemen how they should handle their troops or how they should handle their fleet, but we do know the industrial game, and when the time comes, all theory aside as to what might be done or ought to be done, the people in this country who will have to bear the brunt of war will be the manufacturers and engineers, who will have to organize almost to a man in support of the forces doing the actual fighting.

In the working out of this plan in a concrete way we have in the five national technical organizations—the American Society of Civil Engineers, the American Society of Mining Engineers, the American Society of Mechanical Engineers, the American Institute of Electric Engineers, and the American Chemical Society—a group of 36,000 men, representing every phase of industrial life in this country. It is this group of men, gentlemen, already organized and working in cooperation with the officers of the Navy and Army, who will be able to do that industrial organization work which we all now know must be done before we can be truly prepared. The only way to make our resources available—the only way to organize the industries of the United States for national service—is to do it quietly and efficiently in time of peace. We can not do it at the last minute when we are trying to turn a back somersault because there has been a declaration of war the night before. We have had a pretty fair lesson in the Spanish-American War, and we will probably have another lesson in the Mexican affair before we are through with it. It may be a good lesson and wake us all up to what war in 1916 really means.

That these manufacturers and engineers will do this work there is not the slightest bit of doubt. They will do it, not because they hope for material advantage to accrue to them or to the concerns which they control—and many of them are the leading business men of the country—but they will do it, if you please, upon the same basis that we all carry fire insurance. I refuse to believe that patriotism is any less of a vital influence in America—but put this upon the cold-blooded basis of insurance, if you like. I believe that there are thousands of concerns in this country who have never had one dollar's worth of Government business, who do not want one dollar's worth of Government business, and who would not consider taking one dollar's worth of Government business for war materials in time of peace. It would conflict with their regular lines of work, and they are rushed to death with business in these regular lines. My own concern, for two or three years, has had subdealers' names on the books who have scarcely even seen a Hudson motor car which they themselves have owned. Unfortunately, this is not a mere figure of speech; so why should we ask for Government business? We are willing, however, to take a standing order for a certain small number of shells or any other material of that character which our equipment is fitted to produce, and deliver that material each year under Government inspection. Goods produced under this educational system could be sent in to depots, which preferably should be located in the Middle West. This would be merely on the basis of organization and education, to fit the factories to swing in on this complicated new work if it should ever be necessary.

By taking a small order, say, even for 10 shells of one size, we shall have broken in every department of our works as to the handling of that particular munition. Our purchasing department will learn where and how to buy materials. Our factory will learn how to machine, how to best treat, how to test and inspect to Government standards. The Engineering Department will have in its files up-to-date drawings and specifications for quick use. We have enough manufacturing equipment in this country so that we can concentrate and specialize a concern on some one thing and say, "Gentlemen, in case of war that is the particular thing we are going to call upon you for in such and such quantity," and if you gentlemen will give to our Navy and War Departments, through proper legislation, power to exercise judgment in placing these small educational orders throughout the country, you will have done as much to fit this country to defend itself as through appropriating money for a tremendous increase in Army and Navy. Army and Navy will be taken care of as a matter of course. These other things can not be handled except through the closest kind of cooperation between a nationally organized industry and the various departments of the Government.

* * * * * * *

First, of course, we must inventory—and this we are prepared to do—our producing and manufacturing equipment in this country. We must make this inventory through these men who have engineering training and an intimate knowledge of our industries, so that when it comes to the second step, where the Army and Navy Departments may be placing thousands of small educational orders with the plants throughout the country, they will have dependable information for their guidance.

There is a third step which is absolutely necessary. Here again the engineers are the men who can carry the message to every line of industry. This third step has to deal with skilled labor. Wars of the past have been fought by the laboring men and the mechanics, by men taken from the factories and mills, armed with muskets and sent to the front. I have wondered if you have stopped to think how absolute a reversal of conditions has come about. Now, the skilled mechanic is, to use a figure of speech, being carried on a platter in Europe, for fear something may happen to take him off the job, while the fighting at the front is being done by that portion of the population not skilled in mechanics and the workings of the machine shop. The machinist is being kept at home and the lawyer and doctor and tradesman are going to the front with the musket. In some countries the machinists and mechanics needed in the turning out of war materials had to be brought back from the front, and even Germany, with all of her 40 years of preparation and planning for war, has used just about four times the war materials she ever expected to use. I do not think that any of us need worry about the attitude of the American mechanic. We must arrange to hold him at his work, in order that some other fellow may carry the musket. Sweat and not blood must be labor's contribution to war.

Another thing which we must realize is that women are being utilized in foreign factories in every possible way. Women, such as your wives and mine, are going into the mills and factories at 12 o'clock Saturday noon and working in seven-hour shifts until midnight Sunday to bridge over the rest period left in accordance with the governmental arrangements with labor. This is the kind of war we will have if we ever get into another. It will not be a comic-opera campaign, running on six or seven months. We will be licked out of our boots at the start or we will have to carry it through to the last ounce of our industrial strength. This is the reason, gentlemen, above all others why we must begin on the industrial end of any preparedness for defense.

Mr. TALBOTT. Is your information accurate and reliable that Germany has used four times the amount of ammunition she expected to use?

Mr. COFFIN. It has come from a man who has just come back from Europe. It has been generally understood that Germany at one or two stages of the war has been practically down and out for ammunition in certain sectors, and it has been only through her wonderful coordination of the industrial resources of the country that she has been enabled to stem the tide, and, of course, gentlemen, with all the munitions work we are doing in this country, remember that we are getting only the ripples on the edge of the pool. They tell me—I do not know how certainly, but I think with reasonable authority—that not one single American shell has to date been fired from a French gun and that only 10 per cent of the ammunition England has used has come from this country.

* * * * * * *

We are making in this country a large percentage of the machine tools used in the manufacturing plants of the world. New England, Cleveland, and Cincinnati are turning them out in large numbers.

They will be found in every country in Europe. I do not except any. We have all this equipment here now, but not ready for national service. Let us so plan that we may utilize this equipment in the work that we may some day have to undertake.

Just one word as to what a country-wide distribution of the work of the Army and Navy Departments could be made to mean; it would mean that, instead of shutting down a large percentage of the industries throughout the country in the event of any national emergency such as war—it would mean that those plants would go ahead with Government work, and even though there were a lapse of 30 days or 60 days, labor would be held on the job ready to go ahead. If a declaration of war had been made yesterday, we would have to teach a large percentage of our workmen how to handle munitions. It would probably be six months or a year before we could hope, under the best conditions, and with the best encouragement from the Government, to get war materials out of our plants in any quantity. In the meanwhile our labor organizations, built up over a period of years, would be broken up and there would be a great deal of suffering through lack of employment. You can see very readily the position organized labor will take on any such a plan. There is every argument of common sense in its favor. The Government would have hundreds of sources of possible supply where it now has but a few. Last, but not least, we would lay the ghost of the "munitions lobby" for all time.

* * * * * * *

Mr. ROBERTS. That brings me to this situation: I have been very much impressed with a statement made by a Member of the House on the great difficulty of the manufacturers furnishing rifles, shrapnel, and particularly time fuses, because of the lack, in this country, of jigs and other appliances. You pointed out that if we had a supply on hand at the outbreak of war these gauges would wear out after a certain amount of use and have to be replaced. What provision are you contemplating making for securing, when the emergency comes, all the jigs, gauges, etc., that would be absolutely necessary?

Mr. COFFIN. The only possible safe procedure would be to make them up in advance during time of peace and put them into Government depots, which, as I have said, should preferably be located in the Middle West.

Mr. ROBERTS. Did I understand you correctly to say it would take probably five years to provide, with the present output of our factories, the necessary jigs and gauges?

Mr. COFFIN. Yes, sir; for the production through present facilities available.

Mr. ROBERTS. For the production in the exigency of a great war?

Mr. COFFIN. That is the computation of the manufacturers of these goods, and I have every reason to believe it to be correct.

Mr. ROBERTS. The matter of providing these jigs and gauges is about one of the most essential elements, is it not?

Mr. COFFIN. It is the one great reason why the manufacturers in this country are not supplying goods to Europe. They have not been furnished with the gauges and tools necessary to insure standardization in this work.

Mr. ROBERTS. You spoke of some of the belligerent nations recalling from the firing lines mechanics who have been withdrawn from the industries of the country. Have you in mind the strong criticism which has been made upon Winston Churchill in permitting shipbuilders of the country to enlist?

Mr. COFFIN. I did not have that instance in mind.

Mr. ROBERTS. I mean as showing what is now taken to be an unwise policy, calling on these skilled mechanics to go on the firing line, when there was such need of them at home?

Mr. COFFIN. England did that in many lines of industry—let the mechanics get away, and had to call them back in a disorganized state, because through three months' service in the trenches, mechanics will be unfitted to go back to the lathe for some time.

Mr. BRITTEN. I am told that Mr. Coffin has some very well-defined ideas on the establishment of the council of national defense. I think the committee should hear from him while he is here, if my information is correct.

Mr. COFFIN. In my work down here—coming in as any average business man would—I was immediately struck with the need for that coordination, in the absence of which any big manufacturing concern in the country would be put out of business in short order. There seems to be a lack of intimate general knowledge of what the men in the various departments are doing in each other's lines of activity. It has seemed to me that there are perhaps two needs, each one distinct. One might be termed a council of national defense. This should keep at all times in close relation with the Army and Navy Departments, and upon it should be, of course, the Secretaries of the Army and Navy and such men as they might designate in their departments, other members of the Cabinet, some civilians of unquestioned rank and standing, and the chairmen of the various committees—the military committees—of Congress. There would thus be a chance for an interchange of ideas and the formulation of a general definite policy of departmental and business coordination in any plans for defense. Now that there is certainly urgent need of close working between the Army, Navy, and industry, I think what may be needed—perhaps as in England and France—is a bureau of industrial mobilization directly under the control of the President, as is the Army and Navy. We must keep the industrial end of the country in shape for defense, exactly as the Army and Navy keep their respective departments in shape for defense. Gentlemen, the time has come when in any question of defense there are three big elements, and those elements, while related, are entirely and distinctly separate. There is the Army, the land force; the Navy, the water force; and the industrial machinery necessary for the supplying of materials to these fighting arms. It seems to me, just from my experience, coming in from business lines, that if such an arrangement as I have outlined could be created that it would make more for economy and for efficiency and for the solution of many of the difficulties over which you gentlemen are laboring than any other one thing which could possibly be done. You would then have linked up with you gentlemen of military and naval affairs, and with the departmental heads that which is after all the foundation of the whole defense structure, namely, the industrial resource of the country, which must stand behind you in any emergency, give the guns to the men in the field, and give to those guns the ammunition they need.

Mr. CALLAWAY. Then what you would suggest really would be that this whole country be organized under some central head at Washington, and each man known, and his place known, so he might be called to the particular place he would fit in, by order, the instant he is needed?

Mr. COFFIN. Almost as you have stated it. That is the fundamental thing in any real plan of defense.

Mr. CALLAWAY. You would suggest that organization as necessary?

Mr. COFFIN. Yes, sir; in just that degree, at least, which would insure a real preparedness against confusion and economic shock due to any sudden emergency.

Mr. CALLAWAY. That is your idea of what we ought to have?

Mr. COFFIN. Yes, sir; it is.

Mr. BRITTEN. How long after your arrival in Washington did it take you to ascertain this lack of coordination between the Army and Navy and other executive departments?

Mr. COFFIN. I ran into it the first morning. I found that I could not learn just where to go to get the particular information I wanted. I remember that one of the men told me an amusing story about a letter just received from some manufacturer stating in reply to some communication that he had already had seven letters from as many departments upon the certain identical subject.

Mr. BRITTEN. What you have said is substantially what practically every other expert, naval, military, and otherwise, has stated in the committee. * * *

The CHAIRMAN. We are very much obliged to you, Mr. Coffin.

* * * * * * *

The tremendous importance of aviation in military preparedness is only beginning to be realized. On a few occasions I have spoken briefly, though very earnestly, to the House of the imperative necessity of developing aircraft for military purposes, and of the possibilities of aviation in peaceful pursuits. The letter of Mr. Coffin, herewith submitted, indicates that this most vital, as it is at the present time, the weakest spot in our preparation for defense is not being neglected by these broad-minded, experienced business men who are undertaking to serve the country in a time of real need:

COUNCIL OF NATIONAL DEFENSE,
Washington, February 28, 1917.

Hon. JOHN Q. TILSON,
House of Representatives, Washington, D. C.

DEAR MR. TILSON: I have not been able to get away, as anticipated, and am at your disposal should you wish to confer with me again or by any chance desire me to appear before the committee.

There is another situation that I would like to discuss with you. I refer to the condition of the aircraft industry. There are certain fundamental difficulties in this direction which must be remedied before we can hope to obtain aircraft and aeronautical supplies in any quantity. This industry, as you know, was running along on the basis of a volume of something like $1,000,000 a year when Congress, six months ago, appropriated a total of seventeen or eighteen millions of dollars for aircraft development. No manufacturing plant or business institution in this country can expand within one year on any 17 to 1 basis. It is hard enough to even double production within one year's time. There is an utter lack of standardization in specifications of material and in detail of design throughout the industry. We have these matters now in hand, but the problems require time for their solution. We went through exactly this same stage in the motor-car business. It is the stage of transition which marks the birth of a commercial-quantity production in the development of the art. There is also an almost utter lack of skilled personnel in the aviation art. The most careful nursing of this industry is necessary, and an intelligent consistency must be exercised upon the part of Congress in the matter of appropriations. The aeronautical industry is literally in its infancy in this country. To such an extent is this true that there is not one chance in a thousand that the Government can procure within a reasonable limit of time the amount of aircraft now on order. It will require the support of the Government over a period of years to place the aircraft industry in a position to supply our needs in this direction.

The patent situation has been another element which has retarded development. This also is now in hand; and if there is enacted into law the section of the military bill dealing with this subject we should be able to eliminate this difficulty.

Very truly, yours,

H. E. COFFIN.

Friendly Relations With the Government of Mexico.

EXTENSION OF REMARKS
OF
HON. JEFF: McLEMORE,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. McLEMORE. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include the following resolution:

Simple resolution 97. (By Mr. Harley.)

Whereas the Government of the United States has again resumed friendly relations with the Government of Mexico; and
Whereas there are in the State of Texas a number of distinguished and worthy citizens of our sister Republic, as well as a number of American citizens who have large property holdings in Mexico: Therefore be it

Resolved, That we request our State Department at Washington to request our ambassador in the City of Mexico to continue to use his good offices in behalf of these unfortunate people, to the end that their property rights in Mexico may be respected and preserved by the Government of Mexico: Be it further

Resolved, That a copy of this resolution be sent to the State Department at Washington and to each of our Senators and Representatives at Washington.

JOHN D. MCCALL,
Secretary of the Senate.

Read and adopted.
FEBRUARY 23, 1917.

An Argument for a Decentralized Bank of Commerce.

EXTENSION OF REMARKS

OF

HON. EDWARD W. SAUNDERS,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. SAUNDERS. Mr. Speaker: I wish to present an argument for a decentralized bank of commerce prepared by Mr. R. C. Milliken, a local monetary statist, which I have found instructive and interesting. If you accept his statements of fact, there would seem to be no escape from his conclusions. His argument appears to have been prepared with a painstaking regard for the truth.

I ask you to bear with me while I refer to two of the conclusions maintained in this argument. They may be stated as follows:

First. That all the countries which have adopted this simple remedy (that is, which have established a bank of commerce) enjoy sound credit systems, and speculation, and overconsumption, (twin sisters in producing panics), are for less prevalent among them than they are with us;

Second. That in all such countries there is little or no public sentiment for changes, or amendments to their banking and currency laws, while with us many demands are made for the amendment of our banking and currency laws.

Truth is the bedrock upon which all sound credit must be based, and any credit system which enables those seeking credit to cover up or hide the truth is a bad system, for it encourages fraud.

The Federal Reserve System is making active efforts to reestablish a commercial credit system in this country by trying to induce our commercial men to become guarantors of the credit of their commercial customers, but that system will not effectually aid our commercial men in obtaining reliable credit information.

Before concluding my remarks permit me to say a few words about Mr. Milliken and his tireless efforts to secure credit reform for this country. At the conference of the currency committee of the American Bankers' Association held in this city six years ago a powerful effort was made to induce the members of that committee to indorse the Aldrich bank plan. In fact, that conference was arranged by the author of that plan, the late Senator Nelson W. Aldrich, one of the most astute politicians ever in Washington. As chairman of the Monetary Commission, Senator Aldrich employed the professors of some of the leading universities of the country, who attended that conference and were engaged in instructing the members of that committee, all of whom were experienced bankers, as to the merits of the Aldrich plan. Even the publicity feature was attended to, for stories appeared daily in the press that the committee would indorse the plan before adjournment; but they did not do so, though the conference lasted much longer than was contemplated. One of the few active opponents of the Aldrich scheme was Mr. Milliken, and he was largely responsible for its defeat.

AN ARGUMENT FOR A DECENTRALIZED BANK OF COMMERCE.

(By R. C. Milliken, monetary statist, Union Trust Building, Washington, D. C.)

There are four reasons why we should have a decentralized bank of commerce, which I shall enumerate:

First. To induce our commercial traders to trust worthy traders by becoming guarantors of their credit, and thereby substitute bills of exchange for promissory notes;

Second. To teach the general public the perniciousness of using a bank as a "feeder" to promoting enterprises;

Third. To establish such important "acceptance houses" as exist in Great Britain who exclude themselves from deposit banking; and

Fourth. To partially counteract the disastrous effect of the special privilege now enjoyed by the New York City banks which act as the exchange agents for the other banks throughout the country.

BRITISH AND AMERICAN CREDIT SYSTEMS CONTRASTED.

To contrast the British and American credit systems, let us suppose the sale of goods by a jobber to a retail merchant. Under the British system the jobber would draw a bill of exchange on the retail merchant for the amount of the invoice, and the latter would accept it and return it to the jobber in payment. Under such bill of exchange the jobber becomes the guarantor of the retailer's credit until the bill matures, a period during which the retailer could liquidate the transaction by the sale of the goods.

Suppose the day on which such jobber received that bill of exchange from the retail merchant that the jobber should purchase a bill of goods from a manufacturer or factor. Such jobber would doubtless say, if operating under the British credit system, "Don't draw on me; I will pay you in the bill of," giving the name of the retailer and amount and maturity of the bill. If the manufacturer would credit such jobber, he certainly would do so plus the name of the retailer. Such bills of exchange form the principal currency in the commerce of Great Britain, for the reason that the Bank of England, which is controlled exclusively by the great traders and commercial men of England in the interest of commerce and not for profit, stands ready, and has never failed, to find the gold to liquidate such bills.

Under the American credit system the large jobbers seldom solicit the trade of retail merchants who do not bear the reputation of discounting their bills for cash. That is not a cash transaction, but the substitution of bank for commercial credit. That is, the retailer must go to his local bank or in the open market with his single-name promissory note and buy bank credit in payment of that invoice.

THE THREE METHODS OF BANKING.

Let us first consider the different methods of banking, and that has been stated so clearly by James W. Gilbart, the greatest philosopher of credit the world ever produced, the man most instrumental in giving England her present banking system and destroying the monopoly of the Bank of England and making that institution a bank of commerce, in his excellent treatise of the Practices and Principles of Banking, that I shall quote him. He thus defined banking and the three methods of raising a banking or borrowed capital in these words:

> The trading capital of a bank may be divided into two parts, the invested capital and the banking capital. The invested capital is the money paid in by the stockholders for the purpose of carrying on the business. This may be called the real capital. The banking capital is that portion of the capital which is created by the bank itself in the course of its business, and may be called the borrowed capital. There are three ways of raising a banking or borrowed capital. First, by receiving deposits; secondly, by the issuing of notes; thirdly, by the drawing of bills of exchange.

CREDIT AND GOLD HAVE PRECISELY THE SAME EFFECT ON PRICES.

An expansion of credit by $100,000,000 has as much influence on prices as an addition of $100,000,000 to the quantity of gold. John Stuart Mill says, "Money and credit are exactly on a par in their effect on prices." Henry Dunning Macleod, another great Scotch philosopher of credit, in his Theory of Credit, says:

> It is perfectly acknowledged that credit produces exactly the same effect on prices as gold. And it has been shown by authentic statistics that in modern times gold only forms about 1 per cent of the circulating medium of currency; and to suppose that a variation to the small extent of a fraction of 1 per cent in the amount of the circulating medium, or measure of value, could produce the effect so popularly attributed to it is wholly beyond reason.

FIRST PROPOSITION.

As the oldest method of banking was by drawing bills of exchange, we must consider it. The bill of exchange is the safest credit instrument with which commerce was ever financed, because it carries upon its face abundant proof that it represents a real commercial transaction. Let us enumerate a few of those evidences:

First. Usually it is drawn on the lithographed billhead of the seller and bears the serial bill number of that concern.

Second. Most frequently the bill is for an odd amount, as invoices seldom foot up even amounts, thus negativing the hypothesis that it represents a finance transaction, which is usually for an even amount.

Third. A bill is drawn by a manufacturing concern or jobber on a jobber or retail dealer in a similar line of trade, residing usually in different cities, thus furnishing further proof that it represents a real commercial transaction and negativing the hypothesis that it is a "kite" or accommodation paper or finance transaction.

Fourth. A bill is invariably drawn for the production or distribution of commerce, and in consequence adds to the wealth of the country employing it. If a retail merchant were permitted to draw bills of exchange on his customers (consumers) it would produce inflation and overconsumption and waste, the curse of this country now employing the promissory note.

The promissory note furnishes no proof that it represents a commercial transaction, and no country employing such credit instrument can ever have a safe open discount market for its commercial paper. A commercial credit system is a natural credit system, and something is radically wrong when one com-

mercial man will not trust another worthy commercial man. The commercial man's rate of profit is greater than that of the banker, and in consequence can assume a greater risk in granting credit than the banker. Furthermore, all the obligations of the commercial man mature in futuro. In fact, the commercial man who fails to meet his obligations at maturity is considered insolvent, whereas no bank is considered prosperous whose demand obligations do not far exceed its capital and surplus. Its prime mission is to convert time obligations into demand payable ones. Hence the necessity for its covering its borrowed capital with liquid assets made by two or more commercial men and payable at short and fixed periods.

The cutthroat methods which prevail among the commercial classes in this country are directly traceable to the practice of our manufacturers and jobbers' insistence on their buyers discounting their bills "for cash." Under our system the jobber seldom considers the question of overstocking the buyer, because he knows that within 10 days the obligation will be assumed by a banker. How different it is in countries where the seller is a guarantor of the credit for a period during which the goods should be sold.

We can never hope to capture foreign markets for our commerce under our credit system—a system under which one commercial man will not trust another worthy commercial man. We must adopt the bill of exchange in our domestic commerce, and thus show to the world that our commercial men trust one another, before we ask foreign traders to trust us.

REASON FOR SUCH DISTRUST AMONG OUR COMMERCIAL CLASSES.

The reason for such distrust is plain to the informed. The writer speaks from actual experience along this line, acquired from an extensive commercial-law practice throughout Texas for some Boston, St. Louis, and Cincinnati houses. Such distrust grew out of the numerous instances in which local banks transferred their losses to nonresident commercial houses. I have in mind a merchant who had established a large trade and good credit, but who became involved in cotton speculations. At the time of his speculations the local bank was his sole creditor, but instead of closing the merchant up immediately, the banker tided him over a year and then succeeded in transferring the bank's $25,000 loss to the nonresident commercial people.

This is the way that was accomplished: In the spring following his cotton speculations the merchant promptly discounted his bills "for cash," the local bank furnishing him the facilities. In making his fall purchases the merchant had his bills dated ahead for as long a time as he could secure, ostensibly for the purpose of demanding a large discount rate "for cash," but for the actual purpose of enabling him to dispose of his goods before the maturity of his bills, pay off the bank, fill his own pockets with cash, and leave his commercial creditors in the lurch. All worked out as prearranged.

That merchant was insolvent a year before he was closed out, and his financial condition was well known to the banker. Had his financial condition been known to the commercial world, that loss would have fallen on the bank. It was by keeping the commercial world in ignorance of that merchant's actual condition that enabled that banker to transfer his loss to the commercial people. Away with a credit system which affords such facilities for fraud!

I have another similar disgraceful swindle in mind, one in which the local merchant is thought to have saved some $50,000 out of the failure, and who was a few years later reputed to be worth $250,000. And I have another case in mind in which the local merchant swindled his nonresident commercial creditors out of more than $100,000, who, 20 years later, was reputed to be worth from $2,000,000 to $3,000,000. The basis for those newly made fortunes rightly belonged to the nonresident commercial creditors of those local merchants. In the cases I have cited the local banks did not lose a penny, and the dockets of the courts in which those cases were tried will bear me out in this statement. That "reign of fraud" was only 25 years ago, and many commercial men now living who went through that period will verify all I have narrated above.

THE BANK IS THE BEST SOURCE OF CREDIT INFORMATION.

No one denies but that the bank is the best source of credit information, but the trouble is that the nonresident commercial men do not know when the local bank is boosting the local merchant's credit for the purpose of transferring its loss to the commercial people. A large manufacturer who attended the National Chambers of Commerce annual meeting here last January told me that when a jobber or merchant referred him to a bank that he threw the letter in the waste basket. In proof of the proposition that the bank is the best source of credit information, I wish to call attention to the statement made to me by a wealthy Maryland farmer a few months ago. That farmer said that his banker had criticized him for signing accommodation paper, and told him that unless he quit it the bank would have to exact collateral security for his personal loans. The banker said the farmer was then on $7,500 of such paper, which statement the farmer disputed with emphasis, but when the banker enumerated each piece of paper, giving the name of the principal and amount of each note, the farmer admitted the correctness of the same.

The farmer said that the banker knew more about his business than he did himself. Of course that banker did not impart to that farmer the source of his information, but the informed know it was acquired from the other banks of the same city, by reason of the comity existing among them. If the commercial interests of the United States controlled a bank of commerce, with a branch or agency located in that city, then they could secure as reliable credit information as any bank there, and with reliable credit information our nonresident commercial interests could safely credit other commercial people of that city.

ACTIVITY OF FEDERAL RESERVE BOARD FOR "TRADE ACCEPTANCES."

The Federal Reserve Board and Federal reserve banks are making special efforts to induce our commercial men to adopt "trade acceptances," which are the same in principle as bills of exchange used in European trade, by authorizing special discount rates for such paper, and "all Federal reserve banks in establishing (discount) rates have made a rate generally one-half of 1 per cent lower for trade acceptances than the rate for promissory notes," says the acting governor of the New York Federal reserve bank in an argument for "trade acceptances," published in the Federal Reserve Bulletin, of January, 1917.

Whether our manufacturers and jobbers like it or not they must come to the use of bills of exchange or "trade acceptances," whereby they become the guarantors of their customers' credit, as that is the only safe credit instrument known to commerce. But Congress must create a bank of commerce for our commercial traders, and thus place them on an equal footing with the local banks, otherwise we will have a repetition of the "reign of fraud" which existed 25 years ago and which destroyed the poor commercial credit system we then had.

PURPOSE OF BANKRUPTCY ACT WAS TO DESTROY "REIGN OF FRAUD."

The sole purpose of our present perpetual bankruptcy law was to destroy the "reign of fraud" which existed 25 years ago, and which enabled the local banks to swindle our nonresident commercial interests. But that law has not accomplished the purpose of its authors. It is another makeshift at credit legislation of which our statute books have been crowded since the formation of the Republic. It simply closes the barn door after the horse is stolen. What we must do is to go to the very source of the credit evil, by giving our commercial interests equal credit facilities now enjoyed by our banks, and that must come about here as it came about in all other countries enjoying a sound credit system, namely, by the establishment of a bank of commerce. Just as long as the banks enjoy exclusive or special credit information just that long will our commercial interests be defrauded by the banks.

COMMERCIAL LEGISLATION IN AMERICA AND EUROPE CONTRASTED.

For centuries before the discovery of America all the civilized countries of the world were establishing lex mercatoria, the law merchant, a wonderful system based on the customs of the world's traders. It was accomplished by the creation of merchants' courts presided over exclusively by merchants. Those traders invented and developed the bill of exchange, the Venetians being the leaders, as they were the dominant factors in the commercial world from the eighth to the fifteenth century. Their wealth was the wonder of the world during that period, their argosies formed the sole channel of communication between the courts of Germany and Constantinople, and their well-equipped and expensively guarded caravans furnished the only connecting link between the Occident and Orient until the British discovered the Cape of Good Hope route in 1484. The Venetians employed the bill of exchange exclusively in carrying on their extensive trade.

In writing of the poor coinage laws of the Venetians, Hazlitt, in the Venetian Republic, volume 2, page 621, says:

All these devices for obviating the inconvenience arising from a scanty currency might, however, have failed to provide any adequate remedy for the evil if trade had not been largely conducted on a basis of exchange, and payments in kind had not long remained in universal vogue. We must acquit the Venetians of an ignorance of bills and other substitutes for cash when such facilities were elsewhere enjoyed in the twelfth or thirteenth century, and while the first explicit reference to such matters is as late as 1405, the passage where it occurs speaks of it rather as a familiar principle than as a novelty in practice, and so much so that we have an actual document in 1326 (1325) immediately belonging to Milan, but the counterpart and sample beyond doubt of

thousands and hundreds of thousands which once existed up and down commercial Europe. It is in the subjoined terms, and points to a practice of giving six months' credit, or, as it is now expressed, of drawing at six months.

Daniel on Negotiable Instruments, sixth edition, page 8, says:

The advantages derived from employing foreign bills for remittance of money induced merchants universally to adopt them, and originally deriving their sanction from the custom of merchants they were subsequently recognized and approved by the judicial tribunals, and the engagements of the various parties to them enforced.

The same author, in speaking of inland or domestic bills, adds:

At first, also, effect was only given to the custom when the parties were merchants, though afterwards extended, as in the case of foreign bills, to all persons whether traders or not.

It was in 1613 that the court of king's bench, in Oaste against Taylor, declared that only merchants could execute bills of exchange. And even to this day "in France a bill of exchange represents a trade transaction" and not a finance transaction, says Sir M. D. Chalmers, in his Bills of Exchange, seventh edition, page lxi. In 1702 the same court, in Buller *v.* Crips (6 Modern King's Bench Reports, p. 306), held the promissory note to be a nonnegotiable instrument. The effect of this decision was to clothe the merchants and traders of Great Britain with a monopoly in the execution of a negotiable instrument, just as that class to-day enjoys a monopoly in drawing bills of exchange in France. But the British traders did not enjoy such monopoly long, for in 1704 Parliament enacted the first negotiable instrument law (3 and 4 Anne), thus demonstrating that the bankers of that day were some lobbyists.

One would think that the foregoing enumerated efforts of those old countries in the interest of their producers and distributors of commerce would suffice. But those countries did not stop there but went further in the aid of commerce, and created banks of commerce controlled exclusively by commercial men and as an aid to commerce rather than for profit. No man can serve two masters; no man can sell credit for a profit and as an aid to commerce too. Those countries clothed their banks of commerce with numerous special privileges, they freed them from Government fetters and made them the only depositaries for Government funds and the like, because when those banks serve commerce they serve the general public.

All reputable English writers maintain that the Bank of England is controlled exclusively by the great mercantile traders of that country. So I shall quote a few of them. Walter Bagehot, for years editor of the Economist and a director and London representative of the second largest issue bank in England, a scholar of a high order who is reputed to have had more accurate information on the London money market than any man who ever wrote on the subject, says in his Lombart Street, which is quoted as the highest authority, as follows:

In London no banker has a chance of being a Bank of England director or would ever think of attempting to be one. I am here speaking of bankers in an English sense—those who accept deposits subject to check. Not only no private banker is a director of the Bank of England, but no director of any joint-stock bank would be allowed to become such. The two situations would be taken to be incompatible. The mass of the Bank of England directors are merchants of experience and drawing a considerable capital in trade, in which they have been brought up and with which they are well acquainted. The direction of the Bank of England has for many generations been composed of such men.

Another such authority is Hartley Withers, editor of the Economist, with a London banking experience, and writer on monetary subjects. In his work, The Meaning of Money, he says:

The bank [of England] court is a committee recruited chiefly from the ranks of the accepting houses and merchant firms, and its members are nominated by itself, subject to the purely formal confirmation of the shareholders; and it is an unwritten law that no banker in the ordinary sense of the word—that is, no one connected with what we call the check-paying banks—can be a member of it.

Another authority is the testimony of the governor and directors of the Bank of England to the monetary commission. I give the question and answer:

Q. Is there any custom restricting the class from which the directors may be selected?—A. There is no legal restriction as to the class from which directors may be selected, except that they must be "natural-born subjects of England or naturalized," but in actual practice the selection is confined to those who are or have been members of mercantile or financial houses, excluding bankers, brokers, bill discounters, or directors of other banks operating in the United Kingdom.

No reputable English writer would think of disputing the statements of the authorities above quoted.

PRESIDENT JACKSON'S POSITION ON THE BANK OF COMMERCE.

I doubt if the views of any really prominent public man on so vital a question were ever more misunderstood than those of President Jackson respecting this subject. He favored the principle but opposed and destroyed the institution which failed to carry out the purpose of its creation. Let us quote the language contained in his celebrated message to Congress on July 10, 1832, in which he vetoed the act to recharter the second United States bank. He said:

A bank of the United States is in many respects convenient for the Government and useful to the people. Entertaining this opinion and deeply impressed with the belief that some of the powers and privileges possessed by the existing bank are unauthorized by the Constitution, subversive of the rights of the States, and dangerous to the liberties of the people, I felt it my duty at an early period of my administration to call the attention of Congress to the practicability of organizing an institution combining all its advantages and obviating those objections. I sincerely regret that in the act before me I can perceive none of those modifications of the bank charter which are necessary, in my opinion, to make it compatible with justice, with sound policy, or with the Constitution of our country.

That language is too clear for argument. He admits favoring the principle. He was called on to approve or veto a specific act to recharter a particular bank which had already forfeited its right to exist. It ignored commerce and became the tool of speculation from its inception, was insolvent the second year of its creation and would have gone in the hands of a receiver had not the Government come to its rescue with its own funds.

It was not incumbent on President Jackson to set forth in that veto message the specific provisions which such a charter should contain for "the protection of the public interests." He need not have said he believed such an institution was "convenient for the Government and useful to the people." However, he did not stop with that gratuitous admission, but went further and said he felt it was his duty at an early period of his administration to submit a plan to Congress which would not only obviate the objections of the charter he vetoed, but combine the advantages which would render it an instrumentality for the public good.

Lets observe, in the light of the history of those times, the plan we believe President Jackson had in mind to submit to Congress. Mark you: It was "at an early period" of his administration that he says this "duty" manifested itself to his judgment. It becomes necessary, therefore, to consider some of the events of that period. In 1827, two years before he was inaugurated President, there was published in London a most important treatise on banking and credit, one which to this day is a standard authority in every country enjoying international commerce. It gave to its author, James W. Gilbart, F. R. S., great renown as a monetary thinker. It made him so famous that some of the ablest financiers of the British metropolis supplied him with funds and induced him to return to that city of his birth and early banking experience and organize the first of the London great joint-stock banks. No higher compliment was ever paid a thinker than that paid to Gilbart by those London capitalists. For it is no easy thing to induce capital to finance a new project, but it is well-night impossible to induce capital to engage in a lawsuit, and that is what Gilbart's project meant, as he had to destroy the monopoly then enjoyed by the Bank of England before he could put his principles in practice. What a fight he made against the most powerful corporation of that period! In the beginning he had no influential persons to aid him, but after fighting in all the courts of England, though losing his legal battle, he so educated the British public that Parliament came to his rescue and destroyed the monopoly of that institution.

President Jackson was not a monetary expert; that is, he did not possess accurate detailed information on monetary affairs, on which he had given deep and sustained thought—something which carries a conviction that makes one fight to the last ditch—as Gilbart did. But it is most unreasonable to suppose that some of the political economists of this country failed to direct his attention to some of the important truths then advocated by Gilbart, for those two great men had one interest in common, the destruction of bank monopoly, both institutions then being the tools of speculators. I believe that Jackson, "at an early period of (his) administration," when his attention was first directed to Gilbart's philosophy, had it in mind to recommend to Congress the principles advocated by that great philosopher of credit, but as his mind was engrossed with other important public duties those early formed views—not convictions—passed from his mind, and when it became a political issue he lost sight of the scientific question.

GILBART'S PHILOSOPHY WHICH INFLUENCED JACKSON.

Gilbart announced that commercial men, the producers and distributors of commerce, were the natural or permanent regulators of the interest on money, they being actuated by the rate of profit which money earns, the immediate regulator of the interest rate being the law of supply and demand. His argument in support of that proposition is too long for me to quote, but the effect of it was to destroy the monopoly of the Bank of England and to make that institution a bank of commerce; and the Bank of England is now carrying out the very truths Gilbart announced, as shown under my fourth and last proposi-

tion. However, Gilbart quoted from the Essay on Trade, written by Sir Josiah Child in 1678, who was the governor of the East India Co. and one of the greatest captains of industry of his time. And the abuses of the "new-fashioned bankers" of that time being so like those of the banks of this country at the present time I shall give that quotation in full. But before doing so let me remind the reader that the Essay on Trade was written 18 years before the organization of the Bank of England and 37 years after Charles I deliberately confiscated the British merchants' gold in the Tower of London, that being their sole depositary. Profiting by that sad experience, those merchants thereafter used the goldsmiths until the "new-fashioned bankers" came into existence.

Gilbart says:

Sir Josiah Child, in his excellent Essay on Trade, accuses the "new-fashioned bankers" of "being the main cause of keeping the interest of money at least 2 per cent higher than otherwise it would be, for by allowing their creditors (depositors) 6 per cent they make moneyed men sit down lazily with so high an interest and not push into commerce with their money, as they certainly would do were it at 4 or 3 per cent, as in Holland."

This criticism which was made against the infant English banks 239 years ago may aptly be applied to our banks to-day. The Comptroller of the Currency, in his report to Congress a year ago, criticized our banks on that score and prepared a bill which he submitted to Congress to prohibit any national bank from paying more than 4 per cent on deposits. But 4 per cent now is higher than 6 per cent was 239 years ago. Multitudes will avoid the anxieties of commerce when they can secure 4 per cent interest from the banks. Our bank deposits are increasing at such an alarming rate that it is a guess to come within a billion of the aggregate, which are now somewhere between twenty-five and thirty billion dollars. And bank "deposits are nothing but bank notes in disguise" says McLeod. Therefore, in speaking of our circulating medium, we should add our bank deposits, because they serve every purpose of gold. To be sure they are credit, but "money and credit are exactly on a par in their effect on prices," says Mill and other authoritative monetary writers. Our excessive bank deposits not only affect commerce directly, both in depriving it of capital to which it would otherwise have and causing it to pay an excessive rate for credit, but they give added facilities for speculation and overconsumption, which inevitably result in panics.

INFLATION DEFINED.

Any facility afforded for the purchase of permanent investments—stock, bonds, or real estate—will produce inflation, and any facility afforded the production or distribution of commerce will produce precisely the opposite effect. Prices are governed by the proportion existing between the available supply and the demand. Inflation is the advancing of the price of a commodity without producing a corresponding increase in its productivity. If I buy a piece of real estate, I remove it from the market and thereby cause an advance in the price of other real estate, and that is the effect whether I pay for it in cash or credit.

ILLUSTRATIONS OF INFLATION.

By using our Government bonds as a basis for bank-note circulation we inflated their price. Our 2 per cent bonds bore a premium, though a 1 per cent tax was imposed on that circulation. By this hocus-pocus the Government borrowed money of the public at 1 per cent interest and greatly increased the facilities for speculation by the public who used the currency. As another illustration I cite the inflation in the farm lands of Iowa, due to the cheap credit furnished principally by the savings banks of that State. Iowa's savings-bank deposits aggregate $246,172,395.04 to only $2,306,046.15 for those of Wisconsin.

The late Henry Wallace, the veteran Iowa farm journalist who was an authority on farm conditions in that State, wrote an article about a year ago calling attention to the inflation of the lands and claimed that the owners did not realize 3 per cent on their investment. He further claimed that those farms were fast getting in the hands of speculators who had them tilled by tenants, who, being interested only in immediate profit, robbed them of their fertility, in consequence their yield was growing less. If that bank credit had been used to aid those farmers in the purchase of fertilizers and live stock, and thus have increased their fertility and productivity, the effect would have been the very opposite of what it was by using such credit for their purchase—speculation. Some of the best Iowa farmers sold their high-priced lands in that State and went to Canada and other sections where lands were cheaper; in consequence Iowa was the only State of the Union which lost in population between 1900 and 1910. As still another illustration, I cite the inflation of real estate in our cities since the advent of the trust company 25 years ago. I have heard it stated upon good authority that none of the companies which built skyscrapers in the Wall Street section of New York City realize more than 2 per cent on their investment and most of them nothing. This is due to the easy facilities afforded in that city for loans on real estate.

UNSOUND BANKING.

Inflation works evil in many ways. It increases the cost of living and makes speculators of the masses who seek the short route to fortune. But inflation is by no means the most harmful result of our bad banking practices. The employment of bank credit for the purchase of permanent investments always has resulted, and always will result, in the breaking down of the whole credit system through violent panics which play havoc with everything. This was so clearly stated by Mr. George M. Reynolds, the able Chicago banker, before the Senate Banking and Currency Committee on the Federal reserve bill that I shall quote him. He said:

The man who borrows money on stock-exchange collaterals in New York and who wants to realize on them quickly, must depend on the ability of the borrower to reborrow that money immediately elsewhere upon the sale of the same. If the condition is so bad that the banks of New York City are unable to extend the accommodation, the result is that there is a very violent break in the values of securities, and we are in the midst of a panic.

The condition then described by Mr. Reynolds caused our panics of 1837, 1857, 1873, and 1907. It caused the failure of Monte de Piedad, the largest bank in Mexico, which, two weeks before its failure had a specie reserve of 50 per cent of its borrowed capital. The same practice caused the failure of every bank in Paris, France, in 1848, except the Bank of France. This produced such distress in Paris that the French Government had to furnish the capital for the organization of a bank to relieve it. Those Paris banks had their borrowed capital—deposits—loaned out on railroad bonds, permanent investments on which they could not realize the cash.

I have thus produced abundant authority to show what unsound banking is. That is, I have shown that to use a bank's borrowed capital for the purchase of permanent investments will not only lead to inflation but will also result in the breaking down of the credit system. I shall now proceed to show what sound and safe banking is.

SOUND AND SAFE BANKING.

Any bank which covers its borrowed capital with paper executed by solvent persons, given for the production or distribution of commerce, and made payable at short and fixed periods is absolutely safe and sound. This sound monetary law was announced in 1810 by the Bullion Committee, a committee of experts appointed by the British Parliament to report under what conditions the Bank of England could issue notes—currency. It reads:

There can be no possible excess in the issue of Bank of England paper * * * so long as the discount of mercantile bills (of exchange) is confined to paper of undoubted solidity, arising out of real commercial transactions and payable at short and fixed periods.

Civilized man's existence depends upon being fed, clothed, and sheltered, and he will spend money for such purposes, even though he be timid about making permanent investments. Commercial paper is the instrument by which civilized man is supplied with such necessities, and such paper is met with a promptness unknown in other affairs. Commercial paper given for the production or distribution of commerce is self-liquidating. The goods of which that paper is the representative have been sold, thus raising the cash with which the purchaser liquidates the debt. That is the case when it is between commercial traders, but not the case when a commercial dealer sells an article to the actual consumer.

AN APT ILLUSTRATION OF GOOD BANKING.

The best illustration of good banking I know of was contained in the colloquy between Mr. A. Barton Hepburn, a great New York banker, and an officer of the Credit Lyonnaise of France as narrated by Mr. Hepburn before the House Banking and Currency Committee on January 6, 1913. He said:

Some years ago I called upon the Credit Lyonnaise in Paris, one of the great banks of the world. The gentleman with whom I was in conversation passed over to me their last bank statement. I glanced over it and remarked:

"Well, you owe a great deal of money."

"What is that you say?"

"You owe a great deal of money."

"What do you mean?"

"Your deposits are about $350,000,000."

"Oh, yes; we owe depositors; but we could pay them easily if we had to."

"Could you? How long would it take you to pay them in case of necessity?"

"The element of time would not enter into the matter at all, except so far as it required time to perform the physical labor."

"But how; tell me just how you would do it?"

Almost thinking I was questioning the condition of his bank, he took the balance sheet and proceeded:

"Well, we have so much cash; let us deduct that."

"Yes."

"Then we have so much due from banks. We could value against that and deduct the same."

"Yes."

"We have so much exchange, acceptances, etc., which have an immediate market. We could realize upon and deduct that."

"Yes."

"Now, we have reduced our obligations in this manner to something less than $200,000,000, and we have very, very much more than that in commercial paper."

"Yes; but how are you going to pay debts in commercial paper?"

"Take it to the Bank of France and get currency for it."

"Could you do that?"

"Certainly."

"Is there any law which would compel the Bank of France to discount your commercial paper without limit?"

"Law—yes; the law of its being; that is what the bank was created for."

It will be observed that 42 per cent ($150,000,000) of that great French bank's borrowed capital was covered with cash and demand payable obligations immediately convertible into cash, while "very, very much more than" 58 per cent ($200,000,000) was covered with commercial paper. Bear in mind that commercial paper in France is a bill of exchange with at least two commercial traders responsible for its payment, as no other class can execute a bill of exchange in France. Bear in mind also that the Bank of France is controlled by the creators of those bills of exchange, who are prohibited from engaging in banking for profit or trading in permanent investments. Therefore it is unnecessary to have a parliamentary law to force them to find the gold to liquidate their own paper. It is just as much the "law of their being" to do that as it is for the mother to love and cherish her babe. Those controlling the Crédit Lyonnaise profited by the experience of 1848, for they realize that the deposit bank must be sound in and of itself and independently of the Bank of Commerce. What a pity we can never profit by experience!

SECOND PROPOSITION.

The worst curse of the banking business in this country is the use of banks as "feeders" to promoting enterprises. A bank charter is granted ostensibly to enable the stockholders to realize a banker's—not a promoter's—profit by the sale of credit. Such pernicious practice will continue to exist so long as banks are controlled by the traders and dealers in permanent investments. "It is the law of their being" to serve their business, but in doing so they produce inflation and cause the credit system to break down. The Texas State banking commissioner in his 1911 report called attention to the fact that in some sections of that State rival real estate agents were organizing banks for advertising purposes. That is a shameful condition, to be sure, but no more so than the condition which exists in some of our large cities where traders and dealers in permanent investments control the banks.

SOLUTION OF OUR VEXED CREDIT PROBLEM.

The only way to cure our credit evils is to adopt the method which cured such evils in other countries, namely, by the creation of a bank of commerce, with the power to establish branches, agencies, or auxiliaries in the several communities to teach the depositors sound banking by actual practice.

Those evils can not be cured by legislation, for Congress can not legislate for the State banks, neither can the States legislate for the national banks. Those evils were not cured by legislation in England and France, where one legislative body enjoyed a monopoly in legislating on this question.

This was clearly presented by Mr. W. D. Simmons, president of the Simmons Hardware Co., of St. Louis, in his final report to the National Chamber of Commerce, as the chairman of its banking and currency committee. He said:

We of the United States have been slow to follow the older, highly civilized nations in their recognition of the fundamental principles that the chief function of a commercial bank, like that of currency, is to serve the interests of commerce.

When we remember that currency is simply a device to facilitate exchange—that is, to make it more easy to do business—and that commercial banks are agencies to enable those who have surplus funds to lend them temporarily to others for business purposes, we recognize the propriety of prompt and intelligent action on the part of the business men, whenever it is proposed to devise a new system of banking and currency, because that is primarily a business proposition.

To insure due adherence to this principle the great European national banks are governed by business men rather than by bankers. For instance, a deposit banker may not, by custom, be elected a director of the Bank of England, the requirement being that a director of that institution must have his chief financial interests in commercial enterprises and but a limited investment in banking.

NATIONAL BANKING SYSTEM GROWING WEAKER BY EACH AMENDMENT.

The Federal reserve act weakened the national banking system by permitting the country banks to lend on farm lands, and the 1916 amendment—Senate bill 5078—weakened it still further by extending that privilege to city banks and on city real estate. This last amendment was drafted by the Federal Reserve Board, and the two committees recommended it as drafted by the board. Some members of that board and some members of those committees knew that it would weaken the national banking system to permit the banks to lend on real estate, and the only reason they asked it was to keep the national banking system from going to pieces. They claimed that the States were giving the trust companies and State banks such unlimited powers that Congress had to do something to prevent the national banking system from falling to pieces. Let me quote from the testimony of the Hon. Paul M. Warburg before the Senate Banking and Currency Committee on Senate bill 5078:

Mr. WARBURG. I think this question ought to be looked upon from the viewpoint of our member banks. I think we are in a very serious condition—that is, that the States are trying to do everything to make the State systems attractive as against the national systems, and they can beat us all along the line. We are desirous of keeping our member banks, and I am apprehensive that unless we liberalize conditions for national banks that our national-bank system will eventually come to an end. * * *

Senator HITCHCOCK. The competition of the State banks with the national-banking system is a very serious matter. One-tenth of the national banks in Nebraska have gone out of business since the Federal act passed.

Senator LEE of Maryland. What is the tendency all over the country?

Mr. WARBURG. The same all over.

* * * * * * *

Senator HOLLIS. I suppose it is your idea that one-year loans on city property at the expiration of the year would be allowed to run along indefinitely. That does not mean that they have got to be paid, but be due in one year.

Mr. WARBURG. That is right. The national banks came to us and said that the conditions were pretty unbearable for them. For instance, they have a personal note of some one secured by a mortgage on his house. They have been forced to close out those loans, and the State bank gets their customer. We want to protect the national banks so they can protect their position. On the other hand, we are not in favor of letting the national banks in the city do a regular mortgage business, but we thought a one-year mortgage would be a very good collateral in the general course of their business, and after a year, the note running, the borrower can renew it. But we do not want to suggest five years, since that is like an invitation to go into the mortgage business as such.

Senator LEE. How about two or three years? The ordinary loan is three years, I should say.

Mr. WARBURG. But I do not think these banks need to make long mortgage loans.

Senator LEE. Will the trust companies compete for one-year loans?

Mr. WARBURG. I think they will.

Senator LEE. The borrower will have to renew the commission every year and probably will have his title extended over the year, and these multitudinous expenses will be considerable.

Mr. WARBURG. It does not amount to anything.

Senator HOLLIS. They will be only due in one year.

Senator LEE. Then the bank examiner will come in and say, "You have an overdue mortgage."

Senator HOLLIS. No.

Mr. WARBURG. He can renew it from year to year.

It is difficult to conceive of a more dangerous banking policy than that outlined in the statements just quoted. It is true our States have gone the limit in "wild-cat" banking, and some bankers (?) are so fond of it that they organize a lobby to induce the Federal Reserve Board to use their influence on Congress. Instead of yielding, Congress should stand like adamant against the inflationists. We should have one sound legislative body in this country. That amendment will inevitably result in inflation, and as one-third of the time deposits of such banks may be so covered it will tend to the breaking down of our credit system again. Furthermore, those State institutions which have been violating monetary law in this regard will now have the testimony of members of the Federal Reserve Board to support their vagaries.

THIRD PROPOSITION.

We must have such great "acceptance houses" as exist in Great Britain for our own traders in foreign commerce. The origin and purpose of such houses are well set forth by Hartley Withers, in The Meaning of Money, page 160. He said:

It is easy to understand how a distinct class of accepting houses grew up out of the merchant importers who originally accepted bills in the course of their importing business; that is, accepted orders on themselves to pay for goods which were in process of being forwarded to them. The readiness with which the acceptances of the different merchants would be discounted and turned into cash would vary considerably with the difference in their reputations and standing, and the caution with which they were credited in the matter of conducting their business. And the varying readiness with which certain acceptances were discounted would inevitably express itself in varying rates at which their bills could be placed. It would thus naturally follow that it would profit merchants of second-rate standing to give a commission to those whose reputation was more exalted in order to secure a more attractive signature than their own, and so get back the commission and a little more by being able to finance their operations more cheaply than by means of their acceptances.

The merchants of first-rate credit would thus find that they could let out the use of their reputations on profitable terms and proceed to specialize in this branch of business, which consisted in examining the bill put before them for acceptance, keeping themselves well acquainted with the means and standing of the drawers of them, and

giving their acceptance for a commission to such people as fulfilled the requirements of their discrimination.

The Bank of England forbids those accepting houses from engaging in deposit baiting for two reasons, viz, economy and soundness. The acceptance house does most, or all, its business through correspondence and with responsible business men. Therefore it should maintain quarters where rents are low, whereas the deposit banker, inasmuch as he must gain the confidence of a much larger and less intelligent clientele, with whom he frequently comes in personal contact, must maintain an establishment where rents are high and equip it with expensive furniture and fixtures, not to mention other enormous expenditures which display great wealth. It is obvious, then, that if these two classes of credit institutions be combined, the capital required for their conduct would be greater than if separated, all of which must be borne by the commerce of the country.

If such a combination meant greater strength, then we might ignore the question of economy. But instead of giving strength to the credit system such a combination renders it far weaker. Without such houses the banks would be furnishing security for credit. In all other countries two responsible commercial houses are primarily liable for the payment of bills. Furthermore, the deposit banker is the greatest demand-payable debtor in the business world. The gist of his business is to convert time into demand obligations. An absolutely sound deposit bank may be destroyed by the circulation of a false rumor, and, if it had time acceptances in the open market, that might tend to produce a most disastrous panic. On the other hand, it would be well-nigh impossible to destroy a sound acceptance house which had done a safe business by the circulation of a false rumor, because it has no demand obligations and would have time in which to convince its most important customer (the Bank of Commerce) that there was no foundation for such rumor. On this point I shall again quote from The Meaning of Money, page 164. It reads:

It is also very essential that the banks should remember that the least irregularity or carelessness on their part in the selection of the paper that they hall-mark with their acceptance might have very far-reaching effects if it came to light and were the subject of city comment, because the general body of their customers and depositors would be extremely likely to misunderstand it, and that what would be a mere indiscretion in an acceptance house, which does not depend for its existence on the confidence of the uninstructed multitude, might mean disaster to a bank, which does.

To illustrate a foreign-exchange transaction between two first-rate commercial houses I direct attention to the statement of Senator CARROLL S. PAGE at the hearings on Senate bill 5078, to amend the Federal reserve act, on May 16, 1916. Senator PAGE is probably one of the largest green calfskin dealers in the world, has ample capital, and enjoys an extensive foreign trade; and "Cornelius," the foreign purchaser with whom he relates the transaction in question, is one of the most important tanners in that line in Europe. The Hon. Paul M. Warburg, vice governor of the Federal Reserve Board, was on the witness stand explaining the amendment and telling about the manner in which foreign exchanges were conducted, when Senator PAGE interrupted him. Senator PAGE said:

Allow me to explain that, because I send hundreds of thousands of dollars' worth of goods. All I have to do is to send the goods to New York to be put on board the vessel, and the document, and go to my banker in New York, and that is all sold on the market as foreign exchange, and I get my cash according to the value of the exchange. So far as the American is concerned, the business is done in New York, done with you (meaning Mr. Warburg's former banking firm). You buy my draft on Cornelius ———, a great man in European trade, and I have no trouble in getting the cash. Of course, if I did not have some personal responsibility I might have to get the European bank to give me a substantial letter of credit, saying he would accept or pay. I have not had any trouble.

On the other hand, if you go to Europe to buy hides, this does come through, and they not only furnish the money, but they give the tanner five, six, or seven months' credit, and they get their money for the hides.

Here we have narrated a sound foreign-exchange transaction between two commercial houses of the first rate. The New York bank gave Senator PAGE credit for his bill before it was accepted by "Cornelius," and it was perfectly safe in doing so, as Senator PAGE's name as drawer was a guaranty that "Cornelius" would accept the bill, and the New York bank held the document—the shipping and insurance papers—which carried the title to the goods. So the New York bank sent the bill and document to its European correspondent who, in turn, presented the bill to "Cornelius" and upon his acceptance of the bill the document was released, thus enabling "Cornelius" to obtain the goods he had purchased from Senator PAGE.

Suppose "Cornelius" had been of second-rate standing. Then Senator PAGE would not have guaranteed his credit for five, six, or seven months. In that case he would have paid an acceptance house to guarantee the payment of his bill. In a conversation with the writer about his testimony before that committee and his dealings with "Cornelius" Senator PAGE narrated another transaction which occurred in that establishment in which "Cornelius" spoke to the Senator about an order he had received from an American shoe manufacturer and inquired as to his standing. Being told that his standing was good, "Cornelius" asked what the Senator would charge to accept his bill. The Senator replied that he would let him know the next day. In the meantime Senator PAGE verified his former good opinion of the American manufacturer, returned to "Cornelius's" office, and accepted the bill.

The commission paid Senator PAGE on the last-mentioned transaction partially compensated him for the expense incurred in maintaining the credit department of his own establishment. It was through his own credit machinery and his personal dealings with that American manufacturer that gave Senator PAGE the credit information which induced him to assume that obligation. By that act Senator PAGE benefited both "Cornelius" and the American manufacturer by furnishing the second commercial name to that piece of foreign exchange. We have some of the strongest commercial houses in the world engaged in foreign commerce who would naturally fall into this business of accepting bills for our small but perfectly sound and conservative houses in foreign trade if they had the cooperation of a bank of commerce which would aid them in securing reliable credit information and thus prevent them from being swindled, as they surely would under our present credit system.

HOW COMMERCE IS BENEFITED BY AN EFFECTIVE OPEN DISCOUNT MARKET.

The open market is the safest and most economic means of financing commerce, and it can be effected only by the cooperation of the commercial men through a bank of commerce. We might just as well expect the fresh-vegetable merchants of a city to maintain an effective open market for vegetables as to expect the banks to maintain an effective open market for commercial paper. One must be maintained by the truckers of the community who grow vegetables and the other by the commercial men who create such paper.

The very merchants who control the Bank of England do not patronize it for discounts, as a rule, though they could do so exclusively. Instead they patronize the open market and the banks which sell credit for a profit, as the Bank of England discount rate is frequently 100 per cent in excess of the open-market rate. Some time ago I compiled the open-market and Bank of England discount rates for short-time bills for the last Thursday in each month of 1910, which is as follows:

Date.	Open market rate.	Bank rate.
	Per cent.	*Per cent.*
Jan. 21	2½	3½
Feb. 23	1½	3
Mar. 22	3, 3½	4
Apr. 21	3½, 4	4
May 23	4, 4½	4
June 21	2½, 3	3
July 23	1½	3
Aug. 22	1½, 2	3
Sept. 22	1½	3
Oct. 24	4½	5
Nov. 21	5½	5
Dec. 20	3	4½

It will be observed that on 4 of those 12 days the Bank of England's rate was 100 per cent in excess of the open-market rate. The main purpose of the Bank of England is to make the London open-discount market effective, for without it good credit would be too dear and bad credit too cheap. An effective open-discount market not only cures many banking evils, but it economizes banking capital. For instance, in 1913, the total paid capital and surplus of the 46 banks of England and Wales, with their numerous branches, were less than $400,000,000, or not quite double the total capital and surplus of the Texas banks and trust companies, yet 50 times more commerce was financed through the British credit machinery than through that of Texas. By far the greater portion of the world's foreign commerce is financed through the English credit machinery; even Germany had to depend largely on it. But that commerce was not financed through the English banks, but principally in the open market of London.

ACTIVITY OF FEDERAL RESERVE BOARD FOR "DOLLAR EXCHANGE."

In its activity for "dollar exchange" and in order to divert the foreign exchange business from London to New York, the Federal Reserve Board has completely reversed its position taken on domestic exchange. The very greatest activity of the board during the past few months has been exerted in inducing our commercial men to guarantee the credit of their customers

and thus substitute the bill of exchange for the promissory note. But the board has done nothing to prevent our commercial interests from being swindled by the banks as they were when we had a commercial credit system. On the other hand, in the matter of foreign exchange and credit, the board has taken just the opposite position, by enlarging the power of the foreign branches of our national banks to make time acceptances. Not a word has come from the board about supplying the second commercial name to that foreign exchange and credit business. The bill of exchange, domestic and foreign, is strictly a commercial instrument. It was invented and developed by commercial men centuries before the advent of banks, and so long as it was used for real commercial transactions and by solvent commercial men, no harm resulted to the credit system. Time acceptances should never be made by banks, except in real commercial transactions, and then only sparingly for customers who put up ample collateral security; and they should never be placed in the open market, but carried by the bank making them until maturity. If anyone doubts this proposition, I refer him to the declaration of Sir Felix Schuster, governor of one of the great London banks and the foremost banker in the world, to the monetary commission.

HAVOC WROUGHT BY TIME ACCEPTANCES OF BANKS.

Are we never to learn anything from experience? Every student of American credit institutions knows it was the time acceptances of the banks which principally effected the panic of 1857, and that was the reason the original national banking act prohibited those newly created banks from doing that business. It was the use of time acceptances by the banks for purely speculative purposes that caused that trouble. If that be ancient history let us refer to some recent foreign exchange transactions. Take the coffee valorization scheme which almost ruined Brazil and the $80,000,000 "short-time notes" of New York City which were placed in the London credit stream in 1913. The London Bankers' Magazine for October, 1913, said that the interest rate for the 10 months previous was higher than it had been in 40 years—since our panic of 1873—and the discount rate in the open market for bills of exchange was lower than it had been for years. Commerce was quiet and the London banks were loaded down with idle gold seeking sound commercial paper as an investment.

The bait was too tempting for our banks (the very banks which are to enter the foreign exchange business with bridles off to establish "dollar exchange"), so they invented a new credit instrument, the "short-time note," as an exchequer bill. New York City was making vast additions to her subway system involving hundreds of millions of capital. The interest for capital in New York was very high, and instead of going into the market and paying the market price for capital the officials of that city were eager for any proposition which would supply them with cash. So they issued "short-time notes," which were sold to our banks, and they in turn sold them in London, under the pretense that they represented taxes assessed but uncollected, or chequer bills. They matured just at the outbreak of the great war. Of course New York City had no money with which to pay them. Its officials intended to renew them from year to year or sell bonds and raise the cash to take them up. But at that time the bond market was higher than it was when those "notes" were issued. London set up a cry for the gold those "notes" promised to pay, and our failure to meet our indebtedness to London caused exchange on London to jump to the unprecedented mark of $7. To relieve the situation our banks formed a pool to raise the gold for the payment of that debt, and the Bank of England required our banks to deposit that gold at Ottawa in the treasury of the Canadian Government, because they could not trust our banks. Could they be blamed for distrusting banks which had engaged in such a shady transaction as that? They did not know when our banks would suspend specie payment.

"Dollar exchange!" "Divert the foreign credit business from London to New York!" High sounding phrases, to be sure, and as a loyal American citizen I would like to see it accomplished; but that will never come about until we establish as sound and honest a credit machine as England possesses. It will never come about through the recent amendments to the Federal reserve act. Let me again direct attention to Senate bill 5078. That amendment gives almost unlimited powers to the foreign branches to be established by our national banks. It is interesting to know, however, that one member of the board, the Comptroller of the Currency, had his protest entered of record. Among other things, he said:

I think it would be most unwise to permit our national banks to take stock in general exploitation companies or in companies organized on the general "department-store" plan in foreign countries. It would obviously be unwise to permit them to go into such schemes at home, and I consider it would be still more hazardous and indiscreet to give them such control of corporations designed to do a multifarious business in distant lands.

That amendment gives the foreign branches of our national banks the power to build and superintend warehouses, as well as to furnish security for credit. All that is the province of the English "acceptance house." If we put our foreign branch banks in that business, then they will prohibit any of our commercial traders from doing the same thing in foreign countries, by telling them if they do that that they (the banks) will refuse to give them banking facilities. By the use of the "big stick" in that manner those foreign branch banks will dominate our foreign commerce, and in time they will destroy our foreign credit by engaging in speculation.

FOURTH PROPOSITION.

Before presenting this proposition I shall state the declarations of Sir Felix Schuster to the monetary commission. He declared, in substance:

1. That the only material privilege enjoyed by the Bank of England not enjoyed by any other bank in London was the insight (advance information) acquired by it into trade conditions, by reason of the fact that the other banks of the United Kingdom carried their balances with it; and that the Bank of England could tell from the accumulation or shrinkage of such balances as to trade conditions; that such insight was power.

2. That the Bank of England stood ready to find the gold to liquidate every sound commercial transaction in the United Kingdom, though Parliament had never imposed such duty on the bank, nor had it ever expressly assumed it, yet it had never failed to live up to that moral obligation running into billions.

3. That it frequently occurred that the Bank of England's discount rate was 100 per cent above the open-market rate, and under such a condition the Bank of England had no influence whatever. What it must do under such a condition is to make its discount rate effective, which is done by the Bank of England sending brokers into the open market to buy up the floating supplies by paying more than other people would; that that must be done secretly—that is, such brokers not divulging the name of their customers—that it was done openly but once. When the Bank of England is in commaad of the money market its own rate becomes effective, and by advancing its rate it prevents an outflow of gold and causes an influx of that commodity into London.

4. That his own bank had never discounted a piece of paper at the Bank of England, though at the time he made the declaration his bank had a deposit balance of $17,000,000 with the Bank of England which bore no interest.

5. That those in control of the Bank of England kept aloof from the London bankers; that they were not members of the London clearing house and never attended any of the periodical meetings of London bankers.

"INSIGHT" IMPARTED TO BANK OF ENGLAND.

An insight or advance information into trade conditions is power, and if acquired by one possessing both the inclination and facilities to utilize it, it will result in good or evil. In the very nature of things some must acquire information in advance of others as it is impossible to impart information to all simultaneously. Such information would be worth nothing to the pauper who has no funds to employ; neither to the farmer who is far removed from the channels of trade.

But there is one class who by using such insight to protect and serve his own interests would at the same time serve the public interest. While there is another class who by using it to serve his own interest would do so at the public expense and at the same time bring disaster to himself. Clearly, then, the former class should be put into possession of such insight while it should be denied to the other class.

The former class comprise the great producers and distributors of commerce, who become the creators and guarantors of the paper representing the temporary investments of the country and who are excluded from engaging in trading in permanent investments or assuming demand-payable obligations—deposit banking. The other class are the traders in permanent investments who have the facilities of speculation by becoming the custodians of the surplus funds of the community.

ALOOFNESS OF BANK OF ENGLAND OFFICIALS.

The Bank of England exercises every precaution to prevent objectionable persons from its control. They have no business conferences or conventions with bankers, bill brokers, bill discounters, or dealers in stocks and bonds. Such business men would care nothing for a conference to discuss weather conditions, but they would court it to discuss trade conditions. But if

the Bank of England met such antagonistic interests in such conferences and freely discussed trade conditions, then they would know as much about trade conditions as the Bank of England, and those antagonistic interests would use it for private gain before the Bank of England could use it for the public good.

The Bank of England's insight into trade conditions is not always a mathematical certainty. It frequently amounts to no more than a "hunch." They must put two and two together and make five. In order to make it an effective instrument, they must act secretly and quickly. Therefore, to have business conferences with the men who command the greatest supplies of gold—the bankers—would be suicidal, for they would not sell gold to the Bank of England's brokers when they would know that if it was not in the market for gold it should be.

ENORMOUS OBLIGATIONS RESTING ON BANK OF ENGLAND.

The Bank of England's legal obligations, like all deposit banks, are its deposits; but they are infinitesimal in amount compared to its moral obligations, which aggregate during normal times to the stupendous sum of $10,000,000,000. It staggers the imagination to think of it, and it has never failed to find the gold to liquidate those moral obligations.

RAISON D'ÊTRE OF BANK OF ENGLAND'S STRENGTH.

The uninformed labor under the false impression that the financial strength of the Bank of England rests altogether on public confidence in its excellent management. To a degree that is true, but the principal reason for its strength rests upon the superior system under which it operates—the superiority of banking with bills versus deposits. Under the deposit system the word "guaranty" is overworked, for all know that an express guaranty is worthless unless the guarantor has the ability to execute it.

The Bank of England's moral obligation rests on the soundest of principles, on the flexibility of its discount rate. Such rate may be 5 per cent or it may be 99 per cent. It has never passed 10 per cent. Those high rates deter the holders of those moral obligations (the British bills of exchange) from presenting them to the Bank of England for gold.

Under the deposit system the strength of a bank does not merely rest on the confidence of any particular depositor in the management, but also upon the confidence of each depositor that all the depositors entertain the same degree of confidence. That is to say, it is the constant fear of a run by depositors that destroys confidence among all, whereas if one has confidence in the management of the Bank of England he can sit in the boat with perfect contentment, for that is the only thing which could cause its failure.

WHY THE FEDERAL RESERVE SYSTEM CAN NOT CORRECT EXISTING EVILS.

At the present time every important bank in the United States keeps an exchange balance in some one of the New York City banks, and an insight into trade conditions may be acquired as effectually through an exchange balance as through a reserve balance. It is the fact and not the name of the balance which imparts the insight.

The Federal Reserve Board has no means of acquiring an insight into trade conditions. All its information is stale news when it reaches that body, as it is all acquired second hand. The board has two sources of information, namely, the Federal reserve banks and the office of the Comptroller of the Currency. The information received from the reserve banks is by districts, while that from the Comptroller of the Currency is Nation-wide. But it is days and weeks after the actual transactions are had before the board receives it, by which time business conditions may have undergone a complete change. On the other hand, the New York City banks receive that information fresh. To them it is an insight—advance information.

The clearings of the New York City banks are increasing at a far greater ratio than those of all the other clearing-house cities combined since the establishment of the Federal Reserve System. For instance, in 1916 the clearings of the New York City banks were $147,180,709,000, or 65 per cent of the whole, whereas in 1912 they were $96,672,301,000, or only 57 per cent of the whole; and as the foreign exchange business of the New York City banks increases such ratio will increase more rapidly.

That vast volume of clearings gives the New York City banks an insight into the trade conditions of the whole country as nothing else does. Now, add to that advance information the constant stream of deposits from the banks throughout the country and we have ideal conditions for speculation. They know precisely when to sell the market short and when to buy it long. Speculation was as wild in New York City in 1916 as it ever was in the history of the country.

All the banks of the United Kingdom voluntarily make the Bank of England (the British Bank of Commerce) their exchange and reserve agent, and we should experience little difficulty in convincing one bank in each community to make our Bank of Commerce its exchange agent in that metropolis, and thus place our commercial interests on an equality with the speculative interests of that city. Show our country banks that this means their own salvation, as well as the salvation of the whole country, and they, too, will voluntarily make it their exchange agent.

FEDERAL RESERVE SYSTEM CAN NOT CURE EXISTING EVILS.

The Federal Reserve Board is powerless to remedy existing evils, for the injury is done before that body has the information on which the New York banks act; even if that body possessed the insight of the New York banks, still it would be powerless, as it has no funds at its command. So it has to content itself with writing protests to the banks and appealing to Congress for more power. But more than 75 per cent of the banks of the country are beyond the pale of congressional legislation.

The Federal reserve system will fail because it is fundamentally wrong and not for lack of congressional activity. That system has been in operation less than three years. The original act comprised 23 printed pages, and up to September 7, 1916, numerous amendments were made to it by Congress comprising 9 pages, and a 29-page bill prepared by the chairman of one of the banking and currency committees is now before Congress for its action. Contrast that congressional activity with the French record on the same subject. The governor of the Bank of France testified before the Monetary Commission in 1909 that with the single exception of the amendment of the Bank of France's charter in 1897 there had not been one scintilla of legislation by the French Parliament affecting the Bank of France since 1857, and there was no public sentiment in France for any change. The governor and directors of the Bank of England voiced the same sentiment to the commission. Bear in mind that during that long period of French legislative inactivity the French Government changed from a monarchy to a republic, and they experienced a most devastating war.

Why such a contrast in the legislative activities in the two countries on the same subject? The answer is simple. France legislated scientifically at the start by giving free scope to natural law; that is, by creating a bank of commerce which is selfishly interested in serving commerce, and as a natural consequence they have taught the French people what sound banking is; whereas we have legislated at haphazard and without regard for science and directly in the interests of the banks and speculators.

Our legislation tends to teach the public that a bank can create money, while the Bank of France teaches the French people that a bank can only exchange credits; that is, convert time credits into demand-payable credits. There is no separate bank incorporation law in France, and most any set of French citizens may obtain a bank charter by going to the general incorporation act. But the obtaining of a bank charter is one thing and gaining public confidence for it so as to procure the borrowed capital (deposits) is quite a different thing. The French Government will not spend a franc to inspect that bank, such special privilege being unknown in that country; yet their banks are better inspected than our paternalistically inspected ones. In selecting a depositary the French people have learned to think for themselves and without relying on the Government. But the people of France have the splendid example of sound and safe banking set them by the Bank of France.

The Spirit of the Fathers of the Republic.

EXTENSION OF REMARKS
OF
HON. THOMAS G. PATTEN,
OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. PATTEN. Mr. Speaker, just after the announcement of the vote on the resolution reported from the Committee on Foreign Relations I received on the floor of the House the following letter. I regret that it was not delivered in time to have it read into the debate. It is an expression of a lofty conviction and breathes out the spirit of the fathers of the Republic. It merits preservation in the records of the House of Representatives.

The letter is as follows:

1215 MADISON AVENUE,
New York City, February 28, 1917.

The Hon. THOMAS G. PATTEN,
House of Representatives, Washington, D. C.

DEAR SIR: I was born in this city, in Houston Street, when it was a residential part, and am an old man naturally peace loving and averse to strife. I have never before in the course of my life felt it necessary to write to my Representative in Congress because, in the main, I have been a firm believer in the wisdom of our forefathers, who, by our Constitution, established the representative form of government both as to the executive and legislature. I therefore have considered that my Representative has stood for me to act without coercion upon his own judgment and upon his conscience in the discharge of his duties as a Member of the House in accordance with his solemn oath.

I am now moved to write you in earnest protest against the false, mischievous, and misleading propaganda presented in an advertisement which was freely published in last night's newspapers. Before dealing with the advertisement in detail, may I venture to press on your attention one or two important facts which should serve in some sort to guide the legislative action of our Congress in respect of the very grave conditions that confront us as a nation. Our President was reelected for a second term on the 7th of November last. Prior to that time, shortly after the sinking of the *Lusitania*, Mr. Wilson had solemnly protested to Berlin against the flagrant violation of our rights under international law, and the inhuman sacrifice of lives, especially of women and children noncombatants, as a consequence of sinking vessels without warning and without providing for the safety of the noncombatants. Not long after that protest, under the initiative of the President, the McLemore resolution was voted down in Congress by a heavy majority, amounting to substantial unanimity. Finally, after the savage and inhuman sinking, without warning or care for the lives of noncombatants of the passenger steamer *Sussex*, our President again solemnly protested to Berlin and repeated his warning that such violation of our rights could not be and would not be tolerated.

Among the hundreds, perhaps thousands, of opinions I have heard our citizens express on the course pursued by Mr. Wilson and the Congress I have never heard one opinion that it was too firm or too insistent upon our rights under international law, or that it went too far in declaring in the name of humanity that the lives of noncombatants and of women and children should not be ruthlessly sacrificed. So far as I am aware, the only opinion of that kind has been expressed solely in the columns of newspapers which are printed in a foreign tongue.

These various acts by our President and by our Congress resulted in the establishment and pursuit of a perfectly definite national policy, and Mr. Wilson came before the people for reelection with that policy in his hand. His very opponents found no fault with his policy as a policy, but their contention was that it was confined to words and not supported by deeds.

Mr. Wilson was reelected, and that reelection was an emphatic approval of his general course and of the policy in respect of submarine outrages and savagery that he had solemnly declared he would enforce, if the matter were pressed to an issue by Berlin. It comes about from these circumstances that in the stand he is now making to maintain our maritime rights against submarine lawlessness he has a united people at his back.

Of that there can be no mistake, despite the few neurotic cranks and busybodies whose restless egotism prompts them to confuse judgment and darken counsel.

The advertisement, which speaks for a nameless committee, begins with a perfectly familiar statement usually credited to Gen. Sherman, that "War is hell," but this committee forgets to mention that Sherman and Grant and Sheridan and Thomas and our martyred Lincoln, though they well knew that war was hell, sternly fought through a four years' war because there are worse hells than war, which the human spirit refuses, always has refused, and, thank God, always will refuse, to endure. The hell of the triumph of wrong over right, of force over law, of tyranny over freedom. The whole movement by this committee is an attempt to unduly influence, by machine organization working on the minds of the ignorant, the excitable, and the unreflecting, the free judgment and individual responsibility of our Representative in Congress, and as such deserves to be denounced and shunned by honest men.

It urges us "to help save civilization from destruction," but forgets to warn us that there is no surer way to enfeeble and debase our civilization than by worshiping our material ease and comfort and by a cowardly shirking of the stern obligations of duty toward our country and toward our fellow citizens in the pursuit of their lawful occupations.

I earnestly entreat you, as my Representative in Congress, to wholeheartedly hold up the hands of our President, and if in manfully resisting the unbearable aggressions of Berlin we are finally forced into war, for myself, in common with every loyal American citizen, I unreservedly pledge to my country my fortune and my life.

Faithfully, yours,

F. L. WARRIN.

The District Prohibition Bill.

EXTENSION OF REMARKS

OF

HON. ALBEN W. BARKLEY,

OF KENTUCKY,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. BARKLEY. Mr. Speaker, during the last few weeks, during the agitation over prohibition for the District of Columbia, statements have been made through the press and elsewhere calling in question the statements of various friends of this legislation in the District concerning the number of negative votes cast on a certain resolution offered and adopted at a referendum meeting held at Poli's Theater on Sunday, January 7, 1917.

In order that the RECORD may show the facts concerning this meeting, and in support of statements that there were numerous votes against the resolution mentioned above, and in order that justice may be done to those who have at any time or place since said meeting stated that there were numerous votes cast against the resolution indorsing the proposed referendum, I submit a number of affidavits from people here in the District, which are as follows:

IN RE UNDERWOOD AMENDMENT TO SHEPPARD PROHIBITION BILL.

John L. Knopp, being first duly sworn, deposes and says that he is a citizen of the United States and has resided in the District of Columbia for more than 20 years last past; that he is engaged in building operations; that he was unable to gain admission to the National Theater on the afternoon of January 7, 1917, and that thereupon he went to Poli's Theater, heard the address of Senator UNDERWOOD, and was present when the vote was taken upon the resolutions offered in favor of the Underwood amendment to the Sheppard bill for prohibition in the District of Columbia; that affiant voted "no," as did many others within the hearing of affiant; that there was quite a chorus of "noes" scattered over the theater, but most of the negative votes were in the rear part of the theater; that he does not know how many negative votes there were on that occasion, but affiant is of the opinion that there were at least 100 such votes, and perhaps many more.

JOHN L. KNOPP.

Subscribed and sworn to before me this 24th day of January, 1917.

WILFORD H. DUNN,
Notary Public, District of Columbia.

A true copy.

WILFORD H. DUNN,
Notary Public, District of Columbia.

—

I, Claire Luro Lusby, upon oath say that I reside at No. 1406 M Street NW., in the city of Washington; that on Sunday afternoon, January 7, 1917, I attended the referendum meeting in Poli's Theater, and was present with my mother when action was taken on resolutions that were presented in favor of a referendum vote on prohibition for the District; that both my mother and myself voted in a loud voice against the resolutions; and that I heard a chorus of "noes" all about me on the first floor where we were.

CLAIRE LURO LUSBY.

Subscribed and sworn to before me this 31st day of January. A. D. 1917.

[SEAL.] S. A. GENTRY,
Notary Public, District of Columbia.

My commission expires October 25, 1920.

—

Benjamin F. Larrick, M. D., being first duly sworn, deposes and says that he is a citizen of the United States, resides at 815 New Jersey Avenue NW., Washington, D. C.; that on the afternoon of Sunday, January 7, 1917, affiant attended the meeting at Poli's Theater, and sat in about the sixth or seventh row from the front, on the first floor; that he voted against the resolutions presented at that meeting in favor of the Underwood amendment to the Sheppard prohibition bill; that affiant heard a sprinkling of "noes" against the resolution scattered over the theater at the time the vote was taken.

BENJAMIN F. LARRICK.

Subscribed and sworn to before me this 29th day of January, 1917.

[SEAL.] PAULINE M. WITHERS,
Notary Public, District of Columbia.

A true copy.

WILFORD H. DUNN,
Notary Public, District of Columbia.

—

DISTRICT OF COLUMBIA, TO WIT:

On this 12th day of January, 1917, before me, the subscriber, a notary public in and for the District aforesaid, personally appeared Harry M. Martin, a business man of the District of Columbia, and made oath in due form of law that at a meeting held in Washington City at the Poli Theater on the evening of January 7, 1917, at which Senator UNDERWOOD made an address urging his referendum amendment to the Sheppard bill, the Sheppard bill having for its purpose the abolition of the saloon, the open bar, thus relieving the National Capital from the curse of liquor, with which our beautiful city has been afflicted for a number of years, resolutions indorsing the Underwood amendment were introduced, and an aye-and-nay vote was called for. The affirmative vote was very strong, and the negative, approximately some 150 scattered over the theater, protested by answering "No." I was one of the number; and some stranger by my side also voted "No." Some rude people shouted, "put him out!" and other unpleasant remarks, though we were in a referendum meeting. A great number of the whisky men of our city were present, as well as some of the antisaloon men, who could not get in any one of the meetings held in our city protesting against the referendum amendment

HARRY M. MARTIN.

Subscribed and sworn to before me in the District aforesaid by Harry M. Martin this 12th day of January, 1917.

[SEAL.] HENRY W. SAMSON,
Notary Public, District of Columbia.

A true copy.
Test:

WILFORD H. DUNN,
Notary Public, District of Columbia.

—

Joseph F. Bixler, being first duly sworn, deposes and says that he is a citizen of the United States and has resided in the District of Columbia for more than 23 years; that he was present at Poli's Theater on the afternoon of Sunday, January 7, 1917, when the vote was taken upon the resolutions in support of the Underwood

amendment to the Sheppard prohibition bill; that affiant voted "No"; that there was a surprisingly strong chorus of negative votes against the adoption of the aforesaid resolutions; that in his opinion there were from 50 to 75 negative votes in the immediate section in which he was located—the rear of the first floor; that he was astonished at the number opposing the resolution aforementioned.

JOSEPH F. BIXLER.

Subscribed and sworn to before me this 24th day of January, 1917.

[SEAL.] WILFORD H. DUNN,
Notary Public, District of Columbia.

A true copy.
Test:

WILFORD H. DUNN,
Notary Public, District of Columbia.

Helen Bowen Hall, being first duly sworn, deposes and says that she is a citizen of the District of Columbia and resides at No. 86 V Street NW., Washington, D. C.; that she was present with Mrs. Ray Newby, of 39 Bryant Street NW., at Poli's Theater Sunday afternoon, January 7, and there heard Senator UNDERWOOD speak in favor of a referendum on the question of prohibition for the district; that she was present when a vote was taken on certain resolutions favorable to a referendum vote, and that affiant voted against said resolutions, as did Mrs. Newby, who sat beside her, both voting in a loud voice; affiant further says that she heard many others all over the theater vote against same resolutions; affiant was seated in the upper gallery, where there were many vacant seats.

HELEN BOWEN HALL.

Subscribed and sworn to before me this 3d day of February, 1917.

[SEAL.] WILLIAM HOLLOWAY,
Notary Public, District of Columbia.

Revenue for National Defense and National Emergency.

EXTENSION OF REMARKS
OF
HON. JOHN M. MORIN,
OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. MORIN. Mr. Speaker, we are truly living in times when no man can tell what the hour may bring forth. We are hearing on every side the cry for "Preparedness," but many do not stop to consider just what this may entail. If we as a Nation wish to be adequately prepared we also must make plans by which the money to meet the needs can be provided. For this purpose I have introduced a bill which will provide for the issuing of $1,000,000,000 in bonds. This bond issue will take care of any increase of Army or Navy that may be contemplated. Knowing that the future will be able to participate in the work that is now being done, it is only just and right that they should share part of the burden, and by this bond issue they would be doing so.

Another purpose of this bill is to avoid the probable necessity of a special session of Congress by providing the President with sufficient revenue to prepare for any national emergency that may arise after the adjournment of the Sixty-fourth Congress and before the reconvening of the Sixty-fifth.

This bond issue of $1,000,000,000, under the plan here presented, is to be payable in not less than 10 years nor more than 30 years.

This money can be used for the building of a Navy and the increase and equipment of the Army and operations of every kind which will protect the rights and the property of the people of the United States.

It is my opinion that a bond issue is the sane and sensible method of providing for the safety of our country and the means of being prepared, which will not bear hardly upon the industry, commerce, and manufactures of our country, as does the present methods of the revenue bill in taxing the profits of manufacturers, which bill recently passed the House and is now before the Senate for action. Such a method taxes everything under and over the earth which will yield more or less revenue to be used for the payment of the expenses of our Government and does not relieve the people from the inconvenient and objectionable features of placing stamps on all kinds of instruments, papers, checks, and documents. This bond issue will release awakening business and the industrious life of the Nation from these unsatisfactory, and, in many cases, discriminatory methods.

My plan will distribute the expenses of preparedness to preserve peace for at least 25 or 30 years and not burden the people for the immediate consequences of a policy which is intended and will protect the future of our country. As these war preparations are intended to benefit our people in the future it is only fair and just that those who come after us should pay their reasonable share for the protection which we have provided for them.

It appears to me plain that the preparedness which we are providing for is not for our immediate protection and safety alone, but is for the protection and safety of our future in the United States. It follows that those who are protected should pay their share for such protection, and therefore this bond issue provides that they shall contribute for their own safety. Many argue, even in the face of our present perplexing problems, that there is no reasonable belief that the United States should be precipitated into a war with any foreign nation. But it could have been just as sincerely believed and dogmatically uttered before now of all the civilized and Christian nations of Europe engaged in the terrible and fratricidal war of to-day that it was impossible for such a calamity to arise; yet we have the fact before us that there is now going on in Europe a war unparalleled in its scope, purpose, slaughter, and desolation.

We are fearing even now that this military frenzy may spread to our beloved country and cause us to be embroiled with or without cause with some of the nations of the earth. God forbid that such should be the case. But history, experience, and reason teaches that "in times of peace prepare for war," and we are always in danger of the savage and violent parts of our nature asserting themselves and blasting our hopes and expectations of that glorious time when "They shall beat their swords into plowshares, and their spears into pruning hooks; nation shall not lift up sword against nation, neither shall they learn war any more."

Resolutions Adopted by the Legislature of the State of California.

EXTENSION OF REMARKS
OF
HON. JOHN E. RAKER,
OF CALIFORNIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. RAKER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD, I include two resolutions adopted by the Legislature of the State of California.

The resolutions are as follows:

SACRAMENTO, CAL., *March 1, 1917.*

Hon. JOHN E. RAKER,
House of Representatives, Washington, D. C.

DEAR SIR: The Legislature of the State of California this day adopted the following:

"Senate joint resolution 1 (introduced by Senator Ingram), relative to the work of the California Débris Commission.

"Whereas there is now pending in the Congress of the United States H. R. 351, by JOHN E. RAKER, making an appropriation of $200,000 for defraying the expenses of the California Débris Commission in carrying on the work authorized by an act of Congress of March 1, 1893; and

"Whereas the prosecution of said work will greatly augment the wealth, productiveness, taxable property, and income both of the State of California and of the United States: Now, therefore, be it

"Resolved by the Senate and Assembly of the State of California jointly, That our Senators and Representatives in Congress be, and they are hereby, urged and requested to take all proper means to expedite and secure the passage and enactment into law of the said H. R. 351; and be it further

"Resolved, That the secretary of the senate be, and he is hereby, directed to transmit copies of these resolutions forthwith to each of our Senators and Representatives in Congress."

CLIFTON E. BROOKS,
Secretary of the Senate.

SACRAMENTO, CAL., *March 2, 1917.*

Hon. JOHN E. RAKER,
Washington, D. C.:

In compliance with the provisions of assembly joint resolution 6, by Mr. Dan E. Williams, adopted finally in the senate yesterday, herewith find a copy thereof:

"Whereas the Hon. JOHN E. RAKER, on the 5th day of July, 1916, did introduce a measure for the building of national-defense highways and post roads for the general good of the State of California over the El Camino Sierra: Therefore be it

"Resolved by the assembly and senate jointly, That our Senators in Congress be instructed and our Representatives requested to use all reasonable means to secure the passage of said measure establishing a military national-defense highway and post road for the general good that will be accomplished."

Owing to the fact that Members of Congress are no doubt returning to their homes, would deem it a great favor if you will arrange to have the above resolution conveyed to the Congressmen and Senators from California.

B. O. BOOTHBY,
Chief Clerk of Assembly.

Protect American Lives and American Rights.

EXTENSION OF REMARKS

OF

HON. J. CHARLES LINTHICUM,

OF MARYLAND,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. LINTHICUM. Mr. Speaker, under the leave granted me to extend my remarks in the RECORD I wish to insert a resolution passed by the Board of Trade of Baltimore, February 26, 1917, and also a telegram, signed by a number of Baltimore's most prominent citizens, urging Congress to act in unity with the President to protect American lives and American rights.

The matter referred to is as follows:

Resolved, That the Board of Trade of Baltimore, composed of 19 leading organizations of this city, pledges to the President of the United States its whole-hearted support in whatever measures may be necessary to guarantee and preserve the long-established principles of American freedom, both on land and on sea; and

Resolved further, That this board stands unequivocally devoted to a policy of peace, but only upon condition that peace can be maintained without the sacrifice of national honor or American principles.

BALTIMORE, MD., *March 1, 1917.*

Hon. J. C. LINTHICUM,
House of Representatives, Washington, D. C.:

We, the undersigned, earnestly hope that the Congress will immediately act in unity with the President to protect American lives and American rights.

Dr. William H. Welch, Edgar R. Dawson, John R. Bland, Rev. Arthur B. Kinsolving, Dr. J. M. T. Finney, Harold Randolph, Dr. William S. Thayer, Dr. Henry M. Hurd, Joseph Packard, W. S. Marston, William L. Marbury, John H. Latane, Prof. R. W. Wood, Dr. Theodore C. Janeway, Prof. Joseph S. Ames, Dr. Wm. S. Halsted, Dr. Winford H. Smith, Dr. T. Howland, Prof. W. H. Howell, Dr. William A. Fisher, Theodore Marburg, James H. Brady, jr., Richard H. Bayard, Dr. T. B. Futcher, Vanlear Black, Dr. Richard H. Follis, Right Rev. John Gardner Murray, James Gustavus Whiteley, Arthur Machen, Duke Bond, Wm. Cabell Bruce, Henry A. Orrick, Dr. Lewis Barker, Dr. Franklin P. Mall, Prof. C. J. Tilden, Blanchard Randall, Julian S. Jones, Charles E. McLane, H. S. Post, John Cates, Wyatt Randall, John B. Ramsay, N. Murray, Dr. Thos. S. Cullen, Rev. John McDowell.

A Square Deal for the Dairy Interests.

EXTENSION OF REMARKS

OF

HON. THOMAS D. SCHALL,

OF MINNESOTA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. SCHALL. Mr. Speaker, in one guise or another there is always a deadly war being waged by the oleomargarine interests against the dairy interests. It is a nasty fight, an unfair fight, the fight of an imitation trying to mask as the real article. Just the same proposition as that waged by the corn-products people, who are trying by specious argument to make it appear that an inferior and adulterated mixed flour, composed of some wheat and a whole lot of unnourishing corn flour, less nourishing that corn starch, would result in cheaper bread. If a poor man wants corn bread, he can do his own mixing. But if he wants his wheat flour pure he should have it. We hear much cant about "the poor man's flour" from those who want to take it away from him and substitute "something just as good." The same thing is being put forth about the poor man's butter as an argument for taking the tax off colored oleomargarine. They do not say a word about the fact that they are raising the tax on uncolored oleo. There is the nigger in the woodpile. The uncolored oleo, the white oleo, is the poor man's butter. Well and good. It is cheap now, whereas the colored runs into fancy prices. And if he wants it colored he can color it himself. If dealers are permitted to color it, immediately it comes into direct competition with butter, and up will go the price of oleo.

Not only that, the white oleo can not be easily adulterated. Its whiteness is the poor man's protection, and to allow colored oleo to be sold puts a premium on adulteration.

This measure is a blow at the prosperity of the dairy interests. The farmers of the dairy States are a unit against it; organized labor has voiced its protests through an able letter written to the Members of Congress by James H. Maurer. He says in part:

> The farmer could never hope to compete with the manufacturers of the imitation article. Dairy farmers would turn to something else, and the price of the imitation article would rise till finally the consumer will pay more than we are now paying for the genuine article.

And, again, he says:

> This would mean the starving of the land, for, as fertilizers, cattle are the life of the soil.

Dr. Stockbridge, president of the Farmers' National Congress, says in warning the southern farmer of the sinister purpose back of the arguments used to betray him into favoring this project:

> The cottonseed-oil interests of the South have joined hands with the Packers Trust for our undoing. The real interests of these oil-mill men has never been with the farmer. Southern farmers are asked to demand that their Representatives in Congress jeopardize the new agriculture of the South, annul all efforts at diversification, prevent soil conservation, and risk our prosperity.

The argument used to the southern farmer is that the cottonseed oil used in oleo binds the southern interests to this measure, when the fact is that only in the lowest grade of oleo is cottonseed oil used, and that only to the amount of about $30,000 a year. We may well cast an eye of suspicion on any projects which require false arguments to bolster them up.

Let this shoddy "Just as good as butter" stand on its own legs, and not try, like an old man of the sea, to ride on the back of the dairy interests. It is all right in its place. And it may be just as good as some butter. But the butter we make out in Minnesota is the best butter in the United States, the gold-medal butter of the country. You ought to go into those fresh, sweet-smelling creameries of ours and see it piled up in white wooden tubs ready for molding, fragrant, rich, sweet as clover. We do not get the best of it ourselves. That is good enough to send to New York and sell to the bloated plutocrats, the dainty feasters, at fancy prices, along with their flowers and hothouse fruits and other luxuries.

And that good butter is not going to be put in competition with colored grease. The dairy industry deserves fair play from the Nation of which it is the sturdiest wealth producer.

Here is the Agricultural Department, straining every endeavor to encourage the raising of dairy cattle. The tax proposed would deal a deadly blow to the farmers with one hand, while it passed over with the other millions and ever-widening vistas of millions to the packers. Dairy butter is not going around under cover asking for special protection. All it asks, all it demands, is a fair deal.

When "Bone Dry" Becomes the Real Thing.

EXTENSION OF REMARKS

OF

HON. JAMES A. GALLIVAN,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Wednesday, February 28, 1917.

Mr. GALLIVAN. Mr. Speaker, liquor has more enemies in public and more friends in private than any other substance the world has ever known. If some men in this Congress shall have their way the ashes of Sodom and Gomorrah would look like a bubbling spring in comparison with this land of ours when "bone-dry" becomes the real thing. [Applause.]

> Oh what a tangled web we weave,
> When first we practice to deceive!

I do not believe that argument is of any avail in this hour when from appearances this prohibition bill must pass. Argument is unnecessary, too, because in my judgment not 20 men in this House of the number that will vote in favor of prohibition for the District of Columbia believe in prohibition. [Applause.] I can not let this opportunity go by without congratulating some of my Democratic colleagues, who have been leaders in this Congress in other days, upon having returned to the ranks of those who sit here to take orders. However, I can not congratulate my party upon its change of leadership, and I very much doubt that it will be possible for me to stay with that party when its policies and principles are to be formulated by its new leaders, the representatives of the Anti-saloon League of America. I must admire the gentleman from California. In this hour of national alarm, with a national

crisis here in America, with thousands crying for food and clamoring for relief from this Congress, and with an international crisis of such importance that the President of the United States finds it necessary to come before the Congress twice in less than a month, at the signal from the gentleman from California all these questions of gigantic importance must be laid on the shelf, and the representatives of a hundred millions of people are ordered to consider a proposition to close certain places of business here in Washington now licensed by law. The gentleman from California has grown great since the poll was taken as to the political line-up of the next Congress. I have noticed that he has become an organizer of a new party. Evidently the Democratic leaders who desire to continue in the high places that they have enjoyed for some few years past have also noticed this fact. I can not help thinking that the gentleman from California must have frightened these leaders (?) almost to death. [Laughter.] Why, he has grown so great in the past month that even old Julius Cæsar would have grudged him the meat upon which he hath fed! [Laughter and applause.]

However, if the Democratic Party is going to become a prohibition party, for one I am going to leave the Democratic Party. I do not believe in prohibition. Prohibition is not temperance, since temperance means and comprehends moderation, calmness, judgment, and justice. Prohibition is radicalism run wild; it is an attempt to bring back to American life that Puritanism which made the scourge, the branding iron, and the penal law the agencies of its perverted moralities, and which rejected the peaceful, kindly ministrations of the Man of Sorrows and substituted therefor the fire and ferocity of the zealot and the violences and vagaries of the fanatic. Like any other perversion of a desirable thing, this perversion of temperance, called prohibition, appears to be cradled in ignorance, fostered in hysteria, voiced by intolerance, and marshaled by tyranny. In principle and in practice prohibition is a negation of American freedom and personal liberty; in its essence it is a denial of the laws of nature, and in its purpose a pathetic attempt to stifle a human instinct as old as humanity itself.

It will hardly be gainsaid that any propaganda and policy which transforms a peaceful, temperate, law-abiding city or town into a lawless community is false to its teaching, vicious in its results, and dangerous to the morals and civilization of the Nation. This is exactly what prohibition does.

With prohibition here in the District of Columbia there will be adventure if not romance in getting a drink. [Laughter.] That will be something, defiance of a law which we do not respect. There is now no more adventure about stepping into a licensed saloon and buying a high ball or a stein of beer than there is about going to the post office to buy a postage stamp, or into a grocery store to buy a pound of coffee. There is not a thrill of romance to be found in making the round of all the saloons in town under the present arrangement. There is no temptation about the licensed saloon, and it has not one-tenth of the appeal to the venturesome youth that the cabaret show has, or even the moving-picture houses.

With prohibition all this will be changed. There will be plenty of adventure and even hazard about the search for a drink. Blind tigers will be places surrounded by romance to make them sought after, however vile they may be in reality. Moonshiners and bootleggers will be mysterious characters inviting the romantic youth to make their acquaintance. Here in Washington you will have the same opportunities for romantic adventure that they now have in the mountains of prohibition Georgia and North Carolina [laughter], where men make moonshine and men buy moonshine, not because they like moonshine, but because Uncle Sam's revenue agents are hunting for illicit stills and chasing bootleggers until every native is ready to defend the sacred institutions of home and expel the invader from the soil. Georgia and the Carolinas are but types of their sister States in the leafy aisles of that terrestrial paradise called Dixie.

The most thrilling tales of adventure to-day are to be found in the official report of the Commissioner of Internal Revenue, where are recorded the hairbreadth escapes of revenue agents from moonshiners; there you will learn how these men risked their lives and buried their dead comrades in the mountains of prohibition Georgia, in Tennessee, in Kentucky, or in the Everglades of Florida, because their business is to force obnoxious laws upon communities that do not believe in them and have the courage to protect themselves from their enforcement. Moonshine can be made in a tea kettle, in a closet, cellar, or soap box—yes, even in a Congressman's private office in Washington—as quietly as it is made in a cave or a mountain cabin in North Carolina; and beer can be brewed in the kitchen and from almost anything that grows—the greater the decay, the easier the fermentation.

It will be an adventure worth the romance of Robin Hood to go out in search of moonshine or smuggled whisky and beer in Washington when we have prohibition here; yes, and it will call for an army bigger than that recommended even by Gen. Scott in these days of the Nation's peril to round up the moonshiners, the bootleggers, and the congressional and other patrons amoung the haunts of the cave dwellers of the National Capital. [Laughter and applause.]

Mr. Speaker, I have often heard it said since I came to Congress that rum is exhaled in the lobby and denounced with the same breath on the floor. I wonder if that be true. I can not help thinking that prohibition, as exhibited here, is the pretense of a cheap sybarite whose conception of himself is founded in drink. Oh, I fear that the angle of the sun has played havoc with the Anglo-Saxon. In this bill we find a sample of the statesmanship of the wide veranda, the mint julep, and the reminiscence. My friends from the South would have us believe that prohibition is a virtue there, but I for one fear that they have ordained it in that land for another reason. They tell us it lessens murder, and let us hope that this is true. If it would make life safer in that primitive and halcyon land we would all be willing to make it even drier than it now is.

Again we hear that prohibition in the South is for the purpose of keeping drink from the negro, but we have the evidence that the negro in the South is the official bootlegger and purveyor to the trade, and if he was not naturally a sober man he would help himself ofttimes even more liberally than he does.

Mr. Speaker, the word hypocrite was the only epithet ever directly applied to anyone by the Saviour of men, and the necessity of making use of this word is the most solemn proof of the vileness of hypocrisy.

Oh, I am sorry that the destinies of the people of this city are controlled by the Congress of the United States! To my mind Washington is one of the most genteel cities in the world. The chief element of its population is men and women from the Northern and Western States, who would not be here if they did not have brains. When put to the test they were able to pass a civil-service examination and are now performing the tasks assigned to them by the Federal Government. You are not willing to trust these intelligent people to vote even on prohibition. Some day they will have their turn at the wheel.

Mr. Speaker, I would like to call to the attention of the House the story of the days of prohibition in the State from which I come.

It is commonplace to say that Massachusetts is a Commonwealth that has always been a leader in the upward and onward march of the Republic; its people from the days of 1620 have been a moral, religious, law-abiding community, industrious, shrewd and tenacious of liberty and sane government. The experience of such a community is worthy of attention, and its deliberate political action on this question of prohibition can not be ignored by thoughtful and freedom-loving men.

After a dozen or more years of prohibition, during which the whole police power of the Commonwealth was placed back of the law, the people of Massachusetts, weary of the falsity and futility of the theory of enforced political total abstinence, demanded the abolition of the prohibition statute in the interests of the moral law and order. Petitions were circulated and presented to the legislature, calling for a legislative hearing as a preliminary to action, and many days were devoted to taking evidence.

Men of the highest reputation and character, men of positions of honor and influence in the community—ex-governors, mayors of cities, senators, clergymen of every religious faith, college professors, leading medical men and merchants and manufacturers, appeared before the legislative committee to demand the abolition of the law and the initiation of a reign of law, order, common sense, and American freedom.

The celebrated war governor of Massachusetts, the Hon. John A. Andrew, conducted the case for the petitioners; and such men as John Quincy Adams, Oliver Wendell Holmes, Prof. Louis Agassiz, the Rev. Dr. Peabody, professor of Christian morals at Harvard University; the saintly Rev. Dr. Theodore Edson, of Lowell; scholars from Princeton, Yale, Harvard, and men of mark and eminence from all over New England came to give their testimony to pray for the end of lawlessness and the return of sanity and common sense. The burden of their testimony was that prohibition had failed; it had been productive only of demoralization and contempt for law, and it had increased the evil it was framed to cure. They asserted that decency and temperance in Massachusetts could be fostered and maintained only by a wise regulation and supervision of the liquor traffic, and that the wild, if heroic, attempt to dragoon human nature and foster morality and wisdom by compulsion and hysteria had failed utterly.

Ex-Gov. Washburn, among other things, said, "I do not believe, from a pretty long course of observation and experience, that you can make a law which is against the public sentiment and carry it out, any more than you can make a black man white, or a white man black. You can not do it." He said that when the sale of liquor was a matter of local regulation they had produced good results in Worcester County because the local sentiment was back of it; but when the prohibition law—compelling total abstinence willy-nilly—was enacted the pendulum swung back and public opinion not only refused to support it, but antagonized it.

Hon. John Quincy Adams said that as a citizen, a trial justice, and a member of the governor's staff he had given the prohibitory law his attention, and it had proved an utter failure in suppressing either the sale or consumption of liquor.

Rev. Dr. Theodore Edson, rector of St. Ann's Episcopal Church, of Lowell, believed the prohibitory law had a tendency to increase drunkenness. He himself depended upon religious principles and the appeal to religious feeling to produce temperance, and not upon the statute. Prohibition had failed and should be abolished.

The famous "Autocrat of the Breakfast Table," Dr. Oliver Wendell Holmes, professor of anatomy and physiology at Harvard College, had a keen sense of humor and a whimsical appreciation of the absurdities preached by the prohibitionists. He differentiated alcohol plain and simple from alcohol as a constituent in the combination of beverages.

He said:

I think that alcohol, sir, is meant for use in the arts, for burning in lamps, and for various other similar purposes. Alcohol itself I do not think is an article which is used in the human economy. I have never known it to be drunk, unless some person may have been unfortunate enough to have drank it from the jars containing specimens in anatomical museums—

But—

alcoholic drinks or drinks into which alcohol enters as a constituent in combination have a proper use in the human economy dietetically and medicinally. It acts as food and medicine.

Prof. E. N. Hosford, of Harvard, one of the most eminent chemists of his day, and a pupil of Leibig, Germany's famous master chemist, gave the committee an illuminating contribution on alcohol in his testimony. He called it a valuable aid to digestion and a food and a stimulant. It ministers to the strength of the organism and enters into it. It acts as do tea and coffee and some essential oils. Asked if alcohol was a poison, he said it was in its absolute purity, but certainly not in combination. Vinegar contains acetic poison; there is poison in the oil of pepper, mustard, horse-radish, and other condiments; but they are not barred as foods, and are beneficial.

Not the least interesting feature of this legislative hearing was the testimony of a dyed-in-the-wool prohibitionist, who maintained, in the face of the Scriptures, that the use of alcoholic beverages was immoral and, in spite of the evidence of doctors, chemists, and men of science that it was physically injurious and not a food. He declared he did not care what people thought. Right or wrong, he was for prohibition. His attitude in 1867 was much the same as that of hundreds of his cult to-day. They do not represent an attempt to elevate the community as much as they do a resolution to ram their opinions down the throats of their neighbors.

The Rev. A. P. Peabody, professor of Christian morals for many years at Harvard College, said he did not believe in the use of distilled liquors at all; he did favor the use of light wines used in Europe. He had watched the operations of a prohibitory law in New Hampshire, Massachusetts, and Maine, and he had seen no good at all.

I believe—

He said—

that all the prohibitory laws that have been enacted have done a great deal of mischief by the opportunities and invitations they offer for perjury on a large and harmful scale, and for that reason I am afraid of such legislation.

The Rev. John Jones, a Methodist minister, settled in Billingham, Mass., and a lifelong advocate of temperance, stated that he had lived under prohibition in Maine and Massachusetts from the inception of the system, and had been a believer in the law, but experience had taught him that the law drove the liquor traffic into dark and disreputable places, beyond observation and regulation, and that it corrupted young men and made them drunkards. As a rule, to-day—1867—people were weary of prohibition and desired a stringent license law.

The Rev. George B. Ide, D. D., pastor of the First Baptist Church of Springfield, Mass., believed that temperance work could only be accomplished by personal persuasion and an appeal to the better nature of men. Prohibition, as far as he could see, was a failure; its influence was to place the work of making men temperate on the law and the police, and to stop the work that did count, personal effort.

Weeks were consumed in gathering evidence pro and con by the Massachusetts legislative committee; everyone who wished to be heard had an opportunity, and the widest latitude in testimony was permitted. When the hearings were closed the merits of the case for and against prohibition had been pretty thoroughly thrashed out.

The committee in its report called attention to several facts worth attention:

(1) The strength and character of the opposition to the prohibitory law. If the existing law was sound in principle and fruitful of good results, it was surprising that remonstrants in the number and of the character that they were should call for the repeal of the law.

(2) The opposition to the law is increasing instead of decreasing. Very frequently there is a decided contest over the establishment of a new principle in legislation; but in ordinary cases, if it is found to work tolerably well, the old opposition gradually dies out and disappears. It is certainly a significant fact that the opposition to this law seems steadily to have increased.

(3) The third fact is furnished by the supporters of the law themselves in the character of the legislation designed by them from time to time to carry it out more efficiently. The constant attempt to make more laws and stringent to enforce the original law makes it odious to the people, since the harsh administration of law is ever unpopular.

Prohibition made catering to a public demand a crime, and laws to restrain and punish an artificial crime are usually offensive to a free people. The law is unsound in principle, the committee reported. If it is immoral and sinful to sell liquor, it must be wrong to drink it; yet the law seeks to punish the seller and not the buyer of alcoholic beverages. If the use of beverages is not wrong, is there either sense or justice in punishing the seller of it. But passing by this serious defect in the method by which total abstinence is to be enforced, we say that it is beyond the legitimate scope of legislative action to attempt, by criminal enactment, to prevent the many from using these beverages because a few may abuse them.

Summing up, the committee said, among other things:

It is the right of every citizen to determine for himself what he shall eat and drink. A law prohibiting him from drinking alcoholic liquors universally used in all countries and ages as beverages is an arbitrary and unreasonable interference with his rights and is not justified by the consideration that some men may abuse their rights and may therefore need the counsel and example of good men to lead them to reform. But this law does in theory prohibit him from drinking every kind of alcoholic liquors, since it prohibits every sale of every kind of alcoholic liquors to be used as a beverage.

Judge Page, of Pittsfield, said that under the law intemperance increased faster than the population; and the mayor of Worcester declared it had not suppressed the sale of liquor nor diminished drunkenness; and those and other sayings the committee heeded. It recommended that it was the part of wisdom to heed and answer the petitions that had come from every part of the State; and they suggested that a license system be substituted for the prohibition law, which was unpopular, unsupported, unenforced, and futile.

The Massachusetts Legislature heeded the people and enacted a license law which has worked from that to this with substantial satisfaction to all the people.

The clamor and tumult of the "professional" temperance people, the paid agents of societies and endowed agencies have not made much impression in Massachusetts, for the State has been through the system and learned, not only its failure and futility but its demoralization and mischief.

Each city and town in Massachusetts decides for itself the question of licensing the sale of liquor within its own precincts, but it can not prevent any man from buying the liquor he needs elsewhere and bringing it home.

This important fact has been learned that in places where liquor is not sold the sale of injurious patent medicines—bad liquor masquerading as medicine—and more injurious drugs has increased; and the result is written in the statistics of abominable crimes and multiplication of insanity. No community is advanced and uplifted by hysteria, fanaticism, or false philosophies; only by liberty and justice can any American community thrive.

Prohibition does violence to every principle dear to Americans and insults the convictions of every decent God-fearing man.

Mr. Speaker, I have finished, but I want the House to hear the story of a murder in Georgia this very week. I read from the Atlanta Constitution of this very day. Here it is:

SEEKING MURDERER OF SHERIFF SHIREY—TEN WHITE MEN AND TWO NEGROES ARE PLACED UNDER ARREST IN TROUP COUNTY FOLLOWING DUEL.

Following the assassination of Sheriff W. B. Shirey, of Troup County, Monday by moonshiners while he was raiding a still, in connection with United States Revenue Officer J. A. Henderson and S. A. Smith, one of his deputies, Revenue Agent E. C. Yellowley rushed seven of his men to La Grange to assist Mr. Henderson and the local authorities in ferreting out and capturing the murderers.

The names of the revenue officers from the local office who went on this quest are R. E. Tuttle, E. L. Bergstrom, J. F. Camp, F. B. Harris, A. C. Sowell, Dave Reese, and W. S. Richardson. Later in the day they notified Mr. Yellowley that they had made 12 arrests, 10 of white men and 2 of negroes.

The revenue agent here was in receipt of a telegram from Internal Revenue Commissioner W. H. Osborn at Washington directing him to detail as many of his men as possible to assist the local officers in Troup County in running down the guilty parties.

Rarely has an assassination aroused so much indignation not only in the immediate community affected, but throughout the State, as that of Sheriff Shirey. The killing occurred about 10 miles from La Grange, between that town and Chipley. The officers were demolishing a still when they were ambushed and shot at by men hid in a clump of bushes about 60 paces away. One shot hit the sheriff, killing him almost instantly, but the two officers assisting in the raid escaped.

Following the murder there was a keenly aroused determination on the part of the Troup County people, as well as the revenue officers, to break up the nest of illicit distillers that have been infesting that section. Three stills were raided and destroyed Tuesday in addition to the one broken up Monday.

Revenue Agent Yellowley paid a high tribute to the murdered sheriff Tuesday.

"We considered him one of the best sheriffs in our territory," he said. "We always found him willing to cooperate with the Federal officials in the enforcement of the revenue laws. He was a fearless officer, a perfect gentleman, and highly respected by all who knew him. He was a frequent visitor to this office in connection with rooting out illicit stills in his county, and we knew him well."

The Sheppard Bill.

EXTENSION OF REMARKS
OF
HON. LEWIS L. MORGAN,
OF LOUISIANA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. MORGAN of Louisiana. Mr. Speaker, I wish to digress from the subject of national prohibition just long enough to state why I voted for the Sheppard bill and against the proposed referendum thereto. It is obvious to every Member that the District is not a self-governing unit, as it is under the direct supervision and control of the Congress. Therefore we religiously try to guard against thrusting upon the people here any law without due consideration of its fitness and applicability.

Now, I voted for the Sheppard bill just as it left the Senate because I did not think it was fair to attempt to delude the American people into believing that the adoption of the proposed referendum imported the submission of the proposition to the duly qualified citizens of the District for adjustment. Sirs, you know, or at least you presumably know, that the enfranchisement of a conglomerated mass such as would clamor for the right to vote upon this proposition would have been an unspeakable mockery.

To vote for the referendum may have been and probably was a matter of inclination with some of you gentlemen, but you can not pitch it upon the sacred ground of duty. Whilst I impugn no man's motives, nor question the integrity of any man's purpose, yet I am afraid that some of you gentlemen who were so loud and vociferous in your denunciation of those who favored the Sheppard bill, free from that adroitly drafted referendum, really think it was your sense of proportion that impelled you to insist upon its adoption, when it was only sympathy for the liquor business. Mr. Speaker, every unprejudiced mind in this city is well aware of the fact that the Congress is eager and anxious to make the District the most magnificent spot the sun has ever shone upon. However, in our anxiety to improve and embellish and beautify it may we not forget that it can alone be refined and honored by a pure environment?

I am unable to convince myself that the saloon here or in any other community exalts the mind or in anywise refines the public morals. Therefore, in my opinion, the barroom is neither an essential nor a desirable adjunct to the Nation's Capital. And in the inelegant phraseology of the street, I am heartily in favor of "canning" it.

Now, Mr. Speaker, the day is at hand when every Member of this body must align himself with those who favor the passage of all measures that are subsidiary to national prohibition or with those who are arrayed against such measures. There can be no neutrals or straddlers. He who does not take a definite stand either pro or con will certainly find himself ill regarded on one side and viewed with disfavor by the other. Hence I concluded to give this subject some thought for my own guidance. I did so, and my judgment to-day is that national prohibition will prove to be the most efficacious solution of the liquor traffic. However, in this connection I wish to say that heretofore in season and out I have uniformly opposed prohibition in all its phases and in every form. Not that I entertained any deep-rooted admiration for or faith in the saloon as an institution. For as a matter of fact, it has never been a golden sunset in my eyes. But undesirable as the barroom is, to me it has never been so supremely reprehensible as the bootleggers and blind tigers who are, to all intents and purposes, the emissaries and underlings and puppets of the liquor dealers, through whom the dealers pour their liquid commodities into the bowels of the prohibited units and thus produce drunkenness, incite perjury, and encourage corruption.

Gentlemen, you can neither effectively end nor adequately control the sale and consumption of intoxicants save by prohibition national in scope. For the reason the traffic is an objectionable growth on the body politic, and its tentacles and roots are coextensive with the Nation itself. This being true, how can any individual State hope to successfully cope with it? Every atom of every root must be cut and removed or the results will be transitory, unsatisfactory, and questionable. Yet I believe the Webb-Kenyon Act and the Reed amendment will very materially curtail the pernicious activities of the blind tigers and bootleggers, and consequently give a great impetus to the cause of prohibition.

Much has been said against the desirability of the Reed amendment because it was introduced primarily for the purpose of bringing about the enactment of ultraliberal liquor legislation. Nevertheless, from the liquor adherents' viewpoint, it was a faux pas. It might have been conceived in sin, but it will be one of the most enticing incentives every held out to the American people to actively support the cause of prohibition. Why, the most effectual argument the whisky contingency ever put forth was that prohibition did not prohibit. Now their own friend has unwittingly robbed them of that time-honored and oft-repeated declaration. The will of God seems a wondrous way that is often beyond our poor understanding. Personally I am anxious to see prohibition written into the Federal Constitution, as I am afraid of that brand of prohibition whose existence will rest upon the ever-changing personnel of the Congress.

Mr. Speaker, it is doubtless true that innovations are inoperative when prematurely adopted; that is, when they precede the real wishes of the people who are to be affected by them. But if you take the sense of the American people to-day on the proposition of national prohibition you will find an astounding majority heartily in sympathy therewith. So obvious is this that the liquor adherents are vigorously invoking the assistance of all the friends of the liquor business and industriously calling upon all the enemies of prohibition for their cooperation in the hope of preventing, if possible, the submission of the proposed Federal amendment.

Now, the proponents and friends of national prohibition are not urging the Congress to settle this controversy. On the contrary, we are asked to not consult our own will but to relegate the question to the sovereign citizenship of this Nation for adjustment.

I know not what course you will pursue, but there is a large and respectable portion of my district demanding the right to be heard on this subject, therefore I do not think I would overstep the limits of fair play by voting for the adoption of a measure calculated to enable my constituents to exercise a power lodged in them by the Nation's organic law. However, I am not unmindful of the fact that there are those who will impute to me a want of firmness and stamina on account of the views I here give expression to.

The man who realizes the error of his way and refuses to abdicate that devious course is, in my opinion, unspeakably worse than the one who has the fortitude to publicly acknowledge his mistake. But be that as it may, I have no apology or excuse for saying that the people ought to be given an opportunity to express their own ideas upon this vital question.

To those who will arrogate to themselves the right to criticize me, I wish to say that "the foolish and dead alone never change their opinions."

Now, Mr. Speaker, if the regulations prescribed by the several States for the government and control of saloons were con-

scientiously observed the inherent evils thereof would be far less harmful. Unhappily, however, the vast majority of the keepers of these establishments really think that all laws which seek to regulate the liquor business are enacted merely to appease and pamper the hypercritical element in the various communities. Hence, when an officer makes the slightest pretense to enforce such legislation he is promptly and severely rebuked rather than congratulated.

Mr. Speaker, that flagrant disregard of laws held sacred by well-regulated communities is mainly responsible for the great antiliquor propaganda, before whose determined onward march the now waning but once mighty liquor interests must soon crumble and fall.

I take it no one will deny that the liquor traffic is hostile to every form of social activity which seeks to ameliorate human conditions; nor will anyone gainsay that the liquor business is working at cross-purposes with those who believe in the observance of the mandates and the requirements of the law.

Does any man think it chimerical to charge that the saloon is a perpetual solicitation to depart from the path of rectitude? Again, does not its accessibility make total abstinence a thousandfold more difficult? Do you think it an exaggeration to say that liquor incites inherited weaknesses and tendencies; that it degrades and lowers the life standards; that it warps and twists the physical structures of our boys at the very threshold of their careers; that it dooms countless women and children to sunless homes and inculcates a supreme contempt for all the decencies of humanity? Of course you do not. Now, on the other hand, can any man who is capable of divorcing himself from every semblance of self-interest—economic and political—conceive of a single instance wherein the liquor business redounded to the permanent good of any community, State, or Nation?

Your sole excuse for its toleration is that the country can not subsist without its pecuniary assistance. That is positively the saddest and the most puerile plea the liquor aggregation ever advanced. If that contention truly reflects the sentiments of the American people, then the United States will soon become the scorn of the civilized world. If our great Nation's existence is contingent upon the perpetuity of an institution whose many sinister elements and numerous demoralizing influences no man will foreswear, then the day is not far distant when our country will be rich alone in memories.

Yet the man who has the courage to advocate the discontinuance of the liquor business is invariably flayed and excoriated by those whose interests are in some way bound up with the system. Ordinarily the prohibitionist is characterized as a weakling who trys to inflict his invirile views on the rest of mankind.

Mr. Speaker, to advocate national prohibition can not be construed as an effort to arbitrarily regulate the conduct or to guide the morals of others. Yet the liquor contingency resents every attempt the people make to express their views upon a question that inherently concerns the happiness and well-being of 100,000,000 American souls; and it is this despotic assumption of authority that is about to wreck the liquor business.

The argument that prohibition is a curtailment of and an infringement upon man's personal liberty is drivel, pure and simple.

Think of the brazen effrontery of the man who contends that a free people have no authority to express their sentiments touching the manufacture and sale of intoxicants and in the very next breath scathingly denounces prohibition upon the theory that it is an atrocious invasion of his freedom of action and will. Such sophistry can not weigh a jot with the mortal who has the soul and intelligence of a good man.

Why, no creature has the God-given right to surround your child with evil and foul influences, nor to create an atmosphere around him that will make a proper life, in a measure, impossible.

It is blasphemy to even inferentially assert that certain men have been divinely commissioned to foist upon an unwilling people an objectionable institution.

We know that the atmosphere in which our children live influences their thoughts and in a large degree directs their habits. Again, we know that by the removal of these subtle temptations we make it infinitely easier for them to do right and tenfold more difficult to do wrong. Thank God, the political power in this country resides in the people, and hence they have the right to say what their surroundings shall be.

Mr. Speaker, the southern Congressman is a great apostle of the principle of State rights and you will always find him arrayed against any measure that is likely to encroach upon the rights of the States. But I respectfully submit that from no process of reasoning can he argue that the submission of the question of national prohibition to the people is an abridgement of State rights.

The framers of the Constitution, whose wisdom it behooves no man to undertake to impeach, reserved to the sovereign States the power to amend it. Before an amendment can become a component part of the basic law of this land, the resolution to amend it must receive a two-thirds affirmative vote in both Houses of Congress and the ratification and approval of three-fourths of the legislatures of the Union. Therefore, can any person, after giving this matter thoughtful consideration, oppose such a resolution upon the hypothesis that it is violative of the principles of State rights. He may, but I should feel doubtful of his ability to present for omniscient examination an unspotted conscience.

Now, another specious argument often advanced by the advocates of the saloons is that since you can not prevent a man from drinking by moral and religious persuasion it is folly to attempt to dissuade him by legislative enactments. If there is any merit or philosophy in that contention, why would not the same argument be equally as applicable to the whole catalogue of human crimes? Perjury, murder, rape, and so forth, can not be entirely stamped out by penal statutes, but abolish them and we would forthwith return to that savage state of nature.

I hope nothing I have said in criticism of the liquor traffic will be construed as a condemnation of all men engaged in that business, for I number among my friends some excellent men who are interested in the liquor trade—men who enjoy the respect and confidence of the people in their respective communities.

Food Price Manipulation.

EXTENSION OF REMARKS

OF

HON. HATTON W. SUMNERS,

OF TEXAS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. SUMNERS. Mr. Speaker, I am opposed to the amendment offered by the gentleman from Missouri [Mr. BORLAND] to appropriate $400,000 to conduct an investigation by the Federal Trade Commission of food-price manipulation by corporations in the United States. I am not so much opposed to the expenditure as I am to the excuse for postponed action. We have squandered enough money investigating these matters. We have delayed definite corrective and constructive action long enough. For the first time in the history of the Republic, when not itself engaged in war, the middle classes find themselves under the necessity of exercising the most rigid economy with reference to the ordinary articles of food, while in some sections there is acute hunger.

The fact that Congress adopts this amendment is an admission that the food situation in its judgment demands the attention of the Federal Government. If attention is required because of violations of law, it is the duty of the Department of Justice to act, and act now. It can subpœna witnesses. It can compel them to testify under oath, while the Federal Trade Commission has no inquisitorial powers, and can not itself prosecute. If a better marketing system is required, it is the business of the Congress and of the Agricultural Department to do on the part of the Government whatever is to be done, and to do it now.

The country asks us for relief and the only relief we offer is to pile an additional $400,000 load upon a tax-burdened people and send a lot of so-called experts trailing around over the country on an investigation, which will require eight months to complete and can not discover essential facts bearing upon our legislative duty not now known. What new light can this investigation throw upon our legislative duty? Is there a man in Congress sufficiently informed with reference to the vital economic problems of his country to justify his presence here who does not know all the facts essential for intelligent action now? These investigators can discover that potatoes, when they were dug, sold at $1.35 per bushel at Fergus Falls, Minn., for instance; that they are selling there for $1.55 per bushel now, and for $4 here in Washington. They can discover and report to us that four great packing concerns dominate the live stock and meat markets, and maybe report the profits of these concerns. They can tell of a large number of

different hands through which many food products pass from the field to the table, and of the profits which are attached to the final price. They can tell us of waste in the field and in congested markets.

Mr. Chairman, the details of these profits and of food-product movements in general would of course be interesting, but the knowledge of these details, varying as they must with the changes of influencing conditions, would hardly be considered in shaping remedial legislation which in the nature of things must have in contemplation the general system of food preparation and distribution. This we know now.

The reports of the Department of Agriculture, of private investigators, and the knowledge which one may gain from his own investigation and observations leaves us no excuse for hiding behind a confession of ignorance as to what we ought to do in this emergency. We know or can learn without difficulty what the farmer gets; we know what we pay. We have available all sorts of data with reference to transportation charges and the operation and profits of cold-storage plants. We know the general course of movement from the field to the table. If crimes have been committed in food-price manipulations, we have a Department of Justice, clothed with inquisitorial powers, and charged with the enforcement of the laws in restraint of trade, which laws we have already enacted. It alone has the proper power for the discovery and prosecution of crime, and we alone have the power to correct by legislation. I am not willing that the Department of Justice or the Congress excuse itself by this eight months' delay and $400,000 expenditure.

Looking at the broader aspects of the matter, we know that more and more the people are leaving the farm; the size of the cities are increasing, broadening the distance between production and consumption, and interposing new difficulties in distribution. We know in a general way, at least, what these difficulties are. We know that as these distances lengthen the complexities increase; small concerns find their capacities exceeded, and yield of necessity to great business organizations. We know that thus we are passing from a system operated by a multiplicity of small concerns, with their limited business organizations, reaching from one to the other across the intervening space between production and consumption, each taking its own profit, which in the aggregate are burdensome, to a system where a few great business organizations are reaching more and more toward the span of the whole distance between production and consumption, in many instances including production. We know that as this system develops, while the number of profits decrease, the opportunity for manipulations, the ability to take advantage of any favorable situation, increases. The little concern that can reach but a short distance from production toward consumption or from consumption toward production can not operate against a concern which can span the whole distance. This we know now. We know that when most of the world's population were farmers, producing primarily each family for its own use, and using most of what it produced, that the small business organization could carry the bulk of the small part of farm products entering commerce from production to consumption.

The distance was not great. The expense and slowness of transportation before the railroads came compelled production to limit itself almost entirely to local demand, and the same causes compelled demand to accommodate itself to local production.

We know that the big concerns are coming into dominance in part through the crushing force of superior strength directly exerted upon their smaller competitors, but in the main because they can cover the great intervening distance between production and consumption more systematically, more economically, and with less material waste than can a large number of smaller concerns, each reaching only a part of the distance, depending one upon the other for the performance of a part of the service, but with their organizations not in permanent dependable articulation with each other. These things we know now. And we know, too, that when the process of elimination has proceeded as it has in the meat-packing industry, for instance, where four great organizations practically control the business, it is very difficult to force them to actually compete with each other.

We know that there is enormous food and economic waste in perishable food products due in part to the fact that great concerns with comprehensive business organizations have not yet acquired sufficient control to systematize their distribution, and in part to such high prices to consumers that the opportunity to consume is either denied or greatly limited to the average family, and this, too, at a time when producers may not be offered a price sufficient to justify the harvesting. We know all these things now. What additional essential fact do we hope to gain by expending this $400,000 and by this eight months' delay.

Mr. Speaker, we ought not to run from this situation. We can not lay our responsibility in this emergency upon the back of a Trade Commission. We are advised by the press that the Federal grand juries are investigating alleged manipulations of prices. It is the common belief that such manipulations are in progress. There is much evidence thereof. It is to be hoped there will be vigorous prosecutions of whoever is guilty and that they will receive adequate and exemplary punishment. But the fact is that however gratifying such convictions would be, they would not correct the fundamental defects in our system of food distribution. With the wide ends of food movement narrowing to a very few powerful concerns through which it passes, voluntary sustained competition is not probable, and enforced competition is not possible. Under such circumstances society has the choice of paying the toll charged, regulating the toll by law, or constructing a channel through which movement around these organizations would be possible, which possibility would probably create some constant active competition and would always be a potent force working against exorbitant charges.

With regard to products which have not come under the control of business organizations sufficiently great to systematize their movement, we must either continue to pay the multiplicity of intervening charges and bear the economic and food waste now obtaining, or we must construct the machinery which will shorten the line of movement and eliminate the waste.

Mr. Speaker, if we were to expend four hundred million dollars instead of four hundred thousand we could not discover another choice, because no other is involved in the institution.

If we had a clearing house of information where food products could be listed for sale; if we had a system of standards for products as they come from the farm and when prepared for use; if the farmer in the remotest region, whose products meet the requirements as to grade and preparation for market could place thereon the certificate of that fact; if the smallest manufacturer in all the land, whose plant and output meet the requirements as to sanitation, quality, etc., could place on his output the certificate of that merit, and these could be listed for sale, and any move to market under such supervision as would guarantee integrity of transaction to both buyer and seller, the distance between production and consumption would be spanned. Every area of production would have direct access to every market, and every market could draw directly upon every area of production. The small manufacturer and the small merchant would have a chance, while the machinery for cooperative purchasing would act as a check upon the total of intervening charges which could be imposed. Without great additional expense this machinery could be assembled and operated. The present Agricultural Department coordinated with the agricultural departments of the several States, a little assistance from the postmasters, and we would have most of what is needed. With a small part of the money which we expend investigating things which ordinary people already know about, and the report of which investigations after they are made nobody reads, we could supply what else is required. If we will get to market the products which rot after production, dividing its value between the producer and consumer, and will divide between them some of the present enormous intervening charges, we can put these products within the reach of the cities' poor, we can offer these poor a better chance in the country than we can now. We can stop the movement of the millions from the country to compete with those in the cities now, and we can make the position more secure against the possibilities of food supply shortage.

There is one fundamental fact which should be constantly in mind in dealing with this matter, and that is this:

Regardless of all else that may be done to make country life attractive, if we want to keep people on the farm we must pay them as much net profit to stay there as they could get in the cities; if we want city people to go to the country, we must pay them more net profit than they can get in the city. That is all there is to it.

Aside from unusual and temporary conditions which from time to time may arise, the hope of the city for cheaper food lies in the reduction of intervening charges and in the elimination of waste after production.

With our city population increasing more than three times as fast as that of the country, with the loss of more than 20,000,000 head of beef cattle between 1900 and 1913 and other decreases in live stock, with the decrease of our wheat surplus within a few years from 42 per cent of the total to less than 13 per cent it would be worse than folly—it would be madness—to close our eyes to the fact that we must work such comprehensive economic betterment in behalf of that business which furnishes the material for our food and clothing as to attract to it a larger percentage of our total population.

Prohibition.

EXTENSION OF REMARKS
OF
HON. JAMES A. GALLIVAN,
OF MASSACHUSETTS,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GALLIVAN. Mr. Speaker, I am willing to support this resolution. I want to help even those of my "bone-dry" colleagues who, eager as they are for prohibition for others, now desire that the evil day for themselves shall be deferred. What a wonderful work this Congress has performed!

If the greatest of the caliphs of Bagdad were here, he would fall upon our necks and weep. He was a prohibitionist. For more than 1,200 years the Mohammedan has been the only consistent prohibitionist in the world. After praying five times during the day at the muezzin's call, he goes home to his harem early and sober and goes not out again. Once in a while some sweet lady obsessed with a desire to win him over to Christianity and turn his steps into the paths of righteousness, journeys to the Orient as a missionary, and when we find out through the State Department that her throat has not been cut we all sit back and feel immensely relieved.

Constantinople is a dry town. It has been dry since 1453—ever since the prohibition followers of the crescent took possession of it and massacred 100,000 people who were not prohibitionists. We have hastened to express legislatively our admiration for Constantinople. Constantinople and Washington will be the only two dry capitals in the world. We are able to report progress. After 464 years we have succeeded in making another capital dry. The giant figure for whom Washington was named would be lonely and anxious here after November 1. My dear Democratic friends from the land of the cypress and the magnolia, where life is like a wild, glad song, when you all get rich on 20-cent cotton and journey to Constantinople I know that you will feel at home.

A quart of "moonshine" corn whisky, underneath the fretted shade in the sunny southern clime, is "nothing to the hinny bliss" of Constantinople. But it can not be had in the realm ruled by the Sublime Porte. There is not a "moonshiner" in the dominions of the Sultan of Turkey. There is massacre, but not "moonshine." It is about time that some one ought to think of planting a Democratic colony in Araby the Blest. In all the wide reach of its illimitable deserts, there is not a bottle of beer, nor anything else that would "lend an hour's importance to a poor man's heart." (Peace be with Goldsmith!) Or if we wish to stay within our own jurisdiction, we could find a delightful refuge among the Mohammedan Moros in the unconquered wilderness of the Philippine Islands, for they are prohibitionists. Hereafter, when we see a Democrat packing his grip and getting ready to leave the sweet shades and sylvan retreat of Dixie we will know that he is getting ready to start for the land of Harroun al Raschid, where he may be entertained as of old, for a thousand and one nights. He will feel at home there, for it is dry. Let us adjourn to the Orient.

The Banking and Currency Situation.

EXTENSION OF REMARKS
OF
HON. JOHN H. STEPHENS,
OF TEXAS,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. STEPHENS of Texas. Mr. Speaker, availing myself of the leave granted to extend my remarks on the subject of certain bills now pending before the House Committee on Banking and Currency designed to require national banks to pay up their reserves faster than the law requires, I desire to state that I am opposed to these bills. The present law without the proposed amendments works well and has the approval of the American people, and should not, in my judgment, be changed by the passage of the pending bills. These bills would have the effect of greatly enlarging the reserves now held under the present laws by the Federal reserve banks, and would thereby tie up and keep out of circulation a large fund now available under existing laws for commercial use by and through the small national banks of the country.

I have just received a letter from a prominent Texas banker, lawyer, and financier, which I here insert as a part of my remarks:

WICHITA FALLS, TEX., *February 13, 1917.*

HON. JOHN H. STEPHENS, M. C.,
Washington, D. C.

DEAR MR. STEPHENS: I have the little pamphlet, Plea for Justice; or, The Last Pound of Flesh, and thank you very much for sending it to me. I want to say that I agree with the writer of that exactly, as I do not think the Federal Reserve Board are justified in either of the requests they are making of Congress.

The authority to have a branch bank is mighty satisfactory sometimes, but I do not believe it is for the good of the country; and there is absolutely no excuse for the Federal Reserve Board asking a law to make the national banks pay up their reserve faster than the first law provided. As a matter of fact, I do not believe that the system would be impaired in the least if the member banks were never required to put any more reserves with the Federal reserve banks than they now have, which is 4 per cent. Ultimately, you know, they are to be required to keep 7 per cent, and the reserve board has a bill which has been approved by the Committee on Banking and Currency, to require national banks to pay up all of this 7 per cent at once. I will illustrate how this works out by my own bank:

We have a capital and surplus now of $450,000. Under the law we are required to subscribe for 6 per cent of that amount to the stock of the Federal reserve bank, or $27,000, and we now have half of that, or $13,500, actually paid in; and every national bank in this reserve district in proportion. We are also required to keep, even now, 4 per cent of our deposits with Federal reserve bank at Dallas as reserve. Our deposits have been over $2,500,000, and are now about $2,250,000, so that we have to keep in Dallas absolutely a dead balance of $90,000. In other words, of our total capital and surplus of $450,000 the law now requires us to keep tied up in the system approximately one-fourth of it, being $13,500, in the capital stock of the Federal reserve bank and $90,000 as reserve.

If the bill of the Committee on Banking and Currency is adopted, we will be required to keep 3 per cent more, or $67,500, and $171,000 in all, tied up. It will be a terrible exaction and burden on the national banks, and is bound to tell very adversely on their earning capacity, as you can see it is nearly 40 per cent of our capital and surplus. A great many of the banks are seriously objecting to the compulsory collection system and, while I do not care so much about it, it helps to make the system unsatisfactory.

I have a statement of the condition of the Federal Reserve Bank of Dallas at close of business last Friday, and it shows a capital stock of $2,693,400. Every cent, of course, has been paid in by the member banks of this district, yet its bills discounted and bought amount to only $2,564,110.24. In other words, the rediscounts of the member banks and notes bought in the open market do not equal the amount that the banks have put up for the capital of this reserve bank. The member banks of the district have all deposited net $24,740,166.69, which is absolutely dead capital to them and does not earn them one cent, and the bill asked by the Federal Reserve Board from Congress is to require them to put 3 per cent more, or three-fourths as much as they already have, down there as a dead asset.

I believe in the Federal reserve system. I think it is all right, but the Reserve Board, in my judgment, are going too far and making it too exacting on the banks. We can not use this money in carrying on our business to any advantage. It is not accepted for exchange in New York, Chicago, St. Louis, or San Francisco. If we send a check on the Federal reserve bank at Dallas, outside of our own district the bank charges us up with the difference in exchange. The rediscount privilege is, of course, good at times, but a bank with any reputation or conservatism does not want to borrow money to lend, as a regular thing, but only occasionally. Simply to illustrate by our own case we don't want to keep so much dead money for the privilege of being able to borrow our own money back if we should need it.

I hope that Congress will not pass the proposed bills.

Respectfully, your friend,

R. E. HUFF.

I fully concur in the views of this able writer on this subject. North and west Texas is rapidly developing its great agricultural, mineral, stock raising, and industrial activities, and money must be abundant and available from banks on easy terms for these development purposes, and instead of restricting we should enlarge the local supplies of money now needed, but idle, in the banks for circulation among the people. We have in west and northwest Texas one of the best climatic conditions and the largest area of undeveloped agricultural lands to be found on this continent, and easy money for its development is an absolute necessity.

Mr. Speaker, the high cost of living and the cry for more and cheaper food for the millions of consumers in our cities is now urgently demanding the most serious and thoughtful consideration of our whole country. Let me suggest that the best remedy for these twin evils is to institute a national "back to the farm" movement among the entire people of the United States, so as to induce the millions of people now in the congested districts of the great eastern cities to go into the stock raising, fruit raising, and farming business in our great agricultural and stock-raising districts of the West, and thereby produce from the millions of acres of now uncultivated lands the food supplies so badly needed by the consumers and nonproducers in the East. This development of a new country would fill the pockets of the immigrants to the West with money and the unemployed with employment and the kitchens of their brothers in the East with cheaper food. It would beneficially equalize the business and population of both sections and at the same time cheapen the cost of living on the one hand and

on the other furnish gainful occupations to the vast immigration that should now be moving into the West.

Mr. Speaker, there is also, I am informed, a well-defined movement on foot in financial circles to prevent the checks of the country national banks from being cleared at par through the Federal reserve banks. If this were done it would decrease the fund now held in the country banks, where the money is most necessary, to furnish more funds to open more farming lands, produce more crops, cheapen food supplies, remove laborers from the cities to the farms, and, in short, benefit the farming and food-producing area of our country and thus greatly aid in the "back to the farm" movement.

This movement should receive the active and earnest support of all our people, without reference to partisan politics.

Mr. Speaker, I will here insert a letter from a large mercantile firm in my district protesting against the change in the present national banking laws as above pointed out, and I fully concur in the statements and arguments of this firm as expressed in the following letter:

CANADIAN, TEX., *February 22, 1917.*

Hon. JOHN H. STEPHENS,
Representative, Washington, D. C.

DEAR SIR: We understand that there is an effort being made to prevent the checks of the country national banks being cleared at par through the Federal reserve banks. Just what this amounts to I am not able to tell you at this time, but in case that the city bankers succeed in having this change made it means that it will compel all country banks to increase the reserve which they hold in the large cities like St. Louis, Chicago, and New York, because the manufacturers and jobbers insist that we western merchants pay our bills with exchange drawn on these cities. As the matter stands now they will accept the checks on a national bank in payment of their bills anywhere in their reserve districts.

You can readily see where a change in this law will work to the detriment of the business in all of the West and Southwest.

Trusting that you can see your way clear to permit no change in this law, and with kindest regards, I am,

Yours, truly,

CANADIAN HARDWARE & FURNITURE CO.,
GEO. GERLACH, *Pres.*

Mr. Speaker, I hope and verily believe that there will be no material amendments made by Congress in the near future that would change in any respect either the national banking act, the Federal reserve act, or the farm-loan act, until each and all of these acts have been fully and actually tested by the country at large. In my judgment these wise and beneficent laws will be found by actual tests to complete a monetary system far superior to any that this country has hitherto known. If after due trial these laws are found in any respect to work a hardship on the people of this country, then, and not until then, should Congress take up and study the questions involved before changing our existing banking and currency laws.

Arming American Merchant Ships.

EXTENSION OF REMARKS
OF
HON. JAMES J. BRITT,
OF NORTH CAROLINA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 1, 1917.

Mr. BRITT. Mr. Speaker, this is no time for words. It is a time for action. Much less is it a time for the voice of party or the criticism of the President. It is enough for me, it should be enough for every Member of this House, to know that our flag has been insulted and that American citizens have been murdered while on the lawful errands of the high seas. These facts should rise as far above parties or any other material interests as are the heavens above the earth. Here at home we may be divided; it is best that we should at times be divided, but as against a foreign foe we should but echo the common voice of the Nation.

I support this bill with all my heart. My only objection is the limitations it places upon the President. It does not go far enough. We ought not to withhold from him any power or instrumentality available for our protection. We should give him ample quotas of ships and arms and money. It is foolish to suggest that he would use them uselessly or arbitrarily. The danger is nonaction. The talk of autocratic power by the President is idle. The Chief Executive is a man of high intelligence, of broad learning, and of intense patriotism, and he would not and could not recklessly incur the condemnation of the American people. In my judgment, this power will be used wisely and effectively, and it ought to be given unstintedly. Let us not think of Woodrow Wilson as a Democratic President of the United States, but as the arm of our national sovereignty and the executor of our concerted will. Let us rise above party and stand solidly behind him. Political parties should dissolve and disappear in hours of stress like these. They will naturally reappear when we revert to domestic conditions.

I know we are launching upon troublous seas. The haven is not now in sight, and we need maps and charts for the unknown port. But the God who led our forefathers in the Revolution, the same Infinite Being who has been our helmsman in all the trials of our national life, will guide us to a safe landing, and He will help us to vindicate those inalienable rights which He himself has so graciously vouchsafed to us.

Oleomargarine.

EXTENSION OF REMARKS
OF
HON. GILBERT N. HAUGEN,
OF IOWA,
IN THE HOUSE OF REPRESENTATIVES,
Friday, March 2, 1917.

Mr. HAUGEN. Mr. Speaker, of all the inconsistent, unwarranted, and unjust legislation suggested that which proposes to reduce the stamp tax on colored oleomargarine from 10 to 2 cents per pound is the worst. When the revenue bill was under consideration in the House its supporters contended that the purpose of the bill was to provide for increased revenues, not to reduce the tax on the counterfeit as was proposed in the Underwood amendment. The revenue bill goes to the extent of authorizing the issuance of bonds to meet the demands upon the Treasury. If added to the revenue bill it would have not only saddled additional taxes and bond issues upon the present and coming generations, but would have destroyed one of our most important industries—the dairy industry. That industry would have been sacrificed for another—the manufacturing and vending of the counterfeit oleomargarine.

It is unnecessary to say that dairying means more to the welfare of agriculture and the people in general than any other branch of agriculture. Evidently the object was not to reduce the price of oleo. No; the present stamp tax on oleo, when sold in its natural garb, is one-fourth cent per pound, which is 1¾ cents per pound less than the proposed tax on the counterfeit; so its object could not be to reduce the price of the natural article oleomargarine, but to make it easier to counterfeit, deceive, and impose upon the consumer, and rob the millions of dairy people conducting their business in an honorable way of their legitimate market for their product.

Many eulogies have been delivered extolling the farmer, and many millions of dollars have been appropriated from the Treasury for the support of the Department of Agriculture, presumably for the benefit of the toiler on the farm. Now, it has been proposed to put him out of business at a single stroke by destroying the most important branch of his industry, the branch upon which his business depends. Destroy the dairy and you will reduce the yield and create conditions in our prosperous farming communities similar to that in sections without dairying.

There is no soil so rich and fertile that its productive qualities can not be exhausted. The plant, like a human being, can not exist without food. The cow supplies subsistence for both. It replenishes the soil that gives employment to millions of toilers and subsistence not only to our hundred million people, but to millions in foreign lands.

Now, it has been proposed not only to deprive the farmer of this important source of revenue, but also to deprive the consumer of the genuine article—butter—that nature has provided for and which is recognized by all as the most wholesome article, conducive to health and longevity, and to substitute for it an article made from inferior ingredients, many of them harmful to health, as, for instance, cottonseed oil, made from cottonseed meal, which, according to the statement of Mr. George M. Rommel, Chief of the Animal Husbandry Division, Bureau of Animal Industry, is sure to kill hogs. I refer to the hearings before the Committee on Agriculture (64th Cong., 1st sess, pp. 210, 211):

Mr. ROMMEL. The man who is feeding his hogs on a ration in which there is some cottonseed meal is likely to go out into the pen in the morning and find one or more hogs dead. We have found in our study that there is never a case where a hog dies from cottonseed-meal poisoning where there have not been symptoms; but they have been so slight that the average farmer would overlook them.

The CHAIRMAN. Symptoms of what?

Mr. ROMMEL. Of cottonseed poisoning. A pig never dies from cottonseed-meal poisoning unless he has previously shown signs of sickness; but they may be such signs as only a careful observer would notice. That, of course, makes it out of the question to feed cottonseed meal to hogs. If you are going to have some of your hogs die on your hands it will knock out your profits.

Then, the disease may take another form. The pig may become sick and may not die for a long time. In cases like that a change of feed will effect a cure. In these chronic cases the first indication of sickness is the roughness of the coat of the hog; the coat gets harsh, and the hair begins to curl up, and the pig is plainly unthrifty. By and by he begins to stagger in the hind legs, and possibly there may be a little characteristic thumping of the flanks. Anyone who knows the disease of little pigs called "thumps" will recognize that; it is the same thing; it is a rapid, characteristic movement of the diaphragm that causes the flanks to thump. The pig may go along in this way for a long time and become emaciated and eventually may die.

In those acute cases resulting in death that I have witnessed there is no sign whatever of paralysis. The pig may show no signs of being sick, except indications that would be noticed on keen observation. He is seized with a very sudden attack; there is marked shortness of breath; the pig is in great pain and squeals, and, if the attack does not pass off, he may die in 28 or 30 minutes. Death results from cardiac failure and suffocation.

Mr. HAUGEN. Is that due to an overdose, or is there safety in giving that feed to hogs in a limited quantity?

Mr. ROMMEL. I have not found it so.

Mr. STEELE. You would not recommend it as feed for hogs?

Mr. ROMMEL. No, sir.

The proposition to substitute cottonseed oil made from cottonseed meal, which, when fed to hogs, kills then in from 28 to 30 minutes, which produces a harsh, roughness in the coat of the hog, and causes it to stagger, is, to say the least, most astonishing.

Further comment as to the wholesomeness of cottonseed meal seems unnecessary. It is unnecessary to say that if the product of cotton seed will kill hogs when fed to them that it is also injurious to human beings.

That oleomargarine is not altogether a wholesome food has been thoroughly demonstrated. I refer to testimony given by ex-Gov. Hoard, of Wisconsin, before the Committee on Agriculture, Fifty-sixth Congress, second session, pages 585–586:

* * * * * * *

There is no credible evidence to show that oleomargarine is innocuous; no evidence to show that when eaten continuously in place of butter it is not harmful. But there are reports in great abundance to the effect that oleomargarine is harmful.

Mr. Edmund Hill, a member of the Somerset County council, England, reports that the great bulk of oleomargarine, or "margarine" as it is called there, is eaten in public institutions, convents, schools, etc. *At the Wells Asylum, with which he is connected, the inmates receive oleomargarine. In the asylums of Dorset, Wells, and Hants—the adjoining counties—butter is furnished, and the death rate at Wells is 30 per cent higher. At the Taunton Hospital there were 11 deaths in 13 months. Oleomargarine was substituted, and in 9 months the deaths rose to 22.*

This accords with the experience in France, where its use in hospitals is forbidden. In the United States, in institutions for the blind and for girls, it has been noticed that the use of oleomargarine lowered the vitality of the inmates very perceptibly.

There is abundant reason for this. The normal heat of the human stomach is 98°. Butter melts at 92°, 6° below the heat of the stomach (passes into pancreatic emulsion and digestion). Nature designed this fat in its raw state for food.

Oleomargarine melts at the varying temperature of 102° to 108°, a temperature no healthful stomach ever attains. As a consequence, this unnatural foreign fat must be expelled by sheer gastric action and force.

Butter fat is found in the milk of all mammals. It is chemically and physically unlike any other fat in existence. It was designed by nature for the food and sustenance of infant offsprings, having the most delicate of all digestion. Because of this most evident purpose and provision of nature, butter forms a healthful and important article of food in milk, cream, and in its separated state.

No matter what paid chemists may say, no counterfeit, even in its purest state, is wholesome or healthful.

But there is another phase of this question. There is absolutely no protection for the public against the most dangerous introduction of positive unhealthful compounds into oleomargarine.

The Journal of the American Chemical Society and the department of agriculture of New York abound in proof of the adulteration of oleomargarine with paraffin, a substance which the strongest acids even are unable to affect. There is no reason on earth why the foulest of germ-laden fats should not be used in the making of this compound, when once they are deodorized by the aid of chemistry.

But with butter it is different. Any contamination or hurtful manipulation is instantly shown in a loss of flavor. Butter always advertises its condition.

If the use of oleomargarine at Wells Asylum increased the death rate 30 per cent; if France, after experimenting with oleomargarine, found it wise to forbid its use in hospitals; if its use in our institutions for the blind lowered the vitality of the inmates perceptibly, why make it possible for the manufacturers and vendors of oleomargarine to cram it down the throats of the unwilling consumers?

It seems that such evidence from so reliable an authority should be conclusive and should leave no doubt in the mind of anyone as to the inferiority of oleomargarine to butter and its harmfulness as a food product. If there is lingering doubt in the minds of some, I refer to the statement of Mr. S. E. Bennett, inspector, Bureau of Animal Industry, and others, printed in the hearings before the Committee on Agriculture, Sixty-first Congress, second session, pages 190, 192, and 193:

The CHAIRMAN. Dr. Bennett, will you state your full name to the reporter?

Mr. BENNETT. My name is S. E. Bennett; I am inspector in charge of the Bureau of Animal Industry work at Chicago.

* * * * * * *

The CHAIRMAN. I have another letter, written by a man who signs himself "A packing-house employee." It is addressed to the Committee on Agriculture, from New York City, and he says:

"I know that if you saw the shop fat from which oleo oil—its chief constituent—is made, you would never relish it nor soon care to eat it again. About one-third of all the oleo oil made is extracted from this shop fat, which is gathered promiscuously from the numberless little butcher shops throughout the city or country.

"This shop fat—or, more properly speaking, mixture—is mingled with the sawdust, chicken feathers, heads, entrails, bits of old rags, and almost everything else imaginable, as it is brought in wagons to the rendering establishments controlled and operated by the big packing houses. This may be seen most any afternoon as it is brought in to a rendering establishment at the foot of East Forty-fifth Street and at the foot of West Fortieth Street, in this city, although there are several other places as well; and I suggest that if convenient you take a look for yourself sometime, but be careful and don't let them know who you are or what you are looking for.

* * * * * * *

"Another great abuse in this business is in the handling of grease from dead hogs and cattle and diseased animals (condemned). This vile grease and tallow is not colored or denatured as it should be, but is placed in containers or casks and simply marked 'inedible,' a word that is easy changed to edible. Some time ago the Government ordered that all inedible grease, etc., be colored or denatured to prevent its use as food, but the American Packers' Association lost no time in having the order recalled and simply require now that this stuff be marked 'inedible.'

"Certain firms not connected with the packing houses cart this stuff away and refine it or bleach it. This is done by cooking it with bicarbonated soda and then straining it, or, rather, filtering it, through fuller's earth, after which it is deodorized by forcing air through the mixture while heated to carry off the odor, and it comes out as white as snow."

Mr. BENNETT. I will tell you our experience with shop fat. Of course, in New York City they have considerably more business in the shop-fat line than we have in Chicago. I think they have 7,000 shops that they collect fat from in New York, while we have comparatively few in Chicago.

* * * * * * *

The CHAIRMAN. What precautions do you take to make sure that the things you mark "inedible" do not finally get in with those that are edible?

Mr. BENNETT. No more than the precaution of marking it on the end of the package. We mark it "inedible." We mark it "grease" or "inedible grease," and some of them use a stencil; and if the product comes from what is termed the "black gut" in hogs, that makes a dark-colored grease.

* * * * * * *

Mr. BENNETT. There is no doubt about it. You can not make a No. 1 oleo oil from shop fat. I have known cases where they took a shop fat, apparently clean and wholesome in every way, and manufactured it into a No. 4 oleo oil. If you put shop fat into oleomargarine, you can detect it in the flavor right away.

* * * * * * *

Mr. BENNETT. Oh, I have known of cases where they have manufactured oleo oil from shop fat, but not from the kind of shop fat that he describes there. It was shop fat that came in marked, like kidney fat and cod fat. We do not permit any of the fat of that kind to enter into an edible product in Chicago, except the fat from the kidneys and the cod fat.

* * * * * * *

Mr. HAUGEN, Oh, those same things exist now. There is nothing to hinder that. I will read it to you, and you can see how easily it can be done. [Reading:]

"Dr. De Schweinitz, of the Agricultural Department, in his visit to a factory which was several years ago located in Philadelphia, found the same condition of affairs. Oleo oil was being made from a pile of fat scraps collected from the hotels, restaurants, and butcher shops, which pile gave out such an odor that it was sickening, and the makers admitted that it was being made into oleomargarine.

By this evidence it is shown that oleomargarine is inferior to butter and injurious to health. Of course no one will contend that oleomargarine, made of compounds that are sure to kill hogs, and scrap fat picked from the alley, or decomposed fat from packing houses, is either clean or wholesome.

Who are back of the cottonseed interests? Evidently not the cotton grower. Mr. Brand, Chief of the Office of Markets, before the Committee on Agriculture, Sixty-fourth Congress, first session, page 1433, in response to my question whether he had any information as to the owners and operators of the cottonseed industry, testified:

Mr. BRAND. I would say that information is knowledge. We have very complete records of the apparent ownership of certain cottonseed industries. I suppose Mr. HAUGEN is looking back of that subject to those who were reputed to be interested in the cottonseed industry of the South. I do not think they deny a part of that allegation. I believe they have a large interest in it.

Mr. HAUGEN. To what extent?

Mr. BRAND. I can not tell you. I do not know whether it is a matter of public record.

Mr. HAUGEN. Well, you have some knowledge of it?

Mr. BRAND. No; we have no knowledge of the exact ownership of that industry. A few big corporations, like the Pennsylvania Railroad and the United States Steel Corporation, publish the exact distribution of their stock and control, but there are only a few of them, and we have no method of forcing that sort of information from the people.

Mr. HAUGEN. But I understood you to say that a large amount of stock is owned or controlled by the packing houses?

Mr. BRAND. I said that the packing-house interests admit a very large interest in these concerns whose products they use in the manufacture of their products.

As before stated, evidently not in the interest of the farmer, in whom so many have professed interest, but of those styled by many as "greedy and horrid corporations," such as the Pennsylvania Railroad, the United States Steel Corporation, and Packing Trust, severely condemned and criticized by Members of Congress, and, judging from remarks printed in the RECORD, held in scorn and contempt.

The language and purpose of the amendment shows clearly who is to be espoused and elevated to the throne. The question, then, is: Are we justified in extending the strong arm of the Government over those obviously benefited? Does their conduct in the past warrant giving them a clean bill of health in this way and encouraging a practice contemptible and repulsive to every law-abiding citizen?

According to Government reports the fraudulent sale of oleo, at the time the Grout bill was under consideration in 1899, disclosed the fact that manufacturers of oleo had entered into a conspiracy to break down the State laws and had resorted to dishonorable methods in forcing their counterfeit upon the public by avoiding and disobeying the laws of the land to the extent of 5,492 dealers selling 62,825,582 pounds of oleo out of a total product of 83,130,474 pounds for the year contrary to the laws of 31 States. The manufacturers went so far as to encourage and urge dealers to violate the laws of the States, and provided for a defense fund for the employment of the best legal counsel obtainable in defending illicit sales whenever prosecution was instituted, led to the passage of the present law.

As to further evidence of the character of the firms to be benefited, I refer to the annual report of the Commissioner of Internal Revenue for 1915, pages 256 and 267, in which he states that the Government had been defrauded through artificially colored oleo being sold under tax-paid stamps at one-fourth of 1 cent per pound instead of at the rate of 10 cents due on such product by four manufacturers, the enormous sum of $17,692,410.47 since the inception of the present law. By another manufacturer, $1,503,205.30 in a six-year period. The five alone, in the aggregate $19,195,613.77 stamp taxes, exclusive of special taxes of wholesale and retail dealers incurred.

The commissioner reported a production of 138,214,907 pounds of the uncolored and 7,595,141 pounds of the artificially colored product, or a total of 145,810,048 pounds of both classes, compared with 137,637,054 pounds of the uncolored and 6,384,222 pounds of the colored product, making a total of 144,021,276 pounds of both classes produced during fiscal year ending June 30, 1914.

Also that the collections during the fiscal year 1915 amounted to a total of $1,695,256.95, as against a total of $1,325,219.13 in 1914. Of this amount $761,200.63 was from stamp tax at 10 cents per pound; $347,141.81 from stamp tax at one-fourth of 1 cent; $586,914.51 special taxes of manufacturers and of wholesale and retail dealers in the two classes. It would seem that with five dealers defrauding the Government of more than $19,000,000, and with all the manufacturers of oleo paying less than $2,000,000 into the Treasury in 1915, they are doing fairly well and do not seem worthy or entitled to the recognition and encouragement which the proposed legislation would afford.

The Commissioner of Internal Revenue in his annual report for 1916 reports:

Investigations of violations of the oleomargarine law were continued during the fiscal year 1916, and while no cases of the same magnitude in fraud as those reported during the two preceding years were discovered, a large number of cases of considerable importance involving the illicit coloring of white oleomargarine by dealers were discovered and the offenders prosecuted and convicted. In addition to the criminal prosecutions in these cases, assessments of stamp tax at 10 cents per pound on the product illicitly colored and special taxes as manufacturers were made against these dealers, and in several instances taxes amounting to several thousand dollars were collected.

The prosecutions pending at the close of the preceding year in three of the largest cases discovered in 1914 were vigorously pressed during 1916, and the most important one was brought to trial and resulted in conviction of all the principals, who were sentenced to pay fines and serve terms of imprisonment. Through various legal technicalities and delays criminal prosecutions in the other two cases have not been brought to a conclusion, and the cases are now pending.

A summary of the results of the investigations made during the fiscal year 1916 shows 66 violations by manufacturers, 28 by wholesale dealers, 1,789 by retail dealers, or a total of 1,882 violations by these various classes reported during the year, as compared with a total of 2,777 violations during the fiscal year 1915.

These figures of violations by manufacturers include only those cases reported against dealers who illicitly colored the white product, and thereby became manufacturers under the law, as no violations were reported during the year against duly qualified manufacturers.

There were pending at the beginning of the fiscal year 1916, 22 cases of violations by manufacturers, 1 by wholesale dealers, 7 by retail dealers, and these cases, with those reported during 1916, were disposed of by indictment and prosecution where the facts warranted such action, and by compromise of those cases of technical violations and by being dropped upon payment of taxes due where the facts clearly showed unintentional nature of the offenses.

During the fiscal year 1916 prosecutions resulted in the conviction of a total of 10 manufacturers, 1 wholesale dealer, and 2 retail dealers, and acquittal of 4 manufacturers and 2 retail dealers, while 7 cases of illicit manufacture, 5 violations by wholesale dealers, and 48 by retail dealers were compromised, leaving 60 cases of illicit manufacture; 14 violations by wholesale dealers and 36 by retail dealers pending at the close of the fiscal year.

As stated, only 66 violations by manufacturers, 28 by wholesale dealers, 1,789 by retail dealers, or a total of 1,882 violations, were reported during the year, as compared with a total of 2,777 violations during the fiscal year 1915. True, a decrease in number, but I submit that 1,882 violations is not a small number, and does not entitle the recognition asked for.

It seems proper, also, to refer to the statement of Mr. Royal E. Cabell, Commissioner of Internal Revenue, before the Committee on Agriculture, Sixty-first Congress, second session, pages 285 and 287, which clearly indicates the persistent and unceasing efforts pursued:

[P. 285.]

Mr. CABELL. Here are the practices that we have reported to the bureau every day: A person goes into the business of handling oleomargarine. He will purchase a special stamp to sell the uncolored, and he will purchase the special stamp giving him the privilege of selling the colored. For the one he pays $6 a year and for the other $48, and if he pays the higher tax he can sell both kinds and handle both kinds on the same premises.

Mr. STANLEY. Is that a stamp or a license?

[P. 287.]

Mr. CABELL. The courts have decided that in order to convict that man you have got to prove both manufacture and sale of that identical product. Here is what we have had. You asked a little while ago why we did not enforce this law. If you will give us a law that we can enforce, we will do it; but here is what we are up against:

We have had this in the last 90 days in one State. We knew that a man was engaged in this practice on a large scale. We shadowed him and watched him until we knew the exact time when he did his mixing. And in that we took great chances, for we have had men shot in doing just such things as that, and were unable to get any redress. But we rushed this place; our officers rushed and broke in. They found four men in there, and they found, I think, 18 packages of white oleomargarine; 4 packages that were still warm, with the 10-cent tax on; they found the men in there with bottles of coloring matter and their arms all smeared up with it. Now, we had those men indicted, we went in and showed the evidence, and the judge dismissed them. The judge said that while there was a strong presumption that a man would not be coloring 3,000 pounds of oleomargarine for his own use, yet we had not shown a sale of that particular product, and therefore our officers did wrong to make the arrest; and he let them go. And we run up against that nearly all over the United States. There is not much incentive to spend money in trying to do anything under such circumstances. We have had one man shot, one man in the hospital now from injuries received in being kicked out of a place, and we have no redress whatever.

Evidently there is no limit to which the violators will go in fraudulently disposing of the counterfeit. Consider the absurdity of the proposed legislation.

The special taxes imposed by this (the oleomargarine) law as amended are:

Manufacturers of oleomargarine	$600
Wholesale dealers in oleomargarine colored artificially to look like butter	480
Wholesale dealers in oleomargarine not artificially colored only	200
Retail dealers in oleomargarine colored artificially to look like butter	48
Retail dealers in oleomargarine not artificially colored only	6
Manufacturers of adulterated butter	600
Retail dealers in adulterated butter	480
Manufacturers of process or renovated butter	50

TAXES ON PRODUCT.

Oleomargarine, artificially colored, 10 cents per pound.
Oleomargarine, not artificially colored, ¼ cent per pound.
Adulterated butter, 10 cents per pound.
Process or renovated butter, ¼ cent per pound.

Under the law and its administration, if a creamery manufactures and sells butter made out of sweet, pure, clean, and wholesome cream, and if through some oversight of the butter maker or his inability to reduce its moisture content to 16 per cent, even though the butter maker may do his very best in working and washing it to reduce the moisture content to 16 per cent, or if on account of climatic conditions or otherwise the butter absorbs moisture while in transit or at its destination and is found by a revenue collector to contain more than 16 per cent of moisture, the creamery is held up for a special tax of $600 and 10 cents a pound on the article; and if he fails to pay the tax imposed as required by law, besides being liable to the payment of the tax, he is fined not less than $1,000 and not more than $5,000; besides that, heavy taxes are imposed on dealers in adulterated butter, which are generally charged against the creamery by the dealers.

In many instances the 10 cents per pound tax, the wholesale and retail tax, and penalties aggregate more than $2,000, due entirely to unavoidable and unintentional violations.

On the other hand, the manufacturer of process or renovated butter, or one who buys rancid, decomposed, and unwholesome butter and through some process sweetens and deodorizes it and makes it look and taste like creamery butter, he is taxed only $50, or one-twelfth the tax imposed on the manufacturer of adulterated butter. Besides, adulterated butter is taxed 10 cents per pound, while process or renovated butter, or oleomargarine not artificially colored, is taxed but one-fourth cent per pound. In other words, the special tax imposed on the manufacturer of adulterated butter, a superior article, is twelve times as great as the special tax imposed on the manufacturer of process or renovated butter, an inferior article, and the tax on the superior article is forty times as great as that on the inferior article.

On oleomargarine artificially colored the present tax is 10 cents per pound; manufacturer's tax, $600; wholesale dealer's, $480; retail dealer's, $48.

It is now proposed to reduce the stamp tax to 2 cents per pound on oleomargarine, which would make the pound tax on the inferior counterfeit only one-fifth of that on the genuine and more wholesome article, containing more than 16 per cent moisture.

Can it be possible that the thousands of law breakers indicated in the report of the Commissioner of Internal Revenue are to be given that preference over the millions engaged in a worthy and legitimate business, the dairy industry, conducted in an honorable and dignified manner? Is it possible that counterfeiting, fraud, and deception is to be given preference over honesty and square dealing? Are the hundreds of ex-convicts and others serving time behind the bars to be given a clean bill of health and a certificate of character and thus be encouraged to resume the business? Are those who have, according to the commissioner's report, most persistently and flagrantly violated the law now to be given the right of way in pursuing their unceasing, disgraceful method over those conducting their business in an honorable and dignified manner? Is it a wise policy to appropriate $26,000,000 annually, alleged to be in the interest and for the benefit of the farmer, and in one single stroke wipe out his most important branch of industry?

For years Congress has been appropriating large sums of money to encourage the dairy industry in the South. The department reports progress. The appropriations have been made with a view of helping the farmer who is farming his depleted farm, so that he might in time realize and appreciate the value of the cow, so that he might through the dairy industry restore his farm to a state of productivity, and so that instead of contributing his yearly earnings to the Fertilizer Trust, he might set them aside for the education and comfort of his family, the improvement of his farm, and occasionally a dollar for old age. Now, with all the activity of the department, with all the money expended, it is proposed in a single stroke to make this of no avail and to deprive those sorely in need of aid and encouragement of this opportunity. I take it that no one will contend that the farmer can feed and milk the cow, churn and market the butter in competition with an article made from cotton-seed oil, lard, and other ingredients, such as enter into the production of oleomargarine, all of less cost. That, of course, is out of question. It does not seem necessary to discuss it at this time, as it is of general knowledge that oleomargarine can be manufactured and sold at 10 to 15 cents per pound, while butter, with present wages and price of feed, can not be marketed for even twice that amount. To contend that butter can compete with its counterfeit is absurd. As to the justice of this legislation one might as well suggest taxing counterfeit money. Undoubtedly a piece of copper put through certain processes could be made to look like a $20 gold piece, and might be passed in instances, certainly if gilded to defraud. If we are to permit the coloring of oleomargarine to counterfeit butter by paying a small tax of 2 cents per pound, we might as well permit the counterfeiting of money by paying a tax of 5 cents on the dollar, or by taxing it in the same ratio.

The principle would be the same, and if taxed in the same proportion the profit and the loss to the victim would be the same. There is no difference in the loss sustained by the victim who buys 20 pounds of butter for $10 and receives instead 20 pounds of oleomargarine, worth $4, and the one who exchanges a $10 gold piece for a counterfeit worth $4; both have been defrauded of $6. The one exchanging the gold coin for the counterfeit is out $6, but the oleomargarine victim is out not only $6, the difference in the value of the two products, but, under misrepresentation and deception, he serves an unwholesome article to his family and as a result has a doctor bill to pay. Why any tax on oleomargarine? Oleomargarine manufacturers and others, some of whom are sincere in their contentions, have contended that the 10-cent stamp tax is a tax on oleomargarine passed on to the consumer. Of course it is not. The 10-cent tax is on the counterfeit; the tax on the genuine article is only one-fourth cent per pound. The 10-cent tax represents the difference in the cost of oleomargarine and butter at the time the law was enacted. The 10-cent tax was placed there not altogether for revenue, but for the purpose of removing the incentive to fraud. Much to the disappointment of those who believed in law enforcement and square dealing, the law has been violated, and, according to the commissioner's report, wholesale counterfeiting has been practiced. Naturally the matter has given the dairy people and consumers much concern. Representatives of the dairy people have honestly endeavored to have the law amended by Congress; hearings have been held; representatives from nearly every State have appeared before the committee urgently requesting remedial legislation.

If the 10-cent tax is objectionable, I believe the difficulty can be overcome and the wrong corrected either by prohibiting the coloring of oleomargarine in any shade of yellow, in semblance of butter, or, possibly, by limiting the coloring of it; or it can be accomplished by prohibiting the adding or mixing of milk, cream, butter, or butter fat with oleomargarine or by limiting the mixing, as is done in Denmark, which would give the desired relief and also overcome the objection made by many who actually believe that the stamp tax is a tax on the consumer. The two articles would then stand on their own pegs and merit. If oleomargarine is equal or superior in merit to butter, why mix butter with it? Why reduce its high quality? Why should it masquerade under false color?

In this connection I desire to call your attention to a statement of James H. Maurer, president of Pennsylvania Federation of Labor, to President Samuel Gompers, of the American Federation of Labor, why oleomargarine should not be colored:

The laws of Pennsylvania do not allow manufacturers or dealers to color imitation butter. The consumer may, however, color it. But, once colored, it shall not be sold again.

For the past six years, or the three last legislative sessions of Pennsylvania, I opposed all proposed legislation which aimed to legalize the coloring of imitation butter by manufacturers or dealers. My objections are not based on any thought that coloring matter is unhealthful or that imitation butter is not fit for human consumption. My objection is solely an economic one. At present imitation butter, in its natural state, sells for from 18 to 22 cents a pound in Pennsylvania, while the genuine dairy product costs 36 cents a pound. The purer the imitation is the whiter it is. If the manufacturers and dealers in the imitation article were permitted to color their product the imitation would be complete, so much so that nothing short of an analysis would reveal its component parts. This is, at least, true of the great majority of consumers.

The imitation article, therefore, like any other imitation which closely resembles the genuine, comes in direct competition with it. Once we allow it to be colored its price will begin to soar dangerously close to the real article, and, as a consequence, the consumer who is now buying oleomargarine or butterine for 20 cents a pound will pay the advanced price.

Inclosed find copy of an advertisement which will verify this contention. The River Creamery and Elgin brands, mentioned on advertisement, are colored in imitation of dairy butter and the price is 10 cents a pound higher than the uncolored. The result of this kind of competition would mean ruin to the dairy farmer. The imitation being so perfect, deception would be easy and the market for the dairy product would weaken.

One thing sure, the farmer never could hope to compete with the manufacturers of the imitation article. As a result many of the dairy farmers would be compelled to go out of the dairy business and turn their farms to raising something else. And just as fast as this happened the price of the imitation article will rise until finally the great packing companies will have a monopoly, then the consumer will pay more for the imitation article than we are now paying for the genuine. Besides, the imitation will, most likely, not be as pure as it is now, if colored, because the purer the whiter, and the consumers know this. When colored, a certain amount of impure, foreign matter may be used and can not be detected by sight because of the coloring.

On the other hand, if the farmers can not find a profitable market for their milk and turn their farms to other products, it means the starving of their land. As fertilizers cattle are the life of the soil.

Therefore, looking at the question from every angle possible, I can see but two reasons why some dealers and manufacturers want a law giving them the right to color, in imitation of butter, their product; one is to charge more for their product and the other to give them a monopoly of the butter market.

Let oleomargarine and butterine and all other substitutes stand on their own feet and sell for what they are and not for what their manufacturers can make people believe they are.

JAMES H. MAURER.

Mr. Maurer, president of Pennsylvania Federation of Labor, who has given the subject careful and exhaustive study, clearly indicates why the millions of consumers, members of the great organization which he represents, should not be deceived or imposed upon by making counterfeiting easy. All these years the dairy people have been knocking at the door. Now, instead of granting their just demand, it has been proposed to hand them a gold brick. To deal a death-dealing blow that will not only affect the dairy interests but practically everyone. It has been alleged and feared by many that the party in power might take this step. Evidently it is not a recent thought, but one that was

expected and contemplated, if not agreed to, in advance. I quote from the Dallas (Tex.) News:

[From the Dallas (Tex.) News.]

DEMOCRATS BACK DOWN.

Another bill is to be treated by the House majority from the viewpoint of helping out some northern and western Democrats.

When the Democrats carried the House overwhelmingly at the last general election it was expected that the grip which the dairy interests have held on Congress ever since they forced through the oleomargarine tax bill over the strenuous opposition of the Democrats would be broken.

It was expected with certainty that the House Democrats would speedily adopt the pending oleomargarine bill, which has the indorsement of the southern agricultural and live-stock interests and masses of the city workingmen, but the supporters of the bill to repeal the oleomargarine tax find they can not muster sufficient votes to force a report on the pending measure.

It is said that great pressure has been brought to bear upon some of the northern Democrats who slipped into office on the crest of the last political tidal wave.

This would indicate that the step was at least expected, if not a previous agreement. Are the farmers who voted for you and President Wilson to be thus rewarded? Again, it is up to you, my Democratic friends, referred to as "northern Democrats who slipped into office," to save the day. I trust that if the pressure referred to is ever brought to bear upon you that you may have the courage and wisdom to withstand the pressure and not vote to ruin the most important industry in your districts, and thus encourage and promote counterfeiting by making it easier for the thousand violators. It seems clear that instead of amending the law so as to impede the progress of or to destroy this valuable industry upon whom so many depend, we should amend it so as to give adequate protection to this worthy and legitimate industry against imposition and fraud.

Alabama Steel, Its Suitability for Use in Armor Manufacture.

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. HUDDLESTON. Mr. Speaker, under leave obtained to extend my remarks on the above subject I reproduce a statement made by Prof. Joseph W. Richards, of Lehigh University, made before the Navy Armor Plate Board, in Birmingham, Ala., in February, 1917.

STATEMENT OF JOSEPH W. RICHARDS, A. C., PH. D.

The main questions before the Armor-Plate Board in considering Birmingham, Ala., as a location for the Government armor-plate plant, are, I understand, as follows:

I. Can the phosphorus in Birmingham pig iron be reduced in basic open-hearth furnaces to the specification limits of armor plate (0.03 per cent phosphorus)?

II. Can the large amount of armor-plate scrap be handled by the open-hearth furnace?

III. Granted that the phosphorus in high phosphorus pig iron can readily be eliminated in basic open-hearth furnaces in the production of straight carbon steel, is there any complication as far as armor plate is concerned due to the use of armor-plate scrap and in particular due to the content of chromium in the scrap? If there is any complication what does it add to the cost of the ingot per pound or per ton? (Rear Admiral Fletcher.)

I.

Without hesitation this can be answered affirmatively. It is possible and practicable to dephosphorize Birmingham pig iron, with its 0.6 to 1 per cent of phosphorus, to the limit of 0.03 per cent of phosphorus allowable in armor-plate steel. It goes almost without saying that this requires experienced melters and competent metallurgical supervision to attain it regularly. Making armor-plate steel is no proper task to set the indifferent metallurgist or the careless melter; but granted the same metallurgical skill as is used in the private armor-plate plants, or as is used in Germany in making armor-plate steel from similar pig iron, there is no doubt at all that the quality of steel required can be produced from Birmingham pig iron.

II.

The large amount of scrap can be remelted in open-hearth furnaces, but only at the sacrifice of much of the chromium which it contains, which must then be replaced. The atmosphere of the open-hearth furnace is oxidizing in its nature, and scrap containing chromium can not be melted in such an atmosphere without loss of chromium. This problem, however, is common to all armor-plate plants which remelt scrap armor plate in open-hearth furnaces. The ideal manner of handling such scrap would undoubtedly be by the electric furnace. Assuming an electric furnace properly designed for the purpose, the remelting could be accomplished without any loss of chromium and virtually without any change in composition. With electric power available at one-half cent per kilowatt hour, the saving in chromium would bring down the total melting cost to a par with melting costs in the open-hearth furnace, besides obviating the troublesome slag formed in the latter furnace by the oxidation of so much chromium.

III.

If the scrap is melted with or mixed with the pig iron before the latter is dephosphorized, the chromium present is certain to oxidize and form a viscous slag during the refining of the steel. In fact, it may be virtually assumed that the chromium in the scrap used will largely pass into the slag under such circumstances, increasing the slag volume, making it viscous, and requiring the addition of considerable flux, such as fluorspar, to thin it to the desired fluidity. This slag question is not a novelty in making armor-plate steel. It has been met and solved by all armor-plate makers. The presence of phosphorus and the need for its elimination does not materially change the slag problem. It increases the amount of refining to be done, and thus the time of a heat, and that may be assumed the only complication. The increased cost of the liquid steel due to the increased refining to be done will not exceed at the outside limit $5 per ton. I recommend that this datum be assumed as a perfectly safe figure.

The writer believes that armor-plate-steel manufacture in general can be improved by refining the basic pig-iron charge entirely by itself, without addition of scrap in the manufacturing furnace. In this manner chromium would be absent during the desiliconizing, decarbonizing, and dephosphorizing of the metal and would be added later to the refined steel bath after the slag has been teemed off. To utilize the scrap properly it should simply be melted in furnaces in which no refining is done, for the scrap does not need refining, and should then preferably be cast directly from such furnaces into armor-plate ingots, or it may be added molten to the newly manufactured melted armor-plate steel, or the newly manufactured metal could be added to the remelted metal in the furnace or in the ladle. In this manner the loss of chromium during refining of the pig iron would be obviated and the whole operation simplified, particularly the slag question.

CONCLUSION.

The writer is convinced that by the utilization of the metallurgical skill available in the Birmingham district, employing melters experienced in making armor-plate steel, and with competent expert metallurgical advice, a plant for manufacturing armor-plate steel can be operated on Birmingham pig iron with every assurance of meeting the Government's requirements as to quality and cost.

Respectfully submitted.

JOSEPH W. RICHARDS, Ph. D.,
Professor of Metallurgy, Lehigh University; Chairman Iron and Steel Committee, American Institute of Mining Engineers; Member Naval Advisory Board.

Severing Diplomatic Relations With Germany.

EXTENSION OF REMARKS
OF
HON. JOHN R. FARR,
OF PENNSYLVANIA,
IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. FARR. Mr. Speaker, I am in receipt of the following resolutions from organizations in the district which I have the honor to represent and desire that the same be printed in the RECORD:

SCRANTON, PA., *February 14, 1917.*

Hon. JOHN R. FARR,
Representative in Congress, Washington, D. C.:

Whereas President Woodrow Wilson in an address before the joint session of the Congress on February 3, 1917, in severing diplomatic relations with the Imperial German Government, said in part, as follows: "We wish to serve no selfish ends. We seek merely to stand true alike in thought and in action to the immemorial principles of our people, which I have sought to express in my address to the Senate only two weeks ago—seek merely to vindicate our right to liberty and justice and an unmolested life. These are the bases of peace, not war. God grant that we may not be challenged to defend them by acts of willful injustice on the part of the Government of Germany"; and

Whereas the Senate of the United States, in session of February 7, expressed confidence in President Wilson's severance of diplomatic relations with the German Empire by passing a set of resolutions, which closes as follows: "Therefore be it resolved by the Senate that the Senate approves the action taken by the President, as set forth in his address delivered before the joint session of the Congress, as stated above": Therefore be it

Resolved by representatives of Griffin Post, No. 139, Grand Army of the Republic; Griffin Camp, No. 8, Sons of Veterans; Gobin Camp, No. 41, United Spanish War Veterans; Sherman Camp, No. 1, Junior Order Sons of Veterans; Woman's Relief Corps, No. 50; Circle, No. 19, Ladies of the Grand Army of the Republic; Ladies' Auxiliary of the Sons of Veterans; Ladies' Auxiliary of the United Spanish War Veterans; Daughters of Veterans; and friends, assembled on this the 13th day of February, 1917, to fittingly celebrate Union Defenders' Day, in honor of Abraham Lincoln's birthday, That we hereby express confidence in President Wilson and the Congress of these United States, and that we renew our allegiance to the flag and to the Republic for which it stands; and be it further

Resolved, That, come what may, we will do all that lies in our power to maintain and uphold the principles upon which this Republic was founded, even to the offering of our lives if need be; and as the loyal citizens stood by Gen. George Washington when this Republic was founded, and as they stood by our immortal Lincoln in the dark days of 1861–1865, and, as they stood by our martyred President McKinley in 1898, so do we stand by and pledge our faith in our Government in the words of Abraham Lincoln: "Let us have faith that right makes might, and in that faith let us dare to do our duty as we understand it": Be it further

Resolved, That a copy of these resolutions be forwarded to our Congressman, Hon. JOHN R. FARR, to the Senators from the State of Pennsylvania, that copies be furnished the press of this city and to the Secretary of each organization here represented.

Presented and its adoption moved by D. O. FREEMAN, *Griffin Camp No. 8, Sons of Veterans.*

Seconded by—Mrs. E. L. WALTER, *department president Woman's Relief Corps;* CATHERINE DE LACEY ROACHE, *president Daughters of Veterans;* GERTRUDE COUGHLIN, *past president Circle No. 19, Ladies of Grand Army of the Republic;* Mrs. MARY RIEDMILLER, *president Ladies' Auxiliary Sons of Veterans;* Commander F. E. SHELTON, *Griffin Post, No. 139, Grand Army of the Republic.;* Commander N. M. BIRTEL, *Gobin Camp, United Spanish War Veterans;* D. J. LINDLEY, *senior vice commander Camp No. 8, Sons of Veterans;* EDGAR DAVIS *for Sherman Camp, No. 1, Junior Order Sons of Veterans.*

Above resolutions adopted unanimously.

Commander W. J. LEWIS, *Chairman.*

JEWISH HOME OF FRIENDLESS,
Scranton, Pa., February 19, 1917.

Hon. JOHN R. FARR,
Representative in Congress, Washington, D. C.

DEAR SIR: At a regular meeting, held by our society it was on motion unanimously resolved in case of this great United States of ours being forced into this terrible war, we would do all in our power to give a helping hand in time of need.

Our society consists principally of mothers with families, and it is our prayer to the Almighty and Supreme Ruler not to have this country engaged in this terrible conflict, and implore the President, with the Senate, to avoid such a thing if possible.

In the name of the Jewish Home of Friendless, of Scranton, consisting of over 2,000 members, I remain,

Very truly, yours,

Mrs. Rev. E. FRIED, *President.*
SAMUEL ROTH, *Secretary.*

Volunteer Officers' Retired List Bill.

EXTENSION OF REMARKS
OF
HON. ROBERT M. McCRACKEN,
OF IDAHO,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. McCRACKEN. Mr. Speaker, I offer for insertion in the RECORD a memorial which the legislature of my State has passed, and with which I am in hearty sympathy. While there are only a few hours left for this Congress to act upon this important bill, I want to urge upon this body that it could not perform a more patriotic service to the country than to place the officers of the great Civil War upon the roll of retired officers and thus honor the memory of Lincoln and do justice to the men who did so much to preserve the Union in its hour of peril.

The memorial is as follows:

STATE OF IDAHO,
DEPARTMENT OF STATE.

I, W. T. Dougherty, secretary of state of the State of Idaho, do hereby certify that the annexed is a full, true, and complete transcript of senate joint memorial No. 8, by Curtis and Atherton, to the honorable the Senate and the House of Representatives of the United States of America in Congress assembled, passed the senate on February 10, 1917, passed the house of representatives on February 19, 1917, which was filed in this office on the 23d day of February, A. D. 1917, and admitted to record.

In testimony whereof I have hereunto set my hand and affixed the great seal of the State. Done at Boise City, the capital of Idaho, this 23d day of February, A. D. 1917, and of the Independence of the United States of America the One hundred and forty-first.

[SEAL.] W. T. DOUGHERTY,
Secretary of State.

Senate joint memorial 8. (By Messrs. Curtis and Atherton.)

To the honorable the Senate and the House of Representatives of the United States of America in Congress assembled:

Your memorialists, the Senate and the House of Representatives of the State of Idaho, respectfully represent that—

Whereas there is now pending and upon the calendars of both the Senate and House of Representatives a bill known as the volunteer officers' retired-list bill; and

Whereas full pay for life was granted to all survivors of the Revolutionary War, the War of 1812, and the Indian wars, in accordance with rank; that this is a measure of justice and in harmony with policy and should be speedily taken up and put upon its passage: Now, therefore, be it

Resolved, That we, your memorialists, earnestly recommend that the above-mentioned bill be taken up and voted on at the earliest possible date.

The secretary of state of the State of Idaho is hereby instructed to cause a copy of this memorial to be forwarded to each of the Members of the congressional delegation from the State of Idaho to the Congress of United States.

This senate joint memorial passed the senate on the 10th day of February, 1917.

ERNEST L. PARKER,
President of the Senate.

This senate joint memorial passed the house of representatives on the 19th day of February, 1917.

B. HARVEY ALLRED,
Speaker of the House of Representatives.

I hereby certify that the within senate joint memorial No. 8 originated in the senate during the fourteenth session of the Legislature of the State of Idaho.

RICH'D BURKE,
Secretary of the Senate.

The Reed Prohibition Amendment.

EXTENSION OF REMARKS
OF
HON. WILLIAM B. OLIVER,
OF ALABAMA,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. OLIVER. Mr. Speaker, my attention has been called to the fact that some of the press reports sent out from Washington, giving the vote on what is commonly known as the Reed "bone-dry" amendment, simply show that I voted "present." While this is correct, yet in the absence of knowledge of the accompanying facts, as disclosed by the CONGRESSIONAL RECORD of that date, as to why I voted "present," the press reports referred to would be misleading.

Under leave to extend my remarks I therefore desire to give the facts as shown by the RECORD and briefly state the reasons for my vote on this measure.

The gentleman from Tennessee [Mr. AUSTIN], a Republican Member of the House, desired to be present at Knoxville from February 27 to 29, during the visit of the Armor Plant Board at such place; and it was my wish to be present at Tuscaloosa from February 26 to 28, during the visit of the same board at this my home town. Mr. AUSTIN and I accordingly agreed to pair with each other on all votes in the House occurring on these dates. During his absence, the Reed amendment was presented to the House, and in order to express my attitude on the bill I voted "no," withdrawing the vote, as the CONGRESSIONAL RECORD shows, for the declared purpose only of keeping my pair with Mr. AUSTIN, who was absent, and so I then asked to be recorded as voting "present." This is the only method in vogue in the House whereby one can express his views on a pending measure when paired with an absent Member and at the same time keep faith with his pair agreement. During my absence the RECORD shows that Mr. AUSTIN, on a roll call, voted "no" on a pending bill and withdrew his vote of "no" to be recorded as voting "present," for the declared purpose of likewise keeping his pair with me.

It is unnecessary to say to those who know me personally or who know my public and private record that I have been a lifelong prohibitionist and have sought both by example and utterance, in public and private, to aid always the advance of the cause of temperance. I have at all times taken an active part in behalf of every prohibition measure in my county and State, never being content to simply be a silent looker-on and well-wisher.

I regret to find myself differing from some of my good prohibition friends as to the wisdom, the propriety, and timeliness of the Reed amendment. It is my opinion that in States now wet this amendment will not prove helpful to the furtherance of temperance legislation; nor do I feel authorized by my constituency, either expressly or impliedly, to materially change the laws of my State on this subject recently passed by the friends of temperance. There has never been in my State a discussion or even a remote suggestion that Congress would be asked to pass legislation of this character.

The author of the amendment is avowedly opposed to prohibition in any form, absolute or modified. Like others who share his views, he saw the rapid progress that prohibition was making in every section of our country and how futile all efforts had been to stem its progress. The amendment furnished what to them seemed a gambler's chance to probably postpone the further spread of prohibition in States now wet, and was probably inspired by a further hope that it might cause possible dissension among the friends of temperance in some States now dry.

The author of the amendment well knew that the past history of prohibition legislation disclosed that seldom, if ever, had there been a sudden jump from saloons to "bone-dry" prohibition in any State, but that the advance of prohibition had been gradual in those States now dry, and made so under the direction and guidance of sincere temperance adherents. From the saloon to dispensary or to some modified form of prohibition have been the usual methods pursued in the different States. From this, it was doubtlessly argued by the author of the amendment, that if Congress should now make it impossible for any State in future to abolish the sale or manufacture of liquors without being forced by Federal law to adopt absolute "bone-dry" prohibition, this would probably delay prohibition in States now wet, and might serve to create dissatisfaction in

some States now dry, where a limited quantity of liquor, under certain legal restrictions, may be ordered for private use.

In Alabama, my home State, the last legislature was controlled by the friends of prohibition, and they wrote the present laws of that State on this subject. In their judgment it was thought best to adopt what may be termed a modified form of prohibition. Until the Reed amendment was offered, it had never been even remotely suggested that this Congress would or should assume to change or modify the prohibition laws of that or any other State, now dry, by writing into the Federal law the provisions of the Reed amendment.

Personally I prefer a "bone-dry" to a "limited-quantity" law; but since my State has recently passed a law on this subject, I question the right to substitute my wish for its laws without even the semblance of consultation or discussion. I am the servant, not the master, of my constituents.

As to the probable future effect of this "bone-dry" amendment on temperance legislation in States now wet it may be of interest to recall that when the bill proposing a modified form of prohibition for the District of Columbia was pending in the Senate some weeks ago, a similar "bone-dry" amendment to the District bill was submitted. Prohibition leaders then openly charged that such an amendment was offered in the hope that should a referendum on the bill be later ordered by the Senate, such a "bone-dry" amendment, if adopted, would cause the defeat of the District bill by the voters. The prohibitionists accordingly rejected such "bone-dry" amendment to the District bill.

The brewers were active in their support of this amendment when it was before the House, and sent many telegrams urging its support, and while I fear there may be substantial foundation for their evident belief and hope that the adoption of the amendment may serve to retard the progress of prohibition in States now wet, yet I trust that my apprehension in this regard will prove groundless.

In conclusion, let me say that the amendment has now been written into law, and it is my earnest hope that the people of my State will accept it and cooperate to see that it is lived up to, both in letter and spirit. If accepted and strictly enforced, I recognize fully that it will prove a great blessing wherever so tried. The steady trend of the Nation is undeniably toward absolute prohibition, and the reasons for this are not difficult of ascertainment because they are found in sound moral and economic arguments, which commend themselves to the favorable judgment of people in all sections of our country, namely, the uplift of humanity and the safeguarding of the home.

Failure of the Sixty-fourth Congress to Enact Water-Power Legislation.

EXTENSION OF REMARKS

OF

HON. CLIFTON N. McARTHUR,

OF OREGON,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. McARTHUR. Mr. Speaker, in the closing hours of this Congress I think it fitting to observe that however well satisfied any of us may feel over this or that legislative accomplishment, we are obliged to confess that our performance with respect to water power is something for which we can offer no adequate excuse either to the country or to ourselves. While we have spent days upon days of time wrangling over trivial matters, we have made an absolute failure in one matter that is clearly fundamental to the mobilization of our industries, to the functioning of our overburdened transportation system, to the production of our food supply, and to the defense of our country.

We have failed to make it possible for capable and honorable men to develop our wasting water powers, notwithstanding the fact that hundreds of millions of dollars are available for such development, but will not, by reason of world-wide reconstruction demands, be available in the near future. It has been of no consequence to the majority of us that millions of water horsepower are now actively demanded in the promotion of our national prosperity. We have been indifferent to the fact that great railroad lines are awaiting the passage of legislation that would make it possible to use electricity as a motive power and thereby increase the efficiency and comfort of the service while decreasing its cost and incidentally preventing the present enormous consumption of exhaustible fuel. It has made no difference to us that great industries which we need and demand in this world-wide crisis must seek other countries, because we would not enact honest and practical water-power legislation. We scramble and tumble over each other in our zeal to enact legislation in the farmers' interest, yet in our wisdom we have thought it better to have our farmers either produce half a crop or else pay tribute to the great nitrogen combine of Chile than to allow our water powers to be developed and thereby create home production of nitrogen for fertilizer purposes. Truly, it will be surprising if some of the water-power obstructionists on the floor of this House do not have their names engraved upon a monument erected by the grateful people of the Republic of Chile in recognition of their zeal in levying tribute on the American farmer for the benefit of the Chilean nitrate industry.

The embargo on water-power development is now about nine years old. One Congress after another has passed out of existence without providing a remedy. We have listened to the propaganda of self-styled and self-appointed conservators of the public interest who assume infallibility and whose watchword is "holier than thou," but whose only clear and unmistakable desire is to keep their names and their activities constantly before the public. In this urgent need for wise and manful action we have been unable to rise above the trivialties of those who would tear down that which they have not the ability to construct.

Somehow the two Houses of this Congress managed to advance as far as the appointment of a conference committee on the navigable stream bill. I will not attempt to determine where the blame lies for failure of that conference. The appalling and the shameful fact is that we have failed—failed in a matter in which, as efficient public servants and considerate, sensible, and full-grown men, we ought to have been successful. The water powers of the country will continue to waste down into the sea. Our industrial capital and our creative men will continue to go, as they have in the past few years, to other countries, where ability and enterprise are appreciated and where the creation of something big, broad, purposeful, and useful is not considered a reprehensible act.

I trust that the Sixty-fifth Congress will give its serious attention to this water-power question and that it will have the ability and courage to settle it properly.

Prohibition in the District of Columbia.

EXTENSION OF REMARKS

OF

HON. WILLIAM W. HASTINGS,

OF OKLAHOMA,

IN THE HOUSE OF REPRESENTATIVES,

Thursday, March 1, 1917.

Mr. HASTINGS. Mr. Speaker, the most eloquent plea for prohibition to-day is a vote in its behalf. That is the most effective speech which can be made. A few days ago I favored prohibition in Alaska, and voted recently for the amendment to the Post Office appropriation bill prohibiting interstate shipments into dry States, as well as forbidding the circulation of newspapers containing liquor advertisements in dry States or Territories. I favor this bill providing prohibition for the District of Columbia just as it passed the Senate, without dotting an "i" or crossing a "t." I believe that every sincere friend of prohibition will vote down all proposed amendments to it. I will not attempt to analyze the bill. Everyone knows that if this bill is amended and goes back to the Senate, under the rules prevailing in the other body, which I am not permitted to criticize, indefinite debate can be had on it, resulting in its defeat, now that the session is so near a close. It may be that if the parliamentary situation were not as it is amendments would be favorably considered; but, in my judgment, a vote to amend this bill at the present time is a vote against prohibition, and the people of this country will not be deceived. They thoroughly understand it.

I am not going to make an argument in favor of prohibition. It needs no argument in its behalf. That the saloon is a curse everyone must admit and no one will deny. It never made any boy a better man. It never brightened any home. It never caused the reformation of a fallen woman. I assert with positiveness that there is no argument in its behalf.

We have heard the stock arguments to-day that are usually made in its defense, and among them:

First. It is asserted that we derive a great amount of revenue from it to run the Government. Permit me to remind you that

the saloon is the cause of more crime and, therefore, more expense in the courts and the enforcement of law throughout the Nation, than we get revenue from licensing it. I do not believe in taxing vice to raise revenue for maintaining this Government.

Second. It is argued that you can not legislate temperance into human beings. This I deny. If liquor is put out of the reach of young boys acquiring a thirst for it and the older men having an uncontrollable appetite for it, the former will soon have no desire for it and the latter will take more interest in family life, as temptation is removed and the love of home life grows.

Third. It is asserted that a great deal of money is invested in alcoholic liquors and saloon fixtures in the District, and that some notice should be given in advance of the intention of Congress to enact legislation of this kind. This argument does not appeal to me. I do not believe that we are under any obligations to give such advance notice when it comes to passing laws for the prevention of vice. Any person competent of acquiring property ought to have foreseen long ago that prohibitory laws will be written upon the statute books of every State of this Union within the next few years. Within a short time national prohibition by constitutional amendment will be a reality.

Fourth. It is argued that we ought to leave this important question to a referendum vote of the people of the District of Columbia. This argument has no force. The District belongs to the Nation and not to the residents of it. We, the Representatives of the 48 States of this Union, represent the District, and it is useless to argue, therefore, that the District has no representation in Congress. If this question is left to a referendum vote of the people, why not submit every other question to a vote of the residents of the District which affect the people living here? Why should any special privilege be shown to the liquor interests? It is another argument for delay, nothing more. I am in favor of giving the people of Oklahoma the largest voice in the control of their own affairs. They elect their Representatives. We have a different form of government here, and the District of Columbia is specially represented by 435 Members in Congress, all taking pride in the Capital City of the Nation. I shall, therefore, vote against the referendum, shall vote for the rule to consider the bill, and shall vote against any amendment to the bill for the reasons stated.

Oklahoma is the pioneer in this kind of legislation. For 75 years we have had prohibition in the eastern part of the State. The enabling act admitting Oklahoma to statehood required that we should have prohibition there for 21 years, and by a vote of the people, we extended this provision throughout the entire State. There are now 26 States of the Union with prohibitory laws, and the day is not far distant when we will have prohibition throughout this entire country by constitutional amendment. God speed the day!

The Military Establishment.

EXTENSION OF REMARKS

OF

HON. S. HUBERT DENT, JR.,

OF ALABAMA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. DENT. Mr. Speaker, I submit herewith tables prepared in the War Department showing the initial cost for supplies and additional construction, together with annual maintenance cost, of the Military Establishment under the national-defense act after the fifth increment has been added; also first cost of supplies and additional construction, together with annual maintenance cost, of the Military Establishment if the recommendation of the War College Division for universal compulsory service should be adopted. I also insert a table prepared by the War College, comparing the cost of maintenance and the strength of the defense forces under the national-defense act and the proposed universal compulsory training plan.

It will be observed that the first cost of the establishment under the present law for reserve supplies and permanent construction is $1,514,575,566, and the annual maintenance cost is $339,548,000. This estimate, however, is unfair in that it includes estimates for 685,000 volunteers at the outbreak of war, at a cost of $565,125,000, and 1,500,000 volunteers within three months after the outbreak of war, at a cost of $1,237,500,000. From this is deducted, however, value of supplies in use and in store, material under manufacture, amounting to $155,472,000; also value of supplies that can be easily obtained in open market and not required in time of peace, $111,870,000; and also $569,250,000 worth of supplies that can be obtained within three months. Deducting the provision for volunteers, which, of course, would only apply in the event of war, the first cost of supplies for the Military Establishment under the present law, after the full increment has been added, is $824,866,457. Of course it is manifestly unfair to tack onto the present peace plan the cost for a volunteer army of any size, as that army would be called into existence only in the event of war and its number would depend entirely upon the necessities of the particular situation.

I direct attention to the fact that the first cost of the plan for universal compulsory service prepared by the Army War College, which provides for complete reserves and permanent construction, is $2,138,031,372, and the annual cost of maintenance is $461,205,324.

In view of the fact that this plan has been given to Congress and the bill prepared by the staff has been introduced, for the purpose of calling public attention to the plan I thought it only fair that the public should also be advised as to the cost of establishing and maintaining such a system:

TABLE I.—*Estimate of cost of the Military Establishment as it would ultimately be under the national-defense act after fifth increment has been added to the Regular Army and the National Guard.*

(Regular Army and National Guard are shown at minimum strength.)

A. FIRST COST OF SUPPLIES AND ADDITIONAL CONSTRUCTION REQUIRED.

	1	First cost of supplies.		Cost of additional construction required.	
	Strength.	2 All supplies, including necessary reserve supplies.	3 All supplies, exclusive of necessary reserve supplies.	4 If permanent type.	5 If cantonment type.
(a) Regular Army (including 82,200 in over-sea garrisons)	224,628	$191,352,000	$119,918,000	$102,320,000	$6,020,000
(b) Regular Army Reserve (overhead cost included in Regular Army)	86,000	27,393,000	27,393,000	.....	.....
(c) National Guard (including corps Field Artillery)	428,572	443,019,000	182,180,000	.....	.....
(d) National Guard Reserve (overhead cost included in National Guard)	158,000	40,640,000	40,640,000	.....	.....
(e) National Guard animals (in excess of those authorized in national defense act, June 3, 1916)	.....	40,200,000	40,200,000	.....	.....
(f) Volunteers required immediately on outbreak of war	685,000	565,125,000	260,300,000	.....	.....
(g) Volunteers required within 3 months after outbreak of war	1,500,000	1,237,500,000	570,000,000	.....	.....
(h) Additional armament and ammunition required for fortifications	.....	82,252,457	41,707,457	.....	.....
(i) Total (including strength of over-sea garrisons, 82,200)	3,082,200	2,627,491,457	1,282,338,457	102,320,000	6,020,000
(k) Deduct:					
(1) Value of supplies in use and in store, material under manufacture, and unused appropriations		155,472,000	155,472,000	.....	.....
(2) Value of supplies for (a) to (f) that can be obtained in open market in great quantities at any time and that are not required in time of peace		111,870,000	109,228,000	.....	.....
(3) Value of supplies for (g) that can be obtained within 3 months		569,250,000	262,260,000	.....	.....
Total to be deducted		836,592,000	526,960,000	.....	.....
(l) Amount required, based on present prices		1,790,899,457	755,378,457	102,320,000	6,020,000
(m) Amount required, based on prices prior to European war (estimated at 20 per cent less than present prices)		1,432,719,566	584,302,766	81,856,000	4,816,000

(n) First cost with complete reserve supplies and permanent construction, based on peace prices	$1,514,575,566
(o) First cost with complete reserve supplies and cantonment construction, based on peace prices	1,437,535,566

TABLE I.—*Estimate of cost of the Military Establishment as it would ultimately be under the national-defense act after fifth increment has been added to the Regular Army and the National Guard*—Continued.

(Regular Army and National Guard are shown at minimum strength.)

B. ANNUAL COST OF MAINTENANCE.

	Strength.	Pay.	All costs except pay.	Total costs.	Per capita cost.
Regular Army, including over-seas garrisons	224,628	$73,508,000	$122,306,000	$195,814,000	$872.00
National Guard	428,572	29,770,000	73,000,000	102,770,000	240.00
Enlisted Reserve, Regular Army	86,000	2,064,000		2,064,000	24.00
Reserve Officers' Training Corps	40,000		5,000,000	5,000,000	125.00
Reserve officers	50,000	15,000,000	2,000,000	17,000,000	340.00
Enlisted Reserve Corps	150,000	1,500,000	7,500,000	9,000,000	60.00
Maintenance of fortifications and supplies for Coast Artillery target practice			1,700,000	1,700,000	
Civilian training camps			5,000,000	5,000,000	
Civilian rifle clubs			1,000,000	1,000,000	
Schools and colleges			200,000	200,000	
Enlisted Reserve, National Guard	158,000				
Total annual cost of maintenance	1,137,200	121,842,000	217,706,000	339,548,000	298.58

TABLE II.—*Estimate of cost of the Military Establishment recommended by the War College Division, General Staff, on National Army plan, January, 1917.*

A. FIRST COST OF SUPPLIES AND ADDITIONAL CONSTRUCTION REQUIRED.

	First cost of supplies.		Cost of additional construction.	
	1	2	3	4
	All supplies, including necessary reserve supplies.	All supplies, exclusive of necessary reserve supplies.	If permanent type.	If cantonment type.
(a) Over-sea garrisons	$57,922,518	$28,093,423	$35,259,600	$2,069,700
(b) Frontier force	18,920,040	9,176,219		
(c) Training forces	469,487,089	227,243,921	484,111,467	26,453,121
(d) First reserves	1,324,077,318	692,339,319	31,320,000	8,485,082
(e) Second reserves	1,324,077,318	692,339,319	31,320,000	8,485,082
(f) Permanent personnel not included (staff departments, detached officers, dentists, recruiting service, schools, disciplinary units, education, depots, hospitals, etc.)	6,271,056	6,271,056		
(g) Additional armament and ammunition required for fortifications	82,252,457	41,707,457		
(h) Total	3,283,007,796	1,697,170,714	582,011,067	45,492,985
(j) Deduct:				
(1) Value of supplies in use and in store, material under manufacture, and unused appropriations	155,472,101	155,472,101		
(2) Value of supplies for (d) that can be obtained in open market in great quantities at any time, including animals and vehicles, motor or animal drawn	184,364,734	178,074,379		
(3) Value of supplies for (e) that can be obtained within 3 months	610,399,644	310,605,926		
Total to be deducted	950,236,479	644,152,406		
(k) Amount required, based on present prices	2,332,771,317	1,053,018,308	582,011,067	45,492,985
(l) Amount required, based on prices prior to European war (estimated at 20 per cent less than present prices)	1,866,217,054	842,414,647	465,608,853	36,394,388

Deducting $193,794,535 worth of reserve supplies at peace prices not required for training forces the following results:
(m) First cost with complete reserves and permanent construction $2,138,031,372
(n) First cost with complete reserves and cantonment construction 1,708,816,907

TABLE II.—*Estimate of cost of the Military Establishment recommended by the War College Division, General Staff, on National Army plan, January, 1917*—Continued.

B. ANNUAL COST OF MAINTENANCE.

	1 Strength.	2 Pay.	3 All cost except pay and maintenance of construction.	4 Total cost except maintenance of construction.	5 Per capita.
Training force:					
Permanent personnel	148,850	$80,616,148	$51,626,968		
Temporary personnel (recruits)	475,000	26,125,000	168,191,080		
Total training force	623,850	106,741,148	219,818,048	$326,559,196	$523.60
Trained reservists	3,000,000				
Over-sea garrisons	96,963	31,763,090	41,532,870	73,295,960	756.00
Frontier force	29,024	7,166,039	11,818,960	18,985,599	654.00
Permanent personnel not included above (staff departments, detached officers, dentists, recruiting, service schools, disciplinary units, education, depots, hospitals, etc.)	21,186	11,022,170	6,011,374	17,033,544	804.00
Fixed overhead charges not otherwise accounted for			5,000,000	5,000,000	
Transport service			2,079,796	2,079,796	
Reserve Officers' Training Corps			5,000,000	5,000,000	
Registration, physical examination, and exemptions			5,448,127	5,448,127	
Total	3,771,023	156,693,047	296,709,175	453,402,222	
Add for maintenance of permanent construction				7,803,102	
To be appropriated if permanent construction is maintained				461,205,324	128.30
Or add for maintenance of cantonment construction				3,709,789	
To be appropriated if cantonment construction is maintained				457,103,011	121.21

C. COST OF REPEATING SEASON FOR RESERVISTS.

	Number repeating.	Per capita.	Total cost.	Per cent of cost of whole Military Establishment.
At end of second year of training	495,000	$19.67	$7,966,350	1.75
Subsequent years	770,500	19.67	15,155,735	3.32

D. ORGANIZED MILITIA, ESTIMATED COST.

Allotment to the several States in aid of Organized Militia, $7,000,000. (For five years only to cover transition period.)

A Commission to Devise Plans for National Defense.

EXTENSION OF REMARKS

OF

HON. JOHN M. MORIN,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. MORIN. Mr. Speaker, this is a day in which we are having commissions of every sort to investigate every kind of condition. We have commissions to investigate the tariff, we have commissions to investigate the currency, we have commissions to investigate the cost of food, we have commissions to investigate and control nearly everything imaginable; but we have, according to my opinion, overlooked the one thing for which a commission is most needed, and that is one to investigate and report to Congress what is essential for our national defense, both military and industrial.

Manifestly we should not undertake any enterprise until we understand fully the responsibilities it will incur. Before

building, the wise man sits down and estimates the cost. He makes his plans and the structure that later appears is the outcome of his careful thought. As it is with the individual, so it is with a nation. We must outline the plans, we must count the cost, we must decide on the foundation and also on the superstructure.

In building for the future defense of our country it seems to me that our foundational trouble is our Army organization. Where the trouble lies I can not state. But there are some things that are apparent to the most casual observer. What can we as a people expect from a system where the General Staff is subject to continual change, a new Chief of Staff every four years, a War College where there is no permanency? With no fixed determination of policy and procedure, how can we hope to work out a military system that is truly adequate? Our foundational work must then be to determine upon the course we are to pursue, to work out a plan whereby those in charge shall be certain of their tenure in command, and to select men for these positions who are fully capable of wisely and logically carrying out the plans that will be formulated.

But how is this to be brought about? There have been nearly as many solutions offered as there have been minds. Every Army officer thinks he knows just what should be done. Members of the National Guard have come forward with their suggestions. Writers of repute, military and industrial critics, have written at length on the subject, but it has all seemingly been of no avail. Unless it is demonstrable, how are we to know whom to believe? This is a national question, and means the mobilization of our patriotism, our resources, and the brains of our country.

In the question of what will best contribute to our country's defense there are many problems that do not readily lend themselves to solution. There are problems involving the social, economic, and political elements of our people. Embracing within itself so many perplexing and conflicting elements one can readily see that no body of men, whose views must be necessarily circumscribed to a certain extent by the work to which they are devoting their full time, is able to bring to the solution of these problems the full experience that is needed for the satisfactory analysis of the same. For that reason the officers of the Army, no matter how capable or efficient they may be, would not be able to formulate a policy that will properly provide for the mobilization of all the elements necessary for the national defense or for the future training of our civilian population. The questions are too grave to listen alone to the opinions of those whose bias is such that things that pertain to the military can be viewed only with partial eyes. There are questions, it is true, that can be left to the judgment of these fully qualified Army officers, such as the strategic and the tactical features and the actual training of soldiers; but when it comes to the point of saying who is to be trained and when this training is to be done, and the various other suggestions that are now being made, we need men of a wider vision, whose pursuits are more varied, and whose thought and attention has been given to the great needs that confront our Nation to-day.

We have been unable at this short session to do much in the way of constructive military legislation. For this reason I have introduced a resolution into the House in which I have requested the President to form a commission to investigate this question which is of vital import to us. The question of how we are best to build up a system of preparedness which will save us from the suffering attendant upon the military program of war-ridden Europe, and yet at the same time will insure our peace.

This commission should be appointed by the President and should be above reproach on account of partisan politics. It should be composed of officers from the United States Army, men tried and trained in the art of war. There should be also representatives of the Organized Militia and Members from both Houses of Congress. In addition to this it has seemed wise that there should be a large number of men from the various walks of life. Men whose whole thought and training has been along the lines of social, industrial, and educational development, but still men whose interests have been wide enough to enable them to be valuable factors when it comes to making the decisions on such important matters.

The object of this commission is to make a thorough and exhaustive investigation into every phase of our military and defense problems, and then make a comprehensive report to the next regular session of Congress in order that the Committees on Military Affairs in both Houses may have well-formulated plans which will be the foundation on which we can later erect that structure known as preparedness.

Such a commission will command the respect and confidence of all, for it will be made up of men whose patriotism is undoubted and on whose clear judgment we can rely. Such a commission will inspire all with the feeling that at last we can have some grounds on which to base our hopes and expectations of an immediate working out of the questions that have been agitating the public mind for months. The people will give it their support, but we are not entitled to this support unless the recommendations made are the result of the calm, cool, judgment of men who have given it their careful and unremitting study and attention, and whose capabilities, loyalty of purpose, and patriotic impulse can not be questioned.

Study of the Excise and Prohibitory Laws of the United States and Other Countries.

EXTENSION OF REMARKS

OF

HON. JACOB E. MEEKER,

OF MISSOURI,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. MEEKER. Mr. Speaker, under leave granted me to extend my remarks in the RECORD I wish to insert the following:

KANSAS.

Some 10 years ago I became interested in the study of the excise and prohibitory laws of the United States and other countries. Since that time I have endeavored to maintain the attitude of a student. During the first two or three years of my investigations I accepted on their face value the statements as set out by telegram and letter and newspaper articles as to the condition of things in licensed or prohibition territory. After a while I discovered that bitter partisanship displayed on either side of the question might and did bias the individuals making their statements. That led me to a determination to get at the facts wherever possible. Naturally I turned to the State of Kansas, and I must confess that it has been all but impossible to obtain authentic and official data as to the conditions there; but gradually the lines to follow were discovered and the information obtained is submitted herewith.

It has been my purpose to give here the testimony of the officials of Kansas in their own reports. Where newspapers are quoted I have given the reports verbatim, with date line, so that anyone sufficiently interested to further investigate will find this a sufficient guide.

The one puzzling question in the preparation of this study has been what to omit. Within the last 10 years there has accumulated such a superabundance of local and State testimony upon the subjects herein discussed that it has become merely a matter of selecting such testimonials, especially as regards the newspapers, as would be likely to have received the widest circulation.

In the final preparation of this data I have been assisted by Hon. Paul S. Conwell, of Kansas City, Mo. Mr. Conwell was born and reared in the State of Kansas and has ever been in intimate touch with the life and activities of that Commonwealth. Under his supervision the excerpts from the official reports and from the newspapers have been checked and rechecked, to the end that, so far as is humanly possible, everything herein quoted may be exactly correct. My purpose is to set before the people of America the conditions as they are in Kansas, in order that hereafter the honest student of conditions, social and otherwise, may have the latest and most reliable first-hand data at his disposal.

The data is as follows:

INSANITY.

A SURVEY COVERING FACTS AS REPORTED IN VARIOUS OFFICIAL REPORTS OF THE STATE OF KANSAS, PERTAINING TO THE STATE INSTITUTIONS FOR INSANE WITHIN THE STATE, TOGETHER WITH OBSERVATIONS AND NOTES OF EXPLANATION.

As an agency through which insanity can be solved and through which it has been reduced prohibition, and particularly the "Kansas brand," has been flaunted before the public during the past few years with reckless abandon, through the press and by oral declarations both in and out of the pulpit.

Claims have been advanced without number that "eminent scientists" have at last concluded that alcohol, after all, is but a deadly poison, no matter in what form used; that it is one of the greatest contributing causes to insanity; that "ousting the saloon" making territory "all white" on a map by ballot or enactment of legislative statute, "removing temptation," tightening up the prohibition machinery followed by extensive, persistent, and spectacular raids, decreases consumption to such an extent that insanity is disappearing with marked rapidity—and Kansas, as usual, is dragged forth as the "living example" to prove the claim.

Enough has been said and quite enough written in this behalf to render it expedient that the American public become acquainted with this feature of "progress" achieved under the divers and sundry attempts to not alone sober up but render more sane the population within the Sunflower State.

No claim is here made that alcohol, if taken to excess, will not produce certain types of insanity, nor will it be argued that "a saloon on every corner" will have a tendency to make a community any more sane. Neither will it be denied that indiscriminate, wholesale consumption of boot-leg whisky, "white mule" (a mixture of alcohol, water, and sugar, in common use in Kansas), home-made whisky, or imported whisky of a cheap, rotten quality, consumed "straight" or mixed with water, hard cider, or the "juice" from a silo will and no doubt do produce extensive drunkenness and in time insanity. It was the wholesale manufacture, without let or hindrance, of alcohol and other ardent spirits which were consumed by wholesale that rendered Sweden so drunken that Government intervention was necessary.

In an exhaustive treatise on "Alcohol and Society," by John Koren, published during 1916, considerable light is thrown on the matter of the relationship between alcohol and insanity from a scientific standpoint. Mr. Koren declares the social control of alcohol to be one of the most important questions before the American people, and further declares that, "On both sides of the debate the noisy violence of extremists distorts arguments and perverts statistics."

His study of the question was not made to prove a hypothesis but to find the truth, and in the course of his busy life of scientific research he has been extensively employed by the United States Government in investigating liquor legislation abroad. At home he gained a distinguished reputation when he was commissioned by the committee of 50 to write its memorable report which marked an epoch in the history of the control of alcohol.

"Allied to the basic question of alcohol as a direct factor in degeneracy is that of its position as a cause of insanity," declares Mr. Koren (p. 23). "The popular picture of its importance in this respect is much overdrawn; and for this exaggeration the propagandist temperance literature is responsible. As a rule, the nervous and mental ailments of alcoholic origin are clearly distinguishable. This is true, for instance, of alcoholic polineuritis, which sometimes is associated with mental disturbance. Alcoholic hallucinations and delirium tremens, the commonest form of insanity caused by drink, are easily recognized. Of less certain etiology are rarer forms of derangement such as 'alcoholic paranoia.'

"The causative relation of alcohol to other forms of mental disease is even more obscure. In general, the abuse of alcohol appears symptomatically in a number of dissimilar psychoses, such as dementia praecox, maniacal, and paralytic conditions of exaltation and others. It is accepted that alcoholism may contribute directly or indirectly to upset the psychic balance of persons predisposed to mental disease and thereby help to give it form. The whole case can be put briefly in this way: The mental diseases occurring in intemperate persons are partly of a specific character, partly those in which alcoholism is contributory, and partly those in which it must be regarded less as a cause than as an expression of an abnormal psychic constitution which becomes more clearly revealed by mental disease.

"During the greater part of the first half of the last century," continues Mr. Koren (p. 187), "Sweden permitted practically free trade in the manufacture and sale of spirits. The consumption of spirits rose to extraordinary proportions and with terrible effects. 'The very marrow of the nation was sapped; moral and physical degradation, * * * all those grim legions of evils that ever range themselves under the banner of intemperance took possession of the land.'"

An attempt to conquer the ravages of vile decoctions in the form of hair tonic, patent medicines, etc., was made by the Kansas Legislature during the sessions of 1909 and 1911, when such articles were placed on the "outlaw" list. Drug-store saloons and the "prescription" farce were likewise thrown out, in the hope that better conditions would ensue, but they didn't. Insanity, whether caused by drinking or otherwise, continued to increase. What was theretofore furnished through such agencies of law violation that then existed, is now furnished by an astounding mail-order business, wholesale bootlegging, blind pigging, and home manufacturing.

"Crazy-quilt" or homemade" statistics, cite by prohibitionist propagandists, lay claim to a decrease to the extent that over 85 per cent of the State's territory has been pointed out time and again as being absolutely cured of insanity in any of its various forms. But these claims are all without foundation if the official records of the State insane hospitals speak the truth. They speak without bias and without prejudice, presenting the case as it appears.

Kansas supports three State insane hospitals, one State hospital for epileptics, one hospital for feeble-minded, aside from six private insane asylums, which report biennially to the board of control. The movement and increase in population, together with general conditions surrounding each of these institutions, will be taken up in their order.

However, before entering that field, I desire to call attention to the fact that on three memorable occasions men high in public office in Kansas, namely, ex-Gov. W. R. Stubbs, ex-Attorney General John Dawson—now a judge of the Supreme Court of Kansas—and Gov. Capper have within the past seven years declared that from 87 to 89 counties of Kansas have no insane inmates. It is needless to add that prohibition is given credit for the showing. Ex-Gov. Stubbs delivered his speech in Chicago, March 27, 1910, upon invitation of the State superintendent of the Anti-Saloon League of Illinois. The Dawson speech was delivered at a banquet given in Chicago by the Baptists' Social Union, April 2, 1912, and Gov. Capper delivered his speech in Boston, September 3, 1915, before a gathering under the auspices of the managers of the prohibition and equal suffrage campaign in Massachusetts. These men and others have been quoted extensively throughout the United States, and the speeches mentioned received wide publicity, as have similar declarations made by them both before and since the occasions mentioned.

In a speech before the Fifteenth Annual Convention of the Anti-Saloon League of America, at Columbus, Ohio, November 12, 1913, ex-Gov. Hodges, of Kansas, declared: "It (prohibition) has accomplished wonders in the way of decreasing the numbers of the insane in our State. * * * Sexual crimes, arson, theft, and dangerous assaults are but frequent symptoms of mental derangement, temporary or permanent, caused by a too frequent indulgence in alcoholic stimulants. * * * You have but to come to Kansas to see the cheering effects of prohibition."

Kansas has 105 counties, every one of which, with the exception of Haskell, a far western county with a trifle over one person to the square mile, has contributed at least one inmate to the insane hospitals at Topeka and Osawatomie. (Fifth and Sixth Biennial Reports, board of control, for 1914 and 1916.)

Kansas had 2,912 inmates in State insane hospitals in 1910 (U. S. Census, Bulletin 119; Insane and Feeble-Minded in Institutions), which was an increase of 928 over the number confined June 30, 1899, aside from inmates on county poor farms, in private insane hospitals supported by counties or given State aid, or in private homes supported by lodges, and "farmed out" by counties which could not provide for them but had to care for them because of lack of room in State institutions.

There were 3,824 inmates in the insane institutions, held as wards of the State by counties, those on county poor farms and in the feeble-minded institutions (fifth biennial report, board of control, pp. 34, 41, 88, 121, 139, 165), on June 30, 1914.

Every county in the State except eight contributed at least one inmate during the biennium (supra, p. 62). These eight counties were Elk, Grant, Gray, Greely, Haskell, Ness, and Wichita, whose combined population does not exceed 20,000 and whose area is 5,230 square miles. However, at that time Elk County had 18 inmates in the Osawatomie Asylum, Grant County had 1, Gray County had 1, Greely County 1, and Ness County had 3, so Haskell and Wichita Counties were the only ones having no inmates in these two State asylums on June 30, 1914. (Fifth biennial report, board of control, pp. 62, 101.)

During the same period (the biennium ending June 30, 1914) 11 counties did not contribute an inmate to the Topeka State Hospital for the Insane. These counties were Elk, Grant, Gray, Greely, Haskell, Lane, Ness, Scott, Stanton, Stevens, and Wichita. (Fifth biennial report, board of control, p. 62.) All save Elk were sparsely settled western counties, two of them, Grant and Stanton, having no railroads and only eight very small towns, averaging less than 35 inhabitants each.

However, Elk contributed 5 to the Osawatomie Asylum during the period, Scott contributed 1, and Stanton contributed 1. Thus there were eight counties failing to contribute a single inmate to the two large State hospitals (fifth biennial report, board of control, p. 101), although Ness County sent an inmate to the State Hospital for Epileptics at Parsons. (Supra, p. 121.)

There were 498 inmates in the State Hospital for Feeble Minded (supra, p. 139), but the county or city residences are omitted. Just how many of these, if any, belonged in any one of the seven counties enumerated the official report fails to show.

Even though none of them were, there is quite a difference between 87 or 89 and 7. The fifth biennial report, which was published during the summer of 1914, most surely defeats the "87 or 89 counties that are without insane" story.

At the close of the succeeding period (June 30, 1916) there were 4,462 insane patients in the State, including the population of the Topeka, Osawatomie, Parsons, Larned, and Winfield institutions, and destitute insane held as State wards by various counties and patients held by counties not wards of the State. This is an increase of 638 over the preceding biennium. (Sixth biennial report, board of control, pp. 17, 18, 19, 20, 21, 22, 27, 33, 97, 134, 153, 199.) To the total given above should be added 314 patients, wards of the State, out on parole, making the sum total 4,776. As this records an increase of 1,864 since June 30, 1899, it is hard to understand by what reasoning power the conclusion is determined that insanity in Kansas is decreasing.

Sixteen counties failed to contribute any inmates to the Topeka State Hospital during the biennium covered by the sixth biennial report. They were Chautauqua, Clark, Decatur, Gray, Greely, Harper, Haskell, Hodgeman, Logan, Morton, Phillips, Scott, Stanton, Stevens, Wallace, and Wichita. (Sixth biennial report, board of control, p. 57.) However, of these Chautauqua, Clark, Gray, Harper, Hodgeman, Morton, Stanton, and Wallace sent inmates to the Osawatomie Insane Hospital, (sixth biennial report, board of control, p. 114), leaving eight counties—Decatur, Greely, Haskell, Logan, Phillips, Scott, Stevens, and Wichita—that did not contribute such an inmate. But Decatur, Greely, and Phillips each contributed inmates to the State Hospital for Epileptics (sixth biennial report, board of control, p. 134); thus the number of counties failing to send an insane patient to any State institution during the biennium is reduced to 5—Haskell, Logan, Scott, Stevens, and Wichita.

By way of comment on the startling increase in insanity in Kansas, the Topeka State Journal printed the following news item under date of September 22, 1916;

"INSANITY GAINS 108 PER CENT IN 17 YEARS IN STATE—IN SAME PERIOD KANSAS POPULATION JUMPED 17 PER CENT—INCREASE IN BIRTH RATE AMONG MENTALLY DEFICIENT—MORE THAN 4,000 IN HOSPITALS—FIFTEEN HUNDRED PATIENTS ARE CARED FOR IN TOPEKA—ALL STATE CHARITIES ARE CROWDED, SAID H. C. BOWMAN.

"Insanity in Kansas has increased more than 108 per cent in 17 years, while the population of the State has increased slightly more than 17 per cent in the same period. That is a statement made today by Harry C. Bowman, member of the State board of control, and is based on official figures.

"Decided increases in the birth rate among mentally deficient and a big decrease in the birth rate in normal families is given by Bowman as an explanation of the startling showing. The Bowman statement, which is to be made a part of the official report of the board, shows that since June 30, 1899, the number of insane and feeble-minded persons in State institutions has increased from 1,984 to 4,140, an increase of 2,156, or slightly more than 108 per cent.

TWO NEW INSTITUTIONS.

"In the 17-year period two new State institutions have been established by the State for the care of insane and mentally deficient. Even the new institutions have been unable to care for the increase. All State institutions are now crowded and all State charities are demanding that the legislature provide additional quarters and facilities for the care of the State's mentally sick.

"Establishment of the Parsons and Larned Hospitals has not stopped heavy increases in population at Topeka, Osawatomie, and Larned Hospitals. The Parsons and Larned Hospitals now care for 638 patients, while the population at the Winfield Hospital has increased more than 400 per cent.

"Topeka and Osawatomie Hospitals have made big gains in proportion. In 1889 the Topeka Hospital cared for 827 patients. The report for the biennium closing June 30, 1916, shows 1,565 patients. Osawatomie in 1899 cared for 1,019 patients, with a population this year of 1,348. Winfield State Hospital in 1899 cared for 138 patients. It now has a population of 589. Parsons Hospital, established since 1899, now cares for 525 men and women, while the new Larned Hospital has a total of 113 inmates.

"Reports received by the board of control show all State charities crowded. Returns to-day from the Topeka and Osawatomie Hospitals show cramped conditions. There are quarters for but two female inmates. No additional women patients can be cared for at Osawatomie. Every bed is taken.

"To meet the situation plans are being worked out to send 25 feeble-minded women inmates of the Topeka Hospital to Winfield.

"Recently a new building was completed at Winfield. This change will permit the State to at least temporarily meet the demands for admission of insane patients."

That the State institutions mentioned above are constantly clamoring for increased appropriations for the purpose of securing extensive equipment demanded by the great increase in population, and that the superintendents of the institutions as well as the members of the board of control constantly complain because the legislature and chief executives will not meet their demands is amply proven by a study of the last two biennial reports of the board of control. (Fifth and sixth reports for periods ending June 30, 1914, and June 30, 1916, respectively).

The fifth biennial report contains the following observations of the board of control (pp. 2, 3, 14, 33):

"The nine State institutions—Topeka State Hospital, Osawatomie State Hospital, State Hospital for Epileptics, State Home for Feeble-Minded, School for the Deaf, School for the Blind, State Orphans' Home, Boys' Industrial School, and Girls' Industrial School—under the management and control of this board for the eight years, July 1, 1905, to July 1, 1913, are called 'the State charitable institutions,' but some of them are educational, some are correctional, some are medical, and some a combination of these and what would be termed charitable. The total appropriations to these nine institutions of Kansas for each year do not amount to as much as the annual increase in the cost of the charity service of some of the other States.

"The total direct appropriations to these nine institutions made by the legislature of 1907 for the fiscal years 1908 and 1909 were $1,969,517. The total direct appropriation made by the legislature of 1909 for the fiscal years 1910 and 1911 were $1,720,250, and on account of the Oklahoma convicts being returned the State penitentiary was unable to furnish coal to all the institutions and the legislature of 1909 appropriated $186,000 to this board for coal.

"The average population of these nine institutions for the fiscal year 1907 was 3,939, and for the fiscal year 1913 the average population was 4,672, an increase of 633, and yet the total direct appropriations made by the legislature to these institutions for all purposes have decreased since the legislature of 1907.

"Of the * * * amounts appropriated by the legislatures of 1907, 1909, and 1911, $966,427 was for new buildings, special improvements, and additional land, for the six fiscal years July 1, 1907, to June 30, 1913.

"The legislature of 1911, chapter 44, appropriated $100,000 for the purpose of securing a suitable site of not less than 320 acres nor more than 1,000 acres of fertile, productive land, and for the erection and equipment of suitable buildings for a State insane hospital in a county west of the ninety-eighth meridian of longitude and within 5 miles of the corporate limits of the place (city) selected * * *.

"* * * The legislature which convened in January, 1913 (ch. 21, laws of 1913), reappropriated the unexpended balance of the $100,000 at the end of the fiscal year June 30, 1913, amounting to $25,281.88, for the fiscal year 1914, and also appropriated $55,000 for the fiscal year 1914 and $50,000 for the fiscal year 1915.

"A contract was let for the erection of a patients' farm cottage and boiler house on July 9, 1913, and 20 patients from the Topeka State Hospital and 20 patients from the Osawatomie State Hospital were transferred to the patients' farm cottage at Larned April 6, 1914."

(NOTE.—From 1899 to 1905 the Kansas Legislature appropriated $606,797.06 "for the support of destitute insane persons refused admission to the State hospitals for want of room.") (Fifth biennial report, board of contral, p. 13.) Including the appropriation of $5,849.73 by the legislature of 1913, the amount was raised to $619,432.08, the appropriations for 1907, 1909, and 1911 being as follows, respectively: $128.28, $3,110.26, and $3,546.65. The appropriation made in 1899 was the largest, $211,941.90. Commenting on the showing, the board stated: "The above decrease from many thousands of dollars to a few thousand has been due to the opening in October, 1913, of the State Hospital for Epileptics, at Parsons, and increasing the amount of room at the State hospitals.

"When the board of control took charge the State hospitals were full. The capacity of the Topeka State Hospital at that time was 1,053, while the capacity of the Topeka State Hospital to-day is 1,603, an increased capacity of 550. The capacity has also been increased at the Osawatomie State Hospital and at the State Hospital for Epileptics, at Parsons, Kan. On April 6, 1914, the new insane hospital at Larned was opened and 40 patients were transferred from the Topeka and Osawatomie State Hospitals to Larned.") (Fifth biennial report, board of control, pp. 13–14.)

Under the heading "Social needs" the board of control declared (5th biennial report, p. 33):

"The social needs of our State are perhaps as great but no greater than those of any other State in the Union, and from the viewpoint of one versed in the general conditions there is always room for improvement in every department under the control of charitable and correctional institutions. We would mention under the head of social needs, first, a reasonable mothers' pension law."

Under the title head "Improvements needed," Dr. T. C. Biddle, superintendent of the Topeka State Hospital, declared (5th biennial report, board of control, p. 46):

"In directing attention to the needs of the hospital in the order of their urgency, that of rebuilding the old domestic building demands first consideration. * * * Its capacity has become so overloaded by reason of the growth of the institution that it is with great difficulty the feeding of our large population can be executed with any degree of efficiency. One old-styled rotary oven, with no place for the installation of another, is rendering the baking required a serious problem. The kitchen is overcrowded, and the repairs are dilapidated. Over this superheated bakery and kitchen are located the quarters of 50 men and women who are employed in the domestic and mechanical departments of the hospital. This condition is so intolerable that during much of the summer these servants of the State are forced to make their beds on the roof or out among the trees on the lawn. It will certainly only be necessary to direct the attention of the legislature to this unseemly condition to assure sufficient appropriation for its rebuilding.

"Nothing can be done toward rebuilding the kitchen and bakery until a home for the employees is erected; hence the appropriation must be sufficient to provide for both the employees' home and also the rebuilding of the old domestic building and its equipment with new ovens and proper cooking appliances."

(Note. The above suggestions and demands were ignored by the legislature and no appropriations made for the purposes set forth. Laws of Kansas, 1915, chap. 43, p. 59.)

Continuing his petition, Dr. Biddle further stated (supra, p. 46): "It is exceedingly disappointing that our frequent requests for appropriations for nurses' homes have not been favorably considered. * * * Absolutely nothing has been done to improve the accommodation of the nurses and other employees. * * * Nearly all well-conducted hospitals for the insane throughout the country are being equipped with suitable homes for the nurses, where they can be relieved from the unfavorable environment of constant life in the wards with their patients.

"It is recognized everywhere that in the interest of humanity and efficiency the sleeping rooms of the nurses, at least, should be well removed from the wards. * * * Two nurses' homes for the 120 nurses in the hospital should be provided. Seventy-five thousand dollars should be appropriated for building and equipping these homes."

(Note. No appropriation was made as above suggested. Supra.)

"With the growth of the institution," continued Dr. Biddle's report (supra, p. 46), "the embarrassment on account of our small farm becomes more annoying. Of course, this important matter has been too long deferred, but certainly longer postponement will not improve the chances of enlarging the farm at reasonable prices. Active efforts should be made to buy additional land while it is available."

(Note. This suggestion was likewise ignored by the 1915 legislature. Laws of Kansas, 1915, chap. 43, p. 59.)

Dr. F. A. Carmichael, superintendent of the Osawatomie State Hospital, incorporated several very positive demands and timely suggestions in his report to the board of control for 1914. Among other things, he said:

"I have the honor to submit the nineteenth biennial report of the Osawatomie State Hospital for the biennium ending June 30, 1914, and in doing so I shall probably depart somewhat from the form of previous reports of this institution, as it is my conviction that a more thorough and painstaking analysis of the needs of the institution and its absolute requirements should be presented to our legislators under existing conditions than has been presented in the past.

"It is a fact beyond controversy that on no subject pertaining to our great Commonwealth is the average legislator less fully informed than upon the needs and requirements of our State charitable institutions. This knowledge may only be gained at first hand, and should be secured by the members of the ways and means committee, and others who are instrumental in the distribution of our State appropriations, by personal visit to and a study of the needs and requirements of each institution.

"The indiscriminate distribution of appropriations for our various charitable institutions without proper knowledge of their true requirements, or the acceptance of a budget made up by the auditor of state, who is by no means an authority on the needs of institutional improvement, is an economic waste that reflects upon the energy and business acumen of our legislators.

* * * * * * *

"In the recommendation for appropriations I shall present later on in this report, I would respectfully ask the thorough investigation of our legislators, proving their absolute needs to the institution. In reporting upon the various conditions of the institution we shall take the matter up under the headings of, first, buildings and grounds; second, water and sewage; third, engineering department; fourth, farm; fifth, gardens and orchards; sixth, dairy; seventh, poultry; eighth, those needs pertaining to the clinical phase of institution work.

BUILDINGS AND GROUNDS.

"Main building: This building was completed in 1866, at an estimated cost of $450,000. It was built at a period when the conception of hospital construction for the insane was merely to administer food and provide shelter, and institutions for the care of the insane were at that time not hospitals but merely asylums.

"No adequate provision was made for the treatment of the mental cases consigned to State institutions at that period, as the modern methods now in vogue were then unknown.

"No alteration or improvement in the general scheme or arrangement of this building has been made since its completion, and it stands to-day a monument to the misconceptions of the period of its construction.

"This building constitutes, as it always has, our reception hospital and also contains our convalescent wards. It has absolutely no adaptation to the first use and it is but poorly adapted to the latter. The absolute requirements for this building to make it healthful and sanitary are quite numerous. It should be replumbed throughout in a sanitary manner, as the water waste and damage to the building due to defective plumbing are constant sources of expense and annoyance. The partitions of at least two rooms on each front ward should be removed, providing a fairly commodious assembly room for the patients on the ward and providing for better ventilation and sanitation.

"Metal staircases should replace the present wooden stairs that are veritable fire traps. The erection of ample balconies and sun parlors would not only modernize this building, but would afford a maximum amount of open air and sunshine that is sadly needed by our patients, particularly those who because of physical infirmities are unable to participate in the usual outdoor exercises.

"It would also materially relieve the congestion on the wards, as the capacity of this as well as all other charitable institutions in the State is always overcrowded, and the room that this would give would be a grateful benefaction to all.

"Shower baths should take the place of our old system of tub bathing, as this would prove an economy in the consumption of water as well as a distinct hygienic improvement over our present system. The bathrooms should all be tiled, as they are used for so many purposes, such as scalding beds and other uses where large amounts of water are flushed over the floors, and under present conditions this water goes directly through to the floor below. Many of the floors in the basement are sagging and the joists partly rotten. As all of our heating and high-pressure steam lines are hung directly from these joists, these floors should be replaced by concrete floors, not only as a measure of economy, but as a protection against fire and to facilitate the placing of proper trackage for the heavy food trucks that must be used to convey the food from the kitchens to the wards.

"This improvement would not only materially lessen the danger of fire, which under present conditions is a constant menace, but would add a stability to our floors for the anchorage of our steam lines, and also raise the roof of our tunnels, which are at the present time very low.

"Perhaps fully half of the piping and steam fitting throughout the main tunnels is practically rusted out and unsafe and should be replaced in a large measure by new material. Fully 35 per cent of our heat energy is uselessly dissipated because our heating and high-pressure lines in the main tunnels are not insulated. To thoroughly

insulate these lines would require from one to two cars of pipe covering, costing from $5,000 to $8,000.

"Some of the wards on the main floors are so insanitary as to be practically unfit for use, yet under present crowded conditions we see no way of avoiding their occupation, as every available room in the institution is now crowded with patients.

"About 35 men are housed over the main kitchen in a miserably ventilated and poorly lighted room that during the summer months is unbearably hot and uncomfortable to a degree that makes restful sleep at night impossible.

"The roof in many places needs repairing, and the steel ceilings in many of the wards have rusted through because of defective plumbing. In many places the wooden cornices of the main building have rotted through and dropped down because of defects in the spouting. During the past winter we have been permitted to tile and wainscot the main corridor of the administration building, thereby greatly improving this portion of the institution.

"The infirmary building: This building is an architectural abortion and utilitarian misfit and is adapted to no class of institutional work. Its construction was poor in the beginning, and the settling of the footings has permitted such warping of the floors and walls that it is very sadly in need of a general overhauling.

WATER AND SEWAGE.

"* * * Our reservoir is in a very poor condition. * * * An appropriation for the concreting of this reservoir was very strongly urged in the biennial report of 1910 and again in 1912.

"Our outside fire lines have not been improved or altered in years. Many of the pipes are so weakened by erosion that they would not stand even a very moderate fire pressure, and in the event of fire the efficiency of our fire equipment would be seriously affected by the almost certainty of bursted pipes.

"Our sewer system consists of a 6-inch pipe line, laid when the main building was built (1866). Since that time the population of the institution has probably quadrupled, and six other large buildings have been connected with this small line, which is entirely inadequate. * * *

ENGINEERING DEPARTMENT.

"* * * Our two 16 by 36 120-horsepower Bates-Corliss engines have been in constant use for 17 years and are getting quite badly worn. * * * Our 110-horsepower Buffalo forge engine has been in service for the past 12 years and is also badly worn. * * * The six 25-killowatt Eddy generators, having been run 17 years are badly worn, and should be replaced by a single unit system, as these are all belt driven from a jackshaft, and are being operated at a daily loss. Our line shafting is also badly worn and should be in part dispensed with and in part replaced. * * * Our hot and cold water lines in the building are all too small and are badly rusted. * * * Our system of refrigeration connected with the various kitchens is both unsatisfactory and expensive, due largely to improper insulation of our lines and cold-storage boxes. Many of these boxes have been in use for 15 years or more, were cheaply constructed in the beginning, and the wood linings are in an advanced state of decay. They are damp, moldy, and insanitary, and much food is lost by souring, because the temperature can not be kept low enough to preserve it. To properly rebuild these refrigerators, with the necessary insulation and concreting the inside, would require, of course, some outlay in time and money, but it would be an important feature in future economy, and we hope to attain this during the present biennium.

LABORATORY AND OPERATING ROOMS.

"Our laboratory and operating rooms have been partially equipped. Though they are not as yet sufficiently up to date to render satisfactory service, they are, however, much better than the institution has ever had before, and we are enabled to handle the less complicated clinical, pathologic, and bacteriologic work. Sufficient instruments have been added to enable us to do the more common varieties of surgery necessary in an institution of this kind. * * * Owing to our lack of hydrotherapeutic equipment we have been unable to direct our treatment along the lines of modern conceptions of therapy, but have been obliged to confine our ministrations mostly to a correction or relief of the physical ailments of the patients under our care.

"The addition of a proper reception hospital equipped with proper hydrotherapeutic appliances is one of the crying needs of this institution, and one which should by all means be supplied in the very near future.

OVERCROWDING.

"During the past biennium the capacity of the institution has been taxed to its utmost.

"Our wards have been overcrowded at all times; the same condition existing in every other charitable institution of the State.

"The building of the Larned Hospital will help in a slight measure, but will not materially lessen the congestion of this or of the Topeka Hospital for several years to come.

SCIENTIFIC RESEARCH.

"Very little has been accomplished along this line, due partly to inadequacy of our equipment and partly to the lack of technical skill of the members of the medical staff.

PATIENTS' LIBRARY.

"The patients' library is sadly in need of renewal. Most of the volumes are so badly worn that they can not be handled or read with satisfaction. The selection of the volumes of the original library was indifferent, many of them not being of interest or adapted to the needs of those suffering from mental derangement.

"Five hundred dollars should be appropriated to replenish our stock of books and promote other amusements for the patients.

SENILE CASES.

"It seems that the State hospitals receive a far greater portion of senile cases than is justified. In fact, our State insane institutions become the dumping ground of the various county almshouses. The senile dement in the vast majority of cases is a harmless dement that could in nearly all cases be cared for in the home, or, if not there, could be handled in the county almshouses.

"The overfilling of our institutions with these senile cases is an injustice both to the State and the patient, and it is unfortunate that many families make the most of those mental changes incident to old age, and of peculiarities in themselves, harmless, though probably annoying, for commitment to an insane institution, deeming a verdict of insanity an ample justification for saddling the State with the burden of their responsibilities.

"Were these mild cases consigned to the county almshouses many families in fair financial standing, who readily surrender their aged relatives to insane hospitals, there to become State charges, would hesitate to 'put them on the county,' but would support many of them at home. That would appreciably lessen the burden of the State and would materially aid in the formulation of more accurate statistics than is possible at the present time."

(And Dr. Carmichael could have added that this is indeed a sad commentary on the respect the highly praised Kansan places on those who become enfeebled through age, and who are gotten out of the way by the most satisfactory and speedy route. However, it should be borne in mind that if these seniles were placed in the county almshouses, the prohibitionist agitators would have fewer Kansas counties with no almshouses to prate about, thus robbing them of their chance, which they never overlook to "point with pride" to the fact that prohibition is emptying "our poor farms"—even though they mistakenly state the amount "emptied.")

INSTITUTIONAL HELP.

"The question of institutional help is becoming more unsatisfactory each year. This could be overcome by an adjustment of our salary schedules. The wage paid in this State is insufficient to attract the better class of employees, who are prone to drift to other States where a more satisfactory wage is paid, leaving a residue who are indifferent to institutional advancement and half-hearted or neglectful of their duties.

"The migratory employee, or institution tramp, is another unfortunate condition we are obliged to contend with that may be attributed to a combination of insufficient remuneration, long hours of duty, lack of comfortable and home-like surroundings, as well as lack of appreciation of the many trying conditions that daily arise in the performance of his duty.

"The question of a proper wage for employees has been presented so many times that it has become somewhat hackneyed, and yet very little change in our schedules has been permitted. A most pertinent commentary on this subject was incorporated in the report of the Topeka State Hospital for 1912.

"The former custom on the part of superintendents to discharge as many patients as possible before the issuance of each biennial report, in order to make the best possible showing in the report, gave rise to frequent legal complications and much added expense in cases where recommitment was found necessary. The State board of control, therefore, issued an order curtailing the power of superintendents in this respect. This order, while materially lessening the number of discharges for each biennium, has resulted in greater care and discrimination in the discharges issued and considerable saving of legal expense.

PHYSICAL IMPROVEMENTS.

"Physical improvements vitally essential to the efficient and economic administration of the institution, and earnestly recommended, are as follows:

"(a) A new receiving hospital equipped with modern hydrotherapeutic and electrotherapeutic appliances, where patients may be given the benefit of modern treatment.

"Many cases become chronic because of our inability to properly treat them in their acute stages. If proper treatment could be instituted early, in many cases the patient might be restored to his or her family and become an industrial asset to society. If we are unable to give them this treatment they become chronic and hopeless charges of the State.

"Up to the present time this institution has no such equipment, and under existing conditions can really lay but slight claim to the title of hospital, and has been in the past, and it is to-day, merely an asylum for these poor unfortunates.

"The fact that this institution maintains a corps of physicians does not establish its status as a hospital unless the necessary equipment for the exercise of their knowledge and skill is also furnished.

"When the fact that the number of inmates of this institution averages about 1,325, many of whom might be restored to home, friends, and citizenship by early and proper treatment, thereby becoming industrial assets to instead of liabilities of the State, is considered, one must be impressed with the economic advantage to as well as the humanitarian duty of our State to provide proper and adequate facilities for their treatment along modern lines.

"It is manifestly unjust that patients coming from one part of the State should have a better or more scientific treatment than those coming from another portion of the State. All taxpayers in the State are equal, and it is certain that the great State of Kansas should endeavor to give an equal chance of recovery to all of its unfortunate citizens, no matter in what part of the State they may have been living.

"Under present conditions the citizen who is so unfortunate as to become deranged mentally is taken to that State hospital that is nearest or most accessible. If he happens to live nearer this institution than Topeka we should be able to furnish here just as modern and scientific treatment as may be administered at Topeka. Under existing conditions we can not claim that we are able to do this without the addition of a psychopathic hospital. An appropriation for this purpose has been steadily urged in former reports, and its necessity is so apparent that it hardly requires comment.

"It will be noted that the valuation of the grounds, buildings, and equipment of the Topeka State Hospital is more than double that of this institution, exceeding our valuation almost a million dollars, while its capacity is only 200 more than this institution. This must surely impress our legislators with the urgent need of additional expenditures for this place. Topeka has nothing that is not necessary for the proper equipment of its departments—in fact, it is still lacking in many things that should be added to increase its efficiency—and this comparison of valuation is merely cited in corroboration of the claim that a sum sufficient to modernize this institution should be set aside by our coming legislature.

"(b) We respectfully ask that we be allowed for a new reception hospital and equipment, $100,000; (c) for changes in the main building, including metal stairways, shower baths, tiling, bathrooms, outside painting, balconies and sun parlors, replumbing, and other general repairs and equipment, $50,000; (d) for a new sewer line, $6,000; (e) for improvements on dairy barn and for a building for the proper handling of milk and milk utensils, $8,000; (f) for concreting our reservoir, $10,000; (g) for the installation and equipment of an industrial department for both men and women, $5,000; (h) for new steam fitting and insulation of our steam lines in the main tunnels, $7,000;

(i) for improvements on grounds, including paving driveways, fencing, forestry, curbing, and beautifying the grounds, $10,000; (j) for patients' library and amusements, $500; making a total of $196,500."

Dr. Perry, superintendent of the State Hospital for Epileptics, at Parsons, likewise made known the "crying needs" of that institution in a report which gives much light on the condition of his institution at the same time. The report is well punctuated with observations showing the terrible condition into which the Epileptic Hospital was permitted to degenerate because of lack of sufficient appropriations and apparent ignorance and neglect practiced by the powers having the authority to grant the relief necessary to keep pace with the astounding growth of the institution.

"During this period (the biennium ending June 30, 1914) there has been less construction work than in any other biennium in the history of the institution," declared Dr. Perry on page 111, Fifth Biennial Report of the Board of Control. "This was due," he continues, "to the fact that the last legislature allowed no special appropriation for buildings.

"Having room for only a limited number of male patients at the beginning of the period, the capacity of the male department was soon reached and then exceeded. Cottage No. 1 north, in which chronic, custodial, and disturbed classes are housed, has been at times quite crowded, and constantly has more patients in it than can be cared for there to the best advantage.

"Notwithstanding the fact that some of the cottages have been considerably overcrowded, we could not accommodate all who applied for admission, and, much to my regret, it has recently become necessary to refuse admission to some male patients."

One of the most astounding, if not one of the most important, admissions ever made by the superintendent of any State institution of the State follows the above, in the superintendent's report. In view of the many positive statements, declarations, and claims, which have assumed the form of "statistics," that all forms of insanity, especially epilepsy, have been decreasing appreciably and with startling regularity since "Kansas has enforced her prohibitory law," this declaration by Dr. Perry furnishes food for much speculation. Contrary to the repeated claim made by ex-Gov. Stubbs, ex-Gov. Hodges, ex-Attorney General Dawson, ex-Attorney General Jackson, Gov. Capper, and others, that "our State institutions will soon be empty, just as our county jails are," all due to prohibition, crusading, passing dry resolutions, etc., Dr. Perry's startling statement should forever end such faking, even though indulged in as far away from home as Chicago, Columbus, or Boston. On page 111 of the above report Dr. Perry stated:

"This is the first time since the opening of the institution that care and treatment has been denied any epileptic resident of Kansas who has sought State aid. Until the capacity is increased by the addition of another cottage in the men's group, we shall be under the necessity of admitting male applicants only as vacancies occur."

In commenting on lack of hospital service Dr. Perry further stated (p. 118): "We have been greatly handicapped in our medical work by the lack of this hospital service, and have not always been able to give the sick the care they should have had." An appropriation of $50,000 is asked for a new hospital and equipment (p. 119).

In speaking of the new admissions during the period (p. 112), Dr. Perry said: "We continue to receive more men than women. The disproportion between the sexes in the admissions for the period is more marked than usual, there having been 121 males and 56 females." The fact that the female admissions have been less during that period could as well be used in an argument favoring equal suffrage, and much more truthfully so, than many of the faked-up arguments presented claiming that prohibition has decreased insanity in the State. While the lower percentage of epileptics admitted has nothing whatever to do with the fact that women now vote in Kansas, it would still be as logical for the female agitators throughout the land to claim that as a "victory" for suffrage, as for the governor and ex-governors, etc., to lay claim to every favorable showing, whether it be an increased wheat crop, increased bank deposits or whatnot, as a "victory" to a brand of prohibition that never has and never will prove a real success.

As proof of the "progressive" system in effect at Parsons, the fact that but one patient was restored improved during the above period (pp. 112 and 113), and that a 5-year-old boy who "suffered from mild attacks at irregular intervals, apparently associated with a disordered stomach," speaks in anything but glowing terms of the brand of treatment accorded the unfortunate. Speaking of this boy, Dr. Perry said: "When admitted he appeared to be profoundly intoxicated, possibly from a patent nostrum which he had been taking." And possibly not. Possibly since the "open saloons" have been removed from the corners of Kansas towns and placed in feed troughs, haystacks, behind the potato bin in the cellar or up on a shelf in the kitchen, this 5-year-old lad learned when he began to toddle that it was all right for father and mother to "kiss the jug good morning" after a strenuous evening at some law enforcement league meeting, and did likewise. That "possibly" opens such a wide field for speculation, it has no limitation. One thing is sure: The home that produced that bright eyed little tot of five golden summers was "saving the boy" by loading him up with some kind of boot-leg booze or mail-order rot-gut, if not some "patent medicine" slipped into daddy's hip pocket when he slid into the drug store down town to take a peep at the baseball score board.

Another interesting question arises as we read Dr. Perry's report (p. 112), where it is stated that "36 unimproved" cases were discharged. No doubt to make room for worse cases; but what happened to them? Were they returned home, and if so, being unimproved, should they not be classed as insane in the State reports? How many of them became members of that great and constantly increasing army of criminals that roam the plains of Kansas? Of the total admissions (176 in number), those "under 5 years of age" and from that up to 30 years of age totaled 103. Just how many were rendered epileptic by consumption of "patent nostrums" is not shown, nor is it shown how many in this class were returned "unimproved" during the biennium (p. 123). Of the 176 admissions, 83 were insane as well as being epileptic, 52 less than 40 years of age, 13 of them females (p. 123). If returned to society in an "unimproved" state, having been discharged from the asylum, they were free to marry, and probably did. This may throw considerable light on Mr. Bowman's statement reported in the Topeka State Journal (supra), showing why the birth rate among mentally defective is so abnormally high—much higher than the rate among the sane.

It is, to say the least, a deplorable condition and one which needs real scientific study to solve.

Dr. Perry demanded (p. 119) that $27,500 be appropriated for a building for men; $12,500 be appropriated for a school; $12,500 for a dairy barn, "a much needed improvement"; and $15,000 to develop the farmstead in an effort to help cut down the increasing expense owing to increased admissions.

STATE HOME FOR FEEBLE-MINDED.

On page 136 of the Fifth Biennial Report Board of Control, 1914, Dr. F. C. Cave, acting superintendent, furnishes some enlightenment as to the "great decrease" in the number of inmates in that institution. "The question of room for properly caring for the increasing number of feeble-minded always occupies a prominent place in all our reports," declared Dr. Cave, "and we can make no exception in this instance. We are already housing many more children than our capacity warrants, and another large building, making room for 150 or more patients, is needed.

"We frequently are asked how children are classified or grouped," further stated Dr. Cave, on page 137. "This depends upon age, size, appearance, sex, and mental capacity. The Binet-Simon test for determining mentality has been introduced, and these tests are given to every one admitted, the teachers and the first assistant physician conducting the examination. In our overcrowded condition we can not be as exact as we would like about placing a child in its proper group, but we aim to give every child the benefit of the best class of associates possible."

Under the heading "Appropriations needed," appear the following:

New building for inmates	$60,000
Kitchen and congregate dining room	30,000
Ice plant and cold-storage room	5,000
To acquire title to 5 acres of land	1,500
Construct tunnel from central power plant to new buildings	5,000
Making a total of	101,500

LARNED STATE HOSPITAL.

In his report for the period covered by his superintendency (from Feb., 1914), Dr. B. F. Hawk, in rendering an account for his stewardship of this institution, gave a bit of the history covering its construction, as follows (p. 163, Fifth Biennial Report, Board of Control):

"For a number of years the Topeka and Osawatomie State hospitals have been crowded. They have continually asked the legislature for more room and facilities to handle their people. The legislature found it would be necessary either to increase the capacity of these institutions or to build a new hospital in a new location.

"In order to meet the future needs and to provide the State with the best means of taking care of the unfortunates, the legislature decided to choose a new site and build a third institution.

"The western part of the State felt that, since the other two hospitals were in the eastern part, the new one should be located in the west. To this the legislature agreed * * *. After due consideration the board decided to build the new institution at Larned, Kans., which location was approved by Gov. W. R. Stubbs, as provided by law."

Forty-eight thousand two hundred dollars was asked for salaries, maintenance, during the years 1916 and 1917. (Supra, pp. 165, 166.)

These reports were widely commented upon by the various newspapers throughout the State and did much for the time being to open the eyes of the public as to the true conditions of these State institutions. However, in the face of the matters and things seriously and so clearly set out, reports continued to pour out of the State that "our insane, feeble-minded and epileptic rates have been decreased under prohibition."

In speaking for "home consumption" alone, on the contrary, Gov. Capper rather shocked the sensibilities of that portion of the national population which takes time to read before venturing an opinion by sending the following special message to the legislature touching the subject matter of the above reports and dealing with the question of strict economy:

EXECUTIVE DEPARTMENT,
GOVERNOR'S OFFICE,
Topeka, Kans., February 23, 1915.

To the Members of the Legislature:

We have a plain duty before us, one we must not shirk, one not to be avoided nor evaded. It compels me to direct your attention to a matter instantly important and pressingly urgent if, as chosen ministers of the will of the people of Kansas, we are to do our duty as public servants and keep faith with those we represent and have sworn to serve.

In Kansas we are facing an absolute necessity for stringent economy. In providing for the needs of the various State institutions, it is a case of doing the best we can at a time of world-wide uncertainty and depression, a time when prudence and common sense counsel the utmost moderation, if not the most painstaking retrenchment. It is a case of cutting our garment to fit our cloth.

A niggardly policy of dealing with public affairs is not expected nor demanded of us. To impair the usefulness of any State institution or retard its growth is not economizing. The consequences of such a policy would be as deplorable as to overextend our expenditures at a time when economy of the strictest sort is enforced on every prudent person by the prevailing conditions, and when the burdens of taxation are sufficiently heavy. It is for us to steer most carefully between these extremes, and if we do not we may expect most sharply and most justly to be called to account. We can justify ourselves only here and now.

The appropriation bills, originating in the senate and already agreed to by the senate or its ways and means committee, I am informed, aggregate $7,214,650. This is an increase of $1,521,107.34 over the appropriations made by the legislature of 1913 for the same purposes. It is $1,035,070 in excess of the sum called for by corresponding bills in the house. The appropriations recommended by the house committee are in excess of the estimates made by the auditor of state after careful investigation of the needs of the various departments of State government, and, I understand, are based upon a most careful and searching analysis of what the ways and means committee of the house are convinced are amply sufficient. The members of this committee have given full consideration to the pressing demands of every institution affected. I am fully convinced that the appropriations proposed by the house committee should not be increased.

The appropriations asked for by those intrusted with the conduct of these institutions are asked for in good faith. In most cases they could be used to advantage. But we must not forget that the assessed valuation of property in Kansas has decreased by $5,000,000 last year, nor that the loss of revenue by the repeal of the inheritance-tax law and other measures will amount to several hundred thousand dollars.

The chairman of the State tax commission has warned us that unless this legislature decreases appropriations by at least a half million dollars the State tax levy must be increased for the first time in four years. The senate appropriations, if passed, will necessitate an increase

of the levy by one-half mill, an extraordinary increase. I do not believe such an increase is now justifiable, nor that the people of Kansas will sanction it, and they can not be accused of niggardliness nor lack of liberality in public affairs.

A comparison of the appropriations made by the State legislature 12 years ago with the appropriations now proposed by the senate for 1915 show an increase of 91 per cent. Our State expenditures have nearly doubled, with a very slight increase in population. The appropriations made by the State legislature during the last six sessions are:

1903	$5,477,040.97
1905	5,615,127.45
1907	6,734,927.55
1909	7,386,578.04
1911	8,375,884.01
1913	8,923,919.43

The increase under consideration by the legislature of 1915, and already approved by the senate, will bring this session's appropriation up to the astonishing sum of approximately $10,445,000—not only the greatest appropriation ever made by any Kansas Legislature, but the greatest increase ever made by any legislature in the history of the State.

I do not question the motives of those who now advocate this abnormal increase in appropriations, but the fact remains that some of the members who are now urging this increase are the very ones who were most deeply concerned two years ago in keeping down appropriations. Then they reluctantly appropriated $166,982 for new buildings at State educational institutions, while now they are urgently insisting that $960,350 be appropriated for the same purpose. And all this in face of the fact that our assessed valuation actually decreased $5,000,000 last year, that our population has not increased, and that business conditions, which were then satisfactory, are now much less favorable.

Our farmers face uncertain and unstable markets, an unusual number of laboring men are out of employment, and business conditions are far from satisfactory. All individuals are curtailing expenses. The State can not afford unnecessarily to increase them. We should not impose this additional burden upon the people.

I urgently ask a reconsideration of the appropriation bills, for the elimination of every item calling for an expenditure which can by any possibility wait for more propitious times. I have studiously refrained from any attempt to encroach upon the functions of the legislative branch of our State government, but I can not and will not approve expenditures which I believe to be unwise and extravagant at such a time as this. I most earnestly appeal to you to lay aside the particular benefit of any section of the State or of any institution of the State in which you have a special interest. In the light of conditions as they are, and not as we would have them, I urge you to consider solely the good of the State as a whole, the best interests of all the people.

Respectfully submitted.

ARTHUR CAPPER, *Governor.*

While the demands of the Topeka State Hospital were many, and were specifically set out by Dr. Biddle (Fifth Biennial Report, Board of Control, p. 46), no special appropriation of any kind was made covering any of its "crying needs" by the 1915 legislature. (Laws of Kansas, 1915, ch. 43, p. 59.)

The Osawatomie State Hospital made demands for special appropriations in the sum of $196,500 (Fifth Biennial Report, Board of Control, pp. 84 and 85), aside from stating many matters that needed special appropriation, without naming an amount. An allowance was made, aside from the regular sum required, as a "special appropriation," for $10,000, "general repairs and improvements," for 1916 and a like amount for 1917. The $10,000 allowed for 1917 was vetoed by Gov. Capper "in the interest of economy" and because "we should not cast this additional burden upon our people." For insulation of steam pipes $5,000 was allowed for 1916, although $7,000 was asked for. The "special appropriations" amounted to $15,000 for 1916 and nothing for 1917.

Request was made for "special improvements" at the State Home for Feeble-Minded at Winfield, to the end that congestion might be relieved, sanitation improved, etc., in the sum of $101,000. It received $25,500. (Laws of Kansas, 1915, ch. 34, p. 50.) The balance of the special appropriation so urgently required (Fifth Biennial Report, Board of Control, p. 136) was denied because "we should not impose this additional burden upon the people when the burdens of taxation are sufficiently heavy," and because "our assessed valuation actually decreased $5,000,000 last year" and "our population has not increased."

The State Hospital for Epileptics, at Parsons, demanded, in view of pressing demands for more room and crying needs for improvements and betterments, in view of the constant increase in population, the sum of $117,500 by way of "special appropriations," in addition to the regular allowances for salaries, repairs, etc. (Fifth Biennial Report, Board of Control, pp. 118–120.) It received an appropriation of $50,000 for a fireproof hospital building, completely equipped, to be allowed during 1917. Although the superintendent stated that "this is the first time since the opening of this institution that aid has been denied any epileptic resident of Kansas," owing to the overcrowded condition, and asked for a reception building for men to cost $27,500, that that deplorable condition be relieved, no attention was paid to it. The school building, the dairy-barn improvements, and the farmstead improvements were likewise swept to one side in the interest of economy.

Other State institutions fared likewise. However, the tax levy was increased, as the governor prophesied, much to the delight of the overburdened taxpayers, the majority of whom are either delinquent or pay the toll of fad government begrudgingly.

THE 1916 REPORT ANALYZED.

Gov. Capper's famous message demanding that in the interest of economy and lack of a desire to further burden the people with more taxes was the lightning stroke administered to the State institutions of a charitable nature, and the reports of the various superintendents of these institutions incorporated in the 1916, or Sixth Biennial Report of the Board of Control, was the thunderclap.

Speaking of "medical service," Dr. Biddle, superintendent of the Topeka State Hospital, said (p. 35): "I regret to have to report that it has not been possible, from our insufficient salary allowance, to add one dollar to the meager pay of any member. I can not understand that our State expects her servants to render service for a wage that is so considerably less than all other States are paying for less competent work, and shall continue to hope that another legislature will be more generous in its provision for better salaries.

"The last legislature, in its wisdom," continues Dr. Biddle (p. 38), "declined all our requests for special appropriations for improvements. In our previous biennial report (Fifth Biennial Report Board of Control) we presented, to the best of our ability, the sorrowful state of dilapidation and unfitness of our general kitchen and domestic building, with an urgent request for means to rebuild it. We urged the importance of providing homes for our nurses. We also recommended the purchase of additional land in order that the farm might be more suitable in acreage to the necessities of the State's largest eleemosynary institution." All these requests were denied, in the interests of economy, and their repetition at this time magnifies their urgent need.

As to the matter of "service," it is stated on pages 36 and 37 of the above report that "During the biennium the service has become even more unstable, incompetent, and undesirable. * * * The service must be made more attractive in order that more stable and efficient people may be enlisted in the work. * * * Our trained nurses are receiving only about the wage that is paid for domestic service throughout the country. I fear we will not accomplish much in bettering conditions until there has been liberal increase in our allowance for salaries and wages.

"Again, our sister States are recognizing the necessity and obligation of the States to better the social condition of their servants. To do so, nurses' homes are becoming an established feature of all progressive hospitals. These homes not only furnish the employees with a degree of home comfort, but it breaks the dreary monotony incident to constant association and domicile with the insane. It hardly seems consistent that the State should be so active in requiring much of the corporations of the State in the way of better social conditions for their servants, yet ignoring her own obligations to her own servants.

"In conclusion I desire to summarize as follows: The necessity of discouraging the itinerant habits of hospital employees is country wide. The State's duty in this matter is, first, to provide for better wages; secondly, to improve social and home conditions by building suitable nurses' homes; thirdly, to shorten the long hours of service as far as is found practicable.

"The legislature of 1915 enacted a general civil-service law. While the principle involved is undoubtedly correct, yet, because of the conditions described in the foregoing paragraph, it has in no way improved the hospital service. It has been necessary for almost all the vacancies to be supplied through the temporary employment clause of the law, and the applicants for civil-service examination for nurses and attendants have come almost entirely from persons already employed in the hospital. Until employment conditions are made more attractive the application of the civil-service law seems to be not worth while, and is a case of love's labor lost.'" (Sixth Biennial Report, Board of Control, p. 38.)

Speaking of the results attained through the present force, medical and otherwise, Dr. Biddle stated, on page 34, that "the population table shows that 336 patients died during the period, of whom 234 were men and 102 women—8.5 per cent of the total number of patients under treatment.

"This mortality is 2.3 per cent above the last biennial period, and must be accounted for by certain unfavorable conditions, to wit: The chronic population of the hospital is growing old, many of whom have passed life's expectancy. Again, there has been no reduction in the number of senile dementia cases admitted, which of necessity increases our death rate. In addition, the number of cases of paresis admitted constantly increases, with its consequent increase of our mortality ratio.

"Outside of these causes, however, the winter of 1915–16 was attended by an unusually high death rate on account of a most unusually fatal epidemic of influenza. Many of these cases developed pneumonic infection, and with these cases the fatality was high."

Aside from these causes assigned, there can be no doubt but what competent assistants, nurses, paid reasonable wages and given reasonable accommodations, would increase the efficiency of the medical department and have much to do with at least stamping out epidemics. On this important matter the superintendents of all hospitals have expressed themselves many times during the past 10 years. Economy, however, seems to demand curtailment wherever possible, for political and other reasons, which is a cheap way to play the game with human life at stake, to say the least.

Great stress has been laid from time to time on the number of county poor farms that have few, if any, inmates and though the population in almshouses is unusually high during 1916, being 908 (Sixth Biennial Report, Board of Control, p. 27), as compared with 735 in 1910 (Census of the United States; Bulletin 120, "Paupers in Almshouses," p. 18), and 831 on June 30, 1914 (Fifth Biennial Report, p. 34), aside from 12,871 persons who received aid during the year 1915, equal to one person out of every 130 in the State (Topeka State Journal, Jan. 10, 1916), the State hospital superintendents seem to have a well-founded complaint because of the tendency of various counties to "pass the buck" so far as charges that should and probably could as well as not be cared for in the county almshouses. While the rate of pauperism in Kansas is exceedingly high, the rate should be much higher, if what the various superintendents say is true. We must assume it is.

Dr. Biddle, superintendent of the Topeka State Hospital, thus addresses the board of control and the governor on the subject (Sixth Biennial Report, Board of Control, p. 34):

"The problem of State or county care of the insane has been a mooted one. Under our system of State care the greatest fault lies in the growing tendency of the counties to treat the State unfairly, by filling the State hospitals with large numbers of indigent defectives who should remain in almshouses of the several counties.

"That this imposition on the bounty of the State has steadily grown during recent years is quite apparent to one in position to observe its growth. I recognize that the problem is a difficult one. * * *

"A suggestion to remedy this fault of our commitment procedure would be more complete, and thorough inspection of questionable applications for admission.

"I think the State could well afford to pay for the services of a competent alienist to visit these questionable applicants and report to the board of control the necessity or otherwise of their commitment."

It will be borne in mind that the same complaint was contained in the Fifth Biennial Report. Newspaper comment on the subject has also been indulged in more or less briefly from time to time. There is an abundance of evidence that the system is abused and that the abuse should be remedied, yet nothing has ever been done.

"The problem of more room for patients seems to be ever present," declared Dr. Biddle (p. 40). It is probable that in the main, it will be the policy to allow the development of the Larned Hospital to provide the required room. There are, however, certain conditions in the older hospitals that suggest the advisability of further increase of their capacity. It will especially be necessary to provide more room for women.

"If the policy of accepting applications for admission of large numbers of decrepit old ladies is to be continued, it will become very essential that more suitable provision be made for their proper care.

"A special building, one story, with attached kitchen and dining room, for these old people would be a most desirable arrangement. With such a building they would be able to be outdoors more, their meals could be served in a way more suitable to their needs, and they could in every way be made more comfortable Our 'N' cottage is too small to accommodate all the women of the class."

Commenting again, as he formerly did in the fifth biennial report, on the matter of a home for the nurses, which Dr. Biddle deems one of the most crying needs of the institution, he further addresses himself:

"Again I renew our urgent request for nurses' homes. The need of this important addition to our hospital has been considered in the preceding paragraph, and in advocating this improvement I will quote from the nineteenth biennial report," which is the fifth biennial report of the board of control. Dr. Biddle then quotes extensively from page 46 of that report, the first line in the second paragraph, on page 46, being: "It is exceedingly disappointing that our frequent requests for appropriations for nurses' homes have not been favorably considered," which is followed by a lengthy petition, setting out conditions, reasons for lack of a better showing in the hospital, causes bearing on the inability of those in charge to make more headway in accomplishing the things that are quite necessary in insane-hospital work because of the low grade of nurses they are able to keep, because of the barbarous treatment they are accorded by the lax manner in which the State authorities consider the crying needs of the institutions. It was after reading the fifth biennial report that Gov. Capper admitted that the relief demanded was probably well founded, and no doubt the institutions should have the appropriations requested, but rather than "burden our people" with more taxes, "the burden is now sufficiently heavy," he urged strict economy and scaled down the hospital appropriations to bedrock. Some fine prohibition speeches would have been "ruined" if the State officers during the past 10 years had admitted the truth about the State penal, charitable, and correctional institutions, but nevertheless the State would have been much better off.

Again speaking of the matter of the absolute necessity of purchasing more land because of the great increase in population at his institution, Dr. Biddle stated, on page 41, sixth biennial report, board of control: "The recommendation of our last report urging the enlargement of the institution farm was supported more generously in the last legislature than any of our other requests. Many members of both branches were interested in the proposition of acquiring the Southern tract, containing 80 acres. The land is still available, and the merits of this proposed purchase are now even more obvious than they were two years ago.

"* * * We need more land, and need it where it will be available for the operation of farming interest of the institution. The hospital can not be moved to a location where the land is cheaper, and cheaper land far removed from the hospital site would be a very little advantage. The price of the land, a little more or a little less, is not of so much importance as its availability and adaptation to our needs."

This request, it will be borne in mind, was likewise turned down in the 1915 appropriation, in the interest of "economy," though Dr. Biddle, who has for years been conversant with every detail of the hospital work at the Topeka State Hospital, adds to his 1916 report this very logical conclusion: "There is no doubt in my mind that this proposed addition to the State's holdings here would prove a profitable investment for the State."

THE OSAWATOMIE STATE HOSPITAL.

In commenting on the lack of appropriations granted by the 1915 legislature, in view of the pressing demand for it, Dr. F. A. Carmichael, superintendent of the Osawatomie State Hospital, again renewed his complaint, and set out many more "crying needs" of the institution in the 1916 report. (See sixth biennial report, board of control, p. 78.) "The general condition of this building (the main building) demands that a considerable sum of money be expended upon it within the next two years, otherwise portions of it will be in a comparatively ruined condition. Attention was called in the last biennial report to the dilapidated condition of the roof and cornices. Nothing has been done to improve this condition through lack of adequate funds.

"Our sewer system is still unsatisfactory. The same urgent necessity for an appropriation for improvement of our sewer system exists as set forth in our last biennial report. In April and May of the present year, owing to contamination from some source, sewerage or otherwise, an epidemic of typhoid was experienced at the institution, from which 14 patients and 42 employees suffered. Prophylactic inoculation was carried on for the entire institution, patients and employees alike. We were inclined to consider this epidemic due to the imperfect system of sewerage, that has never been improved or altered in any way in the last 20 years."

No more urgent necessity for a sanitary sewer system could have been described than Dr. Carmichael set forth in the 1915 report. That report undoubtedly moved Gov. Capper to remark in his famous special message, "A niggardly policy of dealing with public affairs is not expected nor demanded of us," but "it is a case of cutting our garment to fit our cloth"; "the members of this committee have given full consideration to the pressing demands of every institution affected"; "the appropriations asked for by those intrusted with the conduct of these institutions are asked for in good faith"; "but we must not forget that the assessed valuation of property in Kansas has decreased by $5,000,000 last year" and "that our population has not increased." "We should not impose this additional burden upon the people."

And "economy" cut the demands of the State institutions, spread typhoid, ran out of the State's service competent men and women who were serving as nurses, instituted a system of employing "tramp" nurses and attendants.

Commenting upon the salaries paid and the chance to secure the service of competent help Dr. Carmichael further declares (p. 82, sixth biennial report, board of control): "The question of efficient help for the care and nursing of patients continues to be the problem most difficult of solution, and will remain so as long as the present inadequate system of remuneration continues.

"Initiative and efficiency in the individual possesses a definite monetary value that must be recognized by the employer, and employees possessing these attributes must be properly compensated in this as in other States. Otherwise they leave the service of the State to seek employment in other States where the salaries are more in keeping with the qualifications and requirements of their particular line of work.

"This applies particularly to skilled labor. We are finding it more difficult year by year to secure the proper type of employee, and of those that are developed within the State in our own institutions the more energetic and capable leave the service of our hospitals, attracted by the higher salaries paid in other States.

"During the last year we have been unable to keep our quota of employees up to the standard allowed by the legislature, because of the unattractiveness of our salaries.

"The same difficulty is experienced with reference to members of the staff and those in other official positions demanding executive ability.

"Efforts made during the past biennium to secure staff members competent to maintain the standards established at this hospital develop the fact that competent men occupying subordinate staff positions in other hospitals frequently receive higher salaries than the superintendents of our Kansas institutions.

"Competent men who have acquired special ability in their line of work can not be obtained unless a salary schedule corresponding to that paid by other States demanding the same character of work is adopted. The same is true of matrons and dietitians. I find from a very extensive correspondence that competent matrons and dietitians in the East receive from two to three times the salary that is fixed for those occupying similar positions in this State."

The East is not so much interested in "economy" of the Kansas brand as it is in securing results. The insane rate in Kansas will never be reduced as long as cheap-john "economy," which is penny-wise and pound-foolish, is a distinguishing feature in Kansas. It is better that a few admissions be made and the errors corrected now than to wait until the next generation witnesses even a greater disgrace by a forced admission that "Kansas has indeed gone crazy clear through." When the population insists on going crazy, filling the State, county, and city hospitals, what can be expected in the end from lawmakers and men and women in charge of schools, colleges, not to mention State officers? Does the recent trend of Kansas legislation reflect the increases so sorrowfully noted in the Topeka State Journal article, published herein? The Kansas City Journal recently stated that the insane rate in the East is decreasing and "fad" government, prohibition, and woman suffrage is making little headway there, while it is the "order of the day" in Kansas. Does that mean anything?

Continuing, Dr. Carmichael declared (p. 87) that "Coincident with the development of a civil-service system, designed to eliminate the worthless and unfit, as well as to abolish political patronage and preferment, steps toward the proper recognition of merit should be taken. The class of cheap employees are found to be careless, indifferent, and incompetent in almost every instance, because they hold their positions in contempet in view of the insignificant salary attached, or are incompetent to attain a higher position.

"I am firmly convinced that in our State hospitals we sustain a sufficient loss annually through the incompetency and inefficiency, lack of interest and cooperation of the underpaid employee to overcome any seeming economy that the low-salary schedule might imply.

"A high standard of efficiency may readily be established, but it can only be maintained by a proper compensation for service. * * * Industrial corporations have found it necessary to make a gradual increase in the salaries of their employees over the past 15 years. No such increase has been recognized by the State in the remuneration of its employees.

"As a matter of fact, our salary schedules are in many instances so out of proportion to the quality of service required and so far below that of other States that there is no chance at the present time and under present conditions of realizing a marked improvement in the service of our public institutions unless a salary schedule more attractive to the employees is established."

It is unknown at this time just what is in the minds of the present legislators of Kansas with reference to meeting any of the demands set forth by Dr. Carmichael, but unless a complete change is made, and the Kansas statesmen who are constantly watchful lest they may admit that it actually should cost the State many more hundreds of thousands of dollars than at present to care for the unfortunate, the same old dilapidated conditions will continue indefinitely. However, unless some active constructive work is indulged in quite soon the buildings will soon fall to pieces, and the sums necessary to be expended will be many times greater than a reasonable sum properly expended at this time would be.

In commenting on the "liberal" appropriations made by the 1915 legislature in line with Gov. Capper's plea for "economy" lest the State be held up to ridicule, Dr. Carmichael declares on page 87: "The special appropriation of $15,000 granted by the last legislature was entirely inadequate to meet the requirements of this institution. * * * The lack of a reception hospital with modern equipment is seriously felt, and, still contending that it is the manifest duty of the State to provide every known means for the restoration of these unfortunates to useful citizenship and reiterating the statement contained in my last biennial report, that the taxpayer in one section of the State is equally entitled to the fullest consideration in this respect with the resident of another section, I must again urge the need of a modernly equipped hospital, where adequate treatment may be afforded.

"It does not seem possible that our legislature can longer refuse this act of justice and mercy to the unfortunates of the State, as it has been earnestly urged for the past 10 years.

"It should be a matter of far greater pride to the Commonwealth of Kansas to point to its adequately equipped educational, charitable, and penal institutions than to prate of its financial prosperity or the amount in the banks per capita of its residents.

"Very few States spend less on their charities than Kansas. This may be regarded both as a questionable economy and a doubtful virtue. And the failure to provide the necessary equipment for applying every known method of treatment is an unpalliated reproach to the State.

"General repairs on the main building, long neglected, with installation of metal stairways and outside balconies, should by all means be provided. The cottage for male nurses, similar to the one now occupied by female nurses, would greatly contribute to the retention of a better class of employees and would also give the rooms on the wards now occupied by attendants for the accommodation of patients.

"Accommodations for help, so far as room is concerned, are very limited, and with the steady growth of the institution provision for proper housing of our male employees should be made."

Speaking of fire protection, Dr. Carmichael again renews his demand that the State legislature awaken to the dire needs of the institution in the name of humanity as well as economy, and thus declares again the needs on page 88, sixth biennial report, board of control:

"In our last biennial report the fact was emphasized that our fire lines have been laid for approximately 30 years; that they are eroded to an extent that would make them useless in case of a serious fire, as they would certainly burst under very moderate pressure. In

case of serious fire we feel that we could not expect service from this poor equipment. As the integrity of our fire protection is dependent upon these fire lines, we would ask that the appropriation requested for the laying of new lines and installation of new hydrants be allowed."

The following recommendations for appropriations were made by Dr. Carmichael for the hospital, during the next biennium (Sixth Biennial Report, Board of Control, p. 89):

For building and equipping a modern reception hospital	$75,000
(NOTE.—A request was made for $100,000 for this purpose in 1914, but turned down by the legislature and barred from consideration by the governor's economy propaganda.)	
For carrying out in part a plan for repairs and improvements on the main building	25,000
(NOTE.—A similar request was made in 1914, but turned down. See Fifth Biennial Report, p. 86.)	
For building and equipping a sanitary dairy barn	20,000
(NOTE.—A similar request was made in 1914, see Fifth Biennial Report, supra, but was turned down.)	
For new fire lines and hydrants	5,000
(NOTE.—Similar request turned down in 1915 legislature, having been asked for in 1914 report. See supra.)	
For general improvements and repairs on sewer line (a similar request having been denied, 1915)	2,000
For replumbing, rebuilding, and tiling of bathrooms in the Adair and Knapp buildings	4,000
Increase in salary appropriation to cover salary of additional staff member	1,000
Increase in maintenance to cover cost of purchase of water from the city of Osawatomie	5,000
Total	137,000

"Grateful acknowledgement is made to the governor and the board of control for their ever-ready advice and assistance," states Dr. Carmichael in conclusion on page 89 of the report; but it seems that there is an overproduction of "ever-ready advice" and a lack of an apparent willingness to appropriate a sufficient sum to keep pace with the speed of the ever-increasing population, the constant wear and tear on the machinery and equipment of the hospital, much to the discredit and shame of the great State of Kansas, one of the many cradles of prohibition liberty.

In line with the complaints registered by the superintendents of the Topeka State Hospital and the Osawatomie State Hospital, Dr. M. L. Perry, superintendent of the State Hospital for Epileptics at Parsons, makes clear the situation as it exists in his institution, on pages 123 et seq., of the Sixth Biennial Report, Board of Control.

"There has been no special appropriation for buildings available during this period, and therefore no increase in the capacity of the institution," declares Dr. Perry on page 123.

"There has been a slight increase in the number of patients—from 518 at the beginning of the biennium to 551 on June 30, 1916. * * * The increase in population in the female department has been relatively greater than in the male, owing to the fact that for the past two years we have had constantly more male patients than our normal capacity.

"As pointed out in my biennial report of 1914, the legislature of 1913 allowed no special appropriation for buildings, and the management has been forced for several months to refuse to receive some patients applying for admission. This state of affairs still exists and will continue until relieved by the increased capacity provided for in the new hospital building, for which the legislature of 1915 made an appropriation of $50,000, available July 1, 1916.

"* * * We now have 16 men more than there is adequate bed space for. Additional beds have been crowded into some of the cottage dormitories, but the overcrowding has been especially marked in the large custodial building for men. In this building for more than two years we have been forced to sleep from 5 to 10 men on beds made down on the floor. Such overcrowding is deplorable in any institution, but it is especially bad in one for the care of epileptics. * * * In spite of the adopted policy to admit all acute and favorable cases and all patients either seriously ill or who, because of mental derangement, were dangerous or difficult to control, it has at times been impossible to accommodate all such types.

"* * * For several years (p. 124) the number of voluntary commitments has been increasing, until now we are receiving nearly twice as many patients of this type as we are court commitments. This is due in part to a better understanding of the different forms of suffering from epilepsy, but it also indicates a willingness on the part of more of those suffering from epilepsy to avail themselves of State aid. Unfortunately, chronic and hopeless types still constitute the bulk of our admissions.

"* * * Many of our patients have defective teeth. * * * This subject is of special importance in an institution for the care of epileptics, in view of the well-recognized relationship which exists between epilepsy and digestive disorders. The medical staff is not prepared to do dental work other than extractions, and I would recommend that some arrangement be made whereby the service of a competent dentist will be available for the better care of the patients' teeth."

Under the heading of "Recommendations," Dr. Perry analyzes the "future situation" at the hospital as follows (p. 130):

"The most urgent need of the institution in the immediate future will be additional room for men. The male population is now 16 in excess of the normal capacity. The new hospital building will give some relief, but it can not be occupied before next spring, and by that time there will be enough men above capacity to fill it.

"As any appropriation made by the next legislature (1917) will not be available until one year from this date, and several months will be required to build a cottage after the fund can be drawn, it is evident that there can be no relief from our overcrowded condition for at least 18 months.

"This cottage should be large enough to take care of the normal increase in the male department for a period of two years. I would recommend that an appropriation of $36,000 be asked of the next legislature for a custodial cottage of 40 beds similar to No. 8 north, except that it be fireproof."

Apparently Dr. Perry has no idea that epilepsy is decreasing in Kansas or that the passage of laws by the legislature against smoking cigarettes or the use of liquor by school-teachers, or tobacco either, or the prohibitive measures adopted by the governor to stop the use of tobacco and whisky by State employees, is going to cut down the crop very appreciably. His long experience in Kansas has no doubt taught him that no matter what the boast is, the fact remains that insanity is increasing by leaps and bounds.

"There have been no cottages for women erected since the first group was built more than 10 years ago," continues Dr. Perry (p. 130). "For several years there has been great need of a custodial cottage in the female department. For lack of it we have not been able to classify the women in a satisfactory manner. There are still a few vacancies in the open cottages, but No. 1 has more patients than can be properly cared for. The additional room which will be gained when the hospital building is opened will be sufficient to meet the needs of this department for two years, but unless provision is made for more room by the next legislature the institution will be obliged to refuse admission to women, as we are now having to do to men. An appropriation of $36,000 available July 1, 1918, for a cottage similar to the one recommended for men should be requested."

The above would indicate that Dr. Perry seems rather certain that epilepsy is not on the decline, so far as women are concerned, either.

"For a number of years I have pointed out the need of a school building and the necessary equipment," stated Dr. Perry (p. 131) in further commenting on the crying needs of his institution. "This need is certainly no less urgent now than heretofore," continued the superintendent. "I know of no stronger way to present the subject than to quote from my last biennial report: 'If the institution is going to continue to receive bright boys and girls—and such patients are the ones for whom most good can be done—it should certainly be in a position to offer them some educational advantages. An epileptic is already sufficiently handicapped without having to bear the additional burden of illiteracy. On account of their disease, they are deprived of the opportunity provided by the State for normal children to obtain an education in the public schools. Why should the State discriminate against the epileptic child in this manner? It seems to me only reasonable to request that if a school is to be conducted in connection with the institution a properly equipped school building be provided.' An appropriation of $12,500 will be needed for this purpose."

The same amount was requested in the 1914 report (p. 119, Fifth Biennial Report, Board of Control), but was denied the institution under the "policy of economy" introduced by Gov. Capper. (See Laws of Kansas, 1915, ch. 38, p. 54.)

Speaking of the dairy barn, Dr. Perry also stated (p. 131, Sixth Biennial Report, Board of Control): "The part of the barn used for the dairy is small, insanitary, and in various ways unsatisfactory, and should be abandoned and a modern structure better suited to our needs erected. * * * An appropriation of $15,000 will be required for this improvement."

A similar sum for the same purpose was requested in the former report (see p. 119, Fifth Biennial Report, Board of Control), but was likewise denied under the "policy of economy."

"The pipe tunnels which were constructed nearly 15 years ago have been in a bad state of repair for several years," declared the superintendent in speaking of other crying needs of the institution (p. 131, Sixth Biennial Report, Board of Control) "and are getting in a worse condition each year. The main tunnel was in such bad shape that it became necessary to entirely rebuild it. This work is now in progress. The remainder of the tunnel system will have to be rebuilt during the next biennium. It is not safe to depend upon it for a longer period than that. Practically all the pipe lines in these tunnels, with the exception of the main steam line, will have to be replaced. It will require $12,500 for these improvements, which I consider to be absolutely necessary for the safety of the heating, wiring, and water systems."

"I would like to see some increase in the general salary and wage schedule," declared Dr. Perry, on page 132, speaking of wages and salaries which are now being paid and which he deems very inadequate to secure efficient help. "The amount paid heads of departments and those in the more responsible positions in the Kansas institutions is very much below what is paid in most other States," he observed. "Efficient service is demanded of those holding such positions," he continued, "in our hospitals, and it seems only fair that they should be paid salaries comparable to those allowed for the same grade of work elsewhere."

From the above and foregoing excerpts it is quite apparent that Dr. Perry seems convinced that his institution has not been receiving the proper amount of appropriations from the legislature, and a study of conditions surrounding this institution particularly leads to the inevitable conclusion that Kansas is most careless about the things that go to make a real up-to-date Commonwealth. From reports that have been sent broadcast and which, unfortunately for the people of Kansas, receive wide publicity because of their source, these conditions seem almost impossible, and the sooner the American people, and those residing in Kansas more especially, learn the truth about the "inside of Kansas workings" the better. People will listen to boasting public officials when they will refuse to read. The official State and Federal reports seem to make little if any impression upon the average person, mainly because they are supposed to be dry reading and without any special interest. Statements put forth in glowing terms about the wonderful workings of any system of government advertised as a cure-all, backed up by statements repeated again and again that the "nostrum" will and does decrease the dread disease of insanity in time, are taken at their face value. Just how these statements originate and why they are made, I will not at this time attempt to explain, but obviously there is an ulterior motive or they would not be made. And again, just how a governor, an ex-governor, and ex-attorney general, or any other man who has gained some degree of distinction in his home State, can purposely misrepresent or refuse to tell the truth about these conditions, is likewise beyond my comprehension. It is beside the question to say they are made "just because we desire to boost our State." Boosting of that sort is dangerous, and more especially so since even some of the legislators feel much the same way about it as do those away from home, and constantly refuse to give the much needed assistance to the unfortunate.

Why not make a clean breast of it? Why not admit after all that the fake tales and truthless stories are merely trumped-up assertions made for the purpose of deceiving the public, and submit to public gaze the power behind the throne demanding that these statements be repeated and given credence by being sent out over official signatures? Kansas will be shocked rudely more than once when the true conditions of her industrial, educational, penal, and charitable institutions become the subject of public discussion in their true light. Better have it soon, correct the errors, kick the ramshackle system out of public life, and start anew. Other States have done it, and Kansas can well afford to follow their example.

In this connection the observations made by Dr. F. C. Cave, superintendent of the State Home for Feeble-Minded, at Winfield, are quite apropos. (See Sixth Biennial Report, Board of Control, pp. 147 et seq.) Among other things, Dr. Cave calls attention to the following:

"A great many crippled children are being sent to us who need careful hospital attention; and if they continue to come to us, it is only a question of a short time when additional room will be needed in this department." (P. 147.)

"In our last report we mentioned the proximity of the present barn and new kitchen, producing flies, objectionable odors, etc. This is unpleasant and insanitary, and probably during the next biennial period alterations should be made, the barn converted into a ward building, and a new structure placed a half mile distant from the present group of buildings." (P. 148.)

"We have room for additional patients, but I understand efforts are being made by the board to send us a good many defectives who are now in private homes, as well as to transfer from the hospitals for the insane imbeciles who have no violent insane tendencies. If these two measures are carried out, the additional room here will soon be taken. In order to place our B building in condition to receive patients some remodeling must be done and new plumbing installed.

"Along with appropriations asked for in previous years we have always included an urgent request for $1,500 to purchase a five-acre tract, the remainder of the quarter we now occupy. This has always been tabled; but as this is a small appropriation, surely it will be granted. We need the tract to fill out our land. It would eliminate an unsightly old house and outbuildings that now stand on the property, and from an esthetic standpoint, if nothing more, should be purchased."

This is the first time the term "esthetic" has crept into the official reports for years. Demands are always "crying needs" and of extreme and urgent necessity. It is refreshing to note the term "esthetic improvements" once in a while, even if it does mean the tearing down of a lot of old buildings and outhouses next door to a State institution.

Just to show that his institution is not being given everything it needs, however, Dr. Cave asks and endeavors to enforce his demands with a strong enough argument that they will be put over for special appropriations amounting to $24,500. This institution asked for $101,500 from the 1915 legislature (Fifth Biennial Report, Board of Control, p. 136) and received $25,500. (Laws of Kansas, 1915, ch. 33, p. 50), which was a fairly good average, considering the "policy-of-economy" program.

In speaking of the future of the State Home for Feeble-Minded, Dr. Cave said (Sixth Biennial Report, Board of Control, pp. 151–152):

"We have already grown to the point where expansion is going to be particularly expensive, and we are not justified in further enlarging the home. The defective population of the State is not decreasing; in fact, I believe it is reported to be increasing faster than the normal rate of increase; and it is only a question of a short time when another institution of a similar character must be established.

"I would suggest that the same policy in selecting a building site be observed as was done by our board when the hospital at Larned was founded. Locate it where climate, water, soil, railroad facilities, and accessibility are features."

This statement does not sound much like the average "away-from-home boast" of the average Kansas booster, does it? And it most surely does not prove the statements made in a bulletin issued by Governor Capper in March, 1915, under the auspices of the Temperance League of the Methodist Church, in which he declared that "our homes are happier and our people stronger in mental fiber and conviction,"—all, of course, because Kansas adopted a constitutional amendment providing for prohibition in 1880.

As a parting shot, Dr. T. E. Hinshaw, the first assistant physician at the State home for feeble-minded, takes occasion to warn the public of the great dangers that lurk within the possibilities of permitting the wholesale production of mentally deficient in Kansas, and his remarks sound so strange, in view of what the country has been led to believe during the past decade to be the true conditions within the Sunflower State, that I urge especial emphasis to be given them. (See p. 152, Sixth Biennial Report, Board of Control, 1916):

"In view of the constantly increasing number of defectives, the insane, the feeble-minded, and epileptic, it would seem timely to suggest, even to urge, that a campaign of publicity be carried forward by the medical profession and the laity till the general public is sufficiently enlightened that it will favor the movement to render absolutely, by surgical means, the above-mentioned classes incapable of reproducing their kind."

Instead, and quite unfortunately, any person posing as spokesman for the people of Kansas can secure an audience and plenty of publicity throughout the Nation in newspapers, through the magazines, and even before great bodies of legislators, by claiming that Kansas is producing the most stalwart citizens in the Union, has more of a birth increase and less of a death increase, with all the virtues known to mankind sandwiched in between those two extremes, because she happens to be laboring—and "laboring" is the term—under a ramshackle constitutional provision, backed up, patched up, and wired together by a multiplicity of enactments, all presumed and boasted to prohibit the demon that slaughters in cold blood in every city, county, and State of the Nation where the sale, manufacture, and barter of liquors is permitted. Kansas has been held up as the "shining light" long enough. It its now high time that she be revealed as the "horrible example" that her own officials, who suffer no ulterior motive to prompt their declarations, declare her to be. If these things these men write are true it is surely time for the Nation, and especially the people of Kansas, to stop, look, and listen. Not that I claim open saloons would remedy these conditions, but in view of the oft-repeated declaration that they sap the lifeblood of the communities where located, this showing is at least some proof that something is sapping the lifeblood of Kansas, and as they have no "dens of iniquity"—no legal dens and lawful dives—it is time to study the cause of these conditions. Resolutions and parades can not solve questions such as these; neither can silent sentries, white flags, or maps that are as pure as the falling snow.

The Larned Hospital opened recently, but is already asking for special appropriations for additional equipment in the sum of $75,700. (Sixth Biennial Report, Board of Control, p. 198.)

In commenting upon the growth of the insane population of the State, Dr. L. R. Sellers, superintendent, stated (p. 197):

"Whether insanity is increasing out of proportion to our growing population or that our people are more alert in detecting and segregating the insane is a mooted question. But we can not deny the fact that the number of insane in institutions is increasing much faster than the increase in the population of the State, and the need of more buildings is imperative."

In addition to the large number of insane, feeble-minded, and epileptic inmates of the various hospitals and homes established especially for them, the State penitentiary has an asylum for dangerous insane (Second Biennial Report, State Board of Corrections, 1916, p. 45). There are 42 patients there aside from 10 more classed as "criminal insane."

Three hundred girls were cared for in the Industrial School for Girls, at Beloit, during the biennium ending June 30, 1916, and two-thirds of them were mentally defective. (Report of Miss Franklin R. Wilson, superintendent; Second Biennial Report, State Board of Corrections, p. 94.)

In an address before the Kansas Conference of Charities and Correction (Sixteenth annual session), at Topeka, November 18, 1915, Dr. H. W. Charles, superintendent of the Industrial School for Boys, at Topeka, made the following remarkable observation: "A survey of the boys in my own institution a few years ago revealed the astonishing fact that only 16 per cent of the entire number were above a retardation of two years, while slightly more than 7 per cent were so far down in the scale of mentality that they would never be self-supporting but would require permanent segregation. The first step in solving the problem of delinquency will be accomplished when our corrective institutions cease to be a dumping ground for the feeble-mended."

Speaking of the almost unbelievable increase in the birth rate of the mentally deficient, Dr. Charles further stated: "A large and apparently increasing number of children are born without sufficient intelligence to know right from wrong, or who, if they appreciate the difference, do not have the will power or judgment or courage to do the right and shun to wrong. It is from this class that the ranks of the criminals are recruited. Every thoughtful study of the criminal classes shows the close relationship between criminality and feeble-mindedness.

"If there is such a thing as the criminal type, it is another name for the type of feeble-mindedness—a class long misunderstood and mistreated, and a class whose members easily fall into the ranks of the criminal. We have failed to recognize the raw material from which criminals are made."

At the same gathering, Roy T. Osborne, judge of the juvenile court of Independence, Kans., declared: "In the little more than 10 years the juvenile court has been established in Kansas children under 16 years of age, in this State, have committed practically every crime in the calendar, including murder in the first degree. * * * Many children charged with delinquency are abnormal. The number of defective children in our public schools is astounding."

Prof. F. W. Blackmar, dean of the Kansas State University, sums up the answer to the query, "What's the matter with Kansas," as follows: "The stream of weakness, crime, and degeneracy flows steadily on, and will continue to do so until we go to the source and stop the fountains that feed it."

The State Board of Controll, in its Sixth Biennial Report, page 7, says, with reference to degeneracy in Kansas: "The hundreds of thousands of dollars spent by the counties and private charitable agencies are spent chiefly in maintaining degenerate families."

Speaking further with reference to the great increase of insane, feeble-minded, and helpless defectives within Kansas, and in discussing their conditions, surroundings, etc., generally, the board further says (pp. 5, 6, 7, and 8):

"State care for the curable and dangerous insane is the only method that conforms to the demands of our present civilization. The only objection to State care is that it inclines the counties to impose upon the State by transferring to the State insane hospitals defectives and dependents who are properly only almshouse charges."

This is an "explanation" for the overcrowded condition at all the State institutions, but just an "explanation," nothing more. However, as has been said before, if the counties did not impose on the State in this manner, and with even more than 908 paupers on county poor farms, with the available room at the State institutions all taken up, a great deal of the "statistical information" cooked by up prohibition propagandists would be lacking in the campaigns away from home, but it would most certainly add a great deal of stability to the State if these conditions could only be better known, more deeply realized, and the remedy for them, if indeed one can be found, applied as soon as possible, even if the tax rate has to be raised 50 mills instead of 5.

"The State Home for Feeble Minded at Winfield, Kans., is for feeble-minded children not over 15 years of age," further states the board's comment (p. 7.) "If the capacity of the institutions allows the reception of persons of greater age the State board of control is permitted to grant admissions. Statistics show that a feeble-minded woman is three times as likely to find a mate as a feeble-minded man, and feeble-minded women are ruthlessly pursued by evil-minded men.

"While feeble-minded women of child-bearing age should be segregated in State and county institutions, yet the institutions should be of sufficient capacity to receive all feeble-minded, regardless of age or sex.

"There should also be a direct legal process for the commitment of the feeble-minded. The cost of segregating the feeble-minded in institutions will be offset by the decrease upon private charitable institutions and the decrease in the charity work of the counties.

"At the beginning of the biennium, July 1, 1914, the capacity of the State Home for Feeble-Minded was 450, and there were 498 inmates, an overcapacity of 48," further declared the board on page 8. "At the beginning of the second year of the biennium, July 1, 1915, the capacity of the institution was 450, and there were 530 inmates, an overcapacity of 80. At the end of the biennium, June 30, 1916, the capacity of the institution had been increased to 700, and there were 589 inmates, with 111 vacant beds for both sexes. Sixty-five new inmates were admitted during the fiscal year ending June 30, 1915, and 120 new inmates during the fiscal year ending June 30, 1916, a total of 185. There were 94 removals during this biennium, leaving a net increase of 91 inmates." Sixty-two counties sent at least one inmate during the period. Shawnee, Leavenworth, and Wyandotte sent 9, 15, and 10, respectively. But the inmates were by no means recruited from "border" or largely populated centers particularly. Some of them, if not the greater portion, came about evenly from that class of population centers and the "short-grass counties" alike.

One of the most interesting features of the fifth and sixth biennial reports of the board of control is a study of the causes for which the various patients are adjudged and committed to the asylum. Under the Kansas procedure (laws of 1915, ch. 239, p. 302) the legislature attempted to prohibit marriage or intermarriage of epileptic, imbecile, feeble-minded, or insane persons, in an attempt to at least decrease

temporarily the number of insane children borne. The admissions to the hospitals show the inmates to be of almost all ages, from "under five" upward, and for almost all known causes.

ALCOHOLIC PSYCHOSES.

One of the stock arguments advanced in favor of the Kansas brand of prohibition is that the rate of alcoholic insanity is constantly decreasing. Some claim it is the lowest in the Union, and others that it is merely decreasing "because over 500,000 of our school children have never seen a saloon."

Under the Kansas law (Session Laws, 1907, chap. 247, p. 387) a jury of six persons and the probate judge must pass upon the sanity of the person charged. It stands to reason that a jury of six persons, hearing the evidence of the members of the charged person's family, his family physician, and neighbors, would more clearly understand from the evidence thus adduced the habits, etc., of the accused, and the physician (one in regular practice and of good standing must be called as a juror, and ofttimes there are six physicians on the jury), being in attendance, most surely gathers a better knowledge of the cause of the insanity than any other person connected with the case, unless it be the members of his family. After this procedure is followed, the accused, if adjudged insane, is sent to the State hospital or wherever there is room—in a private institution if the State asylums are full. The commitment papers are prepared in line with the evidence and sent to the institution with the patient by the probate judge, with the help of either the family physician or the physician attending the trial as a juror, and the law requires the jury also to determine the cause of insanity, if possible.

Drunkenness and insanity bear this relationship that can not be hidden: When a patient is an alcoholic or suffering with tremens, the fact is so patent it is easily detected. Alcoholism may enter into any number of other types, but alcoholic insanity is difficult to mistake, especially at an insane trial.

There seems to be a tendency in the Kansas insane hospital to diagnose cases to suit the pleasure of the statisticians looking for "evidence" that prohibition reduces alcoholic psychoses, as a comparison between the charges set forth in commitment papers and those appearing in the reports indicate.

According to the clinical deductions in the Fifth Biennial Report, board of control, page 47, "26 cases, or 3.2 per cent, of the 818 cases admitted during the biennial period (ending June 30, 1914) were forms of alcoholic mental disorders. The diagnosis of alcoholic psychosis in this group of cases was based on findings that are generally recognized as due to the use of alcohol in its various forms, and not upon the alleged causes as reported in the commitment papers." No report is given in the tables prepared by the superintendent of the Topeka Insane Hospital during that period showing the number of cases where the commitment mentioned alcohol, as was the case during the succeeding biennium, or as was the case of the other hospitals, the Osawatomie and Parsons institutions.

The rate of alcoholics given for the year 1914 at the Osawatomie Hospital (supra, p. 99) was 3.1 per cent, based entirely upon the causes mentioned in the commitment papers. The rate of the alcoholics admitted at Parsons State Hospital for Epileptics was 2.27 per cent, as shown by table on page 123, above report, based on commitment causes.

While it is popularly stated and almost universally believed that the Kansas rate of alcoholic insanity is 3.2, that rate is based on the admittance of the Topeka Hospital alone, and can not be correct, as it is not based on the commitment causes. However, the Kansas rate for the period closing June 30, 1914, including the false report from Topeka, is 8.57 and not 3.2 per cent, which is much above the average for the various States of the Union.

THE 1916 SYSTEM.

An "improved" system of arriving at the percentages of alcoholics for 1916 was introduced in the Sixth Biennial Report of the Board of Control (pp. 43, 92). On page 43 it is stated "The number of patients admitted during the biennial period with alcoholic psychoses is 17. This is 2.1 per cent of all admissions, as compared with 3.2 per cent in the preceding biennial period. * * * When compared with State hospital reports from other States 2.1 per cent is a surprisingly small proportion of alcoholic insanity." It would be surprisingly small if that comprised all the alcoholic insane in the State, or if the figures were correct.

According to the causes of insanity in the commitment papers (p. 54) the total number was 27 and not 17, as claimed, thus making the percentage 3.3 for the Topeka Hospital.

In commenting on the rate at Osawatomie (p. 94, above report), it is stated:

"During the biennial period 11 cases (10 men and 1 woman), or 1.9 per cent of the total admissions were placed in this group." (Alcoholic psychoses). "All had definite history of alcoholic intemperance; 9 were from border counties. * * * This low percentage of alcoholic insanity strikingly proves the effectiveness and some of the benefits of State-wide prohibition."

However, reference to Table No. 15, page 113 of the above report, shows that the number should be 15, directly charged to alcoholism and not 10 as claimed, or as claimed after the proper alterations were made by the examining physicians who entered the patient, and who it seems had a reason for lowering the rate. The percentage, then, of the admissions in Osawatomie should be 2.6, directly charged with alcoholism as a cause, no matter how many more alcohol may have been partially a cause or contributed to the cause.

The rate as shown by the table (No. 8) on page 137, covering the admissions at the State Hospital for Epileptics at Parsons, is 4.8.

The total rates from these three institutions, therefore, should be 10.7 per cent for the biennium closing, June 30, 1916. No doubt it will be charged that the "State rate" is the 2.1 per cent claimed by the Topeka State Hospital, and no doubt the superintendent of the Osawatomie State Hospital will be widely quoted as claiming that the rate has been reduced—all because of State-wide prohibition—but a study of the record itself will convince any fair-minded person that the rate has actually increased 2.13 per cent over the showing admitted in 1914.

It seems strange that anything will be admitted as to true conditions in Kansas by officers in charge of State institutions, but there seems to be one Kansas hobby it is hard to explain, and that is the hobby to boost, twist, garble, and manufacture figures and evidence to boost prohibition. This has been true only during the past few years since prohibition has become the great American political expedient. Why the reports should speak the plain, unadulterated truth and be so insistent that reforms be instituted in some particulars and attempt to color them in this particular is difficult to determine. The changes made in causes between those set out in the commitment papers and those named in the "diagnosis," after the patient is brought to the hospital, are almost invariably confined to cases of alcoholic psychosis. And a further feature is that they are never increased—always diminished.

CRIME.

A SURVEY COVERING FACTS AS REPORTED IN VARIOUS OFFICIAL REPORTS OF THE STATE OF KANSAS, PERTAINING TO THE STATE INSTITUTIONS FOR CRIMINALS AND DELINQUENTS WITHIN THE STATE, TOGETHER WITH OBSERVATIONS, NEWSPAPER REPORTS BRIEFLY MENTIONING CERTAIN CONDITIONS, AND NOTES OF EXPLANATION AND COMMENT.

Contrary to the general belief, claim can not be justly made that since the institution of the law-enforcement propaganda in Kansas in 1906 strict attempts to make the brand of prohibition that State boasts of, prohibit, have resulted in a decrease in crime or juvenile delinquency. The matter of juvenile delinquency will be taken up in due course, and I wish now to direct attention to the increase of crime throughout the State. No claim is here made that should there be a saloon on every corner, a brewery in every village, city, or town, that crime would necessarily decrease in Kansas. That is the usual answer made by the prohibitionists when criminal conditions are revealed. The claim is invariably made that those interested in studying the great increase of poverty, crime, insanity, and disease necessarily take the position that all these "curses" would be cured if the saloon could be returned. I repeat that I make no such claim; however, I do most earnestly urge attention to the fact that while Kansas boasts of a strict prohibition law-enforcement program, the fact is that liquor is consumed by wholesale, in homes, clubs, hotels, dives, blind pigs, alley joints, and in almost every other place where secrecy and law violation produce the greatest amount of drunkenness possible. The point in this study is: Does the pseudo "dry" State of Kansas deserve the "fame" as a prohibition community her "native sons" and other boosters persist in showering upon her? Isn't it true that the very things they claim they have reduced and decreased have in fact increased? And if so, has the Kansas brand of prohibition delivered the goods? If it has not, should the Nation be continually misled by faked reports and "home-made" statistics, used indiscriminately and without authority, throughout the length and breadth of the land?

It is not my purpose to suggest that Kansas return the saloon. That is for her voters to determine. My purpose is to carefully and fairly present the aftermath of prohibition. Is Kansas really famous, or is she merely showered with cheap notoriety—crucified before the word, in fact—by overindulgent, overzealous, and over enthusiastic proud sons who consider it an unforgivable infraction to admit that it is not the greatest Commonwealth under the sun, and also consider it a pardonable offense to overrate her greatness beyond description?

In an enthusiastic outburst before the Fifteenth National Convention of the Anti-Saloon League of America, at Columbus, November 12, 1913, George H. Hodges, then governor and now a regular lecturer for that organization and now an officer in the Kansas branch of that organization, declared that prohibition was emptying the jails, poorhouses, penal, charitable, and correctional institutions of the State, contrary to the overwhelming flood of evidence found in every report issued by State boards during his administration and since that these institutions are increasing their population monthly and yearly. The wheat crops of the State, failures in crops in other States causing the price to rise, foreign wars and demands in eastern industrial centers for normal and abnormal numbers of bushels, the speculators' genius, etc., are never given credit for any prosperity in the Sunflower State. Gov. Hodges further declared in his antisaloon league speech that prohibition "helps almost every man in our State to have a two weeks' vacation with his wife and family in some Colorado mountain resort," although during his administration, owing to a crop failure, the railroads of the State had to loan the Kansas farmers a large sum of money with which to buy seed wheat, hauled it free, and did not charge any interest for the amounts advanced. Which only goes to show that enthusiasm and juggling the truth know no bounds when a Kansan gets started boosting his home State. It was bad enough before the country's attention was called to the "success" of prohibition there. Now, since Kansas hot air has a market value, men high in official circles vie with one another in an attempt to produce the most priceless "jewels." The Hodges speech was printed at State expense by the State printer, bears the State seal, and is now being sold for private profit by the Kansas State Temperance Union, which was quite recently sold out to the Anti-Saloon League of America.

On March 27, 1910, W. R. Stubbs, then governor of Kansas, declared in a speech delivered at the Great Northern Theater in Chicago, upon invitation of Rev. J. K. Shields, superintendent of the Anti-Saloon League of Illinois, that "here in Chicago and throughout the United States the brewers, distillers, and saloon keepers, their attorneys and retainers, are telling in posters, pamphlets, and speeches that prohibition increases crime in Kansas," and mentioned several other charges he claimed were persistently made. "These charges are true or they are not true. They are based on facts or they are utterly without foundation. On my honor as a man and upon my word as the chief executive of nearly 2,000,000 sovereign people I say to you they are infamously conceived and maliciously false."

That speech was afterwards printed and is now sold by the Kansas State Temperance Union.

On April 2, 1912, John S. Dawson, then attorney general of Kansas and since elected to the Supreme Court of that State, addressed a banquet given by the Baptists' Social Union at the Auditorium Hotel in Chicago. Although it is admitted on every hand that no attempt was ever made to enforce the law, that saloons and joints were running all over the State, a condition that no one knew better than Attorney General Dawson, he bravely gave prohibition credit for winning the Spanish-American War, claiming that prohibition of 30 years' standing caused the Kansas boys to win the war, both in Cuba and in the Philippines. He gave Roosevelt credit for the victory at Santiago, but insisted on putting the Kansas boys in front of the colonel, a fact which the colonel has never admitted to be true. And the reports of the battle, as admitted by himself, have never thusly shared "honors."

Gen. Dawson also laid special stress on the fact that prohibition has been a great crime reducer in Kansas. This speech was afterwards printed and is now being sold by the Kansas State Temperance Society.

In a flamboyant speech delivered before a gathering under the auspices of the managers of the prohibition and equal-suffrage campaign in Massachusetts, September 3, 1915, Arthur Capper, the present gov-

ernor, laid claim to Kansas's greatness, among other things, to the fact that prohibition has greatly reduced crime, promoted social welfare, and emptied the poor farms, correctional and charitable institutions, etc. This speech was afterwards printed and is now being sold by the Kansas State Temperance Society. It was printed on the governor's own press, however; not by the State plant.

On March 25, 1915, a bulletin was issued by the Temperance Society of the Methodist Episcopal Church, which has its national headquarters at Topeka, Kans. This bulletin was prepared and signed by Gov. Capper. As a part of it he included a resolution adopted by the legislature (senate concurrent resolution No. 33, approved Feb. 13, 1915, ch. 394, p. 500, Laws of Kansas, 1915), in which it was declared:

"That the State of Kansas is cleaner, better, more advanced in mental culture, and stronger in moral fiber and conviction; that her homes are happier and more comfortable, her children better educated than ever before in her history; that crime is less prevalent and poverty less general; and that all this is due largely to the fact that the saloon is such an outlaw that none of her school children have ever seen a saloon and are unacquainted with the appearance of a saloon keeper."

This resolution was adopted at the request of the governor, to be used by the Antisaloon League in a contest it was then waging in the Legislature of Utah.

When Kansas paid off her last State bonds, January 1, 1916, the governor again reiterated publicly that prohibition was causing a decrease in the rate of crime.

The public has never been advised of just what the actual conditions are with reference to crime in Kansas, for the very good reason that statements of men of official character are usually taken at their face value. Any disputant of the statements is accused of endeavoring to "defeat the purpose of prohibition" or give Kansas a false standing because championing the open saloon. No effort has ever been made by the majority of the American public to study the State reports of Kansas or the Government with reference to the crime situation there, and I have taken the trouble to survey it carefully and present it herewith, without bias or prejudice, and ask that it be carefully considered in the light of the statements above quoted, which are, unfortunately for Kansas as well as for temperance, given much undue publicity of such a character that they have become established as the truth, so far as Kansas is concerned, in this behalf.

The various sessions of the Kansas Legislature since 1907 (including 1907, 1909, 1911, 1913, and 1915) have made direct appropriations aggregating $2,733,282.30 for the State penitentiary at Lansing. The amounts are as follows:

For the fiscal years ending June 30, 1908, and June 30, 1909 (Laws of 1907, ch. 20, p. 36; ch. 21, p. 39; ch. 22, p. 39; ch. 23, p. 40; and ch. 24, p. 41)	$688,288.41
For the fiscal years ending June 30, 1910, and June 30, 1911 (Laws of 1909, ch. 37, p. 64; ch. 38, p. 67; ch. 39, p. 68; and ch. 40, p. 69)	374,681.09
For the fiscal years ending June 30, 1912, and June 30, 1913 (Laws of 1911, ch. 13, pp. 31–32; ch. 14, p. 34; and ch. 15, p. 35)	493,760.09
For the fiscal years ending June 30, 1914, and June 30, 1915 (Laws of 1913, ch. 35, pp. 60, 61, 62; ch. 36, p. 64; 79; ch. 60, p. 80; ch. 61, p. 81; and ch. 62, p. 81)	432,830.21
For the fiscal years ending June 30, 1916, and June 30, 1917 (Laws of 1915, ch. 57, pp. 76, 77; ch. 59, pp. 78, 79; ch. 60, p. 80; ch. 61, p. 81, and ch. 62, p. 81) (Also ch. 63, p. 82; ch. 64, p. 83; ch. 65, pp. 83, 84.)	432,830.21

The appropriation for 1916–17 did not specify the amount appropriated for the "revolving fund" at the State twine plant at the penitentiary. (See ch. 59, pp. 78, 79.) This amount during previous years has amounted to about $175,000, and this should be taken into consideration in estimating the appropriations for this period.

Chapter 62, page 81, Laws of 1915, shows that $14,313.24 of the appropriation for 1915 is a deficit and is represented by a loan from the Bank of Topeka.

A portion of the appropriation was for $61.97 interest paid on the above loan. So far as the record shows back to 1907 at least, this is the first time it has been necessary to go to a bank and borrow enough money to run the prison until the legislature convened.

The various sessions of the Kansas Legislature since 1907 (including 1907, 1909, 1911, 1913, and 1915) have made direct appropriations aggregating $1,244,650 for the State Industrial Reformatory at Hutchinson. The amounts are as follows:

For the fiscal years ending June 30, 1908, and June 30, 1909, (Laws of 1907, ch. 14, pp. 25, 26, 27)	$242,820
For the fiscal years ending June 30, 1910, and June 30, 1911 (Laws of 1909, ch. 34, pp. 58, 60)	237,820
For the fiscal years ending June 30, 1912, and June 30, 1913 (Laws of 1911, ch. 16, pp. 36, 37, 38)	259,520
For the fiscal years ending June 30, 1914, and June 30, 1915 (Laws of 1913, ch. 38, pp. 66, 67, 68; ch. 39, p. 68)	271,400
For the fiscal years ending June 30, 1916, and June 30, 1917 (Laws of 1915, ch. 55, p. 73)	233,000

Any unexpected balance that remains over from one biennium to another is always reappropriated, and the provision is made for securing funds by special permit during any biennium, should the appropriation fail to meet the demands of the institution.

The various legislatures of Kansas since 1907 (including 1907, 1909, 1911, 1913, and 1915) have made direct appropriations aggregating $640,950 for the Boys' Industrial School at Topeka. The amounts are as follows:

For the fiscal years ending June 30, 1908, and June 30, 1909 (Laws of 1907, ch. 15, pp. 28, 29)	$147,800
For the fiscal years ending June 30, 1910, and June 30, 1911 (Laws of 1909, ch. 32, p. 57)	124,650
For the fiscal years ending June 30, 1912, and June 30, 1913 (Laws of 1911, ch. 17, p. 38)	118,300
For the fiscal years ending June 30, 1914, and June 30, 1915 (Laws of 1913, ch. 40, p. 69)	124,000
For the fiscal years ending June 30, 1916, and June 30, 1917 (Laws of 1915, ch. 56, p. 75)	126,200

The various sessions of the Kansas Legislature since 1907 (including 1907, 1909, 1911, 1913, and 1915) have made direct appropriations aggregating $494,000 for the Girls' Industrial School, at Beloit. The amounts are as follows:

For the fiscal years ending June 30, 1908, and June 30, 1909 (Laws of 1907, ch. 12, p. 23; ch. 13, p. 24)	$100,800
For the fiscal years ending June 30, 1910, and June 30, 1911 (Laws of 1909, ch. 23, p. 58)	93,400
For the fiscal years ending June 30, 1912, and June 30, 1913 (Laws of 1911, ch. 18, p. 39)	105,300
For the fiscal years ending June 30, 1914, and June 30, 1915 (Laws of 1913, ch. 41, p. 70)	96,500
For the fiscal years ending June 30, 1916, and June 30, 1917 (Laws of 1915, ch. 57, p. 76)	98,000
Making a total of	494,000

These institutions are known as the penal and industrial institutions and are all under the control of the State board of corrections.

The various amounts directly appropriated during the period mentioned above, aggregate $5,112,882.30. To this, in order to correctly arrive at an estimate of the sums directly and indirectly appropriated, should be added the approximate amount of the earning of the twine plant at Lansing, which was not set out specifically in the acts of 1913 and 1915. The laws of 1911 (ch. 14, p. 34) names the sum for that year as $81,280.09.

On January 1, 1910, there were 882 prisoners in the Kansas State penitentiary, at Lansing, Kans. (U. S. census, 1910, Bulletin 121, Table No. 1, p. 36). This included the Federal prisoners. On June 30, 1910, independent of Federal prisoners, there were 873 inmates in the same institution (Eighteenth Biennial Report, Kansas State Penitentiary, p. 19); and on June 30, 1912, the number had decreased, independent of Federal prisoners, to 871. (Eighteenth Biennial Report, Kansas State Penitentiary, p. 19).

During the year 1911, 286 prisoners left Lansing, 67 by reason of expiration of term, 10 escaped, 1 paroled by the President, and 181 paroled by the governor and board jointly. During the year 1912, 327 prisoners left Lansing, 69 by reason of expiration of term, 5 escaped, 1 paroled by the President, and 230 paroled by the governor and board jointly. (Eighteenth Biennial Report, Kansas State Penitentiary, Table No. 8, p. 23). The paroles by State authorities increased 49.

At the close of the succeeding biennium, June 30, 1914, there were 793 prisoners confined in this institution, of which 41 were United States civil prisoners, leaving the number of Kansas prisoners confined 752. (First Biennial Report, State Board of Corrections of Kansas, 1914, p. 21, Table No. 1.) During the period (same report, p. 24) 193 State prisoners were paroled by the governor, 396 State prisoners were paroled by the board, 26 escaped, and the sentences of 18 were commuted, making a total, less the 18 commuted, of 615 prisoners who were really wards of this institution, making the grand total 1,367. The paroles for this period exceeded those of the preceding period by 262.

On June 30, 1916, there were 841 prisoners confined in this institution. These were all Kansas convicts, as the Federal prisoners had all been removed at that time. (Twentieth Biennial Report, Kansas State Penitentiary, Table No. 1, pp. 8 to 11; also Second Biennial Report, State Board of Corrections, p. 17.) During the period 822 prisoners were discharged, and the total received during the period was 870, which exceeded the number received during the preceding biennium—265—although 41 Federal prisoners were received during the preceding period, which actually meant an increase for the period ending June 30, 1916, of 306. (First Biennial Report, State Board of Corrections, p. 22; Second Biennial Report, State Board of Corrections, p. 17.)

During the period (ending June 30, 1916) the governor issued 220 paroles, the board granted 328, there were 21 sentences commuted, which meant the prisoners were discharged, and 29 escaped. Thus, aside from the prisoners whose sentences were commuted, the population, based on the number of wards out on parole and confined should be 1,418. The commuted sentences and paroles for this period were 569, or a decrease of 20 over the preceding period. (Second Biennial Report, State Board of Corrections, p. 17.)

A study of these figures should convince any fair-minded person that any claim made that "crime is less prevalent" is unfounded, and should also prove that whatever the cause, crime seems to be increasing beyond all reason within the State of Kansas.

A PRISON SURVEY.

Of the 870 prisoners confined in Lansing June 30, 1910, 12 out of 105 counties of the State did not have representation. They were Clark, Cloud, Gray, Kearny, Lane, Osborne, Scott, Sheridan, Sherman, Smith, Stafford, and Stevens.

During the biennium ending June 30, 1912, however, Clark County sent up 1 convict, Cloud sent up 7, Gray sent up 1, Kearny sent up 1, Lane sent up 1, Scott sent up 1, Sheridan sent up 1, Sherman sent up 2 as well as 1 parole violator, Smith sent up 2 as well as 1 parole violator. Stafford sent up 4 as well as 1 parole violator, and Stevens sent up 1.

The representation of Sheridan, Smith, and Stevens Counties was discharged by parole or otherwise before the close of the biennium, and on June 30, 1912, there were seven counties without a representative in this institution. They were Labette, Sheridan, Smith, Stevens, Thomas, Trego, and Wichita. (Eighteenth Biennial Report, Kansas State Penitentiary, June 30, 1912, p. 19, Table No. 1.)

"In July, 1911, 65 counties had no prisoners serving sentence. In my home county (Graham), in western Kansas, there has never been but one grand jury in its history and that was 25 years ago."—(From speech delivered by John S. Dawson, while serving as attorney general, at banquet of Bapists' Social Union, Chicago, Apr. 2, 1912.)

(NOTE.—Under the Kansas practice, "Offenses may be prosecuted in the court having jurisdiction, either by indictment or information." (Sec. 5952, General Statutes of Kansas, 1905.) "Information may be filed during the term time or in vacation in any court having jurisdiction of the offense specified therein, by the prosecuting attorney of the proper county as informant." (General Statutes 1868, ch. 82, sec. 67, as amended by laws of 1887, ch. 178, sec. 1; June 20. Also sec. 5853, General Statutes of Kansas, 1905.)

Grand juries are not provided for in Kansas as in some other States. They are only called upon petition to the district judge, signed by a certain number of taxpayers. (Sec. 5860, General Statutes of Kansas, 1905.) This is a very expensive procedure and grand juries are rarely if ever called in any Kansas counties for the reason that the legislature made ample provision (see above) for prosecutions without them. They are usually called, if at all, for political purposes.

Graham County had one convict in the county jail, January 1, 1910, and during that year sent up two more; had two convicts in the penitentiary June 30, 1910, sent three more during the biennium, and at the close, on June 30, 1912, had four confined at Lansing, one having been discharged. (United States Census, 1910; Bulletin 121, p. 96, Table No. 1; Eighteenth Biennial Report, Kansas State Penitentiary, p. 19.) Two years later (First Biennial Report, State Board of Corrections, p. 21), it still had four convicts in the State penitentiary. Two were received from the district court during the period from June 30, 1912,

to June 30, 1914, and two discharged by parole or otherwise. It also had two boys in the State Industrial School at Topeka at the close of the fiscal year, June 30, 1914. (First Biennial Report, State Board of Corrections, p. 81.)

At the close of the biennium, June 30, 1916, Graham County had two convicts at Lansing. Two were sent up between June 30, 1914, and June 30, 1916, one was discharged by commutation and three were paroled by the board. There were four at the beginning of the biennium, leaving a net of two at the close. (Second Biennial Report, State Board of Corrections, pp. 14, 15.) Graham County also contributed three convicts to the State Industrial Reformatory between June 30, 1915, and June 30, 1916. (Second Biennial Report, supra, p. 64.) And sent two inmates (juvenile convicts) to the Industrial School for Boys at Topeka, in the same period of time. (Second Biennial Report, State Board of Corrections, p. 82.)

Just what the 65 counties were that "had no prisoners serving sentence" in July, 1911, Mr. Dawson failed to state, but a study of the foregoing would indicate that his enthusiasm either got the better of him or he was grossly misinformed before delivering the speech in question.

Of the 752 prisoners confined in Lansing June 30, 1914, 23 out of the 105 counties of the State did not have representation. They were: Chase, Cheyenne, Decatur, Edwards, Gove, Grant, Gray, Greeley, Greenwood, Haskell, Hodgeman, Lane, Morton, Ness, Norton, Rawlins, Rooks, Scott, Seward, Sheridan, Stevens, Thomas, and Wichita. Of these, 15 (Chase, Cheyenne, Decatur, Grant, Greeley, Haskell, Hodgeman, Lane, Morton, Norton, Rawlins, Sheridan, Stevens, Thomas, and Wichita) did not send a convict up during the biennium. In addition, Clay, Comanche Logan, Nemaha, Waubaunsee, and Wallace did not send a prisoner up during the biennium. Of the 830 prisoners discharged, 24 closed the representation of the following counties: Chase (1), Edwards (4), Gove (2), Greenwood (3), Lane (1), Ness (2), Rooks (3), Scott (2), and Seward (5). Twenty-one counties did not have a prisoner discharged during the biennium. Of that number, 12 counties—Cheyenne, Decatur, Grant, Greeley, Haskell, Hodgeman, Morton, Norton, Rawlins, Sheridan, Stevens, and Wichita—had no prisoners in the institution, which means that all but 9 counties of the State, or 96 out of the 105, had at least 1 convict paroled during the biennium or his term expired. (First Biennial Report State Board of Corrections, p. 21, Table No. 1.)

Of the 841 prisoners confined in Lansing June 30, 1916, 18 out of the 105 counties of the State did not have representation. They were: Decatur, Gove, Grant, Gray, Greeley, Haskell, Hodgeman, Kingman, Labette, Meade, Morris, Norton, Ottawa, Rawlins, Seward, Sheridan, Stevens, and Wichita. (Second Biennial Report State Board of Corrections, 1916, pp. 14, 15, 16, 17.)

Of these counties, Sheridan and Stevens have had no prisoners in Lansing during the biennium closing June 30, 1910, June 30, 1912, June 30, 1914, or June 30, 1916; Gray County had none at the close of the biennium June 30, 1910, or June 30, 1914; Labette had none at the close of the biennium June 30, 1912; and Wichita County had none at the close of the biennium June 30, 1912, or June 30, 1914. Decatur, Gove, Grant, Greeley, Haskell, Hodgeman, Norton, Rawlins, and Seward had none at the close of the biennium June 30, 1914. (See Eighteenth Biennial Report Kansas State Penitentiary, p. 19, Table No. 1; First Biennial Report State Board of Corrections, p. 21, Table No. 1; Second Biennial Report State Board of Corrections, pp. 14, 15, 16, 17.)

Eighteen counties did not send up a prisoner to the State penitentiary at Lansing during the biennium closing June 30, 1916. (Second Biennial Report State Board of Corrections, pp. 14, 15, 16, 17.) They were: Decatur, Gove, Grant, Gray, Greeley, Haskell, Hodgeman, Meade, Morton, Norton, Ottawa, Rawlins, Stevens, and Wichita (counties having no prisoners confined June 30, 1916), and Jewell, Kearney, Rush, and Staton.

The paroles by the governor extended over 63 counties. (Second Biennial Report, supra.) The highest number granted was 14, Crawford and Shawnee County sharing alike in this respect. Wyandotte received 12; Labette received 10, as did Montgomery (supra). The report fails to show the nature of the crime for which the parolee was convicted. Convicts from 18 counties shared in commutation (supra), and the number paroled by the board (328) covered convicts from 66 counties. Wyandotte County was highest with 30, Sedgewick received 20, Montgomery received 18, Atchison received 17, Shawnee received 16, Douglas received 14, Miami received 11, as did Cherokee, and Leavenworth received 10, these being the highest numbers granted. (Supra, pp. 14, 15, 16, 17.)

The youngest convict received at Lansing during the biennium ending June 30, 1912, was 17 years of age, the oldest 72. (Eighteenth Biennial Report, Kansas State Penitentiary, Table 2, p. 20.) The youngest received during the succeeding biennium, ending June 30, 1914, was 17 years of age also, and the oldest was 83. (First Biennial Report, supra, Table 3, p. 22.) The youngest convict received at Lansing during the biennium ending June 30, 1916, was 16 and the oldest was 71. (Second Biennial Report, supra, Table 6, p. 19.)

According to the Eighteenth Biennial Report, Kansas State Penitentiary, Table 2, page 20; First Biennial Report, State Board of Corrections, Table 3, page 22; and the Second Biennial Report, State Board of Corrections, Table 6, page 19, there were received at Lansing during the following bienniums ending on June 30 of the respective years named the following convicts of the following ages:

1912, convicts received under the age of 21 years	63
1914, convicts received under the age of 21 years	58
1916, convicts received under the age of 21 years	65
1912, convicts received under the age of 30 years	318
1914, convicts received under the age of 30 years	302
1916, convicts received under the age of 30 years	327
1912, convicts received under the age of 40 years	471
1914, convicts received under the age of 40 years	469
1916, convicts received under the age of 40 years	560

The increase of convicts received under the age of 21 years between 1912 and 1916 was 2; of those received under the age of 30 years, between 1912 and 1916, the increase was 9; and of those received under the age of 40 years during the same period, 1912 to 1916, was 89. It thus appears that while the penitentiary population of Kansas is not only growing each biennium, the convicts are becoming younger each year.

"Kansas is away out on the picket line of progress where mortal Commonwealth has never gone before. It may be called, with entire propriety, the 'State of First Things'—the pleasant garden plat on which God tries experiments with humanity to see how large and free we are capable of growing." (John S. Dawson, from speech delivered before banquet of Baptists' Social Union, Auditorium Hotel, Chicago, Apr. 2, 1912.)

"Kansas is cleaner, better, more advanced in mental culture, and stronger in moral fiber and conviction; that her homes are happier and more comfortable, her children better educated than ever before in her history; that crime is less prevalent and poverty less general; and all this is due largely to the fact that the saloon is such an outlaw that none of her school children have ever seen a saloon and are unacquainted with the appearance of a saloon keeper." (From resolution adopted by Kansas Legislature Feb. 13, 1915, and incorporated in special bulletin issued by National Temperance Society of the Methodist Church over the signature of Gov. Capper, Mar. 25, 1915.)

In his speech delivered before the Fifteenth National Convention of the Antisaloon League of America, at Columbus, Ohio, Nov. 12, 1913, while governor of Kansas, George H. Hodges stated (p. 11) that "in our Kansas penitentiary we have 152 native Kansans."

According to Table 9, page 23, of the Eighteenth Biennial Report, Kansas State Penitentiary, issued June 30, 1912, there were 126 native Kansans out of 526 American-born convicts; so the rate seems to have gone up between then and November 12, 1913, 26.

The percentage of native-born Kansans among the prisoners sent to Lansing during the biennium closing June 30, 1912, was 23.95. At the close of the succeeding biennium, June 30, 1914, out of 588 American-born convicts sent up 142, or 25.44 per cent, of them were native Kansans, an increase in percentage of 1.51. During the succeeding biennium, closing June 30, 1916, of the 629 convicts sent up who were American born 176, or 27.99 per cent, of them were native Kansans. The increase in percentage for this period over the preceding biennium was 2.55, or an increase of 4.06 per cent, over June 30, 1912. (See Table No. 9, p. 23, Eighteenth Biennial Report, Kansas State Penitentiary, 1912; Table No. 3, p. 22, First Biennial Report, State Board of Corrections, 1914; and Table No. 4, p. 19, Second Biennial Report, State Board of Corrections, 1916.)

SUMMARY.

Amount spent by direct appropriations for State penitentiary at Lansing, 1908 to 1917, inclusive	$2,733,282.30
Amount spent for Industrial Reformatory by direct appropriations, 1908 to 1917, inclusive	1,244,650.00
Amount spent for Boys' Industrial School, by direct appropriation, from 1908 to 1917, inclusive	640,950.00
Amount spent for Girls' Industrial School, by direct appropriations, 1908 to 1917, inclusive	494,000.00
Total	5,122,882.30

PENITENTIARY POPULATION.

(NOTE.—This group includes prisoners confined and those outside the prison, wards of the State, under temporary or other parole. It is difficult, owing to the fact that the Lansing prison held some United States civil prisoners up to January, 1916, to determine which of the paroled prisoners were State and which Federal, as no distinction is made in the reports. However, after January, 1916, it is not difficult to determine this fact. Until the Federal prisoners were removed to make more room for the Kansas prisoners, it was impossible to determine just exactly what the growth of this institution was.)

Prisoners in Lansing Penitentiary, Jan. 1, 1910 (including Federal prisoners)	882
Prisoners in Lansing Penitentiary, June 30, 1910 (not including Federal prisoners)	873
Prisoners in Lansing Penitentiary, June 30, 1912 (not including Federal prisoners)	871

(NOTE.—The above number should be increased 191 by reason of the fact that 10 prisoners escaped during 1911 and 181 were paroled by the governor and the board, thus making the number 1,062 at the close of that year, to which should be added 230 paroles for 1912, for a total of "prison population" of 1,292 at the close of the fiscal year 1912.)

Prisoners in Lansing Penitentiary, June 30, 1914 (not including Federal prisoners)	752

(NOTE.—The above number should be increased 633 by reason of the fact that 26 prisoners escaped, 18 were commuted, and 589 paroled, making the total 1,385.)

Prisoners in Lansing Penitentiary, June 30, 1916 (all Kansas convicts, the Federal prisoners were removed in January, 1916)	841

(NOTE.—The above number should be increased 598 by reason of the fact that the governor issued 220 paroles, the board granted 328, 21 sentences were commuted, and 29 convicts escaped, thus making the total for this period 1,439.)

SUMMARY OF PRISON POPULATION.

Jan. 1, 1910 (Lansing)	882
June 30, 1910 (Lansing)	873
June 30, 1912 (Lansing)	1,062
June 30, 1914 (Lansing)	1,385
June 30, 1916 (Lansing)	1,439

Of the 719 prisoners received during the biennium closing June 30, 1916, 460, or 64 per cent, were residents of Kansas. The balance of 259, or 36 per cent, were transients. (Second Biennial Report, State Board of Corrections, Table No. 5, p. 19.) This is the only report available showing the above figures, so it can not be determined for the years 1910, 1912, and 1914.

CRIMES FOR WHICH CONVICTED.

The 547 convicts sent to Lansing during the period ending June 30, 1912, committed 534 various crimes. (Eighteenth Biennial Report, Table No. 2, p. 20; Table No. 4, p. 21.)

The 605 convicts sent there between that time and June 30, 1914, committed 605 different crimes. (First Biennial Report, State Board of Corrections, Table No. 3, p. 22; Table No. 8, p. 25.)

The 719 convicts sent there between June 30, 1914, and June 30, 1916, committed 719 different crimes. (Second Biennial Report, supra, Table No. 2, p. 18; Table No. 6, p. 19.)

The most common crimes committed were arson, assaults of various kinds, bigamy, burglary, false pretense, forgery, grand larceny, rape, manslaughter, murder, selling liquor, and white slavery.

Following is a summary of the crimes of greater importance, showing the increase or decrease during the years 1912 to 1916, both inclusive:

	1912—Table No. 4, Eighteenth Biennial Report Kansas State Penitentiary, p. 21.	1914—Table No. 8, First Biennial Report State Board of Correction, p. 25.	1916—Table No. 2, Second Biennial Report State Board of Correction, p. 18.
Arson	7	8	4
Assaults, various kinds	46	32	51
Attempted rape	6	10	8
Attempts to commit other crimes, such as burglary, robbery, arson, etc	7	11	15
Bigamy	4	3	6
Burglary	110	109	117
False pretense	13	15	18
Forgery	48	40	56
Grand larceny	155	160	175
Great bodily harm	10	14	14
Incest	1	5	4
Manslaughter	18	18	32
Murder	35	29	42
Rape	29	19	27
Robbery	15	30	66
Running house of prostitution			8
Selling liquor	1	17	44
White slavery	1	17	16

The increase in crimes of the nature of murder, selling liquor, robbery, manslaughter, grand larceny, forgery, etc., is quite marked, and crime of all other kinds does not seem to be on the decline very appreciably. Attention is here called to the table setting forth the same information with respect to the Industrial Reformatory at Hutchinson (infra), where comparisons are made, totals given, and comments as to age of offenders, etc., passed. The above table does not show the number of persons under conviction for the various crimes enumerated, who either have an appeal pending to the Supreme Court or are in county jails, awaiting removal to Lansing. Neither is it possible to secure the number of persons paroled for murder, bank robbery, rape, etc., by the district judges throughout the State, before sentence is passed. During the month of January, 1917, two notorious bank robbers were paroled upon a plea of guilty, before sentence was passed, which is permissible under the Kansas law. This practice is very common throughout the State. Comment upon this feature of the parole law will be made later.

Although it is persistently claimed that by reason of the fact that Kansas has prohibition, the penitentiary and other penal institutions of the State are being emptied, the reports of the wardens and boards in charge of the institution at Lansing, and all the other institutions of this nature throughout the State, do not bear out this contention.

On page 7, Eighteenth Biennial Report Kansas State Penitentiary (1912), the board declared: "We desire to call the attention of your excellency (Gov. W. R. Stubbs), and of the legislature to the fact that the physical plant of the Kansas Penitentiary is for the most part in poor condition and thoroughly out of date. * * * Those who are charged with responsibility in this matter should realize that it will be necessary either to make a large appropriation each year for a term of years, beginning at once, to reconstruct the various antiquated buildings of the institution, or else to appropriate a lump sum of from $350,000 to $500,000 to build a new penitentiary," all of which would hardly indicate that there is any intention of abandoning this institution.

"The legislature of 1911 established at this institution a hospital for the criminal insane," continued the board's report, page 7. "A number of patients have come to this institution, but no appropriation has ever been made for the establishment of an insane ward or building. * * * The present insane hospital can be utilized for this purpose, provided the legislature makes an appropriation sufficient to build a modern and up-to-date hospital, thus removing from the present insane ward the hospital now conducted in the upper rooms of the building. * * * The building of this hospital is an imperative necessity."

"The convict's presence in the penitentiary is proof that he is a defective, a delinquent, or degenerate, and that organized society has sentenced him to the penitentiary because it considers him a misfit," declared Warden Botkin, on page 9 of the above report, "and secondarily because it desires that he should be repaired if possible and returned to civil life fit to discharge the duties of citizenship as soon as possible." And in speaking of some of the needs of the institution, Warden Botkin stated on page 10 that "It has less money to spend, poorer equipment, more ancient buildings than any other State institution. We need a large, roomy, modern cell for each prisoner. The little dingy, dark holes in the wall—damp, musty, and disease breeding—are an absolute disgrace to Kansas.

"We need a modern hospital, where we can take care of our sick and injured. A better salary should be paid to the officers.

"A general clearance sale of old wagons and worn-out mules and ancient farm machinery, as well as dangerous boilers in the engine room, should take place, and first-class stock and equipment purchased. The administration building should be repaired from foundation to roof."

According to the statement by the warden, page 11, above report, "The age of those sent to the penitentiary shows a slight advancement in the last two years over those of the same period. During the present biennium (1910–1912) 58.8 per cent of the newcomers were less than 31 years old, and 10.9 per cent were less than 21 years old. For the two prior years the percentages were 64.8 and 16.6 per cent, respectively."

Included in these tables, however, were 40 United States prisoners, and during the years 1908 and 1910 there were 282 Oklahoma and United States civil prisoners, so the showing does not give a fair average of Kansas convicts, and is therefore of little use in this behalf.

"Of the 574 inmates who arrived this biennium 76.1 per cent left home before they were 21 years of age," comments the warden on page 12. "Sixty-three per cent—362—of the 574 newcomers state that they were users of intoxicating liquors, while 37 per cent were nonusers. Of those received in the preceding biennium 73.3 per cent were liquor users, a decrease of 10 per cent," declared the warden, on page 12, and then added:

"Those idle when their offense was committeed number 213, or 37 per cent; in the prior biennium this percentage was 41.6." As the number idle and the number not using intoxicating liquors is the same, the warden fails to make any comment on the comparison. It is problematical just how his statement would have ended, had all those who used liquor been idle at the time their offenses were committed.

"The education of those who were received during the biennial period was considerably below normal," further stated the warden, page 12. "Those unable to read or write were 7 per cent of the total. This is more than double the average illiteracy of the State. Two per cent had less than one year schooling; 36.8 per cent had 1 to 4 years in school—barely able to read and write. These total 46 per cent who were either without education or less than 4 years schooling. Those who had the advantages of the graded school to the extent of reaching high-school standards were 43.7 per cent; 9.6 per cent had a high-school or more advanced education. There were 4 college men."

A comparison of the percentages for this year (1912) with the succeeding years furnishes some interesting studies. The boast that Kansas has a low rate of illiteracy (due to prohibition, of course), and that by reason thereof her crime is decreasing, seems to have little bearing on this table: The number and per cent of uneducated continues to increase, but the "educated convict" per centage persists in increasing along with the other increase. The year ending June, 1916, shows more with a high-school or better" (including college and business educations) than ever before. While the rate of Kansas illiteracy has decreased during the past 35 years; it is also true that during the 10-year period from 1905 to 1915 she dropped from fifteenth to twenty-ninth in the efficiency of her school system, which may have some bearing on the increased number in her convict crop of "educated" prisoners. Since the claim is made that prohibition should be credited with the decrease in illiteracy, would it not be as logical to claim that prohibition also increased the number of criminals who have received "higher education" of from 1 to 4 years of schooling, or from 5 to 10 years of schooling? One thing is sure: The Kansas boys and young men are apparently overlooking no opportunity to become schooled in crime, as well as in the "three R's." There is pending before the 1917 legislature a bill to disqualify any school-teacher using liquor or tobacco. Perhaps the excesses in those respects have set such a bad example to the students, their following the teacher's example has caused the increase in crime among the educated classes. However, be that as it may, the following table furnishes some interesting, if not startling, comparisons:

	1912—Table No. 5, page 22, Eighteenth Biennial Report Kansas State Penitentiary.		1914—Table No. 5, page 23, First Biennial Report State Board of Correction.		1916—Table No. 10, page 21, Second Biennial Report State Board of Correction.	
	Number.	Per cent.	Number.	Per cent.	Number.	Per cent.
No education	49	7.9	44	7.27	70	9.7
Less than 1 year	13	2.2	None.	None.	17	2.3
1 to 4 years	211	36.8	208	34.38	193	26.84
5 to 10 years	251	43.7	291	48.10	377	52.45
High school or better	55	9.6	43	7.11		
High school					42	5.9
College education					13	1.8
Business education					7	.9
Not reporting	4	.7	19	3.14		

"Sixty-three, or 10.9 per cent, of the prisoners received in the biennium had definite sentences, varying from one year to life. There was one 99-year sentence, and 17 were sent for the remainder of their existence; these constitute 3 per cent of the total and 27 per cent of all determinate sentences. The determinate portion of the 574 sentences shows 362, or 63 per cent, for the 1-year or minimum period, while the maximum varies from 2 to 27 years. But 28, or 4.7 per cent, received a minimum of 2 years, the maximum of these ranging from 8 to 20 years. The 5-year minimum is given as 68, or 11.9 per cent, with maximums of 7 to 21 years. Six and 10 year minimums are each 37 in number, being 12.8 per cent of the total. The maximums for the 6-year men run from 15 to 20 years and for the 10-year people 12 to 50 years." (Report of Warden, Eighteenth Biennial Report, supra, p. 12.)

Eighty-eight, or 12.28 per cent, of the prisoners received at Lansing during the succeeding biennium ending June 30, 1914 (Second Biennial Report, Table No. 9, p. 25), had definite sentences varying from one year to life.

One hundred and five, or 14.6 per cent (an average of 1 to each county), of those received during the biennium closing June 30, 1916 (Second Biennial Report, Table No. 6, p. 22), had definite sentences varying from one year to life.

At the close of the biennium June 30, 1912, there were 17 life prisoners sent up. At the close of the period June 30, 1914, there were 14 sent up, and at the close of the period June 30, 1916, 21 had been sent. Thus there was an increase in life-term convictions during the two years from 1914 to 1916 of 7, or an increase of 50 per cent, and a net increase of life convictions over 1912 of 4. A further indication, to say the least, that "life termers" grow in Kansas, 52 having been sent up from 1912 to 1916. Capital punishment has been abolished in the State, and it is oftimes argued that the Kansas prison rate is high because they can not hang their convicts committing murder, rape, etc., but this class is favored under the parole system. More of them are paroled than would be hung if hanging were possible. (See tables above cited.)

Of the prisoners given a determinate sentence committed during the biennial period ending June 30, 1912, 7 were sentenced for terms of 10 years or over (exclusive of life termers); during the next 2 years 16 were sentenced to serve terms of 10 years or over (exclusive of life termers); and during the last biennium, ending June 30, 1916, 22 were sentenced to serve terms of 10 years or over, an increase over the 1912 biennial period of 15 cases, or 201 per cent. The increase in this class over the 1914 period is 6 cases, or 37.5 per cent. (See Eighteenth Biennial Report, Kansas State Penitentiary, Table No.

6, p. 22; also First Biennial Report, State Board of Corrections, Table No. 9, p. 25; also Second Biennial Report, State Board of Corrections, Table No. 6, p. 19.)

At the close of the biennium ending June 30, 1912, there were 539 male white inmates, or 58.19 per cent of the total; 290, or 31.90 per cent negro, and 1.7 per cent, or 16, Mexicans. (Eighteenth Biennial Report, supra, Table No. 7, p. 22.)

At the close of the succeeding biennium, on June 30, 1914, there were 492 male white inmates, or 62 per cent of the total; 234, or 29.4 per cent negro, and 14, or 1.7 per cent, of Mexicans. (See Table No. 6, p. 23, First Biennial Report, supra.)

At the close of the last biennium, June 30, 1916, there were 529 male white inmates, or 62.9 per cent of the total; 247, or 29.3 per cent negro, and 46, or 5.4 per cent, Mexicans. (See Table No. 13, p. 21, Second Biennial Report, supra.)

The percentage of male white and male Mexicans seems to be steady in its increase, while that of the negro is about holding its own. The Mexican increase is the most marked. Kansas had just 61 Greasers in 1900 and 7,941 in 1910. (Census of 1900 and 1910.) According to the Atchison Globe, in a comment upon change in population published shortly after the thirteenth decennial census appeared, "it traded one good German for a couple of Mexican track laborers." Kansas lost 4,803 Germans between 1900 and 1910, about 2,000 English and nearly 3,500 Irish, 1,800 Swedes, and several hundred Canadians, and gained, aside from the Mexicans, 1,395 Greek shine boys. (Census of the United States, 1900 and 1910.)

Of the 909 prisoners in Lansing at the close of the biennial period ending June 30, 1912, 332, or 36.6 per cent had served previous penitentiary sentences, according to Warden Codding's report (eighteenth biennial report, p. 14.) "The newer inmates," continued the warden, "do not show so large a proportion of recidivists, only 28.4 per cent being repeaters, as against 36.6 per cent of the total body; only 20.8 per cent are second termers, as against 25.3 per cent of the total." He adds: "The slight increase in the age of the new inmates and the larger percentage of first-termers are encouraging indications, showing a diminuation of the more serious juvenile crime, and that the older antisocial are either absenting themselves from Kansas, being reformed, or have an increased fear of the law's punishment."

The later reports do not furnish information from which a comparative table can be prepared; but it seems from the foregoing tables showing the increase in crime, the various types, etc., that Warden Codding's felicitation was short-lived.

As an indication of the likelihood that Kansas intends to abandon its State penitentiary, Warden Botkin declares the crying need of a new prison, in his reported submitted for the biennium ending June 30, 1914.

"Criminals are imprisoned for the protection of society," states the warden, page 17. "Under a proper administration of our laws, about 95 per cent of the inmates of this prison will gain their freedom by commutation, expiration, or parole. Hence, society must be profoundly interested in the methods employed for their intellectual, social, and moral betterment.

"This prison was built about 50 years ago. It was necessary for the infant State to be economical in its expenditures for public buildings. * * * It is no reflection upon the intelligence and humanitarian spirit of our State to affirm that this penitentiary is antiquated and out of harmony with present-day conception of the purposes of prison life.

"The cell houses, more than all else, need rebuilding. The cells are wholly unfit for the habitation of any class of human beings. It is impossible to make them other than disease-breeding holes. Of the deaths occurring from January 1, 1900, to June 1, 1914, 37 per cent were caused by tuberculosis. Of the present inmates, about 35 per cent are afflicted with the same disease. Thus about 15 per cent of the present population, or about 120 persons, have contracted the white plague in this prison. About 20 per cent had the disease when they came.

"Most of these victims of the white plague will return to society—to that stratum of society where the soil will most readily receive the seed and produce the largest harvest of patients for the tubercular hospital. It is not the intention of the people, or the courts, to sentence criminals to a fatal disease and premature death; but that is what is being done."

In its second biennial report, covering the two-year period ending June 30, 1916, the State board of corrections thus analyzes the reasons for the great increase in crime and delinquency in Kansas:

"While it is not possible here to go exhaustively into the causes of delinquency, we wish to emphasize the two leading factors that enter into the crime record of the State.

"One is the large influx of itinerant laborers in harvest time, which furnishes a large number of inmates coming into the State reformatory and penitentiary.

"The other is the lamentable influence of unhappy family life, with divorces and separations, leaving helpless children to be creatures of the street and eventually wards of the State."

In view of the resolution passed by the legislature to be used by the Antisaloon League in its 1915 campaign in the Utah Legislature, and later sent broadcast by Gov. Capper as a part of his famous Methodist Temperance Bulletin, this declaration has a paradoxical sound, to say the least. No doubt, however, the board of corrections has more of a knowledge of the actual conditions existing within the State than political prohibitionists, and their declaration must be taken at its face value. As Gov. Capper approves all reports of State boards, the above report must have furnished him considerable material for his next prohibition speech, if indeed he has ever read it. It proves, however, just like the record of Kansas always has proven, that prohibition is "decreasing crime, rendering homes happier, and saving the boys and girls."

Commenting upon the State penitentiary, the board further remarked: "During the two years covered by this report the State penitentiary has necessarily been given a large amount of attention. The absolute need in its physical condition and the increasing number of inmates have called for the most thoughtful efforts of the warden and the members of the board. It is necessary to repeat what has been said by every board of management for 20 years, that the physical condition of the penitentiary is discreditable to the State of Kansas, and we renew preceding recommendations to the legislature that the work of bringing the institution up to modern conditions in sanitation and equipment be speedily undertaken."

There seems to be no intention, so far as the present board is concerned, at least, of turning the penitentiary into an agricultural experimental station or totally abandoning it, as the country has been led to believe during the past decade is likely to happen now that Kansas has been engaged for several years "in dead earnest" in enforcing her prohibitory law.

In an effort to keep down the penitentiary population for the purpose of saving the expense to the State and endeavoring to keep the convicts out on parole, temporarily or permanently, so the new crop of jailbirds can be taken care of, at least for a while at the State prison, there has grown up within the past 10 years a great abuse of the parole power vested in the governor and in the board of corrections.

In casting the balance to show the net gain of prohibition and in rendering boastful statements concerning its "success" in keeping down the crime record of the State, the matter of the paroles is never indulged in, and it is more than a mere passing matter of surprise that it is ignored.

One of the beneficiaries of the governor's parole bounty during the past two years was a notorious moral degenerate named Fred Bissell, to whom Gov. Capper desired to offer "another chance." On April 25, 1916, Bissell brutally attacked and killed Edna Dinsmore in an abandoned house in Topeka. Public sentiment ran so high that there was great danger of mobbing him, and yet Gov. Capper delayed revoking the parole for several days, possibly because his bed had two other occupants in it and the governor was afraid to send him back to Lansing to sleep on the floor.

However, the governor's action in paroling Bissell in the first instance aroused the members of the Women's Good Government Club of Topeka to such an extent that they held an indignation meeting, and, strange as it may seem, this protest was made 20 days before Bissell murdered the little Dinsmore girl. He was convicted before his parole on the charge of committing a grave crime against another girl. In a report of the meeting of the Good Government Club the Topeka State Journal, April 5, 1916, said:

TOPEKA WOMEN START CRUSADE AGAINST BOARD—PAROLE FOLLY IS DENOUNCED IN SET OF RESOLUTIONS—GOOD GOVERNMENT CLUB GOES ON RECORD AT MEETING—IS OPPOSED TO THE SYSTEM—DEMANDS PERSONS CONVICTED OF CRIMES AGAINST GIRLS BE COMPELLED TO SERVE OUT MAXIMUM OF SENTENCE.

"At a special meeting of the Good Government Club in Topeka members of the widely known women's organization adopted strong resolutions condemning the action of the parole board and the governor in releasing Fred Bissell and other persons convicted of crimes against women and girls.

"The action against the present use of the parole system is the first move in a state-wide fight to condemn the policy which resulted in Bissell's release. Similar action will be sought by club women in every section of the State.

"Action by the Good Government Club was taken at a special meeting called for the purpose of discussing the Bissell case. After a frank and candid discussion of the case of Bissell and other offenders the women demanded that all persons convicted of crimes against women and girls be required to serve their maximum sentence. The practice of releasing these men at the expiration of their minimum sentence was severely condemned.

"Two of the members who recommended the Bissell parole to Gov. Capper are now serving on the State board of corrections. The same board recommended the parole of Henry Obermeyer, of Council Grove, convicted of a crime against his own daughter. The parole was signed by Gov. Capper. The governor also signed the Bissell parole, as well as the parole of J. G. Stalnaker, convicted of a crime against his niece, and the Rev. Wallace Stuckey, convicted of a crime against a 16-year-old girl member of his Williamsburg church.

"Now Kansas club women are armed. They will conduct a crusade against the practice which has resulted in the freedom of these men. They will seek State-wide action and will most severely condemn the policy which resulted in the Bissell-Stalnaker-Obermeyer-Stuckey paroles.

"Mrs. Bomgartner was recently elected president of the club. 'I can't place my hands on the exact minutes just at this time,' said Mrs. Bomgartner, 'but I am sure the records of the club will show that protests were filed against other paroles. These protests were sent to the governor's executive clerk.'

"Mrs. Bomgartner was certain the club had protested against the Obermeyer, Stalnaker, and Stuckey paroles. All of the men, however, are now outside prison walls. The Stalnaker parole was issued on the governor's own motion. The 'temporary' parole to Stuckey is in the face of the most severe condemnation of the practice by the investigating committee which last fall recommended the removal of J. D. Botkin as warden of the prison. Obermeyer's parole was also signed by the governor. Release of any of the men, Bissel included, was impossible until the governor had heard the evidence, reviewed the records, and signed the papers in the case.

"It was because of the practice in these cases that the Good Government Club has started a State-wide crusade and promises to start a new brand of trouble."

However, nothing came of the "State-wide crusade." The only kind of a "State-wide crusade" that gets anywhere in Kansas is "law enforcement." The county attorneys, assistant attorneys general, and their "detectives" make much political and financial capital out of it, and then it is a good thing to talk about away from home. Crusades such as that suggested by the Good Government Club never get anywhere.

Stuckey was convicted of wife desertion, statutory rape, and jumping his bond after conviction. He deserted a wife and children to run away with a 16-year-old choir singer, took her to Chicago, which was a plain violation of the Mann white-slave act, lived with her as her husband until he went broke, and then drove her out onto the street, demanding that she solicit men for a living. She refused, after a while, to be his white slave, and quite accidentally the news of the affair drifted back to Kansas. He was arrested and returned, tried, and convicted. His sentence was for 20 years. That was several years ago. He appealed to the supreme court on a technicality and while his appeal was pending became a fugitive from justice. His first wife and babies were left absolutely penniless, their lives crushed by the burden of their public shame.

He was afterwards located in Florida, where he was living with a second wife, his first wife having divorced him after his conviction. He and his second wife had one child at the time he was arrested and brought back to Kansas to serve his sentence. His second wife removed to Kansas and was a rich Cuban woman. Without serving over a few months of his sentence in a very dignified clerkship at Lansing, Stuckey was quietly paroled "temporarily" by Gov. Capper about two years ago, because his second wife was sick. A protest arose from every city in the State when his parole accidentally leaked out. After much delay the governor "revoked the parole." But Stuckey was a preacher and had many "strong, influential friends," who went to his rescue. He did not languish long after his parole was revoked, but was freed

on the governor's own motion on the theory that he had served sufficient time. He is now free. Just what provision was ever made for the first wife or the 16-year-old girl is not known.

J. G. Stalnacker, mentioned in the Topeka State Journal article, is also a preacher, and was paroled so he could take a pulpit in a Southern State.

That the parole feature is abused can not be questioned, in view of what has already been said. Comments have been so numerous, following those given above, space will not permit their reproduction here.

There were on parole June 30, 1914, according to report of parole officer (Second Biennial Report, State Board of Corrections, p. 47), 484 convicts, and between that date and June 30, 1916, 548 more had been given their freedom in this manner, an increase of 164. Of these, 125 were returned, 242 were delinquent. Of the delinquent contingent, 196 can not be located, 37 are in various other prisons for other crimes committed after parole, 3 in various jails for the same reason, and 6 were returned to await disposition by board, 334 were reporting out of 693, 329 having been discharged.

One hundred and twenty-five paroles were canceled (Second Biennial Report, State Board of Corrections, p. 47) for the following reasons:

For not reporting	22
For intoxication	14
For committing theft	10
For committing forgery	4
For keeping bad company	6
For fighting	5
For false pretense	2
For committing sodomy	1
No record previous to Oct. 1, 1915, as cause of return	55
Temporary paroles returned	6
Total	125

In commenting upon various "reforms" that are really needed in Kansas, the Kansas City Journal carried the following editorial note on May 1, 1916: "Nor are the health laws of Kansas, as is pointed out by the health officers of the State, the only laws on the Kansas statute that need strengthening. The parole laws of the State also seem to be in the same boat. So are the laws for dealing with irresponsibles of criminal tendencies of the Fred Bissel type."

And the Topeka State Journal, May 1, 1916, carried the following editorial:

"'The parole system could not have possibly suffered a greater setback than was the case when it became known that Fred Bissell, who murdered little Edna Dinsmore, was a paroled prisoner, for this will simply mean that many good men who are now subject to parole will have to submit to a longer confinement in prison for this man's deed, for I am sure it will have a deterrent effect on the pardon board.' This is a statement from Mr. Codding, the warden of the State's penitentiary.

"But has the parole system been given a greater setback than it deserved? And *isn't the* deterrent effect that the outraging of and slaughter of Edna Dinsmore will have on the prison pardon board a most crying need? And how terribly regrettable it is that the stable door was not locked and carefully guarded in this most essential particular before the heinous crime of Fred Bissell brought home the fact that the State has not been using the caution it should have to protect its people from criminals dangerous to them."

In commenting on paroles in general and a few in particular, C. W. Smith, parole clerk in the office of Gov. Capper, explained the method in which paroles are secured in the Topeka capital (Gov. Capper's paper), May 14, 1916. In explaining why Rev. Stalnacker was paroled (he will be remembered as the man who was convicted of an unspeakable crime against his own niece), Judge Smith said:

"The Rev. Stalnacker parole was urged by such good men as Bishop Shepard, of the Methodist Church; the Rev. T. W. Houston, former chaplain of the State penitentiary; Warden J. D. Botkin (a Methodist preacher); Chaplain Harmon Allen; the Rev. U. S. Brown, of Belleville; the Rev. J. E. Wilson, of Russell; the Rev. C. B. Young, of Leavenworth; the Rev. L. B. Tremain, of Delphos; the Rev. C. W. Stevens, of Salina; C. W. Cross, cashier of the Ellis Bank, and many other citizens of the town where the crime was committed; by the Lincoln Gospel Team, of Kansas City, Kans.; by the Swedish Church of Kansas City, Kans.; by prominent women of the State; and by very many men in his former home State of West Virginia, including an ex-governor, United States Senator, judges, Congressmen, Daniel Westfall, managing editor of the Pittsburg Christian Advocate, and many others."

In commenting upon the parole department the State board of corrections state in their Second Biennial Report (June 30, 1916), on page 5, as follows:

"One factor in the management of the penitentiary as well as of the State reformatory is that of bringing into full citizenship the inmates who have been released on parole, and struggle against the world in a somewhat uphill fight to regain their position.

"The limited funds allowed for this department make it impossible to exercise more than a nominal supervision of paroled men, and we believe that the legislature could do nothing that would be of more benefit from both a financial and a humanitarian view than to expand this department to the largest possible usefulness. The parole officers should have sufficient funds and sufficient assistants to enable them to keep a close supervision and extend helpfulness to every paroled inmate.

"More comprehensive supervision of the paroled man would greatly reduce the number who fall and make the rise of those who succeed more rapid."

THE KANSAS PAROLE SYSTEM.

The Laws of 1903, chapter 375, section 1 (Gen. Stat., 1905, sec. 6160), define the power of the prison board to parole a convict, granting the board authority "to establish rules and regulations under which prisoners within the penitentiary may be allowed to go upon parole outside the penitentiary building and inclosure, but to remain while on parole in the legal custody and under the control of the prison board, and subject at any time to be taken back within the inclosure of said penitentiary." It is then provided that "No parole shall be granted in any case until the minimum term fixed for the offense has expired," and

"That no prisoner shall be released on parole until the said prison board shall have made arrangements, or shall have satisfactory evidence that arrangements have been made, for his honorable and useful employment while upon parole in some suitable occupation, and also for a proper or suitable home, free from criminal influence."

Other sections (6161, 6162, 6163) cover the subjects of "Final discharge; when released or paroled prisoner shall be supplied with suitable clothing, etc.," and cover violation of parole.

This enactment did not "empty" the penitentiary fast enough, apparently, because the legislature in 1907 (ch. 178, p. 281) passed a law permitting the court before whom the conviction was had to parole any person "under the age of 21 years," who "shall be convicted of any felony, except murder, manslaughter, rape, arson, or robbery, and imprisonment in the penitentiary or Kansas State Industrial Reformatory shall be under the law the punishment therefor—either before or after passing sentence—"if satisfied that such person, if permitted to go at large, would not again violate the law. * * * *Provided*, That the court shall have no power to parole any person after he shall have been delivered to the warden of the penitentiary or to the superintendent of the Kansas Industrial Reformatory."

This apparently filled the penitentiary and reformatory too fast, so the legislature of 1913 (ch. 172, p. 264) amended the above law to include persons of any age, instead of "under the age of 21 years," and as the district courts do not file a report with any State official showing how many felons are thus saved from serving at least a short term it is impossible to secure exact statistics covering this very important feature of the "use and abuse" of the gigantic parole system in force in Kansas.

That it is "reasonably easy" to secure a parole, however, is proven by the following extract from the Atchison Weekly Globe, February 1, 1917: "Money is all-powerful. A formerly of Atchison man walked into a bank (in Kansas City, Kans.), locked up the president of the institution at the point of a gun, and then departed with about $1,200 in cash. Because his family has millions this man is now free, and has not so much as spent one night in jail. * * * Caughey was a spoiled child of wealthy people. His father, Hugh Caughey, formerly was a rich lumberman and banker at Horton. His uncle was Frederick Weyerhauser, who before his death was rated by some as the richest man in the world. * * * Nearly all the prominent bankers in Kansas City requested his parole. Even Mayor Green, of Kansas City, Kans., signed the request. With such an overwhelming array of bankers asking that the bank robber be paroled the judge granted the request. * * * Caughey was caught in St. Louis, but he was immediately released on bail and his rich relatives got busy."

Speaking of the activities negotiated during the past biennium, the board of corrections (Second Biennial Report, p. 5), stated, with reference to the insane housed in the penitentiary:

"It became evident that the care of the dangerous insane was a serious problem in the institution. The building allowed to this department was overcrowded, and to relieve the situation that portion of the grounds formerly used as a women's ward has now been turned into a department for the insane."

To relieve the crowded condition at the institution, the female Federal prisoners were ordered removed, they being the last of the Federal prisoners to leave, on January 28, 1916. Commenting on the change, the Topeka State Journal stated, under a heading "No room for women," that—

"Because the State penitentiary at Lansing is overcrowded, Kansas has declined to take care of female Federal prisoners any longer, and arrangements have been made to take care of them in other States."

With these prisoners removed, the question as to what disposition should be made with the remaining female prisoners in the prison arose. Under date of February 24, 1916, the Topeka Daily Capital said:

KEEP WOMEN BEHIND BARBED WIRE—KANSAS FEMALE PRISONERS WILL LIVE IN INCLOSURE HALF A MILE FROM PRISON PROPER.

"LANSING, KANS., *February 23.*

"Warden J. K. Codding is making arrangements to have the 12 Kansas women prisoners, who will be left after the Federal female prisoners are taken away, kept at the Kansas penitentiary farmhouse. This is situated on a high point about half a mile east of the main prison walls.

"He plans to have a barbed-wire inclosure put up to keep the women from wandering beyond certain limits and also to keep any unauthorized person from coming within the inclosure. Matrons will be on day and night duty with the women, the same as they are now in the female ward. In addition there will be one man as a guard at the place at night. The women will be moved over to the new place probably by April 1."

The change was made on June 2. (Topeka State Journal, June 2, 1916.)

In an interview in the Topeka Daily Capital, January 20, 1916, Charles M. Harger, chairman of the board of corrections, stated it was the board's intention to remove the female prisoners belonging to Kansas as soon as possible after the Federal prisoners left. "We may have to erect a building for them for a short time, until the next legislature will appropriate money for a women's building," he said. "I believe the women's ward should be transferred to the Industrial School for Girls, at Beliot, and a new building, separate from the girls' wards, erected there," he concluded.

Harvey Parsons, chief of police of Topeka, thus explains his views on the increase in crime in Kansas that results in causing the penitentiary to be overcrowded. (Topeka Daily Capital, June 1, 1916:)

"Because persons who heretofore engaged in bootlegging are no longer permitted to make a living that way, they have become desperate and are now turning to robbery and burglary for a living.

"This is the explanation of Harvey Parsons, chief of police, for the increase in the number of burglaries in the city."

This may throw some light on the criminal situation also. Just what happened to these "hardened criminals" does not appear by the records:

[From the Topeka Daily Capital, May 31, 1916.]

"COPS GIVE COUNTY 212 OFFENDERS—IN ONLY THREE SERIOUS CASES HAVE COPS FAILED TO GET MAN, CHIEF PARSONS SAYS.

"Two hundred and twelve cases in which the prisoners had been arrested by the city police were turned over to the county since April 15, 1915, according to a list prepared by Chief Harvey Parsons and Police Judge Robert Yates, which was completed yesterday.

"Among the most hardened criminals in the list were Ada Dupree, a negro murderess; Cristobel Reyes, a negro murderer; Fred Bissell and William Butler, who were recently tried for safe blowing in the county courts.

"'The only three hard cases we have not run down during the past year,' Parsons said yesterday, 'are those of the man who snatched a woman's purse recently and the two burglaries which occurred Saturday night.'"

The Sixteenth Annual Session of the Kansas Conference of Charities and Corrections and the Fifth Annual Session of the Kansas State Society of Criminal Law and Criminology convened in a joint meeting held at the University of Kansas, in Fraser Chapel, Thursday evening, November 18, 1915, at 8 o'clock.

The Kansas Conference of Charities and Correction is an organization established in 1900. Its membership is composed both of those actually engaged in public and private charities and of those interested in social and humanitarian work. The function of the conference is (1) to stimulate interest in social problems; (2) to encourage a scientific study of existing conditions; (3) to discuss and interpret the most improved methods of the management of charitable and correctional institutions.

The Kansas Society of Criminal Law and Criminology is an organization of progressive judges and lawyers which has as its purpose the study of criminality and the improvement of court and penal methods in dealing with the criminal. (See report of above meeting, pp. 5 and 7.)

In discussing "the past and present of delinquency," Dr. H. W. Charles, superintendent of the Industrial School for Boys, at Topeka, said:

"Present-day discussions of the various phases of criminology, legal, medical, and sociological, are not recent propaganda of late discoveries, but rather the outcome of a process of evolution that has been in progress for many years (p. 7).

"Whether the criminal is born so, or whether he is the product of the social and material forces around him, is the one question upon which hinges much of the discussion of crime. This question will probably never be answered, or if it is answered at all it will be after the solution of many other problems that lie much nearer to us * * *. All human conduct has its source in the original tendencies of the individual—the unlearned activities of the mind. These form the essential nucleus of human personality and are responsive to and are modified by the material and social environment. Relegating this question to some future time when we shall know more of the nature of unsocial conduct, we may devote the present to the solution of problems nearer at hand.

"The past decade has been most fruitful in the development of one phase of the psychology of crime. Begun as an effort to study the mentality of feeble-mindedness, the psychologist soon began to discover the relation between feeble-mindedness and crime. This is one of the present-day problems that is pressing upon the people for solution. At this time the effort is in its incipient stage. Spasmodic efforts here and there offer the hope that the day of great achievement is at hand.

"* * * A survey of the boys in my own institution a few years ago revealed the astonishing fact that only 16 per cent of the entire number were above a retardation of two years, while slightly more than 7 per cent were so far down in the scale of mentality that they would never be self-supporting, but would require permanent segregation.

"The first step in solving the problem of delinquency will be accomplished when our corrective institutions cease to be a dumping ground for the feeble-minded.

"A large and apparently increasing number of children are born without sufficient intelligence to know right from wrong; or who, if they appreciate the difference, do not have the will power or judgment or courage to do the right and shun the wrong.

"It is from this class that the ranks of the criminal are recruited. Every thoughtful study of the criminal classes shows the close relationship between criminality and feeble-mindedness.

"If there is such a thing as the criminal type, it is another name for the type of feeble-mindedness—a class long misunderstood and mistreated, and a class whose members easily fall into the ranks of the criminal. We have failed to recognize the raw material from which criminals are made.

"Such conditions make the strongest possible appeal for a practical advance in the way of a diagnosing clinic. Hitherto only the legal and social facts have been considered in the investigation of most courts * * * The need of some systematic preliminary investigations in our own State may be illustrated from a few cases that have occurred within the present year.

"One boy received at the industrial school was physically 17 years old. A psychological examination disclosed the fact that he was only a 7-year-old mentally—was, in fact, an imbecile of low grade, without hope of mental or moral amelioration. Another case, that of a 15-year-old boy with a retardation of seven and a half years, was classed as a low-grade moron, and besides being mentally hopeless was sexually precocious and dangerous to good morals, and will never be able to direct his own destiny. * * * These, with many others that might be mentioned, illustrate the crying need for a more careful preliminary investigation by the courts dealing with juvenile offenders.

"What we must have is a widespread propaganda of the needs for an intelligent and scientific diagnosis of the deviating child, in which parent, physician, psychologist, and court may cooperate for the good of the child, ever remembering that the earlier in life any deviation from the normal is discovered the more effective will be the treatment.

"Education along the line of the prevention of disease, of crime, of pauperism, is the one thing needed. People do not know that these things are needed. Even if they knew this they do not know how the remedies are to be brought about.

"I have an abiding faith in the ultimate judgment of humanity, and when humanity learns the truth and frees itself from prejudice and sentiment there will be no lack of workers in this field of human betterment."

Thus it appears that Dr. Charles does not agree that "law enforcement" or the passing of additional laws cures the criminal tendencies in a people. The people of Kansas have been led to understand that more law is the thing, more restriction, more crusading, and more exploiting will in time cure the evils that necessarily curse every community where real human beings live. To say that the "law is enforced," or that the "prohibitory law is enforced as well as any law upon the statute books" (speech by W. R. Stubbs, Chicago, Mar. 27, 1910, p. 3—and usually advanced as a "proof" of the successful operation of the law), does not seem to have the effect of reducing crime or delinquency in any appreciable degree, if Dr. Charles is correctly informed. As he has been engaged in the scientific study of criminology and psychological research all his life it stands to reason that his testimony should be given much greater weight than the blatant declarations of men whose only claim to speak with authority is that they happen, by reason of the vicissitudes of political manipulation, to become State officials, their previous lines of endeavor having led them into fields of activity so remote and distant from this special field of study that they scarcely could distinguish the difference between a feeble-minded person and a sane one, and care nothing about it so long as he or she "votes right" and "puts the crowd across."

Referring once more to the physical condition of the penitentiary at Lansing, Warden Codding touched briefly upon the civil-service system, on pages 12 and 13 of the report (second biennial, supra):

"In providing a civil-service commission and rules for the appointment of employees an important forward step has been taken toward gettitng the penitentiary out of politics and politics out of the penitentiary," declared the warden (p. 12). "Like all new movements, there have been difficulties encountered in making the law effective.

"The law provided that all men who held positions on the 1st day of July, 1915, were prima facie qualified and were deemed to be competent, even if they had been chosen under a partisan spoils system and were incompetent. This section of the law made it impossible to get rid of the inefficient, drunken, and worthless officers on the force when I assumed the wardenship. Not until they had allowed escapes of prisoners, incited mutiny, became drunk, or committed other acts of inefficiency could they be removed."

(NOTE.—Mr. Codding was removed by Gov. Hodges, and Rev. Botkin placed in charge of the penitentiary during the Hodges administration (1913–1915), and Rev. Botkin was summarily removed by Gov. Capper shortly after the latter became governor in 1915. One of the reasons for his removal was the charge that he either permitted bootlegging or was too busy making prohibition speeches away from home to find out it was going on; another was that he played favoritism up to the limit, even permitting certain prisoners to entertain women in their cells and took prisoners to Kansas City or permitted them to go there unattended, and afterwards could not "coax" them back once they crossed the State line.)

In speaking of the religious features of the penitentiary Rev. Harmon Allen, chaplain, declared, on pages 37 and 38 of the Second Biennial Report (State Board of Corrections), that—

"For the spiritual and moral welfare of the inmates there should be stricter sanitary regulations.

"No man can feel his best morally or religiously when he is compelled to drink out of the public drinking cup, where deadly disease germs lurk, seeking whom they may devour.

"In like manner a man is affected when he must be shaved with a shaving outfit that is used on diseased men.

"Again his religious temper is disturbed when on a hot night the only water he has to drink must be taken from an old galvanized pail sitting alongside his detestable night bucket. Especially in hot weather, the prisoner should have frequent baths. When a man must lie down at night with a dirty, grimy body, as the result of his day's labor, he naturally feels rebellious.

"The Sabbath should be marked as different from other days by their having a Sunday suit. A man sitting at worship in his old working clothes can not be very worshipful.

"Officers of the prison should be religious men, who are examples of morality and religion. These officers should not only be religious men, but men capable of teaching in the night school. Primarily, the business of the penitentiary is reformation, and if the chaplain's department fails the purpose and aim of the institution is abortive.

"We are sadly in need of a modern school building and officer instructors," concluded the chaplain (p. 38).

"The prison body, as to denominational affiliations, is 11 per cent Catholic, 50 per cent Protestant, 1 per cent Hebrew, and 38 per cent have no choice. Our greatest need in this work is a new chapel, to be used for religious services only." (Second Biennial Report, supra, p. 37.) Preaching services are conducted in the men's ward at 9.30 on Sunday morning and in the women's ward at 11 o'clock (supra).

In his report contained in the First Biennial Report, State Board of Corrections, 1914, page 38, Rev. Allen laid special stress on the condition of the library at the prison.

"The library is in bad condition," he declared. "In the past books have been given indiscriminately to prisoners with contagious diseases. Books have been held in cells of men with tuberculosis, and then placed back in the library without disinfecting precautions. Many institutions prohibit indicriminate circulation of books among sick and well. It should be so here. No new books have been added to this infected library during the past year."

It will be recalled in this connection that Warden Botkin stated, on page 18 of the same biennial report, that "of the deaths occurring from January 1, 1900, to June 1, 1914, 37 per cent were caused by tuberculosis. Of the present inmates about 35 per cent are afflicted with the same disease. Of these, 20 per cent had the disease when they came. Thus, about 15 per cent of the present population, or about 120 persons, have contracted the white plague in this prison. * * * It is not the intention of the people or the courts to sentence criminals to a fatal disease and premature death, but that is what is being done."

In speaking of the library in his report above quoted from, the Second Biennial Report (p. 37), Chaplain Allen further says: "There should be such segregation of the sick and afflicted that no books from the general library be issued except to healthy prisoners."

Thus it seems that the legislature, "in its wisdom," is still permitting criminals to be sentenced "to a fatal disease and premature death." The chaplain (p. 37) states that "about 600 new volumes have been added during the past two years," thus rendering the danger six hundred times greater. No "prohibitory" measure, such as suggested by Rev. Allen in his 1914 report, seems to get very far in Kansas, but any sort of a "dry" measure, introduced for the purpose of making grand-stand material for campaign purposes at home and abroad, can not only get a hearing before that august assembly, but plenty of front-page publicity.

No statistics are available to show how many of the prisoners have families dependent upon them and whose untimely death robs dependent ones of the hope that "some day daddy will get out" and then the burdens of endless hours of toil may end for "mother." However, that many inmates are married and their families have been robbed of their earning capacity can well be concluded from various declarations made by the board of corrections in their 1914 and 1916 reports.

On page 7, First Biennial Report, 1914, they say:

"The most casual study of prison management emphasizes the pathetice fact that often the most severe punishment is not upon the prisoner but upon families left without means, struggling with the problem of existence and some shadow of disgrace that makes the path more difficult. The State should add to its activities adequate provision for the families of prisoners who are in destitute circumstances, and this should be done in so generous a manner that the suffering of these families may be relieved as humanity dictates."

No attention was paid to the appeal of the board for aid of the distressed families, as it was impossible under the policy of economy inaugurated by Gov. Capper to even consider it. The most "crying needs" of this institution were even "laughed out of court," by the chief executive in order to carry out his program. Had he admitted that (1) Kansas ever sends up a prisoner who is the head of a family, or (2) it is ever necessary to extend State aid to the destitute, two of the stock arguments used by prohibition agitators would be "nailed," so "economy" was the cloak that covered these two shameful sins of the Kansas system.

The appeal is renewed in the last report of the board, on page 6 of the Second Biennial Report. "We recommend," declares that body, "provision for such payment to deserving inmates who show exceptional energy in their work as will enable them to give some assistance to their families. The fact is that in many cases the family suffers more than the inmate, and the present conditions allow of no adequate assistance in such cases."

It thus appears that the families of the convicts not only need whatever assistance the State can "in its wisdom" extend to them, either by a direct appropriation or by permitting the prisoner to contribute to their support by receiving a small fraction of the wealth he produces for the State in the coal mines, on the farm, etc., but the State still persists in permitting the ravages of disease to subject the unfortunate class to face the grave possibility of premature death.

These are matters of great consequence, both human and economic, but unfortunately for the people of the State the "new program" instituted by the Stubbs administration slips lightly over such matter of importance and devotes the entire time of the legislature, the taxpayer, and the public official to one line of thought—"law enforcement"—to the end that Kansas "take the lead" as the greatest moral State in the Union.

In speaking of the habits of the inmates Warden Codding remarked in his report issued June 30, 1912, that 63 per cent of the inmates (newcomers) stated that they were users of intoxicating liquors, but no showing appears as to the number claiming liquor was the cause of their downfall. (Eighteenth biennial report, Kansas State Penitentiary, 1912, p. 12.) In view of the fact that it is persistently claimed that "80 per cent of crime is due to the saloon," etc., it seems rather strange no report was made as to the number claiming during that biennium "John Barleycorn got 'em." Should 63 per cent have confessed that liquor caused their downfall in a State that has been legally dry for 35 years, and where "our people are cleaner, better, more advanced in mental culture, and stronger in moral fiber and conviction," all because of it, some tall explaining might have been necessary, so the report stops before arriving at a very interesting point of observation.

However, the second biennial report (p. 21, Table 12) discloses some interesting facts in this particular. Of the 719 prisoners received during the biennial period ending June 30, 1916, 205, or 28.50 per cent, assigned liquor as the cause of their downfall. The number "using liquor" is not stated, nor is it shown whether these convicts came from ruined homes within the State or were a part of that great army of "itinerant laborers" who flock in during harvest time. In either event, it is positive proof of the fact that "it can be got" even in any part of the State, border counties and all. While there is no claim any more than the State is absolutely "dry," the old moth-eaten claim that "anyway prohibition stops some of the evil" does not seem to be very well supported by this showing. Table 11, same page, indicates that of the 719 prisoners received, 506 were in the "first-conviction" group, the balance of 213 being distributed between groups showing second, third, fourth, sixth, and seventh. Just how many of the first convicts mentioned claim liquor as the cause of their downfall is not shown, but it would hardly seem possible that all the "old timers" convicted more than once before were "victims of demon rum."

As a cause of downfall Table 12, supra, shows that 318, or 44.28 per cent, assigned "women and bad associates" as the cause; 12, or 1.66 per cent, assigned "uncontrollable temper" as the cause; 34, or 4.7 per cent, assigned "self-defense" as the cause; "dope" and "family trouble" claimed 34 each, or 4.7 per cent each; destitution caused the downfall in 69, or 9.5 per cent, of the cases; and "unknown" was assigned as the cause in 13, or 1.7 per cent, of the cases.

It is not very often that the public is afforded the opportunity of "looking behind the scenes" in Kansas, and one of the rare things in Kansas statecraft is the publication of any statement, observation, or declaration by anyone in high office, finding fault with any portion of the administration. During the sixteenth annual session of the Kansas Conference of Charities and Corrections, above referred to, many speeches were made boosting the State to the skies. Among them was one by Roy T. Osborne, juvenile judge, of Independence, in which he claimed, among other things, that Kansas is first in education. This statement has been so frequently made it is not "news" any more, and yet the newspapers gave his speech, in this particular, plenty of publicity. His statement and others along the same line have been quoted hundreds of times in other States as proof that prohibition raises the efficiency of the educational system and in the Sunflower State has raised it to the proud position at the head of the column.

Reference is made to the Osborne statement at this time to pave the way for an "explanation" by Dean F. M. Blackmar, of the Kansas State University, which followed the next evening, supplementing a speech delivered by Mr. Codding, warden of the State penitentiary.

With "Present outlook of prison reform in Kansas" as his subject, Mr. Codding waded into the subject without gloves and dealt body blows to the faked-up statements so persistently circulated throughout America regarding crime and moral conditions in the State. His speech, it is scarcely necessary to mention, was "hushed up" by the newspapers of the State, and the merry little carnival of claiming everything good under the sun for the State, crediting it all to prohibition, was not even interrupted; but to a mind that is open, unbiased, and free to form a conclusion based on facts alone the warden's masterly denunciation of the pseudo morality that we are told has covered Kansas like a blanket of roses presents many interesting features—features that are so well known to the average Kansan that no official bulletin issued from the governor's office and no resolution lobbied through the legislature by the same political force can change his mind.

"One of the first great necessities in prison reform is a modern penitentiary," emphatically declared the warden. (See published report, sixteenth annual session, Kansas Conference of Charities and Correction, p. 41.) "Our present institution is unsafe, unsanitary, absolutely out of date, and since it was built there has been a great revolution in prison policies," he continued.

"We can not cure crime with a penitentiary, no matter how well constructed, how modern it may be, or how efficient the management. To cure crime we must go to the places where the criminal is bred and there, by a comprehensive system of prevention, cure crime," the warden proclaimed on page 43 of the above report. And in speaking of the moral conditions within the State he proceeded to give his views on the cause of crime without fear or favor. And here is how he did it:

"After being in the penitentiary for three years and nine months—the average period of confinement for Kansas prisoners, exclusive of life prisoners—the Kansas boy who has gone wrong walks out of the institution under parole, belonging to that part of the prison body known as the 75 per cent, or reformable part of the inmates.

"He leaves the institution with a good suit of clothes on his back and a few dollars in his pocket. During confinement he has attended night school, and his mental vision has been expanded. His physical needs have been looked after by a competent physician. He has had the attention of a chaplain who is interested in his spiritual and moral training. The prisoner has attended Bible class and church once each Sunday for over three years.

"He has shaved, bathed, and changed his clothes regularly. He has been forbidden to smoke cigarettes, punished if he uses profane or vulgar language, and has been taught the value and dignity of labor; perhaps he has learned to read.

"Cleaned, disciplined, reformed he leaves the penitentiary walls behind him to return to his native city—the city that permitted him to become schooled in crime.

"He finds that while he, during his three years and nine months' imprisonment, has been cleaning house and casting away bad things and putting in good things, his native city—the city that spoiled him—hasn't reformed any.

"It has the same old vile pool hall, the same little alley joint, the same rendezvous where some of the men and boys slip down after night to play poker and shoot craps.

"They are all there where they were three years and nine months ago.

"He sees for the first time the prominent citizens and college boys parading around smoking cigarettes. He hears, for the first time in over three years and a half, curses and vulgar stories right on the streets of the town that hasn't improved.

"He looks around for a gymnasium like the one he has had in the penitentiary, but it is not there. He asks for the library where he can get good books to read. There is no library. He hunts for the free ball, for the public playgrounds, like the ones he found within the penitentiary, but the city has little to offer him.

"Clean and disciplined, his life at once touches the unclean and undisciplined atmosphere of his native city that has not reformed while he has been away.

"He resists it for a while, but the pull of the destructive fight of his native city is too much for him. He slips a little and keeps slipping, and some morning he wakes up after a debauch to find he has broken his parole; to find that while the State maintained many facilities for his reformation while he was in the penitentiary, his own native city had few, and, on the contrary, still has the demoralizing influences which ruined him in the first place; and stunned and bewildered he returns to the penitentiary, marked up as a parole violator, to wonder why it is he can make such progress in the penitentiary and such a failure on the outside.

"Society says he is an habitual criminal, but what he and the prison warden think about society never gets into print.

"Whenever the municipalities of Kansas will take as active and efficient steps to prevent the making of criminals by cities of Kansas, as the State, through its penitentiary management, uses to reform the city boy thus spoiled, then will we commence to make progress in prison reform."

The warden was followed by Prof. F. W. Blackmar, dean of the Kansas University, who likewise went after Kansas conditions in an open manner, sparing no pains to paint Kansas as she really is. This address, however, was never published and sold by the Kansas State Temperance Society, either on a private press or in the State printing plant. One of the shames of the age is that speeches like this are given so little publicity. Every Kansas farmer, merchant, business man, professional man, school teacher, officeholder, and judge of every court, from the supreme court to the justices of the peace, should read this every week, and if necessary, a law should be passed compelling them to do so. As the Atchison Globe remarked, February 1, 1917, "Sooner or later the laws of Kansas will permit a man to sleep, eat, and work, and nothing else," the above suggestion isn't so much out of place.

"I am much pleased with the address of Warden Codding," said Dean Blackmar, as he opened his fire, "which shows that he is alive to the real needs of the Kansas penitentiary. When he states that 'one of the first great necessities in prison reform is a modern penitentiary; our present institution is unsafe, unsanitary, absolutely out of date, and since it was built there has been a great revolution in prison policies,' he but repeats what has been said over and over again by wardens, prison commissions, college professors, and social reformers.

"Yet Kansas goes along in its smug complacency, acting as if it had the best penitentiary in the United States. Indeed, there are those in the State of Kansas who within the last two years have made this boast.

"There was a time, more than 30 years ago, when the Kansas penitentiary was one of the best in the United States, and many people have gone on thinking that thought and saying over and over again, 'What Kansas has is best.'

"The old institution is a clumsy, rotten junk shop, which will not permit men to use efficiency and economic methods in its administration. In the meantime other States have gone farther ahead until the Kansas penitentiary, while not the lowest in the scale of similar institutions in the United States, is well down the line.

"It is time to ask again, 'What's the matter with Kansas?' The Kansas people came up through great tribulation, and hopeful people and optimistic newspapers continually enlarged and magnified every good thing in Kansas in order to keep themselves on the earth at all. So in that early day what Kansas had was best. If a child was born in the town there was a great increase in population; if two stalks of wheat grew where one grew before it was a great agricultural increase; and when we developed our school system we wanted only the best and thought we had the best. When we built our penal and charitable institutions we wanted the best, and sometimes the 'wish is father to the thought,' and we think we have the best.

"Last night a gentleman on the platform said Kansas had the best school system in the United States, when a careful investigation shows that we rank twenty-ninth among our sister States.

"Now all this is an admirable spirit and has done much to make a great people and a great State. Coupled with this has been the everlasting suggestiveness of the Kansas people along reform lines. The

tradition exists in the United States that Kansas is the place to develop new things and progressive things, and we have, indeed, a very remarkable record in this respect.

"But the time has now come to inquire more specifically into our ideals, our aims, and more carefully into the methods by which we reach them.

"Kansas is not efficient in choosing the best methods of doing things, nor in carrying out her plans to a successful termination.

"We need strength all along the line of efficiency. We need a more careful estimation of values. We need to reduce our success to scientific principles that we may get positive and accurate results, and these things should be applied not only to the penitentiary but to other penal and charitable institutions in the State, to all our educational institutions, to our educational system, to all of our legislation and administration, and indeed to our life in general.

"Kansas is rich in her broad acres, in her agricultural products, in her millions of live stock, in her mineral products, in her great bank accounts, and her automobiles. Next January (1916) the State will be out of debt, but when the prison commission asked the appropriation of the paltry sum of $100,000 to be expended for material for two years' time, that the penitentiary with prison labor might be put upon the basis of efficiency and economy, the representatives of the people turned it down, and when the university asked for needed buildings to carry out efficiently and economically the work the State wishes it to do, even though this amount taxes each individual only 11 cents per capita, our wise legislators thought the people could not endure the burden.

"It is just such cases as these that prevent the State of Kansas from realizing a large return on money investments in her institutions. The people are regaled with the foolish idea that economy consists in not spending money; that economy consists in reducing taxes and going without things. But everyone knows who thinks at all that the best economy is that which spends money and seeks the largest return for it in efficiency and work accomplished.

"Kansas has endured in the last three compaigns a perfect tirade of this false philosophy, worked out altogether from the point of vote making. I hope that the epidemic of niggardly economy or parsimony is about over, and that we are ready as a people to reaffirm what has been said so often—that Kansas wants the best—and that we will come out of our false prejudice and realize that if we have the best we must pay for it.

"If Kansas keeps up with the reforms she has suggested, she will have to quicken her pace mightily. Indeed, if she keeps up with the reform movements of other States over which she has foolishly claimed superiority, she will have to speed up; and if she does not want to deceive herself perpetually into thinking she is great when she is not, she must introduce more efficient and economical methods into her institutions and public administration.

"Kansas is first in nothing." (Kansas City Star, Jan. 1, 1916.)

—

STATE INDUSTRIAL REFORMATORY.

The State industrial reformatory, located at Hutchinson, is a penal institution in the nature of a reform school. "Any male person between the ages of 16 and 25 who shall be convicted for the first time of any offense punishable by confinement in the State penitentiary may, in the discretion of the trial judge, be sentenced either to the State penitentiary or to the Kansas State Industrial Reformatory" is a provision of section 7758, General Statutes, 1905, covering the class of prisoners received there. This institution is really a penitentiary, and is so considered in Kansas.

There is no accurate means at hand to determine how many boys and young men are before the various courts of the State charged with crimes that should land them in the reformatory each year, as the parole system instituted by the Laws of 1907 (chap. 178, p. 281), under which the district judges of the State were given power to parole any person "under the age of 21 years" convicted of any felony except murder, manslaughter, rape, arson, or robbery, and who otherwise would be sent to the penitentiary at Lansing or this institution, "either before or after passing sentence," was liberally applied; and the amendment to this law (Laws of Kansas, 1913, chap. 172, p. 264) repealing the restriction "under 21 years of age" reaches many more young criminals. This law as amended is liberally applied. While discrimination characterizes its application in most instances, or in a great many at least, yet the fact remains that no record is ever made of the conviction or the entry of a plea of guilty for any offense, so far as the State board of correction's report shows, until the prisoner is delivered either at the penitentiary or at the reformatory.

However, even in view of the extremely liberal parole laws of Kansas, the population in this institution shows a marked increase year after year. In the period between July 1, 1912, and June 30, 1913, 59 out of 105 counties sent 202 convicts to the reformatory. From July 1, 1913, to June 30, 1914, 58 counties out of the total number (105), sent 223 convicts there. Between July 1, 1914, and June 30, 1915, 58 counties out of the total number (105), sent up 248 convicts to this institution, and the last period covering the time between July 1, 1915, and June 30, 1916, there were 315 sent up from 68 out of the 105 counties.

Thus 9 more counties contributed convicts at the close of the fiscal year 1916 than at the close of the fiscal year 1913, 10 more in 1916 than at the close of the fiscal year 1915, and 11 more than at the close of the fiscal year 1914.

There were 113 more convicts sent up in the period closing June 30, 1916, than in the period ending June 30, 1913, an increase of 55.86 per cent. (First Biennial Report, State Board of Corrections, pp. 19, 20; Second Biennial Report, State Board of Corrections, p. 64.)

On November 12, 1913, in his speech before the fifteenth annual convention of the Anti-Saloon League of America, at Columbus, Ohio, George H. Hodges, then governor of Kansas, declared that there were only 84 Kansas boys in the reformatory. Whether he based his "statistics" on the official figures for the period closing June 30, 1912, or June 30, 1913, was not stated. No authority is ever given for such statements.

However, in either case, according to the official records above quoted, the governor missed it from 118 to 139, whether he used the year ending June 30, 1912, or the one ending June 30, 1913, as an example.

From June 30, 1913, to June 30, 1916, there were 984 convicts sent to this institution. Some of the counties had remarkable increases during this period, among them Cowley, which increased from 2 to 11; Crawford, which increased from 6 to 12; Miami, which increased from 1 to 6; Sedgwick, which increased from 11 to 20; Shawnee, which increased from 10 to 36, and Wyandotte, which increased from 6 to 18. Just what the various inmates from these counties were charged with and convicted for is not shown by the record, and it is impossible from the record to determine the number in the institution at the close of the years 1915 and 1916, but the record for 1913 and 1914 shows the number at the close of those fiscal years to be 278 for 1913, and 246 for 1914. Between July 1, 1913, and June 30, 1914, 225 inmates were paroled. (First Biennial Report, supra, p. 58.) (See also Second Biennial Report, supra, p. 64.) The total number on parole July 1, 1914, was 209, and during the biennium covered from that date until June 30, 1916, 394 were paroled. (Second Biennial Report, supra, p. 66.)

The counties sending the largest number of convicts up during the period from July 1, 1912, and June 30, 1916, were: Allen, 21; Atchison, 29; Barton, 17; Bourbon, 16, Cherokee, 23; Cowley, 29; Crawford, 45; Douglas, 35; Labette, 28; Leavenworth, 21; Montgomery, 37; Reno, 54; Saline, 17; Sedgwick, 45; Shawnee, 79; Sumner, 23, and Wyandotte, 50. These are among the most populous counties of the State; in fact, they lead in population.

However, it has ofttimes been stated that were it not for the counties bordering on "wet" States called "border counties" that the penal institutions of the State would not be so crowded, for the reason that bootleggers thrive in those counties, and it is so much easier to secure liquor near the State line than in the "inland counties"—Shawnee, for instance—where the manner of securing it is more difficult and law enforcement much more strict. An analysis of the above report (First Biennial Report, supra, pp. 57 and 58; Second Biennial Report, supra, p. 64) will not bear out this contention.

In his speech delivered in Chicago, March 27, 1910, W. R. Stubbs, then governor, declared that "so long as our sister State, Missouri, has saloons right on our border there will probably be drunkenness in the cities immediately across the line, with nothing but a street to mark the difference between prohibition and open saloons," the idea being, no doubt, that only "border counties" have drunkenness, and therefore crime, since we are persistently told that 80 per cent, and from that on up to 90 per cent, of crime is due to the "open saloon."

To prove that the inland counties are clean and pure, so far as crime is concerned, the governor incorporated a letter in his speech received from Judge WILLIAM H. THOMPSON, of Garden City, Kans., who is now a United States Senator from Kansas. "In most of the counties," said the Senator, commenting on nine southwestern counties that comprised his judicial district, "there has not been a criminal case on the dockets for over 15 years. We have become the most law-abiding people on the face of the earth," the Senator concluded in true Kansas style.

This district (the thirty-second judicial district of Kansas) contains the following counties: Finney, Hamilton, Kearney, Haskell, Stevens, Stanton, Morton, Grant, Seward. The combined population, according to an estimate made in 1916, is 21,901, which is considerable of an increase over the estimate made the year before, and which excited considerable comment, because it showed a loss of population in the State of 18,404. These "estimates" are made by the county assessor, and in Kansas the salaries of county officials for the most part are paid on a sliding scale, depending upon population. A number of salaries were threatened with a decrease after the population of 1915 was published; hence a new "estimate" in 1916. The 1915 population was 20,001, or 2.8 persons per square mile. The Topeka Capital of June 25, 1916, branded the 1916 "estimate" a joke.

However, granting the population of this judicial district to be 21,901, as claimed, it contains only 3.1 persons to the square mile and has no large cities or centers of industry.

Reference to the above reports (First and Second Biennial Reports, supra) show that during the period covered by them Finney County, of which Garden City, where Senator THOMPSON made his home, is the county seat, sent a total of 14 convicts to the industrial reformatory, 7 having been sent up during the period ending June 30, 1913; Hamilton sent 1; Stevens County sent 1; and Seward 1, making a total of 16. The same counties sent 33 prisoners to the penitentiary at Lansing during the period between June 30, 1912 and June 30, 1914, and 18 during the next two years, for a total of 51; 1 to the industrial school for boys and 1 to the industrial school for girls, making an aggregate total of 69 criminals below and above 21 years of age contributed. (First Biennial Report, supra, pp. 21, 24; Second Biennial Report, supra, pp. 14 to 17; First Biennial Report, supra, p. 81; Second Biennial Report, supra, pp. 82, 83.)

While this showing is by no means as large as some judicial districts of the State make, it does fairly well, after all, for a community made up of the "most law-abiding people on the face of the earth," where there hasn't been a criminal case on the docket "for over 15 years."

Commenting again on Kansas prohibition, George H. Hodges stated, in his Antisaloon League speech in Columbus November 12, 1913, that Kansas was stamping out crime because it had stamped out the saloon. "Excessive use of alcohol is neither an excuse nor a defense for crime," declared the governor (p. 11), "but it causes men to commit crime the same as if one were insane." And again (p. 3), "I would not say to you that there is no law violation in our State, but I emphatically state that there are but isolated cases, and then wholly or principally in a few bordering counties."

The claim that border counties cause all the crime and lawlessness in the State has become an accepted doctrine, especially away from home, though a survey of the records of the reformatory alone during the period from July 1, 1912, and June 30, 1916, robs this claim of any semblance of truth.

During that period Shawnee County, of which Topeka is the county seat, a city in which law enforcement occupies almost as much attention as daily consumption of food, sent a total of 79 convicts to this institution. It must be borne in mind that there are hundreds of cases in which informations, etc., are filed charging crimes that upon conviction would result in prison terms, especially among the younger offenders, that never come to trial. A sentence in a reformatory or other correctional institution is the last resort in the innumerable efforts to punish or reform. Shawnee is strictly an inland county, more than 50 miles removed from Kansas City, Mo., the presumed source of a great deal of Kansas "devilment." The number contributed to the reformatory during the above period exceeds the number contributed by 26 "border counties," including Leavenworth County.

Of the 984 convicts sent up during the period 32 border counties out of 38 contributed 424; 6 border counties contributed none; 9 inland counties contributed none; and the balance of 58 inland counties contributed 560. Eight counties out of the 12 bordering on Nebraska contributed 29; 3 bordering on Colorado out of the 7 contributed 5; 9 counties out of the 10 bordering on Missouri contributed 228; and 12 out of the 14 counties bordering on Oklahoma (a dry State) contributed 166. Fourteen inland counties—Barton, 17; Finney, 14; Ford, 13; Franklin, 12; Douglas, 35; Allen, 21; Pawnee, 11; Pratt, 17; Reno, 54; Rice, 13; Riley, 10; Saline, 17; Sedgwick, 45; and Shawnee, 79—contributed a total of 358.

In commenting on the growth in population at this institution, M. G. McKenzie, chaplain, stated in the First Biennial Report (supra, p. 59), that—

"Of the 396 men received in this institution during the biennium 130 were assigned to the first grade, 132 to the second grade, 75 to the third grade, 24 to the fourth grade, and 7 to the fifth grade. * * * Three hundred were white, 77 colored, 12 Mexicans, and 7 Indians. They were charged with the following crimes: Two hundred and ten with grand larceny or burglary, 50 with forgery, 29 with rape, 28 with assault, 25 highway robbery, 20 with horse stealing, 11 with manslaughter, 6 with bootlegging, 5 with arson, 4 with white slavery, 4 with wife desertion, 2 with sodomy, 1 with bigamy, and 1 with embezzlement.

"Of these boys 202 acknowledged they drank more or less, 275 used tobacco, 77 gambled. Most of these boys ran around considerable and were away from home when they got into trouble; 265 were from homes broken by death or divorce.

"Surely ignorance is an incubator of crime, and the broken home and neglect of school, together with bad associates, is the cause of most of these boys getting into the reformatory."

The report of the chaplain in the Second Biennial Report, 1906, is conspicuous by its absence. (Supra, pp. 55 to 74, inclusive.)

In observing the great growth of the institution, however, J. N. Herr, the superintendent, declared (p. 56, Second Biennial Report): "The neglected education has contributed immensely to the downfall of these young men, and we can state with absolute certainty that the State of Kansas can do nothing better for these fellows than to give them at least the rudiments of an education."

And speaking of some of the many needs of the institution, dwelling more especially upon the fact that "employment is preferable to idleness, and nowhere is the saying more truthful than in this institution," Mr. Herr said: "Our farm and hay land employs a great number, but we could use, either through purchase or rental, to very good advantage at least an additional section of land." Which is some proof, at least, that there is no intention of retrenching in this particular institution of penal servitude, because "the saloon has become such an outlaw that none of our school children have even seen a saloon and are unacquainted with the appearance of a saloon keeper." And, further, without saying that the reestablishment of a "saloon system" would cause the steady growth of population at this institution to cease, it is equally fair to conclude that banishing "John Barleycorn" by making the Kansas map "all white" has most certainly not accomplished the end, nor has it even remotely approached it.

A SURVEY.

Twenty-three counties out of the total of 105 did not have a prisoner confined in the State penitentiary at Lansing June 30, 1914. (See First Biennial Report, State Board of Corrections, Table No. 1, p. 21.) Of those counties, however, Cheyenne sent 3 to the industrial reformatory between June 30, 1912, and June 30, 1914; Edwards County sent 1; Rooks County sent 5; Scott County sent 1; Seward County sent 3; Stevens County sent 1; and Thomas County sent 1. (First Biennial Report, supra, pp. 57, 58.) Greeley was one of the 23 above mentioned and had 1 juvenile criminal in the industrial school for boys. (First Biennial Report, supra, p. 81.) Norton and Greenwood (included also in the above 23) had representation in the industrial school for girls at Beloit. (First Biennial Report, supra, p. 99.)

Thus at the close of the biennium, July 1, 1914, there were 13 Kansas counties without representation in either one or the other of the 4 recognized State penal institutions. These counties, which were Chase, Decatur, Gove, Gray, Haskell, Hodgman, Lane, Morton, Ness, Rawlins, Sheridan, and Wichita, were, except Chase and Decatur, less than 6,000 in population. Combined, they had a population of 47,890, or 4.4 persons to the square mile.

Of the 15 counties that did not send up a convict during the biennium ending June 30, 1914, Cheyenne, Stevens, and Thomas sent convicts to the Industrial Reformatory (First Biennial Report, supra, pp. 57, 58), leaving a total of 12 counties—Chase, Decatur, Grant, Greeley, Haskell, Hodgeman, Lane, Morton, Norton, Rawlins, Sheridan, and Wichita, all, with the exception of Chase, being sparsely settled western counties. Chase had a population of 7,154, or about 6 to a square mile, and was much the heaviest populated.

Of the 18 counties that did not send up a convict during the biennieum ending June 30, 1916 (Second Biennial Report, supra, pp. 14, 15, 16, 17), Decatur sent 1 to the reformatory, Greeley sent 1, Meade sent 4, Norton sent 1, and Rush sent 4. (Second Biennial Report, supra, p. 64.) Ottawa and Jewell both were represented by juvenile charges in the Industrial School for Boys and also in the Industrial School for Girls. (Second Biennial Report, supra, pp. 82, 83, 107.)

This leaves a total of 11 counties—Gove, Grant, Gray, Haskell, Hodgeman, Morton, Rawlins, Stevens, Stanton, Kearney, and Wichita—out of 105 that had sent no convict to any of the four recognized State penal institutions during the biennial period ending June 30, 1916, with a combined population of 27,204, or 3.14 per square mile. Of these counties, Grant, Haskell, Hodgeman, Morton, Rawlins, and Wichita did not send a convict or charge up during the preceding biennium ending June 30, 1914.

Eighteen counties out of the total of 105 did not have a prisoner confined in the State penitentiary at Lansing June 30, 1916 (Second Biennial Report, supra, pp. 14, 15, 16, 17), as compared with 23 counties on June 30, 1914. (First Biennial Report, supra, p. 21.)

Of these 18 Decatur sent 1 convict to the reformatory during the biennium ending June 30, 1916; Grant sent 1 charge to the Industrial School for Boys; Greeley sent 1 to the reformatory; Kingman sent 4; Lane sent 1 to the reformatory; Meade sent 4 to the reformatory; Morris sent 2; Norton sent 1 to the reformatory and 1 to the Industrial School for Boys; and Ottawa sent 1 to the Girls' Industrial School, as did Morris. (Second Biennial Report, supra, pp. 64, 82, 83, 107.)

Thus of the 18 counties having no convicts at Lansing June 30, 1916, there were only 9—Gove, Gray, Haskell, Hodgeman, Rawlins, Seward, Sheridan, Stevens, and Wichita—that failed to send at least one convict or delinquent to the other penal institutions. These counties have a combined population of only 30,806, or an average of 4.1 persons to a square mile.

A PERTINENT QUESTION.

Is the crime increase confined to urban centers, or do the rural counties furnish their share?

THE ANSWER.

Twenty-three counties, having a combined population of 105,598, or 5.1 persons to the square mile, out of a total of 105, having a combined population of 1,672,545, had no prisoners in the State penitentiary at Lansing June 30, 1914. These counties were strictly rural, none of them having a town with over 2,300 inhabitants.

Eighteen counties, having a combined population of 93,937, or 6.4 persons to the square mile, out of a total of 105, having a combined population of 1,672,545, had no prisoners in the State penitentiary at Lansing June 30, 1916. These counties were likewise strictly rural, none of them having a town with over 2,250 inhabitants.

Thirteen counties of the State (105 in all) had no inmates in either of the four penal institutions supported by the State June 30, 1914. These counties were also strictly rural, having a population of 47,890, or 4.4 persons to the square mile.

Nine counties of the State (105 in all) had no inmates in any of the four penal institutions supported by the State June 30, 1916. These counties were likewise strictly rural, having a population of 30,806, or 4.1 persons to the square mile.

REFORMATORY POPULATION.

On January 1, 1910, there were 382 prisoners in the State Industrial Reformatory, located at Hutchinson, Kans. (U. S. Census, 1910; Bulletin 121; p. 36; Table No. 1.) These were all "first offenders" under 25 years of age.

Aside from 235 out on parole there were 273 incarcerated June 30, 1913. The actual number either confined or subject to be reincarcerated by revocation of parole, and therefore wards of the State, was 508. (First Biennial Report, State Board of Corrections, pp. 50, 58.)

The actual number confined June 30, 1914, totaled 499. This was exclusive of 209 out on parole. As these should be added in determining the total number of State wards credited to this institution the aggregate was 708. (First biennial report, supra, pp. 50, 58.)

The population increase witnessed by the total for 1914 over the total for 1910 is 326, or 85.39 per cent.

The population increase between June 30, 1913 (508), and June 30, 1914 (708), was 200, or 39.37 per cent.

CRIMES FOR WHICH CONVICTED.

While there is no accurate way of determining the number of inmates confined at the close of the fiscal years ending June 30, 1915, or June 30, 1916, this important feature having been omitted from the superintendent's report, accidentally or otherwise (second biennial report, supra, pp. 55 to 74, inclusive), yet there was a great increase in the number sent up during these two years as compared with the preceding two-year period, and the crimes for which the incarcerations were made were also varied and increased. Among the most important were the following:

	1912–1914	1914–1915
Assaults	27	36
Burglary and larceny	114	181
Forgery	39	56
Larceny (grand larceny included, but not burglary)	132	198
Murder	14	18
Rape	18	25
Robbery	23	19
White slavery	5	7
Making a total of	372	540

This is an increase of 168, or 45.18 per cent. During the same period there was an increase in the above crimes of 128, for which convicts were sent to the Lansing State Penitentiary, or a percentage of 29.19 increase in that institution. (First Biennial Report, supra, p. 25; Second Biennial Report, supra, p. 18.)

The increase in both these penal institutions therefore for the period in the crimes above enumerated alone totaled 336, or 73.37 per cent.

There is no record in either of the biennial reports (first or second) showing the ages of the convicts when received, but some idea can be gained as to the mental efficiency of those incarcerated by reference to the report of the chaplain in the 1914 report (First Biennial Report, supra, p. 59) and in the report of the superintendent of schools in the 1916 report (Second Biennial Report, supra, p. 65).

In the 1914 report, supra, it is stated:

"Of the 396 men received in this institution during the biennium, 130 were assigned to first grade, 132, to the second grade, 75 to the third grade, 24 to the fourth grade, and 7 to the fifth grade.

"Fifty-six could neither read nor write, and only 18 men had sufficient education that they were not required to attend school. * * * Of the 396 men, 300 were white, 77 colored, 12 Mexicans, and 7 Indians.

"Our teachers are earnest, faithful, capable men, who teach six hours a day besides doing their share of guard and line work, and to them we are indebted for a large share of the good work already done. * * * We feel the need of a prison reader, containing history, biography, science, and ethics couched in simple language, yet treated in more than a primary way. The main object of this would be to teach patriotism and build character, as well as to intellectually fit the boys for useful citizens."

In commenting on the same subject L. A. Coffin, superintendent of schools in the reformatory, stated in the 1916 report (Second Biennial Report, supra, p. 65):

"Probably 60 per cent of our men are willing and anxious to learn, and with the other 40 per cent it is necessary for our teachers to expend much time and effort that a start may be made along right lines. With the amount of individual work each teacher must do our grades are too large, and another teacher is needed to relieve the strain.

"We do not hold that education is all that this institution has to offer the inmates, but we do hold that it is the greatest thing the institution can offer to help them to regain their self-respect, to get better self-control, to start with new purpose and determination, and to better fit them to serve themselves and families and to be reclaimed by society.

"During the past two years 550 inmates have been received into the institution. During the year closing June 30, 1915, 247 were received. Of this number 77 were assigned to the first-grade work, which consists of work from the learning of the alphabet up to the third reader, and from those who do not know numbers beyond 2 plus 2 to those who are able to perform simple multiplications. Work in this grade and in the second grade is necessarily varied to take in all the simpler work of preparation, and it is not until the third grade is reached that we have a well-defined grade.

"Fifty-nine were assigned to the second grade, 59 to the third grade, 10 to the fourth grade, and 7 to the fifth grade.

"Eighteen were received who had enough education to pass an examination on the school work. * * * But one man was received who could neither read nor write. Several were received who had never attended school."

Whether or not illiteracy or lack of education bears any relationship to the commission of crime is a mooted question, but the above reports indicate beyond any possible doubt, that the criminals in Kansas are at least not among the 2.2 per cent of the illiterate population, but are being sent up from the more educated classes. As the school system of the State ranks 29th as compared with the other States of the Union, it can not be claimed that more people are receiving education than formerly. On the contrary it is quite true that educational facilities are poorer than they were in 1905, and the increase in crime among the "educated classes" furnishes food for considerable speculation. In the face of the persistent claim that prohibition has reduced illiteracy (a statement advanced as an argument for national prohibition and prohibition for the District of Columbia by Senator THOMPSON, of Kansas), and that reductions in crime, etc., closely followed, the following table should be carefully studied.

Table showing number of prisoners received during bienniums ending June 30, 1914, and June 30, 1916, giving classification of convicts in various grades at the prison school in the reformatory at Hutchinson, according to the first and second biennial reports (supra, pp. 59, 65), respectively.

Convicts received during biennium ending June 30, 1914	396
Convicts received during biennium ending June 30, 1916	550
Number assigned to first grade in prison school, 1914	130
Number assigned to second grade in prison school, 1914	132
Number assigned to third grade in prison school, 1914	75
Number assigned to fourth grade in prison school, 1914	24
Number assigned to fifth grade in prison school, 1914	7
Number who could neither read nor write, 1914	56
Total, 1914	424
Number assigned to first grade in prison school, 1916	77
Number assigned to second grade in prison school, 1916	59
Number assigned to third grade in prison school, 1916	59
Number assigned to fourth grade in prison school, 1916	10
Number assigned to fifth grade in prison school, 1916	7
Number who could neither read nor write, 1916	1
Total, 1916	213

This shows a decrease of 211, or 94.31 per cent. Considering the further fact that there was an increase in convicts of 164 (those surveyed considered), the percentage is much greater. The number sufficiently educated that they did not have to attend school or could pass the examinations, was the same for each biennium, namely, 18.

Speaking of the educational work generally in the State, Supt. Herr stated, on page 56, second biennial report, that "The neglected education has contributed immensely to the downfall of these young men, and we can state with an absolute certainty that the State of Kansas can do nothing better for these fellows than to give them at least the rudiments of an education."

An increase in the efficiency of the school system of the State, together with a general cleaning up of hidden vice conditions caused by the enactment of laws of prohibition which are not supported by the majority public opinion, may reduce this condition, but one thing is certain, the present system will not do it. More prohibitory laws against the sale or manufacture of liquor will not do it. Kansas, with her low rate of illiteracy, lacks efficiency, patriotism, character, intelligent endeavor, and is suffering from politico-hypocrisy of a fatal type.

THE STATE INDUSTRIAL SCHOOLS.

Concerning the "Boys' Industrial School, Topeka," and the "Girls' Industrial School, Beloit."

CHAPTER I.

BOYS' INDUSTRIAL SCHOOL.

Aside from the State penitentiary located at Lansing, and the industrial reformatory located at Hutchinson, Kans., has two other State penal institutions known as the Boys' Industrial School, located at Topeka, and the Girls' Industrial School, located at Beloit.

These are classed among the penal or reformatory institutions of the State, established for the purpose of caring for juvenile delinquents of either sex.

The Boys' Industrial School was founded by act of the legislature of 1879 (Laws of 1879, ch. 170, sec. 2), and was given the name by which it is now known by chapter 353, Session Laws of 1901, and chapter 39, Session Laws of 1905.

Under the act creating the institution, courts of record, and probate courts of the State were given power to commit any boy under 16 years of age, liable to punishment by imprisonment "under any existing law of the State, or any law that may be enacted and in force in the State"; also any boy under 16 years of age, with the consent of his parent or guardian, against whom any charge of committing any crime or misdemeanor shall have been made, the punishment of which, on conviction, would be confinement in jail or prison; as well as any boy under 16 years of age who is incorrigible and habitually disregards the commands of his father, mother, or guardian, and who leads a vagrant life or resorts to immoral places or practices and neglects and refuses to perform labor suitable for his years and condition and to attend school. (Sec. 7784, General Statutes of Kansas, 1905.) The Supreme Court decided later (53 Kansas Reports, 191) that the words "who may be liable to punishment by imprisonment" mean "who may be subject to punishment by imprisonment," thus giving the law a greater scope in its application.

The growth of this institution has been marked, in which respect it shares distinction with all similar institutions of the State, but the number of incorrigible boys—boys accused of misdemeanor as well as the major crimes—has from time to time grown to such proportions that other action was demanded of the legislature, in addition to the customary appropriations, etc., meted out to this one solitary prison home for that great army of young Kansans who require legal restraint at a less expense per capita than the State could afford through the single agency of this institution.

As a consequence, the session of 1905 created juvenile courts by chapter 190, which provides:

"That there be, and hereby is, created and established in each county of the State a court to be known as the 'juvenile court,' whose jurisdiction shall pertain to the care of dependent, neglected, and delinquent children." (Sec. 4412, General Statutes of Kansas, 1905.)

The second section of the act provided that "This act shall apply only to children under the age of 16 years, not now or hereinafter inmates of any State institution or any industrial school for boys or industrial school for girls or some institution incorporated under the laws of this State. * * * For the purpose of this act the words 'dependent child' and 'neglected child' shall mean any child who for any reason is destitute, or homeless, or abandoned, or dependent upon the public for support, or has not proper parental care or guardianship, and has idle and immoral habits, or who habitually begs or receives alms, or who is found living in any house of ill fame or with any vicious or disreputable persons; or whose home, by reason of neglect, cruelty, or depravity on the part of its parents, guardian, or other person in whose care it may be, is an unfit place for such child; or any child under the age of 10 years who is found begging, peddling, or selling any article, or singing or playing any musical instrument upon the street, or who accompanies or is used in aid of any person so doing.

"The words 'delinquent child' shall include any child under the age of 16 years who violates any law of this State or any city, town, or village ordinance; or who is incorrigible; or who knowingly associates with thieves, vicious, or immoral persons; or who is growing up in idleness or crime; or who knowingly patronizes any pool rooms or place where gambling devices are operated." (Sec. 4413, Gen. Stat., 1905.)

Section 4422, General Statutes, Kansas, 1905, provides that when any child under 16 years of age is arrested such child shall be taken before the probate judge and not before a justice of the peace or police magistrate.

There are 12 other provisions under chapter 67, article 4, of the General Statutes of 1905 governing the same matters, pertaining more especially to procedure when arrested, etc.

As a part of the above statutory provisions, and as supplemental thereto, the legislature passed at the 1907 session (chap. 177, p. 277, et seq.) an act providing that in all cases where any child shall be delinquent, dependent, or neglected, the parent or parents or other persons responsible for or by any act cause, encourage, or contribute to such delinquency, dependency, or neglect they shall be deemed guilty of a misdemeanor, subject to fine not exceeding $1,000 or imprisonment in the county jail for a period not to exceed one year, or by both such fine and imprisonment. This act also provided for a detention home in all counties having a population of over 25,000.

The juvenile-court law was in effect when efforts were begun to enforce the prohibitory law, and under the reasoning presented by the prohibition propagandists "the next generation" quite naturally would or should be so clean morally that need for such a court would be absent. However, at no time has any step been taken or argument advanced looking toward the abolishment of this court, and, on the contrary, many provisions have been adopted to widen its scope and more freely apply its provisions. Also independent agencies have sprung up within the past few years to aid the juvenile court and parole system to more properly solve the great and growing question of juvenile crime and delinquency among the Kansas boys and girls.

An instance of the great harvest of incorrigibles and delinquents that otherwise would find berths in the industrial school for boys, attention is called to a declaration made by the superintendent of that institution in the 1916 report (Second Biennial Report, Kansas State Board of Corrections, p. 77):

"By the cooperation of the judges of the juvenile courts throughout the State we have kept the population down to the lowest possible number, and the courts have disposed of many cases of young offenders without committing them to the school.

"A closer cooperation between the school and the juvenile courts would render still more efficient the efforts to reclaim and care for delinquent youth."

The growth of this institution covering the periods included in the First and Second Biennial Reports of the State Board of Corrections (1914–1916), together with comments made by those in authority as State officials and independent agents and those in charge of private agencies established for the purpose of aiding, if possible, in reducing the growing army of delinquents, will suffice the demands of this study in presenting the facts as they appear, revealing the startling increases that characterize nearly every portion of the State.

In view of the fact that constant appeals are made to voters away from home by Kansas men and women—more especially men high in office—to adopt the "Kansas system" of prohibition to the end that they, too, may stamp out, along with insanity, poverty, crime, and disease, the deadly and vile weed of juvenile delinquency, I feel a careful survey of the situation in the Sunflower State from this angle to be a matter of great importance.

In his opening statement (First Biennial Report, supra, p. 75), H. W. Charles, superintendent of the industrial school, declared on July 1, 1914, that: "At the beginning of this period there were 246 boys in the school. The number of boys received during the period was 292, while 282 were released, leaving the number in school at the close of the period at 253. The largest number in school at any one time was 276.

"The average daily population for the entire period was 267. When we consider that the maximum number that can comfortably be accommodated is 250, the crowded condition of the institution can readily be understood."

So, as late as 1914, seven years after the law enforcement propaganda began, and seven long and weary years of political manipulation, prohibitory agitation, fake raids, worse than faked "claims" that the law is being enforced, etc., we find Kansas has not only succeeded in driving hundreds and thousands of worth-while citizens from her borders, but is filling all her penal institutions beyond any limit that should be tolerated in a civilized community. Of all the penal homes in the State, the one inhabited by "our boys" at least should show some decrease in population, if even anything approaching truthfulness can be claimed for the many and varied orations on the "success of our State" in solving the great questions of insanity, poverty, vice, and crime during all these weary years.

Proclaiming in wild gladness that Kansas "at last" found the means by which to clean up her entire Commonwealth, W. R. Stubbs declared in his Chicago speech (March 27, 1910), in answer to an invitation from the Illinois Anti-Saloon League that he come and tell the wicked people of that great city just how they did it in Kansas: "I want to especially impress the fact upon your mind that while Kansas had substantial prohibition (whatever that is) for 28 years, it has had absolute prohibition only since May, 1909. (After he became governor, of course.) * * * The last legislature wiped out all exceptions and made the State absolutely dry." This is followed, quite naturally, with the usual

claim that "our homes are happier, our children better, and crime is decreasing a hundredfold," all because of the act of the legislature which he whipped through and on the strength of which he claimed political preferment. The governor served two terms, ran for the Senate in 1912 and was defeated by an overwhelming majority by the present Senator THOMPSON. Senator THOMPSON was practically an unknown quantity in Kansas politics, but Stubbs wasn't.

And in the speech delivered before the Baptists' Social Union in Chicago, April 2, 1912, John S. Dawson, then attorney general, shouted: "It is a fact, the truth and significance of which the people of other States can not realize, that there are thousands of young men and women in Kansas, yea, tens of thousands of them, married, living in their own homes with children about their doorsteps, who have never seen a saloon. * * * Prohibition has never prevented or hindered anything under the sun which can in any way contribute to the sum total of human happiness." This statement, and others of its kind, are continually made for the purpose of leading people of distant States and cities to believe that Kansas is enjoying the acme of perfection so far as home conditions are concerned.

If prohibition had reduced juvenile delinquency, or if by any course of reasoning, whether the first or the second year after its trial, or even the tenth or the thirty-fifth, any sound and logical connection could be worked out between the application of a law-enforcement propaganda to make it a success in spite of itself, in Kansas or elsewhere, I most surely would support the doctrine. Aside from the claims advanced by the prohibitionists, there is absolutely no proof that this has ever been accomplished.

I freely admit that all States have too many juvenile delinquents. The solution of that great problem seems to be one of the great world problems, but the groundless claim laid that prohibition will and does reduce it should be carefully understood in the light of the shameful conditions that exist in Kansas, made even more shameful by the unfair statements persistently made by her representatives. Silly sentimentalism, coupled with either ignorance or willful misrepresentation to bolster up this religio-political "cause," is doing far more harm in the Nation than all the saloons that were ever licensed—and that is saying a good deal.

Gov. Capper's many and varied statements to the effect that Kansas homes have been made happier by prohibition follows closely upon the footsteps of the Stubbs, Dawson, Jackson, Hodges claims in the same direction. To arouse the "heart song of home happiness," appeal to the tender and sympathetic sense of religious fervor, is the aim of every propagandist who seeks to further a cause that smacks of "morality and virtue." These men know unless they keep the mind of the public off the aftermath their cause, so far as a vote-making vehicle is concerned, is lost beyond all hope. Until the Stubbs propaganda, which had its real birth in 1906 under Attorney General Coleman, became a "live Kansas issue" prohibition was looked upon as a supreme joke in Kansas. The few who persisted in making wild claims for it were merely laughed at. To-day for a man to have the nerve to declare it to be a failure means political death. There are scores of men to-day sitting in the legislative halls at Topeka who dare not vote against proposed dry legislation but who have no more sympathy with the movement than they had years ago. Ribald and ruthless exploitation of the doctrine have created the most luxuriant crop of hypocrites imaginable.

On numerous occasions claim has been advanced that the inmates of the various penal and correctional institutions are for the most part transients; that the Kansas boys and men and women are above the lowly act of committing crime, and Kansas homes least of all produce delinquent children. This statement, as usual, is merely made; no proof of its truthfulness is ever submitted.

However, the report of the industrial school throws considerable light upon this phase of the subject. Of the 286 American-born boys in this school June 30, 1914, 174, or 60.8 per cent were native Kansans, ranging from 3 of the age of 9 years, 18 of the age of 10 years, 31 of the age of 11 years, 25 of the age of 12 years, 44 of the age of 13 years, 71 of the age of 14 years, to 3 of the age of 17, with 64 of the age of 15 years and 31 of the age of 16 years in between. They were sent up for nearly every crime in the calendar, including 141 cases of theft, 15 of burglary, 84 of delinquency and incorrigibility, 1 of murder, 6 of felony, 6 of forgery, and others, including rape, selling liquor, embezzlement, assault, disturbing the peace, truancy, and felony.

Only 8 could neither read nor write. Eighty-nine had intemperate fathers and 14 had intemperate mothers; 54 were themselves drinkers of intoxicating liquors. (First Biennial Report, supra, p. 83.) The question of drinking and not of "open saloons" seems to be the most difficult one to solve in sunny Kansas, after all.

Divorced parents were responsible for 42 of the delinquents, while separated parents not divorced were responsible for 24. Sixty used tobacco, 187 were profane, 5 had good homes, 47 had fair homes, while 240 had poor homes.

Sixty-two out of the 105 counties contributed the crop for the period between July 1, 1912, and June 30, 1914. Only the sparsely settled rural counties scored on the roll of honor, the majority contributing being the fairly well and more thickly populated counties, though some of the "short-grass" counties were represented. (See Table No. 1, pp. 81, 82, First Biennial Report, State Board of Corrections, issued June 30, 1914.)

There were 424 on parole June 30, 1912, and 540 on parole June 30, 1914. (Table No. 7, p. 83, First Biennial Report, supra.) The record does not show how many of these paroles were forced by reason of the overpopulation mentioned on page 75 of the report (supra), but it is reasonable to assume that several were, because 50 were returned from parole during the succeeding biennium and 64 discharged from parole because they attained majority. (Second Biennial Report, Table No. 7, p. 85.)

This institution is also paying special attention to the matter of much-needed education among the delinquents. "The work in the school of letters has progressed in a very satisfactory manner," the superintendent stated in the 1914 report (p. 75, First Biennial Report, supra), "notwithstanding the fact that the school rooms have been crowded beyond their capacity. Provision should be made for increasing the number of teachers, so that the maximum number of pupils to each may be materially reduced. * * * The buildings and equipment have been kept in good repair, notwithstanding the fact that the buildings are old and are rapidly deteriorating."

This institution made an urgent request for $134,300 in appropriations for 1916 and 1917 (p. 70, First Biennial Report, supra), and even though Gov. Capper's policy of economy forced many other State institutions to go empty handed when the appropriations were made by the 1915 session of the legislature, the demands of this school were of such a nature that they could not be ignored, and the sum of $124,000 was allowed. (Laws of Kansas, 1915, chap. 56, p. 75.)

The actual necessity of maintaining a State institution is always determined by the increase or decrease of its demands. If, as has been stated so many times, prohibition decreased moral delinquency, especially among "our boys," and if in reality "our homes are happier and more comfortable," if the Kansas people are indeed "cleaner, better, more advanced in mental culture, and stronger in moral fiber and conviction," and if, last but not least, "crime is less prevalent," there is no place within the whole system of State institutions that these claims could be more easily proven than in the decrease in population or the cost of maintenance of the Industrial School for Boys, which, no matter what else has been said, most positively and absolutely reflects the home influence and general conditions existing within the State. And for men high in office to either conceal the truth of this matter or shut their eyes to its sad reality is but adding an additional burden to the already astounding weight the people of Kansas have had thrust upon them in recent years.

The legislature of 1907 appropriated $147,800 for this institution for the years 1908 and 1909. (Laws of Kansas, 1907, ch. 15, p. 28.)

The legislature of 1909 appropriated $124,150 for the years 1910 and 1911. (Laws of Kansas, 1909, ch. 32, p. 57.)

The legislature of 1911 appropriated $128,300 for this institution for the years 1912 and 1913. (Laws of Kansas, ch. 17, p. 38.)

The legislature of 1913 appropriated $124,000 for the maintenance of this institution for the years 1914 and 1915 (Laws of Kansas, 1913, ch. 40, p. 69), which was an increase in cost of maintenance of $5,200 over the preceding biennium, $15,600 in excess of the amount appropriated for maintenance for the period of 1910 and 1911, and $23,000 in excess of the amount allowed for the years 1908 and 1909. Some of the appropriations are larger in the aggregate, but the difference is due to "special appropriations." The legislature of 1915 allowed nothing but just what was actually necessary in view of the proposed tax increase which Gov. Capper desired to avoid because taxes were too high, and also due to the fact that the lack of population increase was worrying him because of the poor chance to encourage immigration should it be admitted that moral delinquency, insanity, poverty, and disease was causing a tax increase in the State, contrary to the many representations that prohibition was working a decrease of these curses, a number of which originated in speeches the governor himself had delivered.

The fact that there were only 233 inmates in this institution in 1910 (U. S. Census, 1910, Bulletin 121, p. 36), with few paroled, shows that something above and beyond, aside from and independent of, legal enactments purposing to make the State's record better from a prohibition standpoint, is flooding this as well as all other State institutions with delinquents. Whether it is lack of attention to the more important things of life, neglect along lines of constructive work, or mere ignorance of the growing conditions, is not clear, but the fact remains that the growth along these lines is astounding, to say the very least.

The cause of delinquency among young boys is an intricate problem. It has never been solved by passing laws or endeavoring to enforce them. Filling the calaboose, the jail, and the industrial schools is not reclaiming boys; it only ruins them the more. A boy is only sent to a house of correction as a last resort—after teachers, ministers, mothers, fathers, big-hearted juvenile officers, and well-meaning local organizations have exhausted their final effort to bring about a reformation. Naturally, when the crop of incorrigibles becomes large and their time is devoted to "higher things" such as parading down the streets of the State capital with banners, organizing themselves into church lobbies to push through legislation, etc., the boys must suffer, as they have during the past decade in Kansas.

Home influence speaks volumes either for or against a boy's future or his chance in life, and in this connection some of the observations incorporated in the superintendent's reports of 1914 (First Biennial Report, supra, 76, 77), are intensely interesting any equally instructive:

"Reference has been made in former reports of this institution to the importance of an intimate study of individual differences among the boys committed to the school and to the fact that the problem of the juvenile delinquent is the problem in great measure of the backward child. * * *

"The study of individual differences of the deviating child will disclose a variety of types. A few are here given for the purpose of illustrating, in briefest outline, the method and scope of these studies."

Among the various types noted, this striking example, which represents hundreds of cases like it not only in Kansas, but elsewhere, arrested special attention:

"C. D.—Fourteen years of age. This case represents the type of a vigorous youth, at the adolescent period, rebelling against the injudicious restraints of an overzealous mother. The companionship of the father instead of the nagging of the mother would have reclaimed this boy.

"Mentally the boy tested normal. The difficulty lay in his lack of normal emotional development. His imagery was good but narrow in its range. He lacked imagination and was careless in his perception and observation.

"His sense of justice was undeveloped and his moral standard was that of not being found out. In manner he was reserved and seclusive. He had not been allowed to do the things that a boy loves to do. For this reason, when freed from restraint, he went beyond bounds, because his power of inhibition was weak and his moral standard was not high enough to hold him in check.

"He had not been required to do the things a boy ought to do. His own personality had not been developed, because it had been overshadowed by the mother's personality."

The above is not a knock on motherhood, but on certain kinds of motherhood. This boy no doubt was one of the "500,000 school children who have never seen an open saloon"—not until he cut the apron string, and then he was lost in a maze of wonders everywhere he went until his poorly guided footsteps landed him in the industrial school. No doubt this boy was dressed in a Lord Fauntleroy suit every Sunday, given a penny and trotted off to Sunday school, with a warning that if he got one spot on his pretty new clothes he would be punished by having to read 14 chapters in John Bunyan's "Pilgrim's Progress." This is the type of boy whose only dissipation on a Sunday afternoon is a quiet trip out to the cemetery, and who during all the rest of the week is hammered and scolded daily, hourly, momentarily by a prohibition mother. How many stalwart American soldiers and sailors can we hope for with the principle of prohibition even sapping the manhood from our growing boys?

Is it any wonder the rate of feeble-minded, insane, and delinquent men, women, and children is increasing so astoundingly in Kansas? Closing her eyes to true conditions and emptying her treasury every two years in an effort to make the ramshackle "system" more "pro-

gressive," "more successful," and more of a political asset, Kansas has no time to devote to building up the inner man. He must shift for himself, become the victim of a despotism that is ruining his chances daily to reach the goal he so proudly hoped for as a freckle-faced lad on the farm, and when reaching manhood either become a ranting prohibitionist, a political hypocrite, an inmate of the penitentiary or an asylum, or join that mummering army that treads the State, never daring to lift its voice in condemnation of the system lest they suffer political, social, and commercial bankruptcy, perpetrated by that small but very noisy contingent parading before the public gaze under the banner of "the reform element."

However, the demands of the penal institutions become more marked as the parade passes. In his report for 1914, page 78 (First Biennial Report, supra), the superintendent of the industrial school proclaims in the same strain other heads of like institutions declare each succeeding biennium, that—

"The large number of commitments, the largest number received in any previous biennium, the daily population in excess of the maximum accommodation, coupled with the fact that the equipment of the school is largely antiquated and obsolete, show the necessity of radical and fundamental changes if the State is to have a modern and well-appointed school. * * * Present conditions should not be tolerated longer. To do so would be a grave mistake. * * * The building of new cottages to accommodate a maximum of 20 boys should be begun, and the insanitary quarters should be abandoned."

No attention is ever paid to such "trivial matters." The only committees ever appointed in Kansas to "accomplish great things" are those delegations made up of male and female politicians who are annually sent to the conventions of the Antisaloon League of America to tell of the wonderful accomplishments of prohibition in Kansas, and to sing again the song of gladness that quickens the heart of every Kansan when he warmly congratulates himself that prohibition has decreased insanity, crime, moral delinquency, and feeble-mindedness.

And it is a matter of little wonder that these burning conditions are not remedied, when Kansas is thoroughly understood. In a survey of the legislature of 1917 the Atchison Daily Globe (weekly edition, Feb. 1, 1917) remarked: "As a matter of fact, members of the Kansas Legislature are a pretty decent set of men, as far as morals go. Also, they are conscientious and are trying to do their duty by their State and country. Many of them are notoriously stupid and atrociously unfit to enact any kind of legislation, but they are doing the best they know how." When those men have it hammered into them day in and day out by the governor and other "high officials" that prohibition is a success and has worked wonders, even though the men can not see it or understand it, they have that abiding faith in the governmental power that blinds them to the real conditions, never for an instant realizing why these statements are made or who is responsible for them. Is it any wonder a resolution such as adopted in 1915 can be slipped through? The men who know better are simply beaten and afraid to speak their own knowledge. They vote with the rest because they fear the result of exerting their right of manhood and independence. It is from such stock one must expect to be bred the hypocrite, the sneak, the coward, and the feeble-minded. If law can accomplish anything so far as creating a mental change in a people, the change created in Kansas is one of the most striking examples. Better that we have a whole nation drunk than crazy, cowardly, and spineless.

In concluding the 1914 report (p. 80, First Biennial Report, supra), H. J. Corwine, the parole agent, thus establishes a commentary upon the present home life in Kansas:

"Out of disordered homes flows our stream of juvenile delinquents. The home has lost its charm for the boy, if it ever had any charm for him. He would rather hobnob with loafers on the street corners or hang around pool halls or wander down back alleys than stay in such a home. To force him to do so makes him incorrigible. In several instances studies have been made of extreme cases of social degeneracy.

"It has been the custom to interest local organizations, such as women's clubs, church committees, welfare leagues, etc., in the boy who is returned home on a parole. To parole a boy to the home out of which he came is too often like taking him out of a mudhole, cleaning him up, and throwing him back into it."

The question of juvenile delinquency was agitating the minds of the thinking people of the State as long ago as 1905, when, in response to a popular demand that the subject be studied, the legislature of that year (sec. 29, ch. 475, Session Laws of 1905) made provision for the investigation of the causes of juvenile crime and degeneracy and other evils.

However, immediately thereafter the prohibition wave hit the State. Governors, mayors, sheriffs, senators, etc., took it up with the avidity which characterizes a drowning man's efforts in grasping a straw. A "perfectly new issue" was injected into Kansas politics. Why had no one thought of it before? Eagerly hoping to "beat the other fellow to it," men of all parties, including the Democratic (which for years and years had invariably condemned prohibition in its platform), mounted this bucking, kicking, spavined animal, bedecked in a wide sombrero, flowing red bandanna, and glittering spurs, bound for a State or Federal job in the mad race to catch the church vote and run the criminal element, the no-accounts, and "bums" out of State politics—each privately endeavoring to frame up with the "undesirables" for their political strength, just the same.

All matters of study were forgotten. What need they study? Surely not crime, when Gov. Stubbs claims we are reducing it a hundredfold every time the Anti-Saloon League presents a new bill for him to whip through. Surely not degeneracy, poverty, vice, or immorality when Attorney General Dawson travels to Chicago; Stubbs to Chicago; Hodges to Columbus, Chicago, Indianapolis, and other places; and Capper to Boston and California; Stubbs again to Texas; Hodges to Louisiana and Texas; and the lesser lights all over Christendom, to pour forth the glad news that Kansas has "conquered" all these evils by resolution, parading, and singing of songs! Surely not.

However, when Supt. Charles prepared his 1916 report (Second Biennial Report, supra, p. 79), he had not officially noticed much of a change. At least this does not sound much like it (speaking of the above legislative enactment and commenting on juvenile delinquency in Kansas): "The widespread interest in recent years of these and related questions would certainly warrant the State in making some provision for the encouragement of this line of investigation."

And commenting on some of the crying needs of this institution, he further states in terms that can not be understood as conveying the impression that there is any probability of abandoning it in the very near future, because of the happy home conditions and decrease in moral delinquency (Second Biennial Report, supra, p. 80), that—

"Attention has been called in the biennial reports of the past 10 years to the living quarters in what is known as the main building. The dormitories in this building have been repeatedly condemned as insanitary and illy adapted to dormitory purposes.

"I wish to renew my recommendation that all boys be removed from the main building; that the dormitories and other quarters now occupied by them be utilized for other purposes. The older buildings need much attention in the way of repairs. If this is not provided for soon, a heavy outlay will become necessary in a few years.

After calling special attention to many matters of improvement that have been demanded in years gone by and to which no attention has ever been paid, he continues:

"Attention has been called in former reports to the size of the family units, which sometimes reaches as high as 69 or more boys to be cared for by one family manager. This number is entirely too large. * * * Provision should at once be made for the erection of a sufficient number of cottages for the accommodation of all boys heretofore quartered in the main building, in groups not to exceed 20."

As is usual, this institution suffers from the policy of false economy in the matter of wages paid and this in turn militates against the hope of ever acquiring the results hoped for. In order to repair the broken machinery that propels a growing boy in the wrong direction, scientific, or at least level-headed, methods must be applied. No doubt the ignorance which curses the people of Kansas with respect to the actual conditions within her institutions causes much of this condition. When people are advised through official reports which they seldom see, much less read, of the dangerous system they are permitting to grow up, and with the knowledge available to tell them the truth, the men high in office persist in preaching that "all is well," and we are within gunshot of political heaven, the people can not be blamed too much or the politico-religious political swashbucklers too little.

In commenting on the matter of salaries, etc., Supt. Charles further said (p. 80, second biennial report, supra):

A comparison of the salary schedule with other institutions of similar nature discloses the fact that wages are lower in the industrial school of the State of Kansas, than in similar institutions in other States. This militates against the best interests of the school, for the reason that efficient help can obtain employment at more lucrative wages elsewhere, which situation very naturally hinders the efficiency of our own school. I wish to recommend, therefore, that such an appropriation for salaries and wages be made as will enable the State to employ the most competent help that can be found."

Similar requests have been made for years, but no heed has ever been paid them in a material way. The salaries have been reduced at times, but a scant increase each time one has been made.

Although the probate and juvenile judges throughout the State were called upon after the showing in the 1914 report to lend their aid to keep boys out of this institution, and although the population by reason of that fact was kept more in line with the accommodations furnished by the State, the crimes that make boys hardened moral delinquents, and for which the young men had to be sent to the school, after weeks of such aid as the various societies, etc., interested in their welfare proved hopeless, did not decrease in their intensity, as the following survey shows:

Crimes for which boys were sent to the industrial school.	During the biennium closing June 30, 1914.	During the biennium closing June 30, 1916.
Assault	1	1
Burglary	15	14
Delinquent and incorrigible	84	83
Forgery	6	6
Larceny	.....	3
Embezzlement	1	1
Rape	1	1
Robbery	.....	2
Stealing	141	99
Murder	1	.....
Truancy	30	21
Transferred from orphans' home because criminally inclined	.....	4

One boy was sent up to this institution for murder during the biennium closing June 30, 1914, and none during the present biennium, which should be marked as a great "victory" for prohibition—and no doubt it will be. The rest of the table, however, furnishes little comfort.

A comparison of the past history of the boys received during the two bienniums also proves interesting.

[First and Second Biennial Reports, supra, p. 83, 1914; p. 84, 1916.]

	1914	1916
Parents divorced	42	40
Parents separated, no divorce	24	20
Father dead	46	52
Mother dead	44	57
Father intemperate	89	76
Mother intemperate	14	14
Profane	187	157
Drank intoxicating liquor	54	36
Used tobacco	60	115
Could neither read nor write	8	4
Having good homes	5	3
Having fair homes	47	49
Having poor homes	240	192

CHAPTER II.

GIRLS' INDUSTRIAL SCHOOL.

The Girls' Industrial School, located at Beloit, is to the delinquent girls of the State what the Industrial School at Topeka is to the delinquent and incorrigible boys. It cares for those who have gone beyond the efforts of the juvenile court, the home, the school, the church, and society generally. So much care has been given the way-

ward girls of the State it is surprising that we find so many of them, after all, wards of the State. However, as in all the other penal institutions, this one shows remarkable growth.

This institution was founded by chapter 158 of the Kansas Session Laws of 1889 and applied originally to "any girl under the age of 16 years" who shall be convicted of any offense known to the laws of the State and punishable by imprisonment. "The court or justice, as the case may be," further provided the law (sec. 7807, General Statutes, 1905), "before whom such conviction shall be had, may at his discretion sentence such girls to the State Industrial School for Girls or to such punishment as now provided by law for the same offense."

One would naturally suppose that after all the wonders worked by the operation and enforcement of prohibition, as painted in glowing terms by the men who claimed they had accomplished the Herculean task, this disgraceful law would have been wiped out of existence long ago—a relic of the wicked old days, as it were.

Quite the contrary. Female juvenile crime has been keeping pace with the steady march of prohibition agitation to the extent that in 1911 it was found necessary to increase the age limit at which girls could be sent to this institution to keep them out of the penitentiary, and accordingly the legislature that year (Laws of Kansas, 1911, ch. 301, p. 546) raised the age limit from 16 to 18 years.

The crowded condition of the institution necessitated "paroling" and otherwise disposing of so many girls who became heavy liabilities to the communities in which they were sent, and the legislature of 1913, which was in session two years prior to the time the "famous" resolution was passed for the Anti-Saloon League, bragging about how much cleaner Kansas homes had become and how much stronger in "moral fiber and conviction" the men, women, and children had become, now since they had "St. Georged demon rum" for the millionth time since 1880, was forced to add to the already overburdened taxpayers another little "offering" in the way of the creation of the office of parole agent for this institution. Her duties, or his, as the case may be, to "look after the welfare of the girls who are on parole, to find suitable homes for those who have no responsible friends, and when not otherwise engaged to be subject to assignment by the superintendent to such other work as said superintendent may desire in the management of said school"—cut the grass and carry in the wood, for instance.

But just to prove that there is little spare time in which to run down to Mexico and settle that little squabble, or to chase over to Europe and fix up the war "between times," the parole agent thus explains her movements during the year 1915, during which time she has been on the job: "I find that it has taken considerable part of the year I have been connected with the Girls' Industrial School to get a general working acquaintance with homes and girls, especially those already placed out," she stated on page 103 of the Second Biennial Report, supra, and then continues: "Owing to the large number of girls on parole, to the distances to be covered, and the limited expense account (there it goes again), it is absolutely impossible for the parole officer to see them often enough to achieve best results.

"The pressing necessity of taking out, transferring, and returning girls devolved upon me before time could be taken to become at all familiar with the system of work in the institution.

"These are features of the work which require much time, so there was little time left for investigation of homes or visiting girls unless some misdemeanor made the visit a necessity."

This indicates that the parole officer was appointed none too soon and proves quite conclusively that all the girls sent out of the institution are not "really cured," as may ordinarily be presumed by a reading of the ordinary parole report. However, special pains are taken in the reports of this institution to make no record of the number of inmates at any certain time, although the report shows that on October 1, 1915, there were 57 on parole and from then until October 1, 1916, 82 more were paroled, of whom 3 escaped and 11 were returned and 1 sent to "another institution" (supra pp. 104, 105).

Further commenting upon the work required and the care that must be exercised in her official capacity, the parole officer stated, on page 104, supra, that—

"Bedrock investigation of the home in which a girl is to be placed is absolutely essential to the successful placing of the girl.

"In several instances where the girl was placed without my personal investigation on the recommendation of estimable persons the results were disastrous.

"While the home may be of good character to all appearances, it may be full of discord, or the woman at the head of it may be lacking in sympathy, acumen, or discipline. The presence or lack of these qualities can usually be ascertained by a personal interview. * * *

"It is essential that the girls go to some better protection than they had before they came to the school, because they are largely the product of their environment, and if they are to be permanently reformed new homes must be found for them.

"A great drawback in the work is the inability to secure enough of the right kind of homes—homes where the employer is willing to be a teacher and mother, and where the girls will not be regarded as a source of cheap labor.

"When an inmate leaves the school she is always admonished by her companions to 'make good,' and I believe most of them leave with that intention. They go out into a world filled with busy, prosperous, good women, yet for lack of women's aid, they sometimes slip back into the old life, where they are always assured of companionship. The problem of caring for girls is very much more intricate and difficult of solution than caring for boys, hence the necessity of perpetual vigilance. * * * There is a percentage of the girls for whom there is no hope. These are the mental defectives—the weak-minded. It is this class which swells the list of failures on parole. They need permanent care, for, although many may become self-supporting, few can become self-controlling.

"There is only one thing to do with them, and that is to sequester them permanently in an institution established for that purpose, where they may be kept well contented and harmless, where the vast amount of energy kept by the State can be utilized in such a way that its charges shall be self-supporting and society protected.

"It is the only way of cutting off the train of degenerates and imbeciles which otherwise will surely follow them.

"From the standpoint of the taxpayer, if from no other, such an institution would be a good business venture, for while the initial cost of segregation would be great, the number of criminals, the number of prisoners, the demand upon public and private charity would be decreased.

"* * * In the industrial schools, where notable and effective work is being done with the girls on parole, there is a visitor for each 30 girls placed out. It would be interesting to compute the difference in dollars and cents between the expense of this sort of care and the care of those who must be returned to the school or who become a menace to society because of the lack of proper supervision. Such a policy would cost money, but there would be adequate returns in good citizenship."

This report bristles with timely suggestions. It is true beyond doubt that all the insane and feeble-minded are not inmates of the regular asylums and hospitals and homes designated for that purpose, and it is likewise true that no doubt a great deal of the increase in degeneracy, feeble-mindedness, and crime are due to the fact that ignorance and parsimony have been playing havoc with the Kansas citizenship. Perhaps after all it is no wonder that prohibition has made such headway there during the past decade. There is a reason for everything.

It is positive that another State institution must be constructed to care for the mentally defective girls, but as this may perhaps be advanced as further argument that prohibition hasn't worked the wonders it is claimed for it, the legislature "in its wisdom" will be afraid to provide for it. The Kansas politician may prefer that his State become ruined, morally and physically, than admit his own hypocrisy.

The parole officer (Miss Effie Loader) thus speculates upon the future of her work, showing plainly the crying need of such superior development in this line; it is strange the need became so especially urgent before the legislature finally got around to understand what was wrong (p. 105, First Biennial Report, supra):

"The parole officer hopes to accomplish greater results during the coming year. She hopes that the board of corrections will push the development of this department, which involves great possibilities.

"Parole is the absolute test of the efficiency of the institution. What has the school done for the girl? Has it sent her back to society physically sound, morally controlled, and able to support herself?

Parole is a gradual readjustment of a girl's life. The path of a young girl, practically unprotected, is filled with pitfalls, and upon the parole department devolves the responsibility of teaching her to avoid these and to adjust herself to new conditions of life.

"The maintenance of an effective system of parole supervision is both costly and complicated, but without such a system much of the work of reform and industrial schools must come to naught."

So the Kansas system is not perfect. Another landslide of evidence is here presented; another reason why Kansas should "stop, look, and listen." The cheap notoriety she has gained by and through the many pipings of her high officials that prohibition has reduced her taxes, is closing her almshouses, emptying her penal institutions, and reducing her State charges again receives a justly due condemnation—and this time from a woman, who seems amply capable of defending her position.

In the report of Miss Emma Sells Marshall, parole agent for 1914 (First Biennial Report, supra, p. 97), she said:

"Lack of home training, lack of religious teaching, desertion of the family by either the father or the mother, marriage of the unfit, divorce, and drink are chief among causes of commitment."

The condition of "our homes" does not seem to have improved materially during the two years period, faked-up claims to the contrary, notwithstanding.

In the 1914 report (First Biennial Report, supra, p. 93) the superintendent commented quite fully on the causes that drive the girls of Kansas into the institution. In view of the nation-wide belief that the map of Kansas is as white as painted in the "temperance book," this commentary is interesting, pitiful, and, withal, of intense interest:

"During the past year (July 1, 1913, to July 1, 1914) 240 girls have received the care and protection of the home," she stated. "And every effort has been made to give them the very best physical, moral, mental, and religious training.

"Some girls are sent to us without a stain or blemish, society having condemned their parents as unfit to raise them. Other girls, through neglectful, vicious, or incompetent parents, come to us almost saturated with vice. These are to be pitied. The world has never given them a chance. For, while young, immature, weak, and in ignorance of right and wrong, the sins of adult society wrought their downfall."

The superintendent urgently requested (First Biennial Report, supra, p. 96) that the legislature of 1915 appropriate $157,000 to meet the many crying needs of this institution, and, just to show her that "our homes are cleaner" and "our people stronger in moral fiber and conviction," Gov. Capper saw to it that the "demand" was cut down to $98,000. And, just to indicate to him and to the legislature that the institution will not be abandoned for two years at least, she came back with a demand in her 1916 report (Second Biennial Report, supra, p. 103) that they awaken to the realization of the needs of the institution and to the fact that it is growing beyond all reasonable limits, and appropriate $168,000 for the succeeding biennium.

The legislature of 1907 appropriated for 1908–9	$85,800
The legislature of 1909 appropriated for 1910–11	98,000
The legislature of 1911 appropriated for 1912–13	105,000
The legislature of 1913 appropriated for 1914–15	96,500
The legislature of 1915 appropriated for 1916–17	98,000

(NOTE.—This included a large special appropriation of $16,300.)

From the above it will readily be noted that the demands of this institution, as is the case in all other State penal, charitable, and correctional institutions, are becoming greater each year. One would almost believe that preparations were steadily being made to close the State penal institutions, especially those looking after "our boys and girls," now since we have "every phase of violation of our liquor law covered," as ex-Gov. Hodges put it at the Anti-Saloon League Convention in 1913. And, as he further says, "Prohibition is steadily decreasing our delinquency to almost nothing, is helping to abolish illiteracy, depopulate our poor farms, give us graded schools, snug bank accounts, and the best system of dirt roads in America," it should be about time to begin abolishing some of the institutions of penal servitude.

In 1890 this institution received 20 girls; in 1900 it received 55; in 1910 it received 59; and in 1916 it received 71. (Second Biennial Report, supra, table No. 7, p. 107.) During the period closing June 30, 1914, a total of 133 were received, of which 77, or 58.33 per cent, were native Kansas girls. One hundred and thirty were received as new inmates (not counting parole violators) during the biennium closing June 30, 1916, of which 86, or 66.66 per cent were native Kansas girls. (Supra.)

Thirty-four counties sent inmates during 1913 and 35 during 1915 (First Biennial Report, supra, p. 99); 29 during 1915 and 30 during 1916. (Second Biennial Report, supra, p. 107.)

However, of the counties contributing inmates during the biennium ending June 30, 1916, Brown, Clay, Doniphan, Dickinson, Elk, Jackson, Kiowa, Lyon, Miami, Rooks, Republic, Riley, and Sumner broke into the limelight, each contributing at least one inmate and some as high as three. These are all rural counties and most all "inland counties."

Cherokee contributed 7 inmates during the biennium closing June 30, 1914 (supra), and increased its representation by sending up 11 during the next biennium; Crawford County likewise contributed 7 during the 1914 period and sent up 13 during the succeeding biennium, while Shawnee County (Topeka) contributed 12 during the 1914 period and increased the number sent up during the next biennium to 18, having the distinction of having sent up 30 during the four years, which won its first honors.

The causes for which the various girls were sentenced shows a very even balance year after year, varying in some respects, but for the most part holding its own all along the line:

Causes for incarceration.	1913	1914	1915	1916
Incorrigibility	37	28	27	35
Delinquency	17	27	23	21
Dependent	5	8	6	6
Immorality	1	1		4
Theft	2	7	3	3
Forgery		2		1
Manslaughter				1

Speaking of the great needs of the institution, the superintendent's report for 1916 (Second Biennial Report, supra, p. 94) states:

"Our greatest problem is trying to care for the girls in the dormitories. We have six large dormitories with from 12 to 20 girls in each. You can readily see what it means to put 20 girls in a room together. * * * I have visited 10 institutions this spring and did not find a single dormitory. Is Kansas to take a back seat in this work? I hope we shall soon awaken to the fact that a girl's soul is worth more than the cost of a cottage."

It hardly sounds reasonable that this "direct appeal" should be necessary in Kansas, and surely the parsimonious program fitted out to suit the needs of the political prohibitionists, who are afraid to admit the truth lest it hurt "the cause," will soon become so notoriously unfit for the needs of the State that public sentiment will abolish it.

As an explanation covering the apparent slow progress made in the institution, and as a reason for demanding more constructive help, the superintendent thus closes her petition (supra, p. 94):

"Girls are not sent to the industrial school for being either too righteous or too wise; they are sent for being incorrigible and delinquent, and two-thirds of them are mentally defective.

"Even then they do not come until after the public schools, mission schools, parochial schools, city industrial schools, boards of children's societies, guardians, juvenile courts, probation methods, houses of Good Shepherd, ministers, priests, and parents all have not been sufficient to keep them in the straight and narrow way.

"But, like a certain class of old, some folk demand of the State school a miracle. Please remember that even our Lord did miracles only when outward and immediate surroundings were wholly favorable and sympathetic, and always with some real material to start with."

Thus it seems that, to all boisterous proclaiming to the contrary, prohibition has not strengthened the moral convictions of the people of Kansas, and has least of all reduced the necessity for very careful and painstaking supervision of that army of little fellows and their unfortunate sisters who roam the plains, never casting their childlike eyes upon a saloon, but upon even worse forms of viciousness than the casual reader and light thinker could imagine.

That the juvenile-court system has taken from the shoulders of these two juvenile institutions many burdens during the past decade there can be no doubt, but that system, prated about and exploited to the skies, is of itself insufficient to solve the problem. Constructive home making, less law enforcement, and more social and political sanity is one of the dire and crying needs of this much-overestimated State.

In speaking of the "delinquent child in Kansas" Judge Osborne, of the Juvenile Court of Independence, Kans., thus expressed his views at the sixteenth annual session of the Kansas Conference of Charities and Correction at Lawrence November 18, 1915:

"In the little more than 10 years the juvenile court has been established in Kansas children under 16 years of age in this State have committed practically every crime in the calendar, including murder in the first degree. Confronted by these facts, is it not safe to say there are children needing the restraint of law; and, further, is it not a wise provision which separates juvenile and adult offenders, establishing a court exclusively for those of tender years? Jails and prisons are schools of crime. Youthful offenders, if thrown into contact with criminal adults, readily acquire the methods of their elders and assume their attitude toward society. This is especially true with those who are slightly defective."

Addressing himself to the causes of delinquency, Judge Osborne said, after reciting some of the things for which the State is "famous": "With this fine showing, to what may we attribute delinquency in our children? From my seven years' experience as judge of a juvenile court, I would say it may be chargeable principally to the following: (1) Parental neglect or indifference; (2) divorce of parents; (3) immorality of one or both parents; (4) sale of tobacco to minors; (5) absence of regulations of pool halls and of places of amusement; (6) permitting children, particularly girls, to remain away from home overnight under the belief that they are staying at the homes of chums."

And, speaking of the growth of juvenile delinquency in Kansas, the judge gives his further reasons, as modifying his sixth reason why so many girls go wrong and eventually land in a Kansas juvenile court:

"It is astounding to observe the absolute indifference of many parents to the moral welfare of their offspring. Some authorities charge 90 per cent of delinquency to parental neglect. When parents give no thought to the character of the associates of their children, when they are unmindful of the late hours their children may remain on the streets and elsewhere, when they uphold, or at least seek to excuse, their children in the commission of unlawful acts, it must be expected that sooner or later the children of such parents will acquire criminal tendencies. In many instances, though having legitimate employment, the 15-year-old daughter of poverty-stricken parents appears habitually gowned in expensive apparel, bedecked with flashy jewelry, and yet does not excite parental inquiry, or even curiosity, as to the source of her means. They seem entirely satisfied if these things require no expenditure on their part, and apparently they feel these matters should concern no one else. * * * Unless we want these children as wards of the State, their parents must be taught their duty and be directed and assisted in the performance of their duty."

And, in speaking of the divorce evil as applied to Kansas, he continued: "* * * In many cases affecting children these courts (district) do not have at their disposal proper agencies for suitably caring for and maintaining these children after the trial. As a result, a large percentage of these young ones soon find their way into the juvenile courts.

"* * * Our strict law forbidding the sale or giving of tobacco to minors is not vigorously enforced. However, it does appear that the wide publicity given the provisions of this law has exercised a deterring effect. Apparently, tobacco using by young boys is decreasing. There is still room for considerable effective work in enforcing this law."

"Enforcing the law" is about all the people of Kansas have in mind. The habit of devising new ways and means to jail a boy, girl, man, or woman has become an epidemic in the State; it has been reduced to an art. Whenever anything goes wrong, whether it be the failure of an officer to land a criminal 3 or 4 years old or 40, a new law by which a new method of arresting them is enacted, until it is almost impossible to walk down the street of a Kansas town at midnight, when the thoroughfare is as deserted as charity's pocket, and not violate a State or municipal law.

"In seeking a solution of many problems of delinquincy," continued Judge Osborne, "there is lack of cooperation. In some localities there exists an indefensible practice of paroling offenders upon condition that they leave the State or community. There is a mere sidestepping of responsibility—an avoidance of the performance of duty. To facilitate the passing on to another State or municipality of undesirable delinquents funds are appropriated out of public treasuries with which to pay for their transportation to points distant from the scene of their crimes. Usually these persons arrive destitute in fields that are new for their operations, and soon another locality is burdened with their offenses. Cases do arise in which it is wise to remove delinquent children from their associates who have contaminated them or who have been evilly influenced by them. But this removal should be made with proper safeguards for the children and with full protection to the community to which they are to be sent."

So this is a part of the wonderful "Kansas system." "Pass the buck" with unfortunate children, scarcely more than babies, so the Kansas rate of juvenile delinquency will not become higher. So many statements have been made in recent years that prohibition has saved so many children in America the question arises as to how many are "saved" in this manner, when the local "better element" gets busy with the unfortunates and runs them out of town, rather than spending time and money in helping them, so the "rate of crime and delinquency" will show up better when the next election comes around, or when the Anti-Saloon League yearbook is published.

Just how many deserving girls, beaten and defeated by the tidal wave of fake reforms, have been driven from pillar to post in Kansas towns until they have landed in the gutter, either in the State or in some other State, probably will never be known, but this much is painfully true: The virtue that boasts of godliness that must be purchased by the taxpayers' money used to transport poor, poverty-stricken, morally bankrupt little boys and girls from one place to another may permit the leading citizens to shout their heads off in church and solicit votes to the legislature, to Congress, or to the Senate on the ground that they favor law enforcement and prohibition, but it will never restore the priceless jewel it permits the young womanhood and young manhood of the State to sell for the price of a night's lodging or given as a bribe to freedom from a house of detention.

The Topeka State Journal, of December 4, 1916, casts some light upon juvenile crime in Kansas, and speaks louder in the name of humanity, decency, and right living than all the speeches all the governors, attorneys general, judges of the supreme court, Senators, and Congressmen ever made in their boosting game for the Anti-Saloon League.

"Wages inadequate to provide a girl a comfortable living is the indictment which Miss Linna Bresetts has returned against Kansas 5-and-10-cent stores," says the Journal, on page 5, adding that the factory agent is to submit her report to Gov. Capper that week.

"As State factory inspector and secretary of the welfare commission," continues the article, "Miss Bresette declares that 75 per cent of the girls working in 5 and 10 cent stores in this State receive less than $6 a week. In view of the present high cost of living Miss Bresette is confident the present scale is not a living wage.

"It is probable the report on 5 and 10 cent stores will be used as the basis for some drastic wage legislation. Copies of the report, covering wages to women in all classes of work, will be sent to members of the legislature some time during the current month.

"Investigation of 5 and 10 cent stores by Miss Bresette revealed the fact that in nearly every instance managers of the stores refused to accept applicants for positions who did not live at home. A majority of the girls working in these stores live at home, Miss Bresette reports.

"Pointing to the demands of store owners for girls who do not pay their own way, Miss Bresette declares the rule is 'a frank confession that these stores do not pay a living wage.' Investigations in three stores showed that 13 girls were on the pay rolls who did not live at home. These girls were forced to pay their own room rent, buy clothes, eat, and provide themselves with recreation money at a wage of less than $6 a week.

"Records gathered by Miss Bresette show that 48 girls working in 5 and 10 cent stores receive less than $3 a week. A majority of these girls work less than 48 hours a week. Such hours are mentioned in the report as 'partial time.'

"In addition to the record of the 48 girls receiving less than $3 a week, Miss Bresette found 16 girls working full time who received more than $3 a week and less than $4 a week.

"Wages of more than $4 and less than $5 a week affect 126 girls in 10-cent stores, while 161 girls receive more than $5 and less than $6 a week. Wage scales of more than $6 and less than $7 a week affect 75 girls. The record reports wages paid 470 girls in 5 and 10 cent stores. Of this number 351 receive less than $6 a week. Fourteen girls are shown to receive between $8 and $9 a week, while 20 receive more than $7 and less than $8. Five girls are paid more than $9 and less than $10 a week, while 4 girls draw pay checks of between $10 and $12 a week. Just one girl was found whose pay check was in excess of $12, and it was less than $15 a week.

"Miss Bresette reports that ventilation in these stores is poor and that complaints have brought few changes in conditions. Wage scales in the various stores are based on sales, the report recites. Nearly all of the 5 and 10 cent stores of the State are links in chains of stores. Managers of these stores are allowed a stipulated per cent for gross sales to be paid for clerk hire and store help."

Wage-scale legislation has attracted little attention in Kansas during the past 10 years. The State officials have been too busy "saving" the people by passing and enforcing laws of a prohibitory nature and working out plans to coax new capital into the State. Commercial life in Kansas has been rather lean, aside from the industries engaged in wheat, corn, cattle, and hog raising. Perhaps a few laws to get at the root of the evil and drive crime out would alienate the 5 and 10 cent

stores, so rather than protect the young girls from lives of shame, it serves the purpose in the eyes of the manipulators of the "Kansas system" to pass laws, declaring them to be happy, pure, and virtuous. As long as they have no open saloons to look at, there is nothing else that should really tempt them—not even the price of something to eat or wear.

That careful attention should be given the young boys and girls not only of Kansas but of the whole Nation is beyond dispute, and the great demand for more constructive work along this line is well put by Judge Osborne in the address above referred to. (P. 17, sixteenth report, Kansas Conference, Charities, and Correction:) "There is so much to be accomplished among our boys and girls for the upbuilding of the citizenship of this Commonwealth, there are so many youths (male and female) who, with even slight encouragement, will become good citizens, or for want of it become delinquents, that it behooves the good pople of Kansas to give these matters fuller attention." Surely causing little girls to work at starvation wages in insanitary stores, while the fathers and mothers chase about the State or Nation running down bootleggers or bragging about "saving the boys" with law-enforcement crusades, is not a very constructive means of saving many of the girls. It is much easier to sit in a comfortable chair and sing a song or write a speech or travel in a Pullman car to Chicago, California, or Boston, and deliver a speech in the hope that it will attract public comment and cause the speaker to become a "famous law-enforcement giant" in certain quarters, but it does not save any 12 and 13-year-old girls who work for less than $6 a week and make the rest of their way as best they can. As Judge Osborne aptly remarks in conclusion: "In our attempts to anticipate and prevent delinquency, let us be as zealous as we now are to care for and restrain the child already delinquent." But refusing aid to meet positive demands, by the institution of a system of "economy" that will save a few of the rich of the State a few cents a year, is not caring for many delinquents, either, it might be added.

And speaking of the great problems that confront the juvenile judges in their efforts to aid and assist in keeping down the rate of juvenile delinquency in the State; in restoring to respectability the poor, helpless little people that are finally driven into their court by the exigencies of Kansas life, Judge Osborne laconically concludes (p. 16, supra):

"One of the most serious problems confronting the judges of juvenile courts and those in charge of industrial schools is in making suitable provision for the care and supervision of wards on parole. It seems to be the notion of the general public that its duty toward a delinquent child ceases wholly when the child has been made a ward of a court or has been committed to an industrial school.

"The disposition of a child's case by the juvenile court may be entirely satisfactory, and if committed to an industrial school his progress and improvement may exceed the expectations of the officials there; yet, if on parole, great care is not exercised and the welfare of the child is not diligently safeguarded, all the previous efforts in his behalf may go for naught and the child again drift into evil habits and finally become of the criminal class.

"Up to the time of his commitment it is an easy matter to enlist a great amount of sympathy for a delinquent. However, after his discharge from the institution, at a time when he most needs sympathy and help, it is almost impossible to interest people in him. All of us, I think, lose sight of the fact that in each case the goal for which we are striving is not the punishment of a delinquent, but that we may make of him a good citizen. This is the object in placing around him such restraining influences as he appears to need during the period his character is being formed and his habits are becoming fixed.

"The authority to parole is a wise provision, if discreetly exercised."

So it seems that a boy once brought to court or even sent to the industrial school, and a girl, too, for that matter, even in Kansas, is not immune from a second offense. Just why this should be is a matter of considerable conjecture. They have no saloons to frequent, and according to Gov. Capper and ex-Gov. Hodges, the per capita of liquor consumption varies from $1.25 to $3.04 per year in the State, and it is hard to understand with all temptation worthy of the name stamped out by simple act of the legislature, the Kansas boys and girls will persist in refusing to live up to the press notices they receive away from home.

As an example of what invariably happens when the endeavor of a community is centered on one or two trivial violations of a ramshackle prohibitory law, and all the "reforming" is done either on paper or by word of mouth from pulpits occupied by public officials or ordained ministers, the following rather startling news item published in Gov. Capper's paper (the Topeka Daily Capital), March 8, 1916, should have caused the people of the State to stop and think, but apparently it was passed by as everything seems to be in Kansas, with an "Oh, well; what's the use?" "'There is an epidemic of immorality among the young people of Topeka.' This is the declaration of Robert Garver, assistant county attorney. As former judge of the court of Topeka, and with his experience as an assistant county attorney, his knowledge of conditions covers several years.

"Garver blames the jitney and the motorcycle for the downfall of many of the young girls, but the real trouble, in his opinion, goes further. Mothers and fathers are to blame.

"'Walk down Kansas Avenue any night,' said Garver recently, 'and you will see young girls 14 to 16 years old, powdered and painted and dressed to attract attention, simply displaying themselves and looking for an invitation to be picked up by some boy or man with an automobile or a motorcycle. Jitney drivers get much of the blame.'

"'But what's the matter with the parents? Can not mothers see as well as anyone else how their daughters are dressed? And why do they not know where their daughters are at night and what they are doing? But instead of knowing they are just letting their daughters run. It is time they were waking up.

"'It used to be that prosecutions growing out of immoral acts of or with young girls were an exception. There was not one such case in months at a time. Now there are five pending, all of which developed in the last two months, and there are several more which have been brought to my knowledge personally, but in which no official action has been taken.

"'It is time that something be done in Topeka, for something is radically wrong somewhere. We, in the county attorney's office, can not take preventive measures. We can only act when it is too late—when the harm already has been done. Such cases are usually brought to light by the city's welfare-board workers. But welfare workers, courts of law, and prosecuting attorneys do not get at the root of the evil.

"'I believe that the trouble is with the parents. Mothers do not know what their daughters are doing. Of the five cases now in court the girls all are between 14 and 16 years of age, and every one of them has a good mother who did not know what her daughter was doing. Usually the mother is the last person to learn.

"'When she does learn, she comes to this office with the names of the guilty men or boys and wants them prosecuted. There is nothing for us to do but prosecute when a complaint is made, although the prosecution does not help. It further injures the reputation of the girl by making her character public, and it brands some man or men as criminals.

"'The stories these mothers and the girls themselves tell are almost unbelieveable. It is hard to believe that such young girls have such experiences, and it is doubly hard to understand how mothers can be so blind to a daughter's actions.

"'And if the parents of young boys knew some of the stories these little, young, but experienced girls tell, it would make them mighty nervous. No matter how worldly-wise or experienced a girl is, the law protects her if she is under a certain age. But not so with the boys. The girl may be just as much to blame as the boy but the law punishes the boy and lets the girl go free.'"

At about this time several men and boys were undergoing a severe arraignment at the bar of Kansas justice because of tales that leaked out at the State asylum, and also at the Girls' Industrial School, where several young girls, inmates and otherwise, had been engaging in gross acts of immorality with men and boys, and a number of them officials in charge of the institution. In the same news article, Charles Bower, clerk of the Shawnee County district court, had some comment to make.

"I am not upholding immorality, but the law as it is in Kansas, which, regardless of the character of the girl, always protects her if she is under age and punishes the boy or man, is not right. The law should not have a double standard of morality. In cases where one is as much to blame as the other, if one is punished the other should be; and if one goes free the other should go free.

"Take the asylum scandal for example. Those girls are as wise as most men twice as old. They have caused all kinds of trouble, and yet they go scot-free and come in here to collect their fees for testifying against the men with whom they were equally guilty—actually using the law to make money out of their wrongdoing."

Perhaps the Topeka mothers mentioned by Mr. Garver have other fish to fry and have no time to watch their daughters. Perhaps they are busy saving the boys in other States or attending club meetings to devise ways and means to secure more legislation covering "vice," and perhaps they are just members of that great army of Kansas women mentioned by Judge Osborne, who don't care; who are poverty stricken and helpless and whose daughters work all day in a 5 and 10 cent store for less than $6 a week and must make ends meet somewhere. These matters should attract more attention than an occasional "story" in the governor's paper—constructive work is needed to correct these evils.

As Dean F. W. Blackmar, of the State University, so aptly remarked when commenting upon the woeful lack of constructive work along social lines in Kansas, "The stream of weakness, crime, and degeneracy flows steadily on, and will continue to do so until we go to the source and stop the fountains that feed it."

But where are the fountains? Perhaps we will never know, but irrespective, one thing must happen: The people, not alone of Kansas but of other States of the Union, must be awakened to the truth of Kansas conditions. Closing one's eyes to the greater and far more deadly evils that spring up when all legislative activity, all official declaiming, and all publicity available points to the exploitation of one so-called reform, which is in fact a bold fake, and declares because that one measure has become by law a "success" all other evils are stamped out, when all other evils, including grossest intemperance, are entwining themselves about the very hearts of the growing population, it is surely high time, if not too late, to unfurl the banner of shame that enshrouds this much scandalized and abused Commonwealth and permit, whatever the cost, the Nation to view it as it really is and not as painted by men who either do not understand conditions or are not honest or big enough to truthfully present them.

The Topeka State Journal, August 29, 1916, declares that "beer and whisky are responsible for more criminal cases than all other causes in Shawnee County. Of the 166 criminal cases docketed for the September term of court, 106 are for violations of the prohibitory law. Many of the other criminal cases are due to liquor—the drinking of it," and yet this is the city in which ex-Gov. Stubbs declared in his Chicago speech, made for the Anti-Saloon League, said there is no drunkenness and law violation. "On my honor as a man," he said, "I assert that drunkenness has been reduced to such a point that I have not seen a drunken man in the city of Topeka, a place of 50,000 inhabitants." Something is wrong, as County Attorney Garver remarked; the governor was either "too greatly inspired" when he delivered his notorious boost for prohibition or else he doesn't know what the drunken man looks like.

Of this speech, the governor himself said, "The evidence I submit to you would be considered as good and absolutely convincing in any court in Christendom," and on page 4 declared: "I assert that the brewery is originally, and the saloon is ultimately, the spawning place for the gambler, the prostitute, the robber, the wife beater, and, finally, the murderer," and as Kansas has no saloons or breweries, the question quite naturally arises—since she has not, why are these crimes and moral infractions increasing?

Ex-Gov. Hodges and Ex-Attorney General Dawson both extend their forensic abilities to the breaking point in praising Kansas City, Kans., "the largest city in America without an open saloon or a house of prostitution," and yet during the month of June, 1916, Judge Brady was forced to erect a whipping post at Sixth and Minnesota Avenue—the main business corner of the city—to publicly whip wife beaters. "Wife beating has become an epidemic," declared the judge. "Sending men to the workhouse will not help. I am going to publicly whip the curs"—and this in sunny, prohibition Kansas.

Ex-Gov. Stubbs also declared in his Chicago speech, that "We have no idiots, no imbeciles; we are rearing a stalwart citizenship." In his speech before the sixteenth annual session, Kansas Conference, Charities and Correction, Hon. H. C. Bowman, president of the board of control, declared: "There are more idiots, imbeciles, and feeble-minded persons than there are insane, but suitable institutional care has not been provided for these mental defectives. * * * The increase among the feeble minded is much more rapid than among the normal. The close relationship between feeble mindedness and crime is beginning to be acknowledged, some authorities holding that at least

25 per cent of the inmates of all penal institutions are mentally defective, and a much larger per cent of the inmates of immoral resorts are also mentally defective."

This would scarcely support the ex-governor's views, and in fairness to Mr. Stubbs, we must assume that his overzealousness merely caused him to step beyond the mother earth of fact. However, these statements are all sold as "truth in the open market," and should either be denied, retracted or the men making them, and the purposes for which they make them, should be exposed.

On September 22, 1916, the State Federation of Women's Clubs of Kansas, mapped out their program for the 1917 legislative work they intended to demand performed by the lawmakers of the State. The following "planks" were agreed upon, according to the Topeka State Journal, September 22, 1916: "A law providing a detention home for unfortunate and diseased women, ineligible for admission to the Industrial School for Girls, at Beloit. In effect, an institution for young women resembling the State reformatory at Hutchinson."

(The Industrial School for Girls at Beloit can not admit girls over 18. The new school would be in the nature of a "female penitentiary," such as the reformatory for boys at Hutchinson. The girls in question are too old to go to Beloit and not criminal enough to be sent to the penitentiary. In fact, they may not be criminal at all, but upon conviction of being "unfortunate or diseased," could go there the same as though convicted of a crime. The suggestion is interesting, to say the least. Too bad somebody does not call Gov. Capper's attention to it.)

Other "planks" covered better censorship laws for movies, so the boys and girls would cease to be so reckless; and a stronger mothers' pension law.

Senator Satterthwaite, of Butler County, introduced a bill, January 26, 1917, providing for a new State Industrial School for Girls, and carrying with it an appropriation clause calling for $200,000 to be spent upon it during the succeeding biennium; also providing that none of the appropriation be spent for land upon which to build it. At least 60 acres must be donated by the community "bidding" for the location.

The stream of delinquents that constantly marks a course into every juvenile court of the State as well as the State institutions, is causing much anxiety among those few in the State who are really endeavoring to stop the flow at its source. At the third annual session of the State Educational Council, held in Topeka during January, 1916, a proposition was strongly advanced, according to the Topeka State Journal, January 22, 1916, for the establishment of a "Special School of Opportunity" to be a State institution, in the hope that such an institution might possibly aid in solving the vexing problem. "The Old Man of the School Room," as the defective child was called, is becoming more and more of a burden each year to Kansas school-teachers. That they are not all confined to the "border counties" or the towns is evidenced by a declaration by County Supt. Nelson, of Norton County, a "short grass" county. "Defective children in the country," said Mr. Nelson, "but remain a butt for the jokes of the normal youngsters and a menace to the schools until they commit some overt act that will bring them before the juvenile court and place them in proper institutions."

The Topeka State Journal, January 26, 1917, made public a plan to build a new detention home in Shawnee County to meet the growing population among destitute and delinquent children and solve, if possible, the great question of their welfare. "Shawnee County is to have a modern and permanent detention home, owned by the county," states the Journal, "if plans announced by the board of county commissioners to-day materialize. * * * For many years Shawnee County has not given enough attention to destitute and delinquent children, welfare workers assert. The temporary home has been a success, but as the old board handled it, it did not give the children, all less than 16 years old, as good care and as much attention as is received by the inmates of the county jail. * * * Judge Ralph Gaw, of the probate court, said to-day that any arrangements the board make to better conditions for the children would be approved by him."

According to the Topeka State Journal, January 30, 1917, "The Kansas Council of Women is holding its annual session in Topeka to-day," and among the matters of great importance under consideration, was rallying sufficient political strength to put over a bill in the legislature providing for an industrial farm for women (a new State institution)—to keep the women and young girls out of the State penitentiary and its evil associations. The growth of female population in State institutions has been so marked during the past few years, especially among the women, this action is being "mothered" by the strongest welfare workers in the State. One of the leaders is Mrs. W. A. Johnston, wife of the chief justice of the supreme court, who recently declared in an Anti-Saloon League "contribution" that "Kansas has certainly had better morals and better manners since we kicked the Wholesale Liquor Dealers' Association out of the State." (Kansas City Star, Mar. 14, 1915.)

The Topeka State Journal, January 26, 1916, contributed to the public's store of knowledge of actual conditions there, the following, as a letter from one of the good mothers of that city, where "We have certainly had better morals and better manners" since kicking the saloon out:

"Many parents try so hard to rear their children right and discourage them in the use of liquor and tobacco, only to have their advice ignored. * * * If the men and boys can not refrain from these dreadful habits, we will welcome the time when they can neither get liquor nor tobacco. We can see boys of from 15 to 20 years of age smoking 'coffin nails,' as though there was no law to stop them. This law if properly enforced will keep them from acquiring the habit (liquor and tobacco) until they have had time to get a good education.

"Yours, for law enforcement,

"Mrs. Martha McCammon."

Gov. Capper proposed to the State superintendent, according to the Topeka Daily Capital (his own paper), January 27, 1916, that all the school children be ordered "to indulge in a letter-writing campaign some day this spring." The plan, in brief, "is to have a letter-writing day in the public schools, on which every pupil will write at least one letter to some one outside the State, extending an invitation to visit Kansas" and survey the "results" of the enforcement of laws prohibiting the sale of liquor and the sale and use of cigarettes. Just how far the plan got with the State superintendent is not known. However, probably not very far. The State superintendent is elected in Kansas and has his own political fences to look after.

In January, 1916, according to the Topeka Daily Capital, January 29, 1916, the Kansas Council of Women began preparations to demand of the 1917 legislature that a women's reformatory be established to care for the delinquent, diseased, and unfortunate women. Many suggestions as to location were made, but all agreed it should be close to some State institution where medical aid could be given the unfortunate and diseased. "Because of the existence in our State of a large number of women who are both unfortunate and transgressors of the law," said Mrs. J. M. Miller, the president (wife of an ex-Congressman), "it is necessary to use restraining and reformatory methods. This is a religion without bigotry, a charity without coldness, and a universal philanthropy and human kinship. It is primarily the work of women for women."

On the day following (January 30, 1916), according to the same newspaper (the Topeka Daily Capital), T. A. McNeal, a Kansas writer, thus expounded the virtues of the State:

"* * * With all our rhetorical extravagances in her 55 years of existence as a State, Kansas has made greater impression on the political, economic, and moral of the Nation than perhaps any other of the sovereign States * * *. The first of the States to adopt constitutional prohibition, through the stress and storm of criticism and attack and misrepresentation lasting for more than 30 years, the sentiment of Kansas has grown stronger steadily in support of the theory she espoused in her youth, and to-day she is the acknowledged champion and most successful example of its practical operation."

It is needless to add that Mr. McNeal is a writer on the governor's paper, and also that the above was afterwards printed by the Anti-Saloon League of America, as reflecting "true Kansas sentiment."

When asked on the same day (Jan. 30, 1916) what Topeka needed the most, the mayor, Jay E. House, according to the above newspaper replied: "More common horse sense. Tolerance is another thing Topeka needs. The town needs to be more tolerant of things its citizens do. It ought to let the individual go ahead and do as he pleases, without trying to dictate his actions. A little less meddling in each other's affairs would be a blessing. What the average citizen wants is a government that runs so smoothly he does not know he is being governed. If a town is run on a common-sense basis, if the citizens use common sense in their relations with each other, then the town will be benefited."

Along the same line, talking "common horse sense," Mayor House was again quoted in the Topeka State Journal, August 23, 1916, as follows: "Declaring that Kansas might as well censor the news printed in the newspapers, the advertisements in daily papers, and the display-window advertisements on Kansas Avenue, Mayor House to-day denounced the movie censorship law of Kansas. The attack on the law was made in an address in Representative Hall before motion-picture exhibitors and film men. 'I seldom pass a window display on Kansas Avenue that it doesn't move me to blushes,' said the mayor. 'I have never been moved to blushes at a movie show. True, I have been bored, but I never blushed.' Then the mayor waxed sarcastic: 'By cutting out the display of a pretty ankle or a short dress,' he said, 'I suppose it has caused the women to elongate their skirts instead of shorten them. By cutting out cigarette-smoking slides I suppose it has kept every youth in Topeka from marching down the street with a cigarette in his mouth. By cutting out the barroom scenes I suppose it has caused not more than 60 per cent of the people of Topeka to keep liquor in their homes.

"'We all know why the motion-picture censorship was passed. It was because the people needed the money,' he said in conclusion."

Demanding that greater restrictions be placed around the young men of Hutchinson, and particularly the boys, to protect them from the cigarette, the pool hall, and the immoral show, a delegation of young men, representing 15 different young people's organizations of Hutchinson, called on the city commissioners June 6, 1916, according to the Topeka Daily Capital. Hutchinson is 150 miles from Missouri, and is one of the "bright shining spots" where prohibition is advertised to have worked wonders in saving the boys, but it seems that the boys are not exactly "pure" even so, and failing to see a saloon doesn't seem to have helped them much.

The great need for a new institution to care for wayward, delinquent, and neglected children throughout the State has become so apparent that even Gov. Capper has on several occasions during the past year indorsed a plan to place such institutions in various parts of the State, and more particularly one in Shawnee County.

And the criminal instincts of the citizens have become so well developed that at Salina, on June 14, 1916, according to the Topeka Daily Capital, an organization was formed "whereby every policeman in the State" become a deputy sheriff, and through which organization all of the officers engaged in the "enforcement of the law" (prohibitory law and others) hoped to work in closer cooperation.

It is the old, old story that when the cat is away the mouse will play. Kansas City, Kans., has been held up so often as the cleanest, most progressive, most moral city in America since the open saloons were "driven out"; a city where children are happiest, men most sober, landlords renting only clean, sanitary property and getting as rent the money that once slid over the mahogany at 5 and 10 cents a clip; that a revelation greeted Gov. Capper when a casual survey of living conditions there in April, 1916, almost took his breath. The "cat" has been away preaching the doctrine of "happy homes," "clean living," and "strength in morals and conviction," hence the "mouse" has been doing some high carnival. The searchlight of public opinion can not play on the dark alley of filth, crime, and disease and on the spire of a church at the same time.

"'The tax records of Kansas City, Kans., show that some of the most filthy, tumble-down rental property is owned by wealthy citizens or corporations controlled by them. These men live well on the 15 per cent they get from the rental of this uninhabitable property.' Gov. Capper of Kansas told the members of the Council of Women's Clubs and their friends at a meeting at the Kansas Side High School last night," said the Kansas City Times April 7, 1916. And pointed out clearly who was to blame for some of the bad conditions. The governor has had the county tax records examined, and he told the women that he was surprised to learn who owned some of the property. "There should be a law compelling a landlord to clean up the property he rents," the governor said. "The State law should see that the room in which the child sleeps is in a sanitary, healthy place, and not a dark closet at the end of a blind hallway in a tumble-down shack owned by a man who thinks only 'How much rent can I get?' The health records at Topeka show that in Kansas City, Kans., of the 2,100 children born last year, 216 died before they reached the age of 1 year, and 60 per cent of diseases that can be prevented." But the governor has taken no steps toward having such a law passed; and in the face of this condition, many times since visiting Kansas City, Kans., on the above date, has declared with much vehemence that prohibition has made the homes of Kansas City, Kans., much cleaner, happier, and more prosperous. The same conditions he mentions still exist there and are becoming more and more aggravated all the time, for the reasons set out in the governor's speech. The

"big men" in Kansas City, Kans., are busy also boosting prohibition so the legislature will not cast its eyes in the direction of its rental property.

In the face of the great demand advanced by every civic, religious, and welfare organization that the State make better provision for her unfortunate boys, girls, men, and women, and use increased measures and better developed methods to prevent delinquency, crime, and degeneration, the Kansas statesman for the most part is so busy currying public favor by boosting the State, both at home and abroad, especially at home if a candidate for office, that even the members of the legislature have come to look upon these demands as elements of a "quiet little graft game," and almost without variation turn them down. An example of what crass boasting is was presented at the Sixteenth Annual Session of the Kansas Conference, Charities and Correction, when Hon. R. M. Anderson, of Beloit, a candidate for Congress, delivered an address which no doubt was "homespun" weeks before the momentous occasion on which he spoke. Other speakers, especially among them Prof. Blackmar of the State University, handed the poor old State some rather severe punches, but Mr. Anderson's was a "vote-making" speech, of the usual Kansas type. It is submitted as an interesting observation of some of the things the people there like to brag about: "Kansas is particularly fortunate," he said, "by reason of a long period of advancement along moral, sociological lines, and an absence of congested municipal centers, the heritage of a splendid school system (ranking twenty-ninth in efficiency, according to Prof. Blackmar's address the next day), all of which tend to reduce the question of crime prevention as it pertains to the juvenile, to the most elementary principles—a reduction of all activities to the homely philosophy of the simple life." He wasn't elected.

At the same meeting (see report of above conference, pp. 23 et seq.), in discussing the juvenile court and ways and means of reducing crime among young men and women, boys, and girls in the State, Judge John True Sims, of the Wyandotte County (Kansas City, Kans.) probate and juvenile court, said:

"I want to say at the outset, as the judge of the biggest juvenile court in Kansas, that I am an optimist and not a pessimist. I do not believe that all the girls and boys of Kansas are on the way to the bow-wows. I believe in all the remedial agencies which have been advocated and which are doing very efficient work, but I believe also that the best place to stop bad conditions is with the children and the parents. I want to tell you fathers and mothers that 95 per cent of all girls and boys that go wrong do so because of neglect. If parents did their duty, there wouldn't be so much of this scientific discussion necessary.

"I am a believer in the old adages that 'a stitch in time saves nine' and 'an ounce of prevention is worth a pound of cure.' As one of the elements of society the juvenile court was created to help children. In an age of great cities like ours it is not 'back to the farm,' but from the farm to the town. We must deal with the problem as we find it. * * * The boy of to-day is in close proximity with a lot of pitfalls. Don't think that you can say to your boy, 'Get out of here and go somewhere and grow up,' and your duty will be done. The boy on the street will not grow into a good boy; he will grow into a bad boy. * * * The time to discipline your boy or girl is the time when he or she is in the cradle. Don't wait until they are 10 or 12 years old. * * * There are many parents who don't know how to rear children. It isn't the child's fault.

"The great State of Kansas should reach down into its pocket and give something for the future welfare of its citizens. We ought to have a place provided in large cities to give a job to the boys out of school and under the age of 16 years, so as to employ their spare time in some useful pursuit which will not only be remunerative but also help lay the foundation for some trade, profession, or art upon which to build for the future."

After commenting on the small cost ($1.07) per annum per capita for running his juvenile division, Judge Sims continued:

"A short time ago a juvenile-court officer from California heard that I had made this statement and wrote me a letter of inquiry, asking, among other things, for a picture of our detention home and its arrangement. I had to make believe I had never received the letter. I couldn't send them a picture of the little old log house set apart as the detention home for the most populous and wealthy county in our State.

"The State of Kansas ought to dig down in its pocket and provide more presentable quarters for so important an institution as this by adequate laws governing such institutions.

"The State should take the necessary money and build us a detention home to keep these boys and girls busy between the time when they graduate from the common school and the time when they are old enough to work in the factory. They should have a place where they could profitably spend this intervening time. But it is hard to secure anything like this. People will admit that things like this are needed, but they do not furnish the necessary funds to make them possible.

"You get next to a man when you take a dollar out of his pocket. Conservation of natural resources is now a very popular subject. They talk of conserving our natural forests and of conserving the water in our ponds and lakes. That is all right; but the greatest conservation that they can ever make—the conservation they have omitted—is the conservation of human kind.

"That is conservation that will pay best."

State Tubercular Sanitarium at Norton.

Following the action of the legislature of 1909, which declared tuberculosis a communicable disease and one dangerous to public health and reportable to the State board of health, the legislature of 1911 enacted a law creating a State sanitarium for the treatment of pulmonary tuberculosis. The amount appropriated for this purpose was $50,000, which was to be used to purchase the proper site, erect and equip the necessary buildings, and pay the running expenses for the period of two years. Because of difficulty in obtaining possession of the land the advisory committee, composed of five physicians appointed by the governor, had selected, the matter of a location was unsettled when the 1913 session convened, at which time the former act was repealed and $49,347.47, the unexpended balance, reappropriated under a new act, but the reappropriated funds were not available until July 1, 1913, after which time selection of a site near Norton was agreed upon. "In March, 1914," says the superintendent's report (Fifth Biennial Report Board of Control, p. 173), "the contract was let for the construction of a boiler house, laundry, dining room, and kitchen pavilion No. 1. These buildings will be completed about September 1, and 16 patients can be cared for."

In commenting on the very small amount of the appropriation, he further declared, on page 174: "The amount of room for the care of patients is by far inadequate; there are enough applications on file now to fill several pavilions the size of the one that will be opened in September. There are several hundred cases in Kansas that, with the proper care and instructions, could be returned to useful citizenship. In my opinion there should be erected at least three more pavilions of the same size as the one just built, together with a hospital pavilion and an administration building."

In a speech delivered by W. E. Brooks, chairman of the State board of control, at the laying of the corner stone of this sanitarium, June 14, 1914, he said (Fifth Biennial Report, supra, p. 177): "Science has revealed that it is not omnipotence or nature that afflicts mankind with pestilential diseases, such as tuberculosis. It is man himself, through his own ignorance and uncleanliness, and only through such means as this sanitarium of which we are to-day laying the corner stone, can such education come as will benefit mankind and strengthen his power of resistance to disease. * * * Kansas men and women are of that splendid type of energetic, fearless workers who, knowing that eradication of tuberculosis is within the 'power of man,' will not rest until every possible means for prevention and cure has been perfected and utilized."

The 1915 legislature (laws of Kansas, 1915, ch. 335, p. 431) created a board of medical examiners, to be appointed by the superintendent of the sanitarium, whose duty it shall be to examine all applicants for admission, receiving $3 as their fee for each examination. Also provided that those desiring treatment and who could pay should be charged a stipulated fee, and those desiring free treatment shall apply to local authorities of his or her county having charge of the relief of the poor, who shall thereupon issue a written request to the superintendent for admission of such poor persons, and whenever there are vacancies, caused by death or removal, the applicants shall be received in the order of the filing of their applications. All fees arising from "pay patients" were required to be turned over to the State treasurer.

Capter 41, page 47, Laws of Kansas, 1915, appropriated $26,000 for maintenance, salaries, etc., for the fiscal years 1916 and 1917, and $12,500 as a special appropriation available during 1916 for the building of a new cottage and equipment for the same.

It seems since the legislature finally were convinced that tuberculosis was really a disease and not a crime, as insanity was for years considered and as drunkenness is now considered, hundreds of the people of Kansas (and no applicant can be received who is not a resident voter of the State, male or female) began to avail themselves of the chance to secure treatment, the large majority of them being "poor patients," as usual.

Under the headline "Kansas a beggar" the Topeka State Journal of December 20, 1915, laid bare some of the crying needs of this institution, which has had a marvelous growth since its opening in 1914.

"Because the legislature 'played politics' in the fight over appropriation bills during the recent session," said the Journal, "there is no provision for the care of 200 men and women who are suffering from tuberculosis and have begged for admittance to the State sanitarium at Norton. Now the State has issued an appeal to the public for funds and individuals and charitable organizations will be asked to do the work the State refused to do."

And in the same issue of the Journal, Dr. C. S. Kenny, the superintendent of the institution, declared under a headline, "Kansas poorly neglected; live stock given preference in State aid":

"There seemed to be plenty of money for the care of horses in the foot-and-mouth-disease-ridden counties, but there is nothing for the care of the men and women who are dying from tuberculosis. Some of the letters we receive are pathetic. They beg and plead for admittance, but there is no place to put patients.

"For $175 to $200 we can care for two sufferers and may save two lives, but the State has no money. There is enough to provide food for the patients, but not one dollar that can be used in providing quarters. There is only room for 40 patients in the institution, and quarters for at least 200, from that up to 500, if not more, should be provided for at once."

During the year private funds were collected wherever and whenever the opportunity arose for the purchase of tents and other equipment to be used at this State institution. Thousands of dollars were collected in the State by the Anti-Saloon League and kindred "temperance" organizations, not to mention a score or more of revivalists, but little, if anything, could be provided by either public or private subscription to this most worthy institution.

"At the end of June, 1916, every dollar of the appropriation had been expended in making the prescribed improvements, and it will be necessary to depend entirely upon the regular appropriation and fees for the year 1917," said the superintendent in his report for 1916. (Sixth Biennial Report, Board of Control, p. 213.) "On May 1, 1916, there was nothing in the maintenance and repair fund, $8.49 in fees, and only sufficient in the salary fund to pay the wages for May and June. It was necessary to take the teams off the farm and hire them out to contractors and sell some of the stock in the open market in order to obtain funds to run until the end of the year," he declared on page 214. Also: "It is not possible to run at full capacity during the year on the meager appropriations provided, and I would recommend that the tents and hospital be abandoned until such time as the legislature can give relief."

Of the total of 51 patients admitted up to June 30, 1916, they came from 26 different counties; 33 were charity and 18 pay patients. (Supra, p. 216.)

"As milk and eggs are very essential in the treatment of tuberculosis and should be under careful supervision, we should be equipped with a modern dairy barn, with a sterilizer, and bottling machine. By having the proper equipment pure milk could be had at all times. Our present means for handling dairy products are very crude indeed," he added, in making many recommendations for improvement. "No provision has yet been made for the housing of the farm employees," he stated in conclusion. "Their present quarters have been established in a couple of small rooms in the barn. Better quarters should be provided."

And, in speaking of the equipment needed, he stated (p. 221): "Inasmuch as the power plant is equipped with a second-hand generator removed from the orphans' home, it would be advisable to purchase a new one of 60-kilowatt capacity, which would be sufficient to run the institution for all times. The new 75-horsepower boilers are sufficient for running the present equipment, but with the addition of new buildings it will be necessary to add one more of equal capacity," which does not sound as though the superintendent intends to close this State charitable institution for a little while at least.

An emergency appropriation of $22,750 was rushed through the legislature March 1, 1915, in the face of Gov. Capper's plea for economy in all State charitable appropriations, and this was completely exhausted by the end of June, 1916. The report of 1916 (supra, pp. 214, 215) demanded appropriations aggregating $175,000 to meet the crying needs of this infant State charity. According to the Topeka State Journal of February 10, 1916, the Larned State Hospital for the Insane and this institution are the only two to receive new buildings, although all of the State charitable institutions demand them to care for the increasing population of insane, feeble-minded, epileptic, and tubercular patients, as well as the pauper insane, who can not now be taken care of, even by some of the counties. "Norton receives the greatest increase in appropriations," declares the Journal in commenting on the recommendations contained in appropriation bills prepared by the house ways and means committee. "The committee recommends $153,940, as against appropriations of $61,308 in 1915, or an increase of $92,632. Several small buildings will be erected to meet the increasing demands on the new Norton institution. These buildings will cost about $50,000."

"Larned draws an appropriation for a new State building. The building will cost about $35,000. Appropriations for the new western insane hospital are $17,931 in excess of those of two years ago."

Just what has caused this "wave of tuberculosis" is not clear. The persistent claims of many prohibitionists that "even tuberculosis and pneumonia can be laid at the door of the open saloon" seems to be blasted in this showing. Bootleg whisky and mail-order rotgut, not to mention lemon extract and hair tonic, jamaica ginger, and furniture polish, may play their part in this terrible harvest of human life, but this much is true: Kansas can no longer brag that "the prohibition atmosphere even" is conducive to longevity, good morals, and supreme happiness. She may lay the claim through the agency of her moral dictators who travel abroad to save Boston and Chicago and California, but at home they know different. Drinking may have nothing at all to do with the increase in tuberculosis, but if it has in Kansas it can be laid at the door of the bootleg, whisky-soaked system. They have the white flag up there without doubt, but it is the flag of the white plague.

—

PROHIBITION AND POVERTY.

The modern theory that license and poverty go hand in hand and that prosperity and prohibition travel the same path is a product of the fertile brain power that propels the Anti-Saloon League. As an appeal for votes against "the liquor traffic," it is just unique enough to catch many unthinking people or people who, if they do stop and think, immediately conclude that as "the liquor traffic" is confined only to the open saloon, according to the league, wiping out the saloon will have a tendency to "remove the temptation," and might possibly help in the reduction of poverty. Aside from many empty claims and statements for which no proof is available, however, this theory is a mere air bubble. It was conjured up as a vote-catching scheme and seems to have served its purpose in some localities.

Of late years, and within the past seven, to be exact, since preaching prohibition under the auspices of the league has become one of the chief pastimes of the Kansas statesman, the world has been told time and again and hears day in and day out that the Kansas system has so reduced poverty that almshouses are being emptied, sold for agricultural experimental stations, and torn down to make room for the industrious "commercially reformed" victims who but a few years before were staggering, penniless drunkards, or "moderate drinkers," whose money found its way across the bar and into the saloonkeeper's pocket, to be hoarded and spent for finery, including a silk-tile hat and a diamond as big as a hickory nut.

However high the hopes of these enthusiastic people may be, the facts fail to prove a single contention or claim advanced.

There were 735 paupers in Kansas almshouses January 1, 1910, according to the United States Census, Bulletin 120, page 18. It was during that year that ex-Gov. Stubbs made claim in his Antisaloon League speech in Chicago that the legislation of 1909 had dried the State up absolutely and that pauperism was steadily on the decrease because of that fact. Hundreds of similar claims have been made since then by Kansas newspapers, carrying inspired news items, public speakers, State officials, and ministers, who have taken as gospel the word sent out through official organs of the Antisaloon League in quoting members of the various Kansas political parties. Of late years factions and parties in Kansas "fight to the death" to get into office, make accusations that stretch the imagination to conceive their enormity, but they have all come to look upon prohibition as the "saving grace" because the church crowd favors it, and the church vote in Kansas is a political asset. Bidding for it knows no bounds.

To bolster up the claim that prohibition has reduced poverty in Kansas, valuable use is made of the purported high per capita of wealth in the State. But a very important matter is purposely overlooked when advancing that argument, which should be fully understood, and that is that the "per capita" wealth is figured on the assessed valuation of property as compared with other States. For instance, many States, if not the great majority of them, assess taxes on a valuation of all the way from 33⅓ to 40 per cent of actual value, while in Kansas the assessed valuation is 100 per cent. Prior to the enactment of chapter 316 of the Laws of 1911, page 565, Kansas real estate was assessed at one-third valuation, but this law changed the system so that now "All real property in this State liable to assessment and taxation shall be assessed biennially at its fair market value in money," and the local assessor merely suggests what he thinks that should be. If the county board feels the pinch of poverty it may increase the "fair market value in money," and furthermore the State tax board, should it care to—and it always does—has the authority to increase it again. Many thousands of acres of land in Kansas have been given an enormous "value" by this system, and there is plenty of it assessed at from $100 to $150 per acre that can be bought as low as $50 and $60 per acre.

The same assessed valuation plan applies likewise to personal property.

High per capita wealth has so little to do with poverty among the inhabitants of a city or State, however, it is folly to argue the matter. If distribution of wealth per capita is high poverty will be low, and also the reverse is true.

If it were true that the mere enacting into law theoretical measures would increase wealth and decrease poverty, Kansas could lay claim to the distinction of trying to do so at least, and if enforcing the law, even though thousands upon thousands of dollars' worth of property is confiscated yearly and the most dire calamity visited upon the violator, would produce wealth to anyone save the prosecutor who carries on the crusades, Kansas would also be entitled to claim that she is at least furnishing plenty of evidence of effort. But where a law is admittedly so unpopular that the greatest lengths are required to even frighten a small portion into submission, and where violations are reduced to artful and scientific practice, little can be said to recommend the system, unless, perchance, the claims made are amply proven by reviewing the record the State has made during the period of endeavor.

With the dry measures of 1909 in "full force and effect," to which should be added the additional attempts of the legislature of 1911, as well as those of the 1913 assembly, each and all of which advertised as "successfull" measures, it would stand to reason, no matter how much of a population gain was made, that poverty would be reduced to such an extent that the almshouse population would show a decrease also.

However, reference to the fifth biennial report of the board of control, published in 1914, at the close of the biennial year June 30, shows that there were, during that period, 14 children's societies and institutions receiving State aid, 37 hospitals, 5 rescue homes, 6 adult homes, 3 associated charities and provident associations, 2 miscellaneous institutions, and 6 private sanitariums and asylums for the treatment of insanity and nervous diseases. The institutions for care of neglected, dependent, and poverty-stricken children had 854 inmates during 1913 and 896 during the succeeding year, an increase of 42. The same institutions cared for 946 dependent children during 1915, or an increase of 50. During the year ending June 30, 1916, they cared for 953, according to the sixth biennial report of the board of control, published at the close of the biennium, June 30, 1916.

The 37 hospitals receiving State aid cared for 4,247 charity patients during 1913 and 4,694 during 1914. According to the sixth biennial report, board of control, pages 232–233, 40 hospitals received State aid instead of 37 as formerly, and these institutions cared for 4,766 charity patients during 1915 and 7,681 during the year closing June 30, 1916.

Aside from the regular charity patients cared for during the fiscal year 1915, these institutions cared for 645 patients who promised to pay and from whom collection could not be made because of their poverty, and during the fiscal year ending June 30, 1916, they cared for 905 of such patients. The three largest hospitals did not make any report on this feature in 1916.

According to the fifth biennial report, supra, covering the biennium ending June 30, 1914, 5 rescue homes cared for 135 charity patients during the year 1913 and 154 during the succeeding fiscal year ending June 30, 1914. During the fiscal year 1915 they cared for 74 charity patients and for 110 during the fiscal year ending June 30, 1916.

The 3 adult homes cared for 51 charity patients during the fiscal year 1913. In 1914 there were but 2 such homes, but they cared for 70 charity patients. (Fifth biennial report, supra, pp. 228, 229, 230, 231.) During the fiscal year 1915, 3 such institutions received State aid and cared for 54 charity patients, while the same institutions cared for 55 charity patients during the fiscal year ending June 30, 1916, aside from refusing aid to 10 destitute applicants. (Sixth biennial report, supra, pp. 249, 250, 251.)

The associated charities and provident association organizations receiving State aid were likewise crowded to their doors during the years covered by the fifth and sixth biennial reports of the board of control—1913–14, 1915–16. The institutions in Kansas City, Kans., organized in 1903 "for the relief of distress and poverty (constructive philanthropy)" had 1,352 registered cases during 1913 (Fifth Biennial Report, p. 232) and 1,487 during 1914. Miscellaneous cases for the years 1913 and 1914 totaled 5,391. No complete detailed report of this institution is set out in either the fifth or sixth biennual reports, because of lack of space. This institution had a total of 1,630 registered cases during the fiscal year 1915, an increase of 143 over 1914 and 278 over 1913. For 1916 the registered cases totaled 1,680, an increase of 50 over 1915, 193 over 1914, and 278 over 1913.

There were 12 tuberculosis cases treated and supplies furnished during the fiscal year 1915 and 38 during the fiscal year 1916. (Sixth biennial report, supra, pp. 251–252.)

A complete report of the Topeka Provident Association could not be incorporated in either the fifth or sixth biennial reports, because of lack of space. However, during 1913 this institution received $1,800 from Shawnee County, aside from many other donations, amounting to $2,314.75, and $2,540 from Shawnee County during the year 1916, aside from $3,541 in other donations. The salaries for 1915 were $2,518.05, paid out of over $6,300 received, and during 1916 the salaries were $3,444.25, paid out of over $8,800 received from various sources of donation.

Another of the foremost charitable organizations of the State is the Associated Charities of Wichita. During the fiscal year 1913 this institution cared for 554 charges, some of whom paid for care by small cash donations or work. The charity patients that year totaled 263. During the succeeding year the institution cared for 1,106 charges, of whom 519 were wholly charity inmates. The Sixth Biennial Report of Board of Control does not show what the population of this institution was for the years 1915 and 1916 (p. 253), but the report indicates it is very much larger than formerly. It was necessary to build a $20,000 permanent institution during the fiscal years of 1913 and 1914, during which time $2,927.61 was spent in charity work for 1913 and $4,701.38 was spent during 1914, both independent of the sums spent for salaries, etc. The State donated $200 to this institution during both of these years, as was the case of the succeeding two years also.

During the fiscal year 1915 this institution spent $12,107.30 and during the fiscal year 1916 $14,338.39 for strictly charitable purposes. Aside from State donations amounting to $200 a year, it receives $4,800 annually from Sedgwick County and $2,400 annually from the city of Wichita. (Sixth Biennial Report, supra, p. 253.)

The Topeka Association for the Study and Prevention of Tuberculosis does not give a detailed report of its work during the biennium ending June 30, 1914 (Fifth Biennial Report, supra, pp. 235–236), but is one of the private charities which the State helps to support. It received $100 per year. During 1913 Shawnee County and other private donators, gave it $1,650, and during the year 1914 Shawnee County donated $960. This institution received $900 from Shawnee County during the year 1915, aside from State and other donations. During the fiscal year ending June 30, 1916, Shawnee County donated $3,600. During the fiscal years 1915 and 1916, 63 charity patients were cared for in this institution. (Sixth Biennial Report, supra, p. 254.)

The Foster Humane Society, of Topeka, incorporated in 1896, does not render a full account of its work during the period covered by the Fifth Biennial Report (supra), page 236; nor for the periods covered by the Sixth Biennial Report, page 255, but cares for "man and beast," its purpose being, "general humanitarian work, primarily caring for animals, but extending charity and benevolence to indigent people."

Anyone in need, who is worthy of receiving same, receives charity aid, and the care and protection of animals constitute the scope of the work done by this charitable institution, according to the Fifth and Sixth Biennial Reports, pp. 236, 255. The State contributed $100 annually to this institution.

There are three children's institutions under the group of private associations and institutions of Kansas not receiving aid from the State. The Kansas Children's Home Society, of Topeka, nonsectarian and interdenominational, receives children from birth to 16 years of age, delinquent, if not incorrigible, but sound mentally. Legal surrender of the child is required. The purpose is to find suitable homes for them and supervise them until they become of age. During the fiscal year 1914 this institution received 104 children. During the fiscal years 1915 and 1916, a total of 208, an increase of 100 per cent.

There are many other private charities in both Wichita and Topeka which do not receive State aid, because the lack of revenue will not permit the State to meet their demands. In the present session of the legislature (1917), however, ways and means being worked out to donate over $30,000 per year instead of $14,000 as was done by the legislature of 1915. The private charities supported strictly by private donations and some municipal donations from the city of Topeka, have been incorporated under the name of the Confidential Charities, during the past year and three months, which, according to the Topeka State Journal, of February 9, 1916, is Topeka's clearing house for charities. "During January," says the Journal, "42 new charitable cases were reported to the Confidential Exchange. * * * In addition to the 42 new cases, 87 reports were made by agencies cooperating through the general office." Since January 11, 1915, when the exchange was organized, 441 new cases have been added to the records of the office, in addition to the 629 that were taken from the records of the most prominent charitable organizations when the exchange opened.

The annual report of the Topeka Orphans' Home was published January 1, 1916, and, according to the Topeka Daily Capital the majority of the children of the 61 received during the year, 24 of whom had been placed in homes for adoption, were under school age.

These and many other charities are working constantly to aid the grinding and merciless weight of poverty that staggers the conception when a real clear vision permits of a careful survey.

That all the provident work is not confined to the cities, however, the board of control reports for the fifth and sixth biennial show reports of the Ladies' Benevolent Society, of Cottonwood Falls, a mere village in an inland town, but which has always received State aid for its institution since its incorporation in 1892. The purpose of this admirable charity is "to feed the needy, clothe the poor, send the sick to a hospital, aid in keeping the children in school," etc. The only condition exacted is that the person must really be in need of help. This institution receives $200 a year from the State and is constantly petitioning for more, and probably will receive much more this year. Here is a sample of the work done by the private charities in Kansas. (From the report of the institution herein mentioned, for the years covered by the Fifth Biennial Report, Board of Control, 1913–14). "At Christmas a half dozen poor but worthy widows given $5 each; six widows and a man given $5 each; one unfortunate girl assisted, costing about $75; milk furnished several ailing babies; when family is known to be worthy but poor, order is given for groceries, clothing, etc. Orders are limited in amount. Half a dozen widows' taxes paid; hospital fees paid for two applicants; tuberculosis tent furnished when necessary; helped buy a home for a tubercular man."

During the year 1915 this institution helped 21 destitute families, aside from aiding many unfortunate girls, widows, and other helpless people. The exact number helped for 1915 or 1916 is not shown in the Sixth Biennial Report of the Board of Control. (P. 252.)

Cottonwood Falls is a village of only 899 people. For some unknown reason many larger towns have been "overlooked" in distribution of the political pie consisting of State charity aid, but nevertheless this furnishes a very clear example of the type of charity work carried on in many Kansas towns, which, though they have been crowded away from the State pie counter, spend as much in proportion to their population as does Cottonwood Falls. During 1913, aside from the State aid given the Ladies' Benevolent Society there, $50.40 was raised by membership dues, as compared with $183.54 from the same source during 1914. The dues for 1915 and 1916 were greatly increased. (Sixth Biennial Report, supra, p. 252.)

Other charitable institutions mentioned in the board of control reports for the fifth and sixth biennial are the Liesy Orphan Aid Society, a Mennonite institution; the Child Rescue and Orphan Society of the Church of the Brethren. This institution cared for 24 orphans of that denomination during the fiscal year ending June 30, 1914, and 26 during the succeeding fiscal year.

The Kansas Masonic Home at Wichita cares for indigent worthy master masons, their wives, widows, and children, and members of the order of the Eastern Star. Children from 4 to 14 are received, and any adult over the age of 21.

The Christian Service League, also of Wichita, cares for white children up to 16 years of age. In addition, this institution will care for white persons of any age and either sex in destitute circumstances, according to the Fifth Biennial Report, supra, page 238. Patients are cared for in public and private hospitals at the expense of the league; also cared for in private homes. At the beginning of the year 1914 there were 56 adults in care of this organization, and 72 at the close of the year. During the year 475 persons, all adults, were cared for, aside from 150 children. During 1915 there were 485 received and cared for, and during the fiscal year 1916, 287 received constant aid, aside from the patients who received temporary aid and to whom occasional help was given, aside from 167 children there at the close of 1915 and 180 at the close of 1916.

The Rebekah Odd Fellows Home is another charity rendering reports to the board of control. Its purpose is to care for members of the order unable to provide for themselves, and to take care of their helpless wives, widows, orphans, and members of the Rebekah branch of the order in Kansas. White children 2 to 13 years of age are received. At the beginning of 1915 there were 61 children and 29 adults under care in the institution; at the beginning of 1916 there were 90 children and 90 adults.

The William Small Memorial Home at Leavenworth provides homes for aged women, white, 60 years and over; must be of sound mind and residents of Kansas. The capacity is 30, and it has been crowded since 1913.

Ingleside, a Topeka institution, provides homes for aged, homeless women, 65 and over. They must be of sound mind. During the year 1915 there were 22 inmates, and 23 during 1916. (Sixth Biennial Report, p. 291.)

There are six private sanitariums and asylums for the treatment of insanity, which report to the board, but receive no State aid. These institutions cared for 341 patients during 1913; 335 during 1914; the five reporting during 1915 had 293 patients, and the total six accounted for 395 patients during 1916.

In commenting on these private charitable institutions the board of control (Fifth Biennial Report, p. 181; Sixth Biennial Report, p. 231) says: "Much good work is done by these private charitable institutions. In some cities ladies' organizations look after the little technical needs and wants of the poor, and do it with less expense than could be done in any other way. In many of the private charitable hospitals the physicians donate their services free of charge, which greatly relieves the burden of expense to the men who must earn their livelihood by day labor. In most of the counties the commissioners pay these institutions so much for each charity patient sent there under the jurisdiction of the county. Several cities in the State pay these local hospitals a certain stipulated amount for charity work done and for patients cared for by these hospitals for whose care no remuneration can be received. A great many open-hearted citizens donate liberally to many of these institutions, while several lodges conduct their own orphans' homes and old folks' homes, and many of the churches have their orphans' homes, hospitals, and homes for the aged." It is not compulsory for any church, lodge, etc., to register their institutions with the board, and many—perhaps three score or more—in addition to those included in the official reports, are carrying on organized charity work.

In addition to the 26 children's societies and institutions, which received a total of $6,700 from the State during 1916, the Pittsburg Charity and Humane Society, of Pittsburg, Kans., and the Old People's Home, at Lindborg, Kans., were added for 1917, each to receive $100 from the State. In addition to the 37 hospitals receiving State aid during 1916, in the sum of $6,400, the El Dorado Hospital and Training School, and the Hatcher Hospital Association, of Wellington, Kans., and the Independence Hospital and Sanitarium Co., of Independence, Kans., were added for 1917, each to receive $100 per year from the State, making a total of 40. As the amount that the State can afford to pay to these private institutions which it must aid is limited, political pie answers the description of this help. There are many within the State scrambling and begging for State aid constantly, but it can not be given owing to lack of money. In explanation of the growing demands made upon the board in this behalf, the report for 1916 (sixth biennial, p. 296) says: "From time to time new requests for State aid are made by private institutions doing charitable work in Kansas, and the balance—$400—for the two fiscal years 1916 and 1917 has been retained by the board to be appropriated to worthy institutions doing charitable work in the State of Kansas during the said fiscal years."

Commenting upon the enormous charity work done within the State during the entire year of 1916, the Topeka State Journal said, on December 23, 1916, that "82 Kansas charitable institutions, under supervision of the State board of control, cared for 9,166 needy men, women, and children during the year ending June 30. In a special report issued by Senator J. W. Howe, secretary of the board of control, tells in detail of the work by State charities. Of the gross expense of $166,797.74, the State contributed $14,000 among 67 of the 82 institutions under its supervision. Sixteen children's homes in Kansas make reports to the State board. Of these institutions 13 receive State aid. The 16 institutions care for 1,203 during the 12 months, or an average of 100 children a month. The expense as reported to the State was $65,553.36. Forty hospitals, private and charity, sent reports to the State board. They reported the cases of 7,539 charity patients during the year. The expense was given at $97,444.38. Five rescue homes sent reports. Three of the homes cared for 95 women and girls at an expense of $3,300, while 2 other homes received 37 patients during the year at an expense of $2,500. The Masonic Home at Wichita, which burned this week, and the Odd Fellows' Home at Eureka Lake, which burned recently, sent reports to the State. The Masonic Home cared for 51 children and 91 adults during the year. The Odd Fellows' Home cared for 45 children and 100 adults. Neither of the homes received State aid. Expense of charity work is given in the report at $166,797.74. During each legislative session an appropriation of $14,000 a year is made for the care of private charities. These charities are designated in the appropriation bill, and during the biennium ending June 30 included 67 of the 82 institutions which make reports to the State board of control. The distribution of funds, as well as inspection of institutions, is under the direction of the State board."

In an extensive explanation of the increase of $214,338 recommended by the legislative appropriation committee for the State charitable institutions for 1918–19, the Topeka State Journal of February 10, 1917, declares that "Kansas will be kind to charity next two years."

On August 21, 1913, the North American, an Anti-Saloon League publication, carried an editorial entitled "Something's the Matter With Kansas," in which it set forth a few "facts" furnished by George H. Hodges, the governor of Kansas. Notoriously untrue, and known to be by the governor himself, they were "inspired" for reasons best known to Hodges and the Anti-Saloon League "field force," and have been published in reproduced form by the tens of thousands and sold by the league, fresh from their press at Westerville, Ohio, as "proof" that what they untruthfully and maliciously state to be the truth about Kansas is the naked and unvarnished truth. Speaking of the drouth of 1913, and referreing to Kansas, this statement contains the following joke: "She (Kansas) can better afford this or any other brand of calamity, for her people are not constantly paying out large sums for the care and keep of criminals, paupers, insane, and feeble-minded. The pauper population of the State falls a little short of 600. In 87 of the 105 counties there are no insane. * * * Twenty-eight county poorhouses are as empty as a last year's locust shell, and most of these have been so for the best part of a decade." And speaking of the reason for Kansas' prosperity, the article concludes that "this is true" because she has constitutional prohibition which had been enforced "to the letter" during the preceding five years; that prohibition relieved Kansas from spending much time, strength, and money on paupers, criminals, and feeble-minded; that gives her people "the best of chances for living and the fewest excuses for dying." The editorial quotes ex-Attorney General (now Supreme Court Justice) John S. Dawson as saying "recently," "The last two sessions of the legislature passed the most drastic prohibition law in the world, killing the drug-store saloon, making it impossible to even cure snake bites by the liquor treatment, and absolutely clapping down the 'lid' and riveting it on."

In a speech delivered at Topeka, January 1, 1916, Gov. Capper declared, "Yes; Kansas is a prosperous State, but there are some things which we do not have. More than half a million of our boys and girls never saw an open bar room; * * * we have a great scarcity of

poor farms and paupers; * * * and we drink very little booze. * * * I do not think we can find anywhere else on the face of the earth a million and three-quarters of people who will grade up as well."

In his Anti-Saloon League speech delivered in Columbus, Ohio, on November 12, 1913, which speech was afterwards printed at State expense and sold by the league as a "campaign document," George H. Hodges, then governor of Kansas, said: "Law is a crystallization of public opinion, and years ago we put a ban upon a traffic that produced only ills and woe, shame, indigence, poverty, and want. Kansas was an experimental ground, and we have determined the question that prohibition can be and is enforced in our largest city as well as in the rural districts. * * * It is of common occurrence for the liquor men to misrepresent the workings of our Kansas laws. We have had a long, hard, fierce struggle for a genuine law enforcement, and we are succeeding to-day as never before. * * * Kansas, after 34 years of prohibition pioneering, has demonstrated to its entire satisfaction, and has proven to the world, that whisky, houses of prostitution, and gambling dens are a commercial liability of the heaviest sort; coupled with their attendant evils of crime, divorce, murders, paupers, untold suffering, and ignorance. * * *

"When ministers have the courage to say to these nation wreckers that all your tear-stained money will not buy a kindly smile from that omnipotent Being before whom you must finally pass, then, and only then, will the old slippery conscience concerning the 'necessary evil' take on new activity, and become a militant, fighting, courageous organism for mankind. * * * We long ago came to the painful realization that it was not the 'good fellow' staggering from curb to curb, supinely happy, hiccoughing some rollicking song, that alone suffers from the effects of his indiscretions, but the wife at home, with a pale face, tense with suffering, a wistful, pleading, dry-eyed vigil of long, long night waiting, hoping that he would come home before the babies were awake in the morning. * * * To-day we are a law-abiding State, rich in wealth and manhood. * * * The original prohibition amendment excepted mechanical, scientific, and medicinal uses, and permitted alcohol to be sold for these purposes. Several years ago we put a ban upon that, and now there are no exceptions. * * * Prohibition prohibits in Kansas. Prohibition is helping to abolish illiteracy, depopulate our county poor farms, give us graded country schools, snug bank accounts, and the best system of dirt roads in America."

In again bragging about the effect of prohibition upon poverty, Mr. Hodges declared (p. 11): "We had only 625 paupers in the State last year."

If that is true, and admitting that the governor spoke the truth, and prohibition is to be judged by its record in that direction, what about the State having 908 in 1916? And those independent of any county or city pauper population outside the poor farms?

"Prohibition promotes wealth and industry," declared Gov. Capper at Boston, September 3, 1915. "Thirty-two counties in Kansas abandoned their public farms last year. * * * When Kansas began its rigid enforcement of the law, a great and a wonderful change was effected in personal credit. Butchers and grocers found that the men who were 'deadbeats,' under the saloon's influence, became debtors of reliability and good standing, and that bad accounts were a rarity."

If that be true, why was it necessary to adopt chapter 232, laws of 1913, giving the debtor of the State a new exemption against payment of personal debt? Speaking of the order of court to force a payment "or enforce the same by proceedings for contempt, in case of refusal or disobedience," the act gives the debtor a freedom unrestrained if he makes affidavit in answer to the creditor's demand for his money or his pound of flesh nearest the heart that "such earnings are necessary for the use of a family supported wholly or partly by his labor." It is further provided that only 10 per cent and court costs not to exceed $4 "and no more of the earnings of a debtor who is a resident of this State, for his personal services at any time within three months next preceding the issuing of any attachment, or garnishment process, may be taken and applied to the payment of his debts, when it is made to appear by the debtor's affidavit or otherwise that the remainder of such earnings above the said 10 per cent and court costs not to exceed $4 are necessary to the maintenance of a family supported wholly or partly by his labor; and such earnings of any such debtor earned during any one calendar month shall be subject to only one deduction of the amount herein made subject to attachment, or garnishment process, and one application of such deduction in one action shall be a bar to any deduction if any other action for such calendar month, regardless of where or by whom the action may be brought," etc., proceeding at length to further protect the pay check and fireside of the unfortunate debtor hounded to death with garnishment suits by the corner grocer, the butcher, or the market man, installment furniture house, installment clothing house, or loan shark.

The enactment of this statute was the outcome of a public uprising among the poorer classes of the State, ground down by increasing taxes to the point where their earnings had to receive State protection to permit them to even live without county aid.

"The Temperance Society of the Methodist Church asked bank presidents in Kansas what they thought of prohibition. One hundred and sixty-six favored the law, while only six expressed doubts of its wisdom," further declared the chief executive, and followed this by saying that sentiment was "unanimous" in its favor, because of its great reduction in poverty. The governor also declared that "saloon cities which send out advertising literature do not boast of the large number of saloons within their borders, but cities in Kansas put 'no saloons' first." He forgot to state what the retail grocers' association thinks of the 1913 garnishment law, or to show how much they spent on a lobby to beat it, or to say what they tried to do to it in 1915 or are doing now. The lobby thinks it is such a "blessing" by way of giving the Kansas mail-order whisky cheat a way out of paying his honest debts so he can send his money out of the State to buy rot gut that they will willingly pay any price to repeal the law.

"Thirty-eight county poor farms have no inmates," declared John Dawson in his Anti-Saloon League speech delivered in Chicago April 2, 1912. And it is needless to add that prohibition gets the credit for this "magnificent showing," while the official record shows that at no time were there even 32 counties without inmates, as Gov. Capper claimed.

The various statements, garbled, twisted, and worked into Bible-class leaflets, thrown broadcast over the country by a subsidized press, shouted from a hundred pulpits in every State, have convinced many people that the governors, attorney general, etc., spoke the absolute truth. If they did, then there can be no argument but what prohibition not alone has been a blessing to Kansas, but would be to any other Commonwealth, drink-ridden or otherwise. That they are made and are used for political and financial purposes goes without saying. Just what the price was, paid in exchange for them, will never be known, but one result has been to retard progress along many badly needed lines in Kansas, for the reason that the members of the legislature until quite recently have become hoodwinked and misled to such an extent that they have not been paying enough attention to the real needs of the poverty stricken and otherwise grossly misfortunate people to meet their needs by appropriations. Even superintendents of State institutions, begging for relief from the crying needs of their various charitable homes, have been looked upon as grafters, seeking "spoils of politics." With the governors and other men "high in office" maintaining, for a price and in answer to a call they dare not refuse to heed, to go abroad and spread such sophistry it is little wonder that the "people" begin to feel that the governors are right and those charged with positive knowledge are appealing for aid, when they should be holding an auction to sell the effects of the hospitals, etc.

A thunderbolt dropped from a clear sky, however, when Gov. Capper sent a special message to the legislature in February, 1915, and begged them to have a care in appropriating large sums he admitted were seriously needed by these institutions, and also cautioning them that a tax increase would be necessary, and, as assessed valuations were up to the breaking point, a tax increase would only add greater burdens to an overtaxed populace—overtaxed in patience as well as in financial demands. His reasons were, briefly, that the State had lost over $5,000,000 in taxable wealth during the past year and the population had not increased. Official figures for 1915 show that the population not alone was not increasing, but had actually decreased 18,404 since 1910.

However, in the face of this declaration, the governor traveled all the way to Boston to tell the people of the Anti-Saloon League and the representatives of their subsidized press that the reverse is true in Kansas, permitted his speech to be printed by his own printing plant, and is permitting the Anti-Saloon League to sell copies of it to prove that Kansas is increasing in population, and her pauperism, among other things, is decreasing. In fact, the governor stated, contrary to the solemn views expressed in his official message to the legislature, that the population increase had been enormous since prohibition has become the greatest matter of statesmanship in the State.

The mothers' pension act, chapter 261, of the Laws of Kansas, 1915, approved March 24, 1915, the day before Gov. Capper issued his famous Anti-Saloon League bulletin for the temperance society of the Methodist Church, and made a law by publication in the official State paper, April 1, 1915, makes the foregoing sound strange indeed.

This measure was adopted by the legislature with little or no opposition. The people of the State demanded it. Poverty, dire and unrelenting, refusing to be relieved by the magical and truthless tales of its absence, poured across the sheets of the press by men whose only object was to serve their masters, had become so general and the pinch of want so acute a general uprising throughout the State demanded the relief. Gov. Capper signed the measure and approved its becoming a law at once, and not awaiting the routine of the publication of the statute books several months later. Not saying that open saloons on every corner or on every other corner would have kept it off the statute books, but declaring the mail-order, bootleg, Jamaica ginger, automobile, alley-joint system made it necessary, I maintain that the Anti-Saloon League, through the agencies employed in and about the high offices in Kansas, has been trafficking in votes long enough that the Nation should at least hesitate in its mad rush toward a promised land of happiness and read.

The law provides "that the board of county commissioners may in their discretion allow and pay to poor persons who may become chargeable as paupers, and who are of mature years and sound mind, and who from their general character will probably be benefited thereby, and also the parents of idiots and of children otherwise helpless, requiring the attention of their parents, and who are unable to provide for said children themselves, such annual allowances as will not exceed the charge of their maintenance in the ordinary mode," * * * provided that in any case where the mother of any child or children under the age of 16 years shall have the care and custody of such child or children by reason of such mother being a widow, divorced, or by reason of the husband of such mother being physically or mentally unable to earn a living for himself or family, or by reason of his being lawfully confined in any penal or other State institution, or by reason of the husband of such mother having at all times for three months last past abandoned or deserted such mother without just cause or collusion, and where such mother has been an actual and bona fide resident of the county for one year next preceding her application, and where such mother is a provident woman of good moral character and a fit person to have the care and custody of such child or children and is financially unable to support such child or children, and where such child or children have not sufficient property or income to support such child or children, such mother shall be entitled to a "mother's aid" in caring for and supporting such child or children from the county in which she is a resident at the time she makes application.

The act provides for "reasonable aid" to be extended, not exceeding $25 per month, to each such applicant. Many precautions against graft on the part of the applicants are written into the law as a commentary on the honesty, or lack of it, of worthy and needy people of the State.

As soon as the law became effective nearly every county in the State was flooded with applications. The law proved a landslide of victory for the "statistics" and "sob twaddle" that prohibition had reduced poverty to such an extent, to use Gov. Capper's words, that "a pauper or needy person is a curiosity in Kansas."

Under bold-faced headlines the Topeka State Journal declared on January 10, 1916: "Poverty is great! It cost Kansas counties $607,580.03 last year. This is exclusive of aid dispensed from other sources. Mothers' pensions, $29,080.

"In one year Kansas counties spent $607,580.03 for aid of indigent poor and under the provisions of the mothers' pension law, according to reports compiled by Senator J. W. Howe (a Hodges appointee), secretary of the State board of control," said the Journal.

"The Howe report is the first statement of the county cost for the care of the poor. It is also the first statement showing expenses under the operation of the mothers' pension law. The annual expense of the counties as reported is $29,080 for mothers' pensions. Yet there are but 25 counties of the 105 which have adopted the provisions of the 1915 act.

"Shawnee County is among the 36 counties which have flatly refused to put in operation the provisions of the reform county pension law." Sedgwick and Reno, other larger counties of the State, adopted the provisions of the law. Wyandotte County allowed 59 pensions.

"General aid for the poor by Kansas counties aside from State aid, county farms, city, and local charities, cost $453,803.28, according to the report. Expense of the county farms amounted to $124,696.75 for the 12-months period.

"In the counties where the mothers' pension law has been observed the total expense of this reform law is $2,423.50 a month, or $29,080 a year.

FEW ARE CHOSEN.

"Of the 772 women who have applied for aid under the mothers' pension law since it became effective aid has been extended to but 247 under the terms of the new law.

"In several counties where provisions of the mothers' pension law have not been placed in operation investigating committees have been appointed by the county commissioners. Several of these counties will come under the operation of the law this month. All of which will mean that the expense for the care of the State's poor will show a big increase this year over the 12 months just ended.

EXTRA TAX LEVIES NECESSARY.

"Reports from the various counties show some heavy tax levies for the support of the poor. In Ottawa County (population, 11,605) a levy of 1 per cent on the assessed valuation of the county is made for county aid of the poor.

"Nine counties in the State reported an annual expense in excess of $10,000 for the care of the poor. Sedgwick County's expense was nearly three times as great as that of any other county in the State. In one year that county spent $69,095.52 for the care of the poor. Shawnee County was second with an expense of $23,878.14, while Leavenworth County reported an expense of $22,529.72; Montgomery, $21,652.92; Wyandotte, $20,034.38; Wilson, $15,030.60; Bourbon, $11,837.65; Saline, $11,143.65; Cherokee, $10,575.51.

REGULAR ALLOWANCES.

"In 19 counties regular allowances are made for the poor by the county commissioners. These counties include Anderson, Clay, Dickinson, Finney (the home of Senator Thompson), Geary, Gove, Harper, Harvey, Kingman, Leavenworth, Marshall, McPherson Meade, Pottawatomie, Saline, Shawnee, Wabaunsee, Wilson, and Woodson. The combined population of these counties is 349,809.

"Mothers' pensions were reported from 25 of the 105 counties of the State. These counties included Chase, Cheyenne, Clark, Cloud, Comanche, Crawford, Decatur, Gove, Gray, Greenwood, Haskell, Hodgeman, Kearney, Lane, McPherson, Morris, Morton, Rawlins, Republic, Rush, Seward, Stanton, Stevens, Trego, and Woodson. A number of these counties—14 of them—are "short-grass" counties, sparsely settled. The combined population of the entire number is 224,153, or 8,966 to a county.

"Six counties have, during the six months' operation of the law, granted 10 or more pensions. Wyandotte leads with 59 pensions to mothers and a monthly expense of $513. In Montgomery County 26 pensions cost $267.50 a month. Cherokee County has granted 17 pensions at an expense of $182; Butler County 12, at an expense of $110 a month; Bourbon County 12, at an expense of $70 a month; and Atchison 10, at a monthly expense of $65.

"Thirty-six counties have failed or refused to grant mothers' pensions. These counties are Allen, Anderson, Barber, Brown, Chase, Chautauqua, Coffey, Cowley, Doniphan, Douglas, Edwards, Elk, Ford, Franklin, Graham, Jackson, Jewell, Leavenworth, Lincoln, Logan, Lyon, Meade, Miami, Osage, Osborne, Phillips, Pottawatomie, Reno, Rooks, Russel, Saline, Shawnee, Sheridan, Sherman, Trego, and Wilson. Included in this list is Lyon County, the home of William Allen White, one of the most ardent champions of the mothers' pension law. The combined population of these counties is 599,802.

"Statements received by Senator Howe from several counties where the law is not observed indicate that while the 1915 measure is not opposed, no provision has yet been made for the money to meet the extra expense. In a number of the counties the expense for charity work is heavy, and the levy for this purpose is now near the limit. Other counties have provided for mothers' pension aid in their levies for this year and will grant pensions as soon as the money is available.

GENERAL AID GRANTED.

"One of the startling facts in the Howe report is the showing that but 247 persons have benefited under the mothers' pension law, while the counties have granted aid to a total of 12,871 persons. General aid has been given to a total of 11,716 persons, while the county poor farms have cared for 908 persons.

"'The amount of aid allowed the poor of Kansas is an enormous sum,' said Senator Howe to-day. 'One would hardly have supposed that we are spending more than three-fifths of a million dollars a year for the care of the poor—independent of State and municipal aid and through local charities. In the main though, I believe the money is given to worthy persons.

"'Yet, I am fearful of one thing: Probably less than half of the sum given relieved the cause. It merely helped the prevailing needs. A similar sum must be paid this year, while it seems the money should in some way go toward permanent aid. Instead of temporarily assisting these persons, there should be some manner of permanently aiding the charges of the State.

"'The question of aid for the poor seems unsolved and the expense is growing without permanent betterment of conditions. The mothers' pension will give relief to many needy persons. But it will not effect a cure of the evil in all cases.'

"Senator Howe's report is the first definite showing of the expense of counties for the aid of the poor. It is a valuable document for persons interested in welfare work and another insight into the problem of 'where the money goes.' The report is compiled from official statements received from 101 of the 105 counties of the State. Greeley, Scott, Wallace, and Wichita—all small counties in the extreme western portion of the State—did not report."

In commenting upon the need of a permanent institution to handle the charity money of the counties, Senator Howe stated in his official report, that "It would relieve the charity burden of the State in the future. It is like cutting down a sunflower. You can not stop the sunflower's growth, in a favorable season, by simply cutting off the top, you must go to the root. It is the same with giving aid—the problem for Kansas to solve is how to do this, thereby gaining the best results and the most lasting results. A problem to be solved in years—not in one year."

The chief complaint against the mothers' pension law was the fact that the first section of the law left it to the discretion of the county commissioners, as to whether the pension should be allowed. Many worthy persons applied for aid and were denied the relief, either on the ground that they could not be supplied with the aid because of lack of funds or because they could be turned down arbitrarily by the board without giving a reason therefor. The law became a political asset, as is usual in cases of this kind, where the needy ones with the strongest pull or the most influential political forces to "front for them" could secure the desired aid, while those not possessing that delightful element of "progress" were cast aside or permitted to fall by the wayside, objects of pity but victims of an uneven system.

Commenting upon the scarcity of good homes for the poor children placed in the various orphans' homes throughout the State, Gov. Capper stated, according to the Topeka State Journal of January 17, 1916, that he had received many letters from Missouri, Nebraska, and other States, asking if Kansas had any unfortunates who desired homes in good families. The governor stated it was a shame Kansas could not supply the needs of these children, and while he disliked to have them leave the State, unless some action was taken by the Kansas people to open good homes to the unfortunates, the law should be changed so the orphans could secure the benefits of respectable home life by being sent to Nebraska, Missouri, Oklahoma, and other States from which he had received offers. There were so many children housed in the institution homes at that time, according to the Journal, the governor was making a personal effort to have the burden of their keep shared by the home owners of the State, and thus relieve the general tax burden of caring for them.

Of the 105 counties in Kansas, 29 appear to have no inmates on the county farms during the year 1912, and the same number make the same showing for 1913, according to the fifth biennial report, board of control, 1914, page 34.

The 29 counties having no inmates for the year 1912 are: Barton, Cheyenne, Clark, Comanche, Edwards, Finney, Gove, Graham, Grant, Gray, Greeley, Hamilton, Haskell, Kiowa, Lane, Logan, Meade, Morton, Ness, Rush, Russell, Scott, Seward, Sheridan, Stanton, Stevens, Trego, Wallace, and Wichita. These counties have a combined population of 131,347, or 7.7 per cent of the State's total population. The same counties were listed for 1913, except that Cheyenne did not appear in the 1913 list, nor did Hamilton and Kiowa. Barber, Hodgeman, Kearney, and Thomas were in the 1913 list and not in the 1912 list. Those listed for 1913 had an aggregate population of 134,100, or 7.8 per cent of the total population of the State.

However, of the above counties, Edwards and Finney take care of their poor by paying for their keep in private families. Thomas and Graham do likewise and rent their farms. Barton also has a fine poor-farm property, but rents it and pays for the keep of its poor in various private families under contract. Many of the county poor farms have been turned into agricultural demonstration stations, and other farms less adapted to practical purposes established for the care of the dependent poor. Many county farms are being rented by the boards of commissioners of the various counties. The proceeds are used for caring for the poor either in their own homes or in private homes, where they are placed upon bid and under contract. While the total number of poor farms for the year 1913 is 19 less than for 1912, this does not indicate that they are not necessary, but that the plan of farming out the poor has been resorted to in the interest of economy and to reduce taxation. (5th Biennial Report, supra, pp. 34, 35.)

According to the sixth biennial report (1916), page 27, there were 22 counties having no inmates on county poor farms. Of these, 13 counties, including Finney, Graham, and others, which make it a practice to farm out their poor, report "no poor farms." The combined population of these 13 counties is 51,368, or 3 per cent of the total population of the State.

Of the 22 counties showing no inmates on farms, 9, namely, Barton, Cheyenne, Greeley, Hamilton, Hodgeman, Lane, Norton, Rush, and Sheridan, have poor farms, but, like Barton, rent them in the interest of economy and for the purpose of keeping down taxes, and care for their poor by contract with private families, using the proceeds of the farms to defray the expense whenever possible. The total population of these 9 counties is 51,339, or 3 per cent of the total population of the State. Thus, where from 7.7 per cent to 7.8 per cent of the State's population was represented by the counties having no inmates on the poor farms in 1912–13, those having none according to the report for 1915 comprised only 6 per cent of the State's entire population.

Of the 29 counties claiming to have no poor in 1912, Cheyenne, Clark, Comanche, Gove, Gray, Haskell, Lane, Morton, Rush, Seward, Stanton, Stevens, and Trego granted pensions under the mothers' pension act of 1916. Finney, Gove, and Meade are recorded as giving regular allowances by the county board for the poor, by agreement. Edwards, Logan, Meade, Russell, and Trego refused a part or all of the demands made for pensions, because of lack of funds.

In addition to the above counties granting mothers' pensions included in the 1912 list all were included in the 1913 list, and Barber County, included in 1913 and not in 1912, refused pensions because of lack of funds, while Hodgeman and Kearney, not included in the 1912 list, granted them.

Of the 9 counties reporting no poor on farms, but possessing farms according to the 1916 report, 4—Cheyenne, Hodgeman, Lane, and Rush—were among the 25 counties granting mothers' pensions. Sheridan, included in the above 9, refused to grant pensions because of lack of available funds.

Of the 13 counties reporting no poor and no poor farms regularly operated, Graham, Logan, Morton, Russell, Stanton, and Stevens refused to grant mothers' pensions because of lack of funds. And of the above 9 counties mentioned, Sheridan refused for the same reason.

(NOTE.—Norton County pays $2.50 a week for board and maintenance of each poor-farm inmate, having the farm rented for grain rent. Chautauqua, Harvey, Linn, Mitchell, Pawnee, and Phillips Counties have their poor farms on a self-supporting basis. Meade and Rawlins Counties have no improvements on their poor farms, but provide for their poor by direct appropriations each year.)

SUMMARY.

Number of counties reporting no inmates, according to Sixth Biennial Report, Board of Control, 1916, page 27, all of which have poor farms (Barton, Cheyenne, Greeley, Hamilton, Hodgeman, Lane, Norton, Rush, and Sheridan)	9
Number of above counties granting mothers' pensions under the law of 1915 (Cheyenne, Hodgeman, Lane, and Rush)	4
Number refusing because of lack of funds to grant mothers' pensions, though applications were made therefor (Sheridan)	1
Total	5
Number of counties having poor-farm property, either rented out or operated by the county, and no inmates thereon, and no demands made under mothers' pension law that were either met or refused	4

There were 99 counties that did not enjoy this distinction.
(Greeley County, included above, has 1.17 persons per square mile.)

Number of counties reporting no inmates, according to Sixth Biennial Report, Board of Control, 1916, page 27, none of which report any poor farm in operation (Finney, Graham, Haskell, Kiowa, Logan, Morton, Ness, Russell, Scott, Stanton, Stevens, Wallace, and Wichita)	13
Number of above counties granting mothers' pensions under the law of 1915 (Haskell, Morton, Stanton, and Stevens)	4
Number of above counties refusing to grant mothers' pensions under the law of 1915 because of lack of funds (Graham, Logan, and Russell)	3
Total	7
Number of counties reporting no inmates on poor farms and having no regularly operated poor-farm property (Kiowa, Finney, Ness, Scott, Wallace, and Wichita)	6

Among these are many counties, including Wallace, Wichita, Stanton, and Morton, that have from 1 to 2.4 people per square mile.

There are but 10 counties out of 105 in the above groups showing no paupers, and of those counties Barton, Finney, Ness, Kiowa, Hamilton, Norton, and Graham either give a stated sum to their poor, by order of the board of commissioners, or care for them by private contract. Of the 10, it is doubtful if any, save perhaps Greeley, have no paupers. (See Fifth and Sixth Biennial Reports, Board of Control, supra; Topeka State Journal, Jan. 10, 1916.)

The entire population of the above 10 counties is only 55,511, or 3.3 per cent of the total population of the State. Thus 96.7 per cent of the Kansas population lives in counties where poor-farm inmates are reported in the 1916 report of the board of control actually residing in the almshouses and not farmed out or cared for by the county in any other manner than as inmates of regularly constituted and operating institutions, known and designated as such.

And aside from those inmates, numbering 908 (the largest number ever reported), the population decrease was 18,404 for the entire State as compared with the United States census of 1910. Furthermore, independent of aid granted under the mothers' pension act and the paupers residing on regularly constituted poor farms (not including many of the 10 counties mentioned above, where the poor is farmed out or cared for under county supervision out of proceeds from rental of poor farms), there were 11,784 people given aid by counties, independent of the State and city charity, local charity, or lodge, fraternal society, or church charity. The total thus reported is 12,939, the largest number ever reported in the State—and this 34 years after the introduction of prohibition, which has been "prohibition" since 1906. Likewise, aside from "prohibiting," it has been "decreasing poverty" until, as ex-Gov. Stubbs and the present governor, Arthur Capper, insist, "a pauper is such a stranger among the prosperous Kansas multitudes he is almost a curiosity!"

And this is the kind of "bunc" that is used to secure "dry" votes in other States by "the church in action" contingent. O tempora; O mora!

DEMANDS INCREASE—LAW MUST BE AMENDED TO GRANT RELIEF.

The mothers' pension law of 1915 is not meeting the crying needs of the paupers of the State. The legislature is being called upon to tighten up the demands of the law and rob the county commissioners of the discretionary powers granted, making it compulsory to grant aid if the applicant can prove herself worthy. When you stop to consider that, figured on the basis of the State's population, the number of poor and needy given county aid alone during 1915 established a rate of 1 person in every 129.2 in the whole State, a charity patient, aside from what State, local, municipal, lodge, etc., aid was extended perhaps that many more, compulsory mothers'-aid laws are not so much of a surprise.

Shortly after the pension law became effective the mother of three small children, whose husband was serving a term in the Kansas penitentiary, applied to the county commissioners for relief under the act. Her application was arbitrarily turned down. She lived in Johnson County, one of the rich counties in "assessed valuation," lying in the eastern part of the State.

"Johnson County can not get away from allowing a pension to the mother of three children when the husband and father is in the penitentiary," said the Kansas City Star, September 28, 1915. "S. M. Brewster, attorney general, announced to-day that if necessary he would bring legal proceedings in the name of the State to compel the payment of the pension. A woman in Olathe, whose husband was sent to the prison last May, asked the county for a pension. The oldest of the three children is 6 and the youngest barely a year old. The mother is in bad health and almost unable to work. The county board turned down her application and announced that pensions would not be paid in cases of that kind."

Johnson County was afraid to set a dangerous precedent in Kansas, for if the poverty-stricken families of every prisoner, even, in the penitentiary and county jails had to be pensioned the tax rate would take an unusual jump. There is pending before the legislature at this time, an unusual jump. There is pending before the legislature at this time a series of bills trying to secure some aid to poverty-stricken families whose heads are in the State reformatory and penitentiary, by instituting a "service system," whereby the husband will be given credit for a certain amount of work, or so much per day, the proceeds to be sent to his struggling wife and children, in an effort to cut down the enormous expense cast upon the counties by the mothers' pension. The counties favor the measures, but the State authorities are not keen for it. Letting go of any source of revenue has never been a favorite pastime of Kansas State officials. They spend too much time figuring out new ways in which to gouge the people, to ever release a strangle hold.

Hundreds of cases, similar to the one of the Olathe woman, occurred throughout the State during 1915 and 1916. In the happy, prosperous "dry" home of William Allen White (Lyon County), the board absolutely refused to "take on" the new obligations, and no one was more bitter in his denunciation of them than Mr. White himself. He demanded that the board give them at least a little aid to tide them over the winter, but the hard-hearted farmers refused to relent. At the same time Mr. White was bragging away from home that prohibition had reduced poverty to such a degree that "we have none"—but that is another story.

In commenting on the inefficient system in operation in Kansas as regards caring for poor children, poor mothers, struggling families, etc., the State board of control thus addressed itself in the sixth biennial report, pages 1 and 2:

"In this State there are the fraternal orders, such as the Masons and the Odd Fellows, that have orphanages for the children of their unfortunate members. Then there are the sectarian institutions, such as the Catholics, Lutherans, and Mennonites have organized, providing institutional homes for the children of their respective denominations. These sectarian institutions also receive other children, in order to propagate their religious beliefs by bringing up such children in their faith. There are also general private children institutions that receive children from birth until the age of 2 years—which latter age is the lowest limit for receiving children at the State Orphans' Home—and also furnish a temporary home for other children whose parents, through misfortune are temporarily unable to provide for them. These institutions allow the parents to pay what they can, and have their children when they want them. The law also permits the keeping of dependent and neglected children at county almshouses. There are two State-wide home-finding associations and several local associations that place children direct in family homes, and supervise the children in such foster homes. As to the State institutions, soldiers' children are taken care of at the State Soldiers' Home at Fort Dodge and the Mother Bickerdyke Home Annex at Ellsworth. All dependent and neglected children between the ages of 2 and 14 years, of sound mind and who do not need hospital treatment, are admitted to the State institution at Atchison, named the State Orphans' Home, and this home has a State agent who attends to the placing of children in homes."

(NOTE.—The conditions surrounding the State Orphans' Home have become a State disgrace. Newspapers throughout the State have been filled during the past two years with column articles touching the vile conditions that have been permitted to grow up in this institution.)

Speaking of the crying needs of the State Orphans' Home, the superintendent stated in the Fifth Biennial Report, Board of Control, pages 149–150, that "Our needs are varied and well founded. * * * This is an institution of which any State might justly be proud; why not make it, in part at least, self-sustaining? These children are our future citizens; why not try to make them useful and worthy? We have many who are bright and capable, eager to take advantage of any opportunities. Were they properly fitted to go out into the world they would often rise above the position of a mere menial, as is frequently their fate. Would you not give your own child a chance? Does not this question of assisting orphans appeal to all thinking, feeling people, especially you who are parents? And these things may be accomplished by very few extra cents taxation." Apparently the question of assisting the orphans did not appeal to the State officers, because in the interest of "economy," the much-needed aid asked by this institution was denied.

The State Agent's Report, covering the population of this institution, for the biennium closing June 30, 1914, showed (p. 151, supra) a total of 235 children handled during the period. The number handled during the fiscal year 1915 was 307, and during the fiscal year 1916, ending June 30, 1916, the number had increased to 322. (Sixth Biennial Report, supra, p. 181.)

When making the report for the biennium ending June 30, 1916, the superintendent commented upon the fact that few if anybody ever reads such reports, and added: "Members of the legislature and others whose duty it is to provide maintenance for the institution are supposed to be familiar with these reports, and yet a member of great influence and learning asking a large appropriation of our legislative body had never read any of the reports and did not know that the object for which he was seeking this large appropriation had long been under consideration. Thought able, honest, learned, and enthusiastic for his institution, his knowledge of its needs was so crude that he failed to accomplish anything along the very worthy line for which he sought support.

"We may be mistaken, but it seems that the time has come when the citizens and the taxpayers generally are taking an active interest in their institutions and that our lawmakers will listen to the officers of the institutions rather than attempt to rely upon their own hasty observations or from hearsay and from other unreliable sources. Legislating for the institutions and providing for their maintenance is a delicate and complicated matter and should be approached with the greatest care and caution (supra, p. 165).

"The people most greatly disturbed over the question of child welfare, and who make the most noise, are those who have the least to do with them personally and who would be the last in the world to offer a homeless child a home. Why this is we do not know. It is like the question of taxation, where those who bear little or none of its burdens rave the most about taxes. It is a sure and certain thing that these people are satisfied when someone else is caring for the dependent child, while they are content with doing the talking.

"* * * Our experience in the placing of children has completely confirmed in our mind that 90 per cent of those who take our children into their homes do so for commercial reasons and not because of any real love for the child or desire to benefit his condition. It is for what they can get out of him in dollars and cents rather than for what they can see in him as a future citizen of the Commonwealth. Those in need of cheap help take the children out in the spring and keep them during the busy season and return them when the work is over and they must be to the expense and trouble of sending them to school and otherwise provide for their training.

"Wealthy people who are childless give freely of their material substance to maintain homes and home-finding societies, but very few of them give at all of the maternal or paternal riches that would make many orphanages and home-finding societies unnecessary.

"More home finders are necessary. Kansas is the only State that puts children out and then lets them shift for themselves. We have now more than 500 out on indenture contracts that are still in force. No one agent can visit and supervise anything like that number, not to say anything of finding and investigating new homes. In 1912 I recommended the appointment of two State agents with sufficient appropriation for salaries and expenses to thoroughly cover this feature of our work. I now renew this recommendation. This is a worthy object. The State has not the right to place these children out, no matter how carefully it may be done and then forget them."

Continuing, the State board of control said, on page 2 of their 1916 report: "The boys' industrial school at Topeka and the girls' industrial school at Beloit receive the incorrigible under the age of 16 years; but, as a matter of fact, many of the boys and girls sent to these two institutions are simply unfortunate.

"Either the private children's associations and institutions should provide for the children not provided for by the State or else the State and the county should provide for all children not taken care of by the private children's associations and institutions. As the State has institutions covering the work along certain lines, should private associations and institutions be permitted to solicit aid to duplicate the work carried on by the State?

"The 20 private children's associations and institutions, organized and working especially for children, and the 15 or 20 additional institutions which are somewhat concerned with problems of caring for dependent and neglected children and the State children's institutions should work together as a compact whole and not fight each other.

"Every child is entitled to an equal chance and a square deal, and it is the duty of society to hold the scales of justice. Children do not want charity, they want justice. A man dies after a lingering illness and leaves a widow and a child or children penniless. It is the duty of society to see that such children are properly raised and educated.

"The tendency of all legislation until quite recently, and of the societies and institutions created and operated thereunder, is to separate the family—to tear the children away from their parents, who are financially unable to support them. The home should be maintained at any cost, as it is the foundation stone upon which the superstructure of society and government rests. Most of the prevailing social evils of to-day are due to bad home conditions or broken homes. The bad home conditions are in the homes of the wealthy as well as in the homes of the poor. There should be a 'back to the home' movement.

"The legislature of 1907 strengthened the juvenile-court law by giving the juvenile courts jurisdiction to punish parents or other persons responsible for or by any act causing, encouraging, or contributing to the delinquency, dependency, or neglect of a child. The companion piece to this legislation, 'the funds-to-parents act,' popularly known as 'mothers' pensions' was enacted by the last legislature in the form of an amendment to the poor laws, requiring the board of county commissioners to give an allowance or pension to a mother under certain conditions (ch. 261, Laws of 1915, amending sec. 5545, General Statutes of 1909). The juvenile court has jurisdiction over dependent children and to punish parents and should also have the power to make an order granting an allowance or pension to worthy parents when the children or their parents have been brought before the juvenile court under the juvenile-court act, and the act of 1915 should apply to all other dependent children and parents."

Thus it is made clear that poverty and pauperism have become so rampant that it is quite necessary, from the viewpoint of men who have consistently studied the cause and in some manner called upon to declare the cure of it, if possible, that the State grant the power to the juvenile court, as well as to the county commissioners, to reach into the public treasury when occasion demands it and grant a pension to the struggling families from which flow a great percentage of the delinquent, incorrigible, and in time the criminal, no-account classes. Which is another "victory" for prohibition, quite naturally.

The fact that the mothers' pension act of 1915 did not compel the county commissioners to grant the relief applied for, and therefore has in no manner met the demands creating the measure, is notorious.

Speaking of the failure of the law to meet the conditions within the State, the Kansas City Star, February 9, 1917, said: "Club women of Kansas City, Kans., are becoming dissatisfied with the way the county commissioners are handling the widows' pensions. The women found to-day that 85 applications for pensions made since November have not been granted, although the applicants are in need of help and have been recommended by the poor commissioner and the investigation committee. The explanation of the commissioners is that the money is not available. The widows' pension act has been in force two years. A hundred or more beneficiaries are on the list in Wyandotte County. The monthly payments amount to more than $750, which, the commissioners say, is becoming a burden."

The Federated Women's Clubs of Kansas have been struggling for a compulsory mothers' pension law since July 1, 1915, and on January 4, 1917, the Topeka State Journal declared that they demanded four measures enacted into law, chief among which was this measure, as they realized the utter futility of trying to meet the demands of the women of the State under a law which permitted the county commissioners to exercise their discretion. They demanded compulsory pensions, no matter what the cost in increased taxation might be. It was declared to be another "crying need" of the State.

At the sixteenth annual session of the Kansas Conference, Charities and Corrections, R. M. Anderson, of Beloit, Kans., one of the chief speakers at the conference, said:

"Turning to dependent children the greatest stride for the prevention of crime by legislative enactment in the entire history of mankind was that of the mothers' pension measure recently enacted by our Kansas Legislature. The strength and the safety of a community depends most upon the virtue and intelligence of its youth. What a masterful conception was this self-same mothers' pension measure! Where better than under a mother's loving care can good citizens be made! Sums of money that are necessary for maintenance of children in their mother's care should be appropriated from time to time from the funds of the community which depends for its future welfare upon their proper maintenance and upbringing."

But strange to say, the Kansas legislators and county commissioners do not all agree with Mr. Anderson. They may join in his lofty idealism, but "joining in lofty idealism" and digging down in the threadbare pocket for more tax money to carry those ideals into practical effect are two entirely different things. And they do the other thing.

At the same meeting Hon. H. C. Bowman, chairman of the board of control, said:

"The public should demand that the practice of separating a mother from her children on account of poverty be stopped in every State. It costs $4.50 a week per child for care, schooling, and maintenance at the State home. The public has to pay for the care of every dependent child in one form or another, so why not do the humane thing and pay this money over to a poor mother who is otherwise competent?"

And after delineating the work done by the various State charitable institutions, in an effort to relieve the poverty that is so general within the State, Mr. Bowman said:

"In addition to the correctional and benevolent work carried on by the above-mentioned public and private institutions, which cost the taxpayers and persons who contribute to the private institutions millions of dollars annually, a vast amount of benevolent and charitable work is done by the churches, the Salvation Army, other religious organizations, fraternal societies and clubs, dispensaries, day nurseries, associated charities, provident associations, and social settlements. A vast amount of money, house rent, and supplies is also distributed by cities, townships, counties, etc., in what is known as outdoor relief. This outdoor relief work alone amounts to millions of dollars annually."

The conference adopted resolutions demanding the passage of an act by the legislature providing for the physical supervision of all children in the public schools and the medical treatment at public expense of the physical defects in the case of those children whose parents or guardians are financially unable to bear the expense; also indorsed the principle of mothers' pensions and urged the enactment of further legislation making the granting of the pensions compulsory and not discretionary, as provided by the laws of 1915.

Every welfare organization of the State demanded a change in the law similar to the one above declared necessary by the Kansas conference of charities and correction.

In his message to the legislature, January 15, 1917, Gov. Capper became "aroused" to the crying need of more strict legislation along this line, and "spoke right out," as they say in Kansas. And here is what he had to say about it:

"The increasing cost of living has become an almost unbearable burden upon the people. * * *

"The life, health, and vigor of the men, women, and children of the State are its greatest assets. It is certainly as much the duty of the State to promote the welfare of its citizens as to protect their lives and property.

"Kansas has been a leader in many phases of welfare legislation, but there is more we can do and must do.

"Only a few counties are observing the law for the payment of a pension to worthy widowed mothers, as provided by the legislature two years ago. The law should be strengthened by requiring each county to provide funds for this purpose."

Representative Bird of Shawnee County immediately introduced a bill in line with the governor's suggestions and in answer to the almost unanimous demand for it from all over the State. On January 24, 1917, the Topeka State Journal carried the following news item concerning the disposition of the Bird bill:

"The house late this afternoon voted to recommend the Bird compulsory mothers' pension bill for passage. By a vote of 88 to 14 house members in committee of the whole rejected a *motion by Martin*, of Reno, to strike out the enabling clause.

"Bird's bill provides that on proper showing county commissioners will be compelled to grant a pension. The present law, enacted in 1915, provides for optional pensions. Bird's bill removes the option clause and prescribes requirements for applicants for county pensions.

"A large women's lobby heard the debate. The bill came up for consideration under a special order."

Recognizing the demand for compulsory legislation, however, many members of the house and senate refused to support this measure on the ground that taxes are too high now, and it will be necessary to levy a special mothers' pension tax in most of the counties to meet the demand created should the measure pass. Batting the measure back and forth, consideration of this pauper measure became a game of battledore and shuttlecock. The women kept a lobby working in both branches of the law-making body, and Gov. Capper did all he could to put it across in its original form, his vehement denials while talking for the Anti-Saloon League away from home that Kansas has no poverty to the contrary notwithstanding.

On February 16 the Kansas City Star said: "Club women of Kansas City, Kans., are becoming anxious over the fate of the measures that they and the women in other parts of the State are asking of the lawmakers at Topeka. Not one of the bills they desired have been enacted.

"* * * The mothers' pension bill is the one most desired by the women. There are several bills along this line, one providing for the State taking charge, one placing the matter under the probate court instead of the county commissioners. The club women of Wyandotte County are interested in this, because the county commissioners say they can grant no more pensions until some fund is provided for this purpose."

After the house had voted in the committee of the whole to recommend the passage of the Bird bill, however, a house filibuster threw a can of dynamite behind the measure and blew it through the roof. "The Bird mothers' pension bill, designed to compel county commissioners to award compensation to widows and to provide a fund from which to pay it, was made inoperative, unless later considered and amended," said the Kansas City Journal of January 25, 1917, under a Topeka date line of the 24th, "when the word 'shall' was stricken out after a long filibuster in the lower house of the Kansas Legislature to-day. The word 'may' was substituted for the word 'shall' in the bill, which will allow county commissioners to ignore the provisions, if they desire, should it be enacted into law."

The bill as amended was also approved by the senate, and the teeth knocked out of it by permitting the "may" to remain, a fact commented upon by the Topeka State Journal of February 17, 1917. There is no doubt but what the measure, limp as a rag and absolutely worthless, so far as meeting the demands made upon the State by poverty-stricken women is concerned, will be presented to the governor before the end of the present session. No doubt being "the best we can do," and being another case of "cutting our garment to fit our cloth," the governor will sign it. And then at the first opportunity will probably "point with pride" to the fact that there are so few poverty-stricken widows and mothers in Kansas, the matter of caring for what few there are is left to the tender mercies of the county commissioners, who "may," if they think it necessary, grant the relief. Unless the governor changes his tactics as an Anti-Saloon League campaigner, he will declare that the "liquor interests" tried to force through the "shall provide" clause, and as it was entirely unnecessary due to the great prosperity prohibition brought the State, it was tossed to one side.

In addition to the mothers' pensions allowed by the larger counties of the State, thousands of dollars are paid out each year by way of temporary aid and regular monthly allowances. Based on the amount paid out by Wyandotte County alone, during January, 1916, the monthly allowances, if not increased during the year, amounted to over $3,000, and the temporary aid amounted to over $16,000, according to the Press, the official paper of Wyandotte County, January 14, 1916.

In the same issue of that paper appeared the following news item, as indicative of the "luxury" allowed the paupers on the county farm: "Meals at the Wyandotte County Poor Farm during 1915 cost 6½ cents each. This includes gum drops for Christmas." Merry Christmas!

One of the many contributions to the chain of evidence that Kansas people brag too much on their State and claim everything under the sun that is worth while claiming for it, to such an extent that people living in other Commonwealths begin to believe it after awhile, is presented in an article appearing in the Topeka State Journal of November 28, 1914:

"TALKS TOO MUCH—PROSPERITY REJOICING DEVELOPS A KANSAS KICK BACK—STORIES OF STATE'S RICHES LEAVE FALSE IMPRESSION.

"Kansas has been talking too much. The old State has been boasting and whooping things up about her big wheat and corn crops, her fine alfalfa, big profits in live stock, and her numerous motor cars and

other comforts and luxuries until folks in the Eastern States believe Kansas is so wealthy she doesn't need any contributions to help support her charitable institutions.

"The College of Emporia, a Presbyterian institution, says in its latest bulletin:

"'We suffer greatly because the conditions in Kansas are so greatly misrepresented abroad. Kansas is considered so wealthy that it is almost impossible for us to get money in the East. At the same time this wealth is so divided that there are very few individuals of large means in Kansas to whom we can appeal.'"

Hard times caused the Confidential Exchange, the central charitable organization of Topeka, to close a short time ago. And, in commenting upon its closing, together with the distress it caused in closing, the Topeka State Journal of February 17, 1917, said:

"The closing of the Confidential Exchange, which has done such commendable charity work, is causing both distress and criticism.

"'Such a thing should not occur again,' Commissioner W. L. Porter said to-day. 'The exchange has done valuable work through its secretary, Miss Adams, who has given all her attention and energies to the organization of charitable work in Topeka at a pittance wage. Next year it should be placed on a business basis.'

"'It is a shame that the exchange had to close just when it was needed most,' said Miss Kate Pearson, head of the Public Health Nursing Association and a pioneer agitator for the establishing of the exchange. 'It is too late to do anything this year. A month ago by efforts of the welfare committee enough money might have been secured to carry on the work during the remainder of the winter.'

"Meanwhile Miss Adams, secretary of the exchange, is answering daily a flood of phone calls from Topeka givers asking why the exchange is not in operation. The exchange was founded two years ago to organize the charitable work of the city and prevent duplication of giving food, as well as furnishing other assistance. Through its agency more than 1,200 baskets of food were distributed at Thanksgiving and Christmas last year."

Editorially, the State Journal stated the same day:

"POOR NEED HELP.

"Many of the charity organizations of the city are up in arms over the enforced closing of the Confidential Exchange because of lack of funds. With an epidemic of poverty caused by nonemployment, charity organizations are minus their best aids—the exchange.

"The city distributed $1,000 between the Provident Association and the Public Health Nursing Association in December. The welfare committee of the chamber of commerce made no particular attempt to secure any of the money for the continuation of the work of the exchange, charity workers assert, although the exchange is under the direction of the committee. Individual members of the committee say that at no meeting of the committee was the financial situation of the exchange discussed.

"* * * The city appropriated $500 to the exchange some two years ago and the amount has been made to cover the expenses of the exchange during the 12 months in which it has been kept open. The commissioners profess that they were ignorant of the low financial tide of the exchange, as no effort was made to bring the matter to their attention by the welfare board."

The charitable work in Kansas City, Kans., reached such enormous proportions that during the present winter steps have been taken to work out a plan to centralize them, not because of fear of duplication so much as fear that many of the paupers are not receiving aid. The same is true of Wichita and other larger towns in the State.

When Allen County decided not to grant mothers' pensions in January, 1916, according to the Topeka Capital, January 11, 1916, because of lack of funds and fear of an uprising if taxes were raised any higher, of the 35 mothers with dependent children who applied, at least 20 were found to be in dire need and suffering extreme poverty. The county commissioners decided to do "what they could," promising nothing. Just what became of the poor people, or how many of their sons and daughters were driven into immorality, vice, and crime to get a loaf of bread, or a new pair of shoes, or clothes to wear, is not stated. That part of it doesn't matter, so long as taxes can be kept down to boost prohibition.

Topeka's industrial plants decreased in number from 202 to 159 during 1915, according to the State Journal, January 15, 1916, thus closing the doors of commercial institutions that might have offered a chance for "child labor" at least to have helped beat the wolf from the door.

During this time the attorney general's office and all the available State machinery of government devoted weeks at a time preparing briefs for the purpose of butting-in to the Supreme Court of the United States, in an effort to help the good work along of having the Webb-Kenyon law declared constitutional, according to the Topeka State Journal of January 19, 1916.

The astounding increase of delinquency, juvenile immorality, and crime of all kinds in Kansas may be traced without fear of successful contradiction to the dire poverty that infests the State and the futile and careless efforts exerted by those who should leave no stone unturned to remedy it. "Poverty is the principal cause of immorality," declared the senate committee investigating vice condition in the State of Illinois, according to the St. Louis Globe-Democrat, January 20, 1916. "Unregulated conditions of domestic employment render the home, in many cases, a breeding place of commercialized vice," the report continued. "That poverty is the principal cause, direct and indirect, of immorality is the first and most strongly emphasized finding of the commission," said the Globe-Democrat.

The relationship between poverty and vice is so close that it occupied special attention when the Report of the Commission on Industrial Relations was submitted to Congress, August 23, 1915. On page 31, it says:

"Six dollars a week—what does it mean to many? Three theater tickets, gasoline for a week, or the price of a dinner for two; a pair of shoes, three pairs of gloves, or the cost of an evening at bridge. To the girl it means that every penny must be counted, every normal desire stifled and each basic necessity of life barely satisfied by the sacrifice of some other necessity. If more food must be had than is given with 15-cent dinners, it must be bought with what should go for clothes; if there is need for a new waist to replace the old one at which the forewoman has glanced reproachfully or at which the girls have giggled, there can be no lunches for a week and dinners must cost 5 cents less each day. Always, too, the room must be paid for, and back of it lies the certainty that with slack seasons will come lay-offs and discharges. If the breaking point has come, and she must have some amusement, where can it come from? Surely not out of $6 a week." And surely not from the Antisaloon League or a high-toned Y. W. C. A.! She might beg a meal from a corner saloon keeper, but never from an Antisaloon Leaguer.

A "sufficient reason" for Topeka's neglect, failure, and refusal to care for the poverty-stricken army of down-and-out men, women, and children may be gleaned from the following cheerful news given to the taxpayers, according to the Topeka State Journal of January 21, 1916:

"Exclusive of paving, water, and sewer bonds, Topeka is in the hole to the extent of over half a million dollars. The bonded indebtedness, exclusive of the above, is $509,312.41, and it will be necessary to stow away in the sinking fund $30,000 a year for 17 years in order to meet it.

"That is Topeka's financial standing, according to figures worked out to-day by W. H. Wasson, commissioner of finance. By laying away $30,000 a year until 1932 the city will be able to get out of debt; that is, the city proper. There will still be the waterworks, paving, and sewer bonds. The waterworks has a bonded indebtedness of $620,000, but will take care of its own troubles, exclusive of the city proper. The paving and sewer bonds will also be taken care of through another source—through the taxation of citizens whose property is affected.

"Heretofore the city has been putting between $24,000 and $25,000 in the sinking fund each year, but the ante will have to be raised to $30,000."

No wonder, as the State Journal said in its editorial February 17, 1917, the commissioners "knew nothing of the poor people's wants." They have their eye on that $30,000 "ante" each year.

When a city spends $10,000 a year chasing bootleggers and spending an increased amount year after year "enforcing the law," these little half million deficits are bound to come, no matter what be said away from home about the blessings of a ramshackle system the taxpayers know is a farce, a joke, and a sad commentary on the sound and dependable judgment of the best thinkers in the State.

On the same day the glad tidings were rung forth by the commissioner of finance, the police department, according to the State Journal, demanded an increase in pay. "The police ought to have more money," said Mayor House; "they are underpaid."

If all that has been said about prohibition in Topeka is true, they should be laying off policemen. They should have no use for them, and no doubt Mayor House doesn't know what he is talking about. He is merely the mayor of the city. To be an "authority" in Kansas you must be a governor or an attorney general, doing the lock step with the Anti-Saloon League. Then you know it all. Probably some of the policemen have a daughter or two working in the 5 and 10 cent stores there for from $3 to $5 a week, and would like to "save" them, preferring to do a home job of it than leave it to the governor or the attorney general's office—or Billy Sunday circus performers.

While the poor of Topeka were crying for bread at the door of the city hall Cora G. Lewis, one of the State's welfare workers, gave a glowing interview in one of the Anti-Saloon League's chief organs, the Kansas City Star, on how she was planning to censor film music. "How can we expect fathers or mothers, especially the fathers, to become interested in good music," queried Mrs. Lewis, according to the Star January 24, 1916, "when they hear the average ragtime"? Mrs. Lewis said she would take up the censorship proposal with State educators in Kansas. She is drawing a State officer's salary, incidentally, as a member of the board of administration, which has always had a tendency City Star, giving prohibition the same old threadbare boost, saying,

On January 27, 1916, Gov. Capper was quoted at length in the Kansas City Star, giving prohibition the same old threadbare boost, saying, among other things, that prohibition had beed a godsend to the farmers of the State, who were the healthiest, wealthiest, and wisest set of men in the Union, and the farmers of Smith County, one of the counties where "assessed valuation" is high and apparently "actual wealth" somewhat low, spoiled it all by petitioning the county commissioners and State officials to give them three or four months more time in which to pay their taxes, then due and delinquent, because of financial stringency. "It is likely they will be given a stay of at least 20 days," says the governor's paper, the Topeka Capital, January 28, 1916. "There are more taxpayers in arrears in this county now than for the last 20 years," concludes the article, in the form of a dispatch from Smith Center, Kans., the county seat of Smith County.

The farmers have been buying too many Anti-Saloon League pamphlets or too much boot-leg, mail-order whisky, and trusting too much in what the league promised them. But the tax collector only promises one thing, and that is a rough-house if you are not there with the coin of the realm when it is due. Prohibition doesn't pay taxes—it creates the demand that they be raised.

Forty-five sturdy "sons of prohibition" slept in the city building at Winfield, Kans., on the night of January 29, 1916, according to the Topeka Capital, January 30. "This is an unusual condition," remarked the Capital. Quite. And quite interesting. What caused it?

On February 1, 1916, the Topeka Daily Capital carried the following "living proof" that prohibition has decreased poverty in that city to such an extent even an epidemic of sickness cuts no figure any more:

"The grippe has brought the pinch of winter poverty to more homes in Topeka this winter than in any similar period of cold weather on the records of local charitable workers.

"The charitable institutions have been flooded with pleas for immediate relief, and in an overwhelming measure the increase in the number of calls and the keenness of necessity is a result of the grippe that in so many cases has quickly developed into pneumonia.

"Wage earners have been taken ill, the slender supplies of coal and food exhausted, and families that heretofore have not been compelled to ask assistance have sought temporary relief.

"'We have never had as many calls as we are now receiving,' said Mrs. E. J. Callahan, assistant secretary of the Provident Association, yesterday. 'Illness has been the cause of a majority of our appeals. Food, clothing, coal, and transportation—all have increased. Our woodpile has been an especial blessing. Beside the families to whom we have given wood, numerous times, Mr. Bacon, the county poor commissioner, has been unable to rush coal orders to needy homes, and recourse is had to our woodpile.

"'So far this month,' Mrs. Callahan said, '217 grocery orders, averaging $3 in cost, have been issued. Clothing and fuel, in addition, have been provided for many, and rent has been paid for numerous families. The men's dormitory at the association building has been full every night since the present cold weather began, and the two hospital rooms have been crowded with patients.'

"* * * W. E. Bacon, county poor commissioner, has had a big month, and as many calls are coming in daily now as when the first cold weather arrived. Food and fuel are the principal things for which the demand has increased, Mr. Bacon said. The Salvation Army

has given help to many persons the past few days, Ensign Houser said last night."

Apparently somebody in Topeka has been spending those nickels they would shoot across the mahogany, if they had saloons up there, somewhere else. In any event, none of them went into the savings account, or went to build dry fortunes we hear so much about by the Kansas "statesmen." Something is wrong. Perhaps, after all, Topeka and the rest of Kansas is just like the rest of the country, only that they buy all their booze from boot-leggers and from the mail-order whisky houses.

During this time, according to the Topeka Capital, February 1, 1916, an almost unprecedented campaign was being waged among the rich people of the city by the Walnut Grove Methodist Church to raise $10,000 for the new church to be built in an exclusive resident neighborhood, costing $20,000. Bishop William F. Anderson, of Cincinnati, and other big men in the church organization were booked to come to Topeka and deliver lectures for the purpose of raising a part of it.

The article failed to state how many of the lectures were to be delivered at the hospitals or in the jails, where the starving and sick unfortunate army of the city's population were housed, or to the babies whose mothers were near wrecks from lack of food. The "better element" had its hands full and had no time to think of the sick and starving. The money had to be raised for the church, no matter how many died of pneumonia.

The February 5, 1916, edition of the Topeka State Journal tells the sordid story of the shame of little Hattie Naffe, a 16-year old Topeka girl, whose three or four dollars a week as a waitress in a cheap restaurant failed to keep the wolf from the door where her sick mother was the victim of pneumonia, and so she sold her virtue for the price of food and clothing that could not be spared her from the church donations or the regular monthly subscriptions to the Anti-Saloon League. "White slavery is becoming an epidemic," laconically states the news item.

Billy Sunday was about due to save Kansas City at the time, and prayer meetings were being held daily and nightly, urging the Lord to make his meetings there a grand success. There was also a promise of his coming to Topeka for a few hours to save the poor people.

The police had time, however, according to the Capital of February 7, 1916, to hunt up a cabaret dance and arrest 52 people. "Among the persons arrested," says the Capital, "were 25 boys under age and 9 girls under 20. There were several boys and several girls who were not over 15 years of age. The range of the ages was from 15 to 44. Dan Hickman was the oldest. Chief Parsons warned Mrs. Fisher, the proprietor, Saturday that she must not permit minors, boys and girls, to enter her place or she would be arrested. Mrs. Fisher conducts a restaurant in the upstairs rooms of a brick building."

On February 11, 1916, the Topeka Daily Capital featured a news dispatch from Peabody, Kans., a town of slightly over 1,300 population, in Marion County, in the central portion of the State:

"PEABODY A PAUPERLESS TOWN—BEDDING AND SUPPLIES FOR THE NEEDY AT CITY HALL, BUT NOBODY CALLS FOR THEM.

"PEABODY, KANS., *February 10.*

"Peabody claims the distinction of being one of the very few cities in Kansas that is without a pauper. Mayor J. W. Newsbaum said the other day: 'So far as I know, there is not a pauper in the city, nor has there been all winter.' Charles Marsh, city marshal, says the city has a lot of bedding and clothes at the city hall for those who are in need, but so far this winter there has not been a call for free supplies."

In the Topeka State Journal of February 11, 1916, appeared a cartoon showing starving and needy Topeka children, huddled together watching large moving vans hauling away Servian and Belgian relief supplies. It was entitled "When Will Charity Begin at Home?"

In the same issue of the Topeka State Journal Hon. F. P. MacLennon, the editor, said:

"In a recent talk which the editor of this paper was invited to make in a distant State he said: 'The lesson which California teaches Kansas lies in the statement that the Sunflower State is not a good spender; that great things come not by accumulating wealth and holding it, but by spending it efficiently.'

"That is as strong as we dared to put it away from home, where it might leak out and hurt us, but here in the capital of Kansas, just among ourselves and in the family, we have got to admit our real trouble when we find it out and take the remedy.

"Fortunately the indisposition, though evil, is not incurable; quite the contrary. It can be cured. The dose is easy and palatable. We have it at hand. We boast we have it, but we do not take it. Let's take it and be great; then we will really be not only what we claim to be but what we really are, if we but assert ourselves and take the rank which belongs to us.

"This remedy is to stop hoarding money; stop putting our wealth in mere piles and figures to amaze the world—but spend it, efficiently of course, but buy that for which we have the means.

"We talk too much. Well, to be true; but let our actions follow, and befit our mien and station. Let us quit being miserly, and thereby mean and close, and do as the State and the community of Kansas are really doing individually, for the Kansan himself is not selfish. He is generous and sympathetic personally. Witness the long list of good things our people do for others. For instance, the Belgians, the sufferers by flood and fire, aid to the poor and stricken of our own and other communities. Let us do as citizens of our State, county, and city as we do in our families, in our homes, in our business.

"Kansas is not correctly or efficiently represented, governed, or led by those who have put themselves in public place to represent us. This is true of our governor, of our county commissioners, of our city commissioners."

"Look at the spectacle of Gov. Stubbs (an ex-governor), who vetoed a needed appropriation for our university to make a political record in holding down taxes, now sending his children to Princeton," further declared Mr. MacLennon.

While poverty was still raging throughout the State the Topeka Capital of February 20, 1916, heralded the glad tidings to the world that Henry J. Allen, of Wichita, and W. Y. Morgan, the lieutenant governor, had answered the Macedonian call for help from the Iowa suffragettes and the Topeka Club women were busy trying to enforce the Sunday blue laws, while the school children of the State were to receive only $53 per capita during the year for all educational purposes provided by the State.

And the Capital of February 21, 1916, gleefully heralded the news that much poverty would be relieved soon, as the National Congress was about to pass a bill to pension Indian war veterans, and two regiments of Kansas cavalry were to participate in the appropriation.

And with befitting modesty W. J. V. Deacon, a faithful contributor of Anti-Saloon League literature, himself the State registrar, announced that the birth rate had increased from 21.2 to 22.2 in a whole year, but forgot to mention with any emphasis, in his interview appearing in the Capital (Feb. 21, 1916), that the death rate had also increased from 10.5 to 10.7. The Kansas death rate in 1914 was 9.8, according to Government figures, though Deacon put it at 10.5 "on suspicion," because it was 10.6 the year before.

One of the surprises of the age was notedl n the Capital February 23, 1916, in the form of a telegraphic dispatch from Belleville, Kans., an inland town where John Barleycorn has been dead for all of 35 years: "The whisky ring in this county is trying to play a smooth game this year in county politics. They have a well-organized plan to get behind certain candidates for county office, regardless of political party, and will endeavor to nominate and elect them with a view of controlling them in office after election. If the voter will keep close tab and take a second look he will be able to detect the candidates the whisky ring is supporting." The whisky ring must be quite a power out there! And this after 35 long and weary years.

Another prosperity item in the Capital, of same date, was the story of the filing of a petition in bankruptcy by the owner of the largest restaurant in Kansas City, Kans. "It was the favorite gathering place of business men, politicians, professional men, and the like, to take lunch and talk shop," said the Capital. "It seems now that the best known café of Kansas City, Kans., has been suffering from poor business. * * * The total liabilities listed amount to $8,536.26. The only asset listed is the safe, valued at $1,500."

The Topeka State Journal of February 25, 1916, carried the pitiful story of the downfall of Pearl Higginbottom, a 13-year old girl, who because of poverty and inability to secure aid or work sold herself into white slavery to one Charles Smith for $5. Charles, by the way, was a Kansas product who had never been tempted to do evil by the sight of an open saloon, but was a frequent receiver of mail-order whisky and a good customer for the bootleggers. But he was "dry," and as proof of it showed he was a Sunday-school member in good standing and could yell at poor old John Barleycorn louder than a calliope.

Also on February 25, 1916, the city of Topeka and the county commissioners of Shawnee County entered into a public fight as to who should assume the care of the indigent poor, pauper sick, and charity patients of the city.

"I didn't know until I read it this morning that Dr. Lull was fighting me," said Commissioner W. L. Porter, "but now that he is I'm going to get a couple of yards of mosquito netting and protect myself."

After which remark, Commissioner Porter made formal request on George P. Hayden, city attorney, for an opinion on the division of the medical work between city and county. The opinion was in Porter's hands within a short time, and it bears out his contention with the county:

"Under the opinion, * * * it is up to the county to take care of all cases of sickness among indigent poor and of all contagious and infectious diseases, except in so far as the city assumes responsibility.

"It states that under the law, where the city adopts rules and regulations for the control of contagious diseases, then the city assumes the responsibility for the treatment of such diseases. It states that under the law it is up to the city to take care of sick transients—people who are not residents of the city or county—but that the county is responsible for the expense incident thereto.

"* * * 'From reading the statute covering the point,' reads the opinion of Attorney Hayden, 'there is in my mind no question that as a general proposition the county shall be liable for the necessary care of the indigent poor and is only relieved from these duties when the city takes upon itself the responsibility of the health of the city.'

"'That,' said Porter, referring to the opinion, 'is the contention I have been making—that the city is responsible only for what it undertakes. And we have not undertaken and do not intend to undertake the responsibility for the treatment of the indigent poor. That has always been the county's business and will continue to be so far as my department is concerned. I don't blame the county for trying to saddle this work and expense upon the city. That's the way for the commissioners to cut down their expenses.'

"* * * Dr. Lull (county physician) stated to-day that his department and that of Commissioner Porter made an agreement months ago under which the city physician was to take care of all contagious diseases and that Porter is backing up."

In the meantime, on February 26, 1916, the news was heralded by the Topeka Daily Capital that the entire Kansas delegation in Congress had been made to "see the light" by the Anti-Saloon League and were "solid for prohibition," because there was no poverty or sickness in the State; because, in fact, "Kansas offers more reasons for living and fewer chances of dying than any other State." No doubt this was news to some of the Kansas delegation.

Another reason why Topeka merchants are short and continually entering the bankrupt court, with or without "inducement" from their creditors, and perhaps a potent factor in the apparent lack of attention paid the poverty-stricken army that roams the streets of that fair city and sleeps in the police station or goes to the hospital because food and clothing can not be obtained, is given in a "prosperity and prohibition" item, published in the Daily Capital, February 26, 1916:

"TRADE AT HOME" MOST IMPORTANT CITY SLOGAN—A. C. NAGEL POINTS OUT FEASIBLE PLAN TO BRING DESIRED RESULTS—LIST THE THINGS YOU BELIEVE CAN'T BE BOUGHT HERE AND TELL THE COMMERCIAL CLUB ABOUT IT.

"'Trade at home,' says Albert C. Nagel, manager of J. C. Darling Co., and in the next breath he comes right along with a scheme to encourage Topekans to take his advice. Here is the scheme:

"Every Topeka merchant who buys goods outside of the city and every other business man should prepare a list of the goods which he can not obtain, or thinks he can not obtain, in Topeka. These lists should be given to the Topeka Commercial Club and taken in charge by a committee. This committee should check over the articles mentioned. If the goods wanted are not made here, there is a reason, Mr. Nagel says. It will be the committee's business to find out the reason.

"'Too many merchants and business men take it for granted that the goods they want are not made here,' said Mr. Nagle. 'They never stop to find out. If they want a large quantity they find the eastern manufacturers will offer better prices. What's the reason?

"'It's simply because the Topeka man can not afford to carry a big stock, because the merchants do not buy from him consistently. He can't compete with eastern houses, because he can't buy in large quantities.

"'If a list was prepared showing what goods were made in Topeka it would boost the trade. The same list would show what lines are carried here. Cooperation would enable some firm to stock up on the needed lines.

"'I think it is time for Topeka business men to wake up and get together and do a little cooperating so they can help each other build up. As long as they fail to do so, the town isn't going to get along very fast. It will be mighty slow pulling.'"

Mr. Nagel probably is also aware that 85 per cent of the "energy" expended in Topeka is reform energy—all wasted. Not arguing that if Topeka had saloons, this condition would change materially. It would if the "good old days" of license and regulation would get the people back into the habit of building up rather than tearing everything to pieces. The sunbonnet brigade has been furnishing many sweet morsels for the governor to roll around under his tongue when praising suffrage and prohibition throughout the land, but a ramshackle system will break down eventually, and Topeka is about as good a living example of what bunk will do as could be imagined—and Topeka is by no means the only city in the State suffering from prohib-religio-peritonitis. One thing is certain, prohibition has ruined the town, which answers every argument made by the dry boosters.

A few days prior to Mr. Nagel's outburst a Capital reporter asked Mayor House what Topeka needed most. "Horse sense and tolerance," answered the mayor, according to the Capital of January 30, 1916.

According to the Atchison Globe, April 22, 1915, "An Atchison business man said to-day: 'If I had my money out of my business, I would leave Kansas on the first train. The fool politicians are ruining the State, as they never overlook an opportunity to drive business to Missouri.'"

Law-enforcement programs have long since taken the place of industrial-trade crusades in the Sunflower State, and it is no matter of wonder why poverty, piffle, and bankruptcy prevail in normal times. The big red-padlock crusade staged in Kansas City, Kans., during 1906, 1907, and 1908 by Trickett and the attorney general's office in quest for gold only—not that they cared a whit about prohibition—dealt that city a body blow from which it will never recover. A third of the business property there is vacant now, and bankruptcy proceedings have been instituted against the largest clothing store there within the past week. The city has lost its amusement park, has no theater, no newspapers; its city market went to the wall after a feeble effort to stay on earth; its hotel, opened several years ago with so much promise, has become nothing more than a family boarding house, occasionally housing a few of the overflow crowds Kansas City, Mo., can not care for; and its park system has degenerated into a series of mudholes, ruined pavement, and trashy looking flower gardens.

But there is a reason for everything. One of the reasons why Kansas City, Kans., is the backdoor yard of Kansas City, Mo., is because the women insist on running the police department, the city hall, and declare too often, "We are the people; let the people rule."

The following from the Kansas City (Mo.) Post, August 18, 1915, gets the point to you better than a volume:

"FLAYS K. C. K. OFFICIALS; CHARGES INSINCERITY—MRS. S. H. WALLACE DECLARES PROMISES OF PROSECUTION OF BOOTLEGGERS BY POLICE AND JUDGES HAVE NOT BEEN FULFILLED.

"Charges that Kansas City, Kans., officials, from judges to patrolmen, are not sincere in their attempts to enforce the prohibitory laws were made by Mrs. Sena Hartzell Wallace last night. She was addressing the Twelfth Precinct Welfare League at the Western Highlands Presbyterian Church.

"The meeting was the first of a series to be held by the Welfare League and the W. C. T. U. in Kansas City, Kans., to arouse public sentiment to a more rigid law enforcement. They were decided on at a meeting held two weeks ago at Grandview, when Chief Gordon spoke.

"'Chief Gordon told us the courts had a whole lot to do with the failure to stop beer wagons making illegal deliveries,' said Mrs. Wallace. 'It does seem that the judges, from Judge Pollock, of the Federal court, down to Judge Fischer, of the district court, have by some of their decisions on liquor cases made it hard to enforce the law.

"'The chief also said witnesses went back on their testimony when taken into higher courts than the police court, which amounts to nothing to the bootlegger, who appeals from his fine.'

"Mrs. Wallace pointed out that there is a way, and cited a recent case in Wichita, where a witness was fined $10 for not telling the truth.

"'The law can be enforced if the officers are in dead earnest and cooperate with each other.'

"Mrs. Wallace also made an attack on the parole system used in police courts as very inefficient by allowing a loophole for the bootlegger to avoid the fine."

And at the same time rental property not fit for a dog to occupy was housing starving babies throughout the city, street car tracks were almost impassable because the city commissioners were sitting up nights trying to figure out how to keep a beer wagon off the city's streets rather than face the W. C. T. U. firing squad and letting the railway franchise go unenforced; the building code was trampled under foot; and in the mad rush for favor among the "sunbonnet brigade" the county poorhouse was creaking and groaning with its overload of paupers, having dished out to them a 6¼-cent meal, with gumdrops thrown in, for Christmas dinner. And the people ruled!

The Topeka Capital of August 21, 1915, quoting Harold B. Wood, city health officer, as saying, "It is no easy task to find the dirtiest home in Topeka."

And amid the clamor and "open charging" by the female firing squad in Kansas City, Kans., the "efficiency" of their law-enforcement program was meekly told by the Kansas City (Mo.) Post, May 28, 1915, as follows:

"RESORTS IN KANSAS CITY, KANS., RUN UNMOLESTED—'BLIND PIGS' ARE FLOURISHING WITHIN FOUR BLOCKS OF POLICE HEADQUARTERS.

"Within a radius of four blocks of the Kansas City, Kans., police headquarters resorts and 'blind pigs' are operating and have been doing so for several months without serious molestation. Several times the proprietor of the most flourishing resort has been haled into police court on minor charges, but always escaped on small fines.

"The police have received several complaints. Confident of their secure position, the proprietors sell liquor of every description without discrimination. Seldom do they investigate before complying with the requests of prospective customers.

"Policy tickets are sold openly in some of the pool halls of both Kansas City, Kans., and Kansas City, Mo. Kansas City, Kans., is given as the location of the drawings."

It is notorious that there are resorts flourishing there to-day. The county and city officials have made many "attempts" to stop the dive keepers and policy writers, but when the public goes to sleep for a week their business takes on new life. Occasionally it is absolutely necessary that some little business be transacted, and the foot racing and crusading must subside while the commissioners figure out how much the taxes shall be for the ensuing year. And then the "business of 'seeing the judge'" and the patrolmen goes merrily on. And so does poverty, vice, crime, drunkenness, and "saving of souls."

Kansas City is close enough to the Missouri city, so joints are not as necessary to the "metropolitan life" as in Topeka and Wichita. With a car line running from the Kansas side to Missouri, a great convenience is enjoyed by the "Kansas side drys." If the bone-dry law is passed, the car line will be a most highly useful adjunct to the Kansas town, and should any bone-dry law contain the clause making it a felony to have booze "in or about the person" half the city would be in jail all the time or move away.

When a reduction was made in railroad fares in Kansas recently much promise was held out for the Kansas towns, especially those bordering on "city territory," and one of the delightful aftermaths of the continuous system of hammering, misstating the truth, and bragging of the wonderful satisfaction that reigns supreme in sunny Kansas because of the saloonless conditions is contained in an extremely "shocking" and none the less "unpatriotic" article appearing in the Press, the official and also the only weekly paper published, the only one, in fact, in Wyandotte County, under date of January 28, 1916:

"THE HALF-CENT FARE REDUCTION CATCHES 'EM—TRAVELERS ON TRUNK LINES GOING TO AND COMING FROM POINTS IN KANSAS STOP IN THIS CITY, BUT THERE'S LITTLE OF MUCH INTEREST TO HOLD THEM.

"Passengers from points in Kansas do not alight from trains in the Union Station, Kansas City, Mo., because they can save one-half of a cent per mile by getting off trains in this city. The board of railroad commissioners fixed a rate of 2 cents per mile in Kansas. The Interstate Commerce Commission has fixed the rate at 2½ cents per mile. Passengers to points in Kansas come from Kansas City, Mo., to stations in this city for passenger trains.

"All trains stopping in this city let off and take on many more passengers since the interstate decision has become effective. (Note.—For years the best through trains running west from Kansas City, Mo., did not stop in Kansas City, Kans., and only very recently have a number of them been forced to do so by act of the legislature.) In consequence street cars are taking in more nickels.

"'Where is the Cordova Hotel?' asks an arrival. 'Which car goes there?'

"'Where is the Savoy?' inquires another. And so questions are asked and answered as the travelers pull their baggage along after them on the street cars. (No inquiries are made for any of the Kansas City, Kans., 'hotels,' Woman's Christian Temperance Union headquarters, or churches, however; nor the public library nor 'park system.')

"The stop is made in this city merely to save the half cent per mile. Upon the arrival of trains a rush is made for the city on the other side of the State line, to the hotels, for the theaters, for the department stores, to the cafés, and the saloons.

"The little passenger stations in this city that towns of 1,000 population afford are adequate for even this increased business. Without the attractions that Kansas City, Mo., affords, where is the business in this city to maintain a million dollar depot? (Note.—Kansas City, Mo., opened a $60,000,000 station and terminal in October, 1914.)

"A union station, to be sure, and freight rates and terminals and hotels and theaters and stores and big business, all combined, would make a town here.

"A start should be made to attract strangers and transient trade, but the beginning should be made on practical lines."

In bragging on the wonderfully pure and progressive results of the constant cannonading, confiscation, jailing, and crusading carried on by Trickett, Attorney Gen. Coleman, Stubbs, Attorney Gen. Jackson, Hodges, Attorney Gen. Dawson, and others, ex-Gov. Hodges, in his notorious speech delivered before the fifteenth national convention of the Antisaloon League, Columbus, Ohio, November 12, 1913, while he was governor of the State, said:

"Kansas City, Kans., is the only city in the world of 100,000 population where there is not a house of prostitution, nor an open saloon, and I doubt whether there is a joint accessible in the whole city." ("Doubt" is good. Kansas City, Kans., "shrunk" from 100,000 in 1913 to 91,658 in 1915.)

And further the governor declared: "Kansas was an experimental ground, and we have determined the question that prohibition can be and is enforced in our largest city as effectively as in the rural districts. I have but to cite Kansas City, Kans. When the joints were closed the business men were up in arms, so to speak; they thought that the enforcement of the law would drive trade just across the line into Missouri wet territory, and while we were embarrassed temporarily, a reaction took place, and the city grew by leaps and bounds. New business houses, bigger and better stores, great high schools, public ownership of a great water plant and electric-light plant sprung up." (The bonded debt of Kansas City, Kans., is greater than that of Kansas City, Mo., and the latter is a metropolis of nearly 400,000. Every two years the Kansas Legislature is forced to permit Kansas City, Kans., to increase its bonded debt limit. The water plant and the electric-light plant are bonded for several millions, are not self-supporting, and have proven to be a serious menace because of the high tax necessary to keep them going. They show a "profit" when figured out by the city officials, who want more bond money to spend on them, but not by experts. Bond money voted for "extensions and improvements" is carried in the general fund, and what is left at the end of the fiscal year is figured in as "profit" to furnish sop for the prohibitionists, and also as a bait to induce "big business" to come, but big business is not crazy, no matter whatever else is the matter with it, and refuses to come.)

Kansas City, Kans., furnished much "enthusiasm" to the Antisaloon League "statesmen" for a short while, especially during the period the Kansas City Star was putting across commission form of government over there. Bankers, who were expecting to and did afterwards handle some of the bond issues voted under the "new form," furnished glowing testimonials that are still used by the league throughout America. But that was years ago.

In his Antisaloon League outburst, however, Gov. Capper declared in Boston, September 3, 1915, that "after the saloons were driven out of Kansas City, Kans., the State's largest city, for the first time in 20 years that municipality made no debt for current expenses," and cited a former mayor, U. S. Guyer, as "authority." Mr. Guyer forgot to tell him, or Capper forgot to say, that the bonded debt of the city has increased to over $11,000,000 meantime, which is over $4,000,000 in excess

of that of Kansas City, Mo., over four times as large in population. The governor also maintained that "another saving was made of $25,000 by a reduction of the police force," but does not say when the "reduction" was ever made. For a time after the city suffered a loss in revenue by closing the joints, the treasury was so depleted the fire department and police department had to be cut down, as were a portion of the small army of school-teachers. The streets were unsprinkled and permitted to go to ruin, as they are now. After some bonds for "public improvements" were voted, the police force was again rehabilitated and is now over four times larger than it ever was, and not half large enough. The governor claimed also that "a former attorney general" told him that Kansas City, Kans., had "saved $25,000" by reason of public prosecutions falling off. If that is true, it seems strange neither the governor nor the "former attorney general" gave any authority for the statement. The records of Kansas City, Kans., do not bear out the claim. When a city has to put a fire department in a tent and take money voted for the purpose of building a new fire station to pay running expenses it is time for the governor to adjust his glasses and take another look. He took a look at some of the tenements there recently and threw up his hands in holy horror, declaring he "never seen the like." There is lots to see elsewhere, if he will only look.

Aside from quoting John Dawson and ex-Mayor Guyer (ex-candidate for reelection, ex-candidate for city commissioner, ex-candidate for judge of the district court, ex-candidate for Congress three times, and ex-candidate for judge of the city court, and ex-lecturer for woman suffrage), Gov. Capper's speech let Kansas City, Kans., pretty well alone. He quoted a tale told him by Dawson, in which a "prominent citizen"—probably the fellow who hit McCarthy with the brick or stole Charley Ross—of Kansas City, Kans., came to him (Dawson) and said: "For God's sake, don't let the old rotten order of things return to Kansas City. We have got away from it and are well rid of it, and the town was never so prosperous as now." Apparently the "prominent citizen" cares nothing for a union depot, a hotel, theaters, baseball parks, department stores, first-class cafés or restaurants, or big business. He answers the description of the type of the average Kansas City, Kans., religio-politico hell raiser. They live on "increased publicity"—not "increase of population, prosperity, or industry."

The Happy New Year resolution adopted recently by the Mercantile Club of Kansas City, Kans., called for the hiring of an expert, if the funds could be raised, to tell them what was the matter with the club and what to do to make it grow and bring "big business" back to town. And ex-Mayor Guyer and the banker who told of the glories of prohibition in glowing terms a few years ago were among the prime movers of the plan. Dawson and his friend, the "prominent citizen," were absent, the former holding down a fat job as judge of the supreme court and the latter probably holding down a "call" with a little more of a pay check attached—in some wet town.

Gov. Capper's rap at the slum landlords in Kansas City, Kans., was not made until April 7, 1916, according to the Kansas City Star, however, which was some time after his Anti-Saloon League speech in Boston, but he repeated it several times during the fall campaigns for the league. In his "rap," according to the Star, he said: "The tax records of Kansas City, Kans., show that some of the most filthy, tumbled-down rental property is owned by wealthy citizens or corporations controlled by them. These men live well on the 15 per cent they get from the rental of this uninhabitable property." He was going to see to it that the legislature passed a law prohibiting these hell holes of poverty, to the end that "the room in which the child sleeps is in a sanitary, healthy condition and not a dark closet at the end of a blind hallway in a tumbled-down shack owned by a man who thinks only, 'How much rent can I get?'" but has been too busy entertaining his coworkers in the Anti-Saloon League, endeavoring to figure out what sort of a bone-dry law "the people want" to pay any attention to the poverty-stricken people of Kansas City, Kans., or any other Kansas town.

"The health records at Topeka show that in Kansas City, Kans., of the 2,100 children born last year 216 died before they reached the age of 1 year and 60 per cent of diseases that can be prevented," the governor said when delivering his "rap," according to the Star, but not one word about it now. "'The people' are demanding a bone-dry bill and the governor is sworn to serve 'the people';so the starving, disease-ridden children will just have to hang on as best they can. If they don't like it, they can wander out and look at the nice dirt roads, 'the best in America," so Hodges says, that prohibition has furnished for the State, or they might hunt up that "prominent citizen," the friend of Judge Dawson, who said "For God's sake" when begging him not to let the "rotten conditions" return to the city.

There is no showing anywhere that conditions as revealed in Kansas City, Kans., and Topeka differ from conditions throughout the entire State. It is no doubt true, if Peabody, the little 1,300-inhabitants town down in Marion County, actually had no paupers during a portion of the last winter, it enjoys the distinction it claims, but the fact that it was "prepared" for pauperism shows it, like all other Kansas villages and towns, expected to have it to contend with. Space will not permit an analysis of conditions in Lawrence, Wichita, Salina, Parsons, and other "cities" of the State, nor of the smaller towns, but it is true, nevertheless, that poverty is just as rampant as bootlegging.

SUMMARY.

The published report of the secretary of the board of control, Senator J. W. Howe, showed, among other things, that on December 31, 1915, Kansas was caring for 247 paupers under the mothers' pension law, and that 772 applicants had applied for aid thereunder, with only 25 counties recognizing the demands of that measure, and those among the most sparsely settled communities, where, if anywhere, prohibition should have driven poverty before it into the bottomless pit of oblivion. That report, covering a period of 18 months (from July 1, 1914, to Dec. 31, 1915), showed that $457,361.58 had been spent for relief of poverty during the period, and the expense of operating poor farms totaled the staggering figure of $124,696.75, with many poor farms self-supporting, or the poor cared for under private contract or through an arrangement whereby they could be provided for out of the grain or cash rent received from the rental of poor-farm property.

The year elapsing between December 31, 1915, and the last of the year 1916 has been a prosperous one for Kansas farmers. Wheat has been demanding a top price; cattle, hogs, hay, and alfalfa, as well as all other farm products, have broken all records, owing to the "war prices." However, in a report just published, covering the period from July 1, 1915, to July 1, 1916, it is shown that 368 mothers' pensions have been granted among 943 applicants, about one-third of the relief given that has been demanded; and, although the number has increased from 247 to 368, the cost has been held down for the reason that counties are opposed to establishing a precedent by granting "regular pensions." The cost has been approximately $2,423.25 per month, or $29,080 per year. "The county commissioners in many counties allow regular monthly aid, but do not call it pensions," says Senator Howe, for the obvious reason that they may "cut off" the temporary aid whenever they desire, but not so with a pension. The cost of caring for the pensioners and those to whom general aid was given during the period from July 1, 1914, to December, 1915, was $457,361.58. The cost of caring for them during the period of just one year, from July 1, 1915, to July 1, 1916, a portion of the time, however, included in the foregoing mentioned period of 18 months, was $426,905.70, which proves that the cost is not decreasing any, but increasing at an astounding rate. While general aid was given to 11,784, aside from county poor-farm inhabitants, and also the 247 pensioners, during the 18-month period above mentioned, for the year covered from July 1, 1915, to July 1, 1916, 7,304 received general aid, aside from the poor-farm inhabitants and the 943 pensioners, at a cost of $134,704, as compared with an expenditure of $124,696.75 during the 18-month period. "The county commissioners contend they do not have the funds to pay mothers' pensions," reports Senator Howe in his last statement. "These figures do not include local charity or State charity," he adds.

If the State officials of Kansas, or other members of the Anti-Saloon League of America, can work any comfort out of this showing, they are welcome to it. And if the persistent claims that prohibition has reduced poverty to such an extent that a pauper is a curiosity in Kansas; that the homes are happier and children better cared for than formerly are not answered, defeated, and forever put to rout in this exposition of the fraud practiced upon the American public, then the English language has failed in its initial purpose to convey thought and tell the truth. One thing is established beyond all doubt—the Kansas system is everything else than claimed to be by the prohibitionist panhandlers. As a system of ruination and a vehicle for transportation to the poorhouse and the grave, it has achieved a signal success in the Sunflower State. Not that it has routed "booze" and that temperance and sobriety bring these conditions about. Not a bit of it. On the contrary, it has filled the State with rot-brain mail-order whisky, torn asunder any semblance of commercial thrift, turned into channels of despotism all police efficiency, torn from the masthead of the ship of state the flag of progress and prosperity, and nailed thereon with bloody hand clutching the steel hammer of hate, confiscation and ruin, a black and yellow flag, with skull and crossbones, whereon is written "He who enters here leaves hope behind!"

—

THE DIVORCE RECORD.

The State of Kansas does not publish an annual divorce report. Neither do any of the counties. Contrary to the general belief, the Kansas brand of prohibition and "the Kansas system" have in no manner decreased the divorce rate. On the contrary the rate has been increased to such an extent that it has caused much public and unlimited private comment.

In the Anti-Saloon League resolution passed by the legislature for use in various State legislatures, during March, 1915, it is positively stated that Kansas homes are happier now since the stalwart Kansans have "at last" found a way to make prohibition work, which is taken at its face value among people who either have not the time nor the inclination to study the problem, or who have an ulterior motive in spreading any news complimentary to prohibition of the Kansas or other brand. In his tirades against "demon rum," Billy Sunday always points to Topeka as an example of how prohibition will reduce divorces.

The causes for which divorce may be granted in Kansas are: First, when either of the parties had a former husband or wife living at the time of the subsequent marriage; second, abandonment for one year; third, adultery; fourth, impotency; fifth, when the wife at the time of the marriage was pregnant by another than her husband; sixth, extreme cruelty; seventh, fraudulent contract; eighth, habitual drunkenness; ninth, gross neglect of duty; tenth, conviction of a felony and imprisonment in the penitentiary therefor subsequent to the marriage. (Sec. 5580, Gen. Stats. of Kansas, 1905.)

Relief may be granted independent of statutory provisions in cases where the court may feel in its equitable jurisdiction a divorce or other relief may be consistently extended to the injured party. (35 Kans., 638.)

In Kansas, as elsewhere, many divorces are secured on the ground of "gross neglect of duty" or "extreme cruelty" when those terms, like charity, cover a multitude of sins—and things.

The board of control, in its Sixth Biennial Report, page 2, says: "Most of the prevailing social evils of to-day are due to bad home conditions or broken homes. The bad home conditions are in the homes of the wealthy as well as in the homes of the poor. There should be a 'back to the home' movement."

And further evidence is presented in the declaration of the State board of corrections, in its Second Biennial Report, page 4, wherein it declares: "The other (speaking of the factors that enter into the increase in the crime record of the State) is the lamentable influence of unhappy family life, with divorces and separations, leaving helpless children to be creatures of the street and eventually wards of the street. Kansas can well afford to enter on improvement of its reformatory methods at the source instead of at the top, and only thereby will it be able to reduce its list of inmates in the institutions."

"In the institutions" means the State penitentiary, the State reformatory, the boys' industrial school, and the girls' industrial school, as these are the institutions under control of the State board of corrections.

Dean F. W. Blackmar, of the State University, declared, at the sixteenth annual session of the Kansas Conference, Charities and Correction (p. 45): "If Kansas keeps up with the reforms she has suggested, she will have to quicken her pace mightily. Indeed, if she keeps up with the reform movements of other States over which she has foolishly claimed superiority, she will have to speed up, and if she does not want to deceive herself perpetually into thinking she is great when she is not, she must introduce more efficient and economical methods into her institutions and public administration."

Owing to the great flood of this class of litigation, clogging the courts of the State, an effort was made during the 1913 session of the legislature to at least temper the increase, allowing divorces only in such cases as it was absolutely necessary, by the establishment of the office of "divorce proctor" in each county of the State, whose duty it is to make investigation and report his findings to the district judge before trial. A fee of $10 was allowed for that purpose. (Chap. 234, p. 415, Laws of Kansas, 1913.)

Strong pressure was brought to repeal this law during the present session (1917), because of the proctor's fee. It was claimed the extra $10 caused many worthy people who were entitled to a divorce to be forced to go without it. However, the county attorneys, most of whom are divorce proctors, got busy and defeated the attempt to repeal it, claiming it was highly necessary to preserve the "peace and dignity" of the Kansas homes.

In his address on "The Delinquent Child in Kansas" before the Kansas Conference, Charities and Correction (sixteenth annual session), Judge Osborne, of Independence, Kans., said (on page 14): "Deprived of proper parental care the young easily drift into evil ways. Provision is now made for the appearance of proctors in all divorce cases. Their preliminary investigations afford the district court much valuable information, enabling the judges to discover more readily the salient features in any case. In many cases affecting children these courts do not have at their disposal proper agencies for suitably caring for and maintaining these children after the trial. As a result a large per cent of these young ones soon find their way to the juvenile courts. Every divorce action affecting the cutody of children should be referred to the judge of the juvenile court for trial. * * * It would be infinitely better for the juvenile courts to have charge of such matters at the outset than to be called upon to exercise authority after a dismal failure of other means."

"In nine cases out of ten in the juvenile court the blame should not be placed upon the child but upon the parents," said R. M. Anderson, of Beloit, Kans., at the same meeting. And at the same meeting Judge John True Sims, of the Wyandotte County juvenile court, declared that "95 per cent of all girls and boys that go wrong do so because of neglect. If parents did their duty there wouldn't be so much of this scientific discussion necessary."

H. J. Corwine, parole agent of the Industrial School for Boys, said, on page 80 of his report for 1914 (first biennial report, State board of corrections): "Out of disordered homes flows our stream of juvenile delinquents. The home has lost its charm for the boy, if it ever had any charm for him. He would rather hobnob with loafers on the street corners or hang around pool halls or wander down back alleys than to stay in such a home. To force him to do so makes him incorrigible." And Effie Loader, parole officer of the Girls' Industrial School, declared in her report for 1916 (second biennial report, supra, p. 104): "It is essential that the girls go to some better protection than they had before they came to the school, because they are largely the product of their environment, and if they are to be permanently reformed new homes must be found for them. A great drawback in the work is the inability to secure enough of the right kind of homes. * * * While the home may be of good character to all appearances it may be full of discord."

The Chicago Tribune, February 4, 1917, carried the following story, under a Topeka, Kans., date line: "A new trend in the worok of the womens' clubs in Kansas is being developed. Instead of building sidewalks to the local cemetery and seeing that the grass is kept cut, the women's organizations are trying to make their home towns a better place to rear children."

In reporting the State meeting of the Women's Federated Clubs, held at Goodland, Kans., for the year 1915, the Topeka Daily Capital, September 24, 1915, said:

"That a large part of the work of Mrs. Miller's administration will be an effort to interest the women of the State in crime prevention is evidenced by her opening speeches. Child welfare work is advocated as a means of crime prevention. It is the business of the club women to know the conditions in their home towns and to regulate these conditions so that every town will be a good place to rear children," she told the audience.

"The theories that women should see no evil and know no evil, and that each mother should confine herself to the work of her own home, were characterized by Mrs. Miller as pretty sentiments, but out of date and impractical. 'Women must know the evil conditions of their own towns,' she declared. 'It is nobler and braver to know evil conditions and to set about earnestly to correct them than to turn away from the misfortune and tragedy of life. It is better for the club women to be mothers of all the children in the community than to allow some of them to grow up and become members of the criminal class.'"

According to a report issued by J. W. Howe, secretary of the State Board of Control of Kansas, April 24, 1915, the rate of Kansas divorces was one in every seven marriages. The increase, as near as can be ascertained, was 1 in about every 5.8 for the year 1916. In some parts of the State the rate was very high, being as high as one in every three or four marriages.

According to the Topeka Daily Capital January 1, 1916, divorce was sought in over one-fourth of all the cases filed in the civil cases instituted in the district court there.

The annual report of the Topeka Orphans' Home was published January 1, 1916, according to the Capital, and showed that the majority of the children of the 61 received during the year, 24 of whom had been placed in homes for adoption, were under school age. "The reason for this fact," said the matron, "was because the majority of the people who want children prefer younger ones, who can become members of the family in which they are placed and forget their past life." Among other children for whom the matron was then trying to secure a home was a pair of twins (girls), 3½ years old, who were placed in the home by the juvenile court.

Apparently ignorant of the fact that the Kansas Conference of Charities and Correction, the State Federation of Women's Clubs, the State Board of Control, and hundreds of private and many public agencies in Kansas are working day and night to secure some solution to the great increase in crime and juvenile delinquency, or that there is in fact any crime or moral delinquency worth worrying about in Kansas, ex-Gov. Stubbs, in one of his characteristic outbursts, stated at the banquet of Texas cattlemen in El Paso, according to the Topeka Daily Capital of January 26, 1916, that prohibition had saved Kansas $5,000,000 in crime prevention and better morals. The occasion on which the speech was delivered was a dinner given the officers and delegates of the American National Livestock Association. "He was hooted and cheered in turn by the diners," the Capital adds. It is scarcely necessary to add that he produced no facts or figures, authentic or otherwise, to prove this wild declaration.

In speaking of plans then under consideration for crime prevention and to secure a better standard of morals within the State for the protection of children, Mrs. J. M. Miller, president of the Kansas Federated Women's Clubs, thus admonished the members and others interested, according to the Capital, January 28, 1916 (three days after the Stubbs "speech" in Texas): "Do not be satisfied until you have aroused the entire community and have brought about a cooperation of all forces interested in the welfare of the child. Let us make this a community work as well as a community blessing." But Mrs. Miller lives in Kansas, among the Kansas people, knows the Kansas home conditions, the dangers from divorce and its attendant evils. She is a student of human nature in Kansas.

Dr. Alberta Corbin, president of the Kansas Council of Women, declared, according to the Capital, January 29, 1916, in summing up the practical, sensible reforms necessary to decrease moral delinquency and crime among the women of the State: "The need is better home condition, more unity in their social life, opportunity to know each other and to preserve the democratic spirit. Kansans have acquired an unfortunate habit of saying that Kansas has the best of everything. As a native Kansan and a loyal Kansan, I wish to say we have not the best of everything. This is especially true of Kansas schools, which rank comparatively low."

An average "happy-home day" was celebrated in Topeka, according to the Capital, February 4, 1916, when one marriage license was issued, two divorces granted, one divorce suit dismissed, and two other new ones filed.

Lawrence, the State University town, found it necessary, owing to neglect of children by parents, to adopt a rigid curfew law February 24, 1916, according to the Topeka Daily Capital. Policemen were instructed to arrest all boys and girls under 14 who loitered on the streets after 8 o'clock in winter and 9 o'clock in summer.

The "happy home" slogan received another body blow when, according to the Topeka Daily Capital, February 28, 1916, Carl Hofchoinder was arrested at Hays City, a western village, for stabbing his divorced wife, burning down eight buildings, and raising prohibition hell generally, because she refused to live with him, or divide the property which the court decreed to her when the racy divorce suit was determined some time prior. Needless to add, Carl was drunk on white mule, which was not purchased at an open saloon.

Another "home prosperity" item of more than passing interest appeared in the Topeka State Journal April 5, 1916, under the headline, "She Had a Good Time." "Jessie Harris, a young Topeka woman," states the story, "who spends much of her time in the city jail, managed to stay out of jail just 24 hours after she was released yesterday morning. This morning she was back behind the bars. A week ago Jessie was arrested for being drunk and disorderly. She was in a room with two negro men when they carved each other up and was slightly cut herself. Yesterday a woman who knows the Harris girl made an appeal in her behalf, and the girl was released. She promised to drop the booze. Last night she secured some liquor and amused herself with it through the night. This morning she went to the home of a stranger who was not at home, kicked in a window, and made herself at home. When the police arrived, she had all the dishes in a dish pan, had poured hot water over them, and was trying to pour the whole works out of a window. Meanwhile she was shouting and cursing at the top of her voice." All of which proves that "our homes are happier" and "our people stronger in moral fiber and conviction." Being "one of our young women" of school age, no doubt Jessie has never seen an open saloon. Why should she, as long as the bootleggers and Jamaica ginger-selling drug stores are on the job?

The mayor of Kansas City, Kans., granted the police judge permission to erect a whipping post at the corner of Sixth and Minnesota Avenue, the main business street, where punishment could be meted out to the abundant and ever increasing crop of wife beaters, according to the Kansas City Post, June 28, 1916. "Fining wife beaters does no good," said the judge. "They just go to the workhouse and eat and sleep," he continued; "they like it. And when they get out, they go home and beat their wives some more so they can go to the workhouse again." A new brand of indoor sport, as it were. But nevertheless, the judge said, "This thing has become an epidemic and I'm going to do what I can to stamp it out."

"But our homes are happier and our people are stronger in moral fiber and conviction," according to Gov. Capper and the legislature. "John Barleycorn is dead and buried a thousand feet under the cold, cold earth, so that's something to be thankful for anyway. Jamaica ginger and rotgut aren't John Barleycorn so the Kansas victims of wife beating will have to hatch up a new excuse."

According to the Topeka Daily Capital, January 25, 1916, the divorce rate of Lawrence really appears to be lower than it should be. Under a Lawrence date line, the following appears, by way of explanation for the "poor showing" made in Lawrence divorce court, as compared with other divorce courts of the State:

"LAWRENCE, KANS., *January 24.*

"Ninety-six civil cases will be tried during the February term of the district court in Douglas County. Of these 28 will be divorce suits.

"Although generally known as the 'Athens of Kansas,' the divorce rate here is one for every seven marriages. The average may be higher than this when it is considered that probably 50 Topeka couples each year secure licenses in the Douglas County probate court."

That being the case, the Topeka rate should be higher also, as the Topeka couples, traveling a few miles to Lawrence to be married, returning to Topeka to make their homes, quite naturally should be counted as "Topeka marriages" rather than belonging to Lawrence. It would indeed be an interesting study to determine the exact percentage of Kansas people who secure divorce. Hundreds of licenses are issued in Missouri for Kansas couples each year.

In commenting upon the increase in divorce, crime, etc., in the State, the Topeka State Journal of October 10, 1916, brings many interesting facts to light: "Divorces in Kansas have increased 185, the total number of decrees granted number 2,320," it continues. "Sedgwick County (Wichita), takes first place in this instance; Wyandotte County second, Shawnee, third, and then Crawford, with Cherokee following it." Total divorces granted in 1915 were 2,320, and in 1916 they moved up to 2,505. District court liquor convictions increased from 652 to 925, which, considering the "appeal bond" practice and the great amount of time spent gathering evidence, trying the cases, etc., as was shown in Topeka, is a very fair record for even Kansas, dry as it is. Boys in jail under 16 numbered 153 for 1915 and 169 for 1916; and girls in jail under 16 numbered 25 in 1915 as compared with 39 in 1916. Total number of criminal and civil cases, 1915, 12,753; 1916, 14,553.

"Fredonia, Kans., is absorbed this week in a bitter contest between the probate judge and the clerk of the district court," says the Kansas City Star, February 8, 1917. "The probate judge is trying to issue marriage licenses as fast as the clerk of the court receives petitions for divorce." And Fredonia is in an "inland county!" No border saloons, and not an open saloon in sight. Of course plenty of bootlegging and Jamaica-ginger-selling drug stores, but they don't count.

The Topeka Daily Capital of July 26, 1916, noted an interesting society item from Pratt, Kans., a western inland burg, in which John Conrad, "widower, and the father of a married daughter," played an important part. "He is in jail at Pratt," the item continues, "charged with a crime against his 14-year-old daughter, Martha. The girl, who has been his housekeeper since his wife's death three years ago, is his accuser." And this is one of the "clean" western counties where they have no crime record, according to Gov. Capper's declaration in Boston and throughout the Nation in antisaloon league literature containing his picture.

Other "happy-home" articles from Topeka: Carl Linder, 20, was being searched for by the police, says the Capital, July 27, 1916. His mother swore out a warrant for him, charging him with being lazy, mistreating her while she worked hard, insisted on living off her income, and continually distrubing her peace and dignity by getting drunk and striking her. Carl has never seen an open saloon.

Mrs. Edward White, says the Capital, same day, anxiously called at the county jail several times during the day to be assured her husband was still safely in jail. The sheriff assured her he was. "Friend husband," who is a firm believer in prohibition, and daily congratulates himself that he is living where "our homes are happier," loaded up on a mixture of Jamaica ginger and bootleg booze, went home, and started so much trouble they had to call out the fire department to keep his wife quiet enough so the neighborhood could sleep. Mrs. White said, when assured he would remain for several days safely in the old village bastile, "Well, thank the Lord; I can get some sleep to-night for a change."

And in the society column of the Atchison Globe (weekly edition), August 3, 1916, there is plenty of evidence to support this contention; plenty, and then some:

"Alleging gross neglect, extreme cruelty and abandonment, Mrs. Lettie Jackson filed suit for divorce against her husband, John Anson Jackson, in the district court late yesterday afternoon. Mr. and Mrs. Jackson were married in Highland in 1888, and are the parents of nine children. In her petition, Mrs. Jackson alleges that her husband frequently came home drunk and addressed her with vile and abusive language, and even struck and choked her. She also alleges that on several occasions he absented himself from the home for several months at a time, during which time he contributed nothing to her support or that of the minor children, and that she and the children had to do the farm work on an 80-acre farm in Mount Pleasant Township, which is their home. Jackson is now absent from home."

"Charging adultery, gross neglect, and extreme cruelty, William C. Sheldon to-day filed suit for divorce against his wife Helen. The petition makes allegations that Mrs. Sheldon was unduly intimate with different Atchison men at Bean Lake, of drinking beer with other men, and finally leads up to the episode of the evening of July 22, when Sheldon came home unexpectedly and started a rough house upon the arrival of another man. The Sheldons were married September 26, 1912."

These are samples of the "society notes" that decorate the pages of nearly every Kansas daily newspaper every day in the year, and fill the weekly papers with spicy prohibition "happy-home" evidence. They are cited because they are typical. Both are based on drunkenness and general cussedness. One petition mentions drunkenness as a cause, under the head of "extreme cruelty"; the other does not. Sixty per cent of the Kansas divorces can be traced to Jamaica ginger and mail-order whisky, consumed by the man or his wife.

During the succeeding week, August 10, 1916, Nanna Brown sued Attrus Brown for divorce at Atchison on the plain ground of "beating her up." "Brown gave Mrs. Brown such a severe beating," says the Globe, "in May of this year, that she was compelled to consult a physician. They are the owners of 40 acres of land which she alleges was purchased by their joint earnings, and she asks that the court make suitable allowance to her."

Two fights and a general riot that wound up by Mary Walthow, 20-year-old visiting girl in Topeka, being tramped to death at a "beer party," occupies a prominent place in the society notes of the Topeka State Journal August 16, 1916. Many married couples and apparently many school children participated in the general good time, which was a success aside from the fact that they knocked Mary down getting away from the police and kicked her to death.

"What's wrong in Doniphan County?" asks the Atchison Globe of August 17, 1916. "Lately as many divorce cases are being filed there as in wicked Kansas City. Mrs. Ora Brown, of Troy; Reed M. Wilson, of Severance; and Mrs. Mabel Roland, of Severance, all want divorces. Wilson alleges his wife refuses to live with him, and Mrs. Roland says her husband has been terribly cruel. Mrs. Brown also alleges cruelty."

"Following a neighborhood row on Patriot Street yesterday," says the Atchison Globe August 17, 1916, "Mrs. Anna Ball was arrested on the charge of having attacked Mrs. Idona Pike. Mrs. Pike exhibited a bandaged hand in court this morning and said one of the bones in her hand was broken when Mrs. Ball struck her with the handle of a broom. Mrs. Ball declared she did not hit Mrs. Pike. 'I admit that I shoved the sweeping end of a broom toward Mrs. Pike, after I had taken the broom away from her, but I'm quite positive that the broom did not touch Mrs. Pike,' said Mrs. Ball. 'Mrs. Pike was the person who wanted to fight. She it was who grabbed the broom and assumed the offensive. The trouble occurred in the Dave McCully home.'" After long explanations by both women, detailing how the trouble arose and how they and their children had continually "fought it out" back and forth, the judge discharged them.

Daisy Jenkins filed suit against Roy Jenkins, according to the Topeka State Journal, August 18, 1916, and, as the item declared, "There are 13 different reasons why Daisy can't continue to live with him in peace and happiness, according to the wife's divorce petition, and the husband is the sole owner of each and every one of the 13. She lists all her husband's shortcomings, ranging from profane language to fits of insane jealousy. For herself, she says that she has at all times conducted herself as 'an affectionate and dutiful wife.'

"The Jenkinses are the parents of two children. Mrs. Jenkins wants both of them, because she alleges her husband is not a fit person to have the custody of them. Then she wants $25 a month for their support, a divorce, and court costs."

Here are Roy's shortcomings, aside from which he is all right: Found fault with her; cursed her; called her vile names; struck her; choked her; injured her back; choked her again; employed spotters to follow her; had fits of insane jealousy; charged her with infidelity; "Ran her down" to the neighbors; injured her health; scared her. Jenkins is employed by the Santa Fe at $75 a month.

Under the glaring headline in bold-face type, "One marriage in every three a failure here," the Topeka State Journal of August 23, 1916, puts somewhat of a dent in the blatant claims made for prohibition as a "home fixer":

"The frightened young man asks the outwardly excited but inwardly calm and collected young woman the all-important question. She hangs her head, carefully studies the effect, and reluctantly says, 'Yes,'" says the Journal.

"Then they go together, or the young man goes alone, stepping high like a horse, to Hugh MacFarland's office and gets a marriage license. They are married and things start off with a flourish. No one could tell either that there is one chance in a hundred for a matrimonial shipwreck—not in their household.

"As a matter of fact, they have only a two-to-one chance of continuing to live together. Their chance of 'getting along' together is much smaller, for not nearly all the domestic storms reach divorce courts.

"But the records in the courthouse from November 2 of last year to August 9 of this year show there was one divorce for every two marriages. * * * There were 213 divorces filed during those months and in just one-half of the cases the plaintiffs filed poverty affidavits. They were unable to pay the initial cost of a divorce proceeding.

"While the divorce cases were being filed, Hugh MacFarland, probate judge, issued 676 marriage licenses. While 676 happy and hopeful young couples were starting upon their matrimonial trip, 213 sorrowful and hopeless couplies were cashing in the remainder of their tickets.

"ONE MARRIAGE IN EVERY THREE IN SHAWNEE COUNTY IS A FAILURE."

If there is any proof in this showing that prohibition is making the Kansas homes happier, I most assuredly and seriously fail to see it.

A Hiawatha man, according to the Kansas City Star, August 24, 1916, became involved in serious trouble with his wife when he returned from a circus at a neighboring town, with his face all scratched and beaten. He explained to his wife that he got hurt in the menagerie. "Yes, I guess you got too close to the blind tiger," remarked the irate wife.

"If the sheriff of Shawnee County can lay hands on Andrew Calkins, Calkins will have a choice of two things," said the Topeka State Journal, September 25, 1916. "He may resign himself to a term in the penitentiary for wife and child desertion or place himself under a heavy bond to support and remain with the wife and child. The county commissioners to-day authorized Kiene to go after Calkins and bring him back to Topeka.

"Mrs. Calkins, a young woman and the mother of a baby 13 months old, appeared before the county commissioner to-day with her attorney. She had already sworn out a complaint before the county attorney.

"Many cases of wife desertion are checked up to the county attorney, but few are handled as expeditiously as was the Calkins case. The young wife's story appealed instantly to the county attorney. She stated that when her husband left about two weeks ago, he not only took every penny of money that the couple had but stopped her credit at the grocery store and even took the pennies out of the baby's bank.

"'It was a hot night and I wanted to get baby out for some fresh air,' said Mrs. Calkins, the wife and mother. 'I asked my husband to walk around the block with me while I took the baby. He refused to go, so I asked a neighbor woman to go with me. That made him angry, and he abused me frightfully. He took my clothes and the baby's clothes away and frightened us.'

"'This man Calkins is a steady worker,' said her attorney, 'and fully able to take care of this young wife and baby. He worked at the Topeka Pure Milk Co. He married this girl, became the father of a baby, and because things did not go just exactly to suit him thought he could ditch the whole affair and avoid his responsibility. He should be brought back here and forced to support his wife and baby. What chance has a woman with a 13-months-old baby got to get out and make a living?'

"'How do we know,' asked James Shimer, commissioner, 'that if we put up the railroad fare for the sheriff but what he will come back and do the same thing over again?' 'Leave that to me,' answered her attorney. 'If he is brought back here he'll go over the road or he'll put up a good and sufficient bond to stay with the job and keep his family.'"

An item in the Atchison Globe of August 27, 1916, tells of an Atchison stalwart carrier of the white flag "who fails to provide anything and then scolds and fusses at his hard-working wife because there is nothing to eat in the house."

The society column of the same edition contains the following:

"A divorce suit recently filed by Mrs. Emily Jones, of Valley Falls, Kans., against her husband, L. R. Jones, is the result of the escapades of their 15-year-old daughter, Ruth, who ran away from her home a few weeks ago with an Atchison man. The girl has now returned to her home, but a disagreement of the parents as to her management resulted in the divorce suit."

The Globe then proceeds to scold Topeka and its tough element in the same issue in a manner that reminds one of the pot calling the kettle black:

"Mary Poppleton, of Topeka, frequently has her name in the Topeka papers. She is not prominent socially but is a conspicuous figure in police-court circles. She has had a husband or two and a divorce or two. She has several children but kept them in such dire poverty and filth that they were taken away from her.

"She has spent her life going from bad to worse, and on the Fourth of July Mary Poppleton and one of her gentlemen friends celebrated by drinking and selling beer. That's no way to celebrate the glorious Fourth in clean Topeka, and Mary Poppleton and her 'friend' were arrested. She entered the police court with a swish, and a don't-care smile on her face. In that picturesque language so familiar in police-court circles she called her accusers a 'pack of liars.' But she heard some man say of her, 'Mary Poppleton comes of a good family.' And she did not call him another. It is a safe guess, however, that he is one. The Mary Poppletons do not come from good families, but for some unaccountable reason people love to charge the best families with producing the Mary Poppletons of this world. Mary Poppleton, of Topeka, is like the rest of her class, a chip off the old block; she comes from a tough family."

And among the society notes of the same day, in the same issue, appears the following:

"Some one called the Globe this morning and said that a woman of about 59 years would be more respected if she would wash her face and quit inviting old soldiers to her home."

According to the Topeka Daily Capital, January 2, 1916, there were 54 divorce cases on the docket in the Leavenworth district court ready for trial at the January term.

W. J. V. Deacon, registrar of the Kansas Vital Statistics Bureau, stated in the Kansas City Star, January 1, 1916, that he attributed the happiness existing in Kansas homes to the fact that the State has prohibition, and that "the absence of the saloon means much to our growing young men and boys, who, in the absence of the barroom, find more healthful pastimes than loafing in an alcohol-laden atmosphere. * * * Another and more important effect of prohibition is that the wage of the laborer or mechanic is not dissipated but goes to supply those necessities of food, clothing, and housing, most esential to the well being of their families and themselves." It is unnecessary, I hope, to add that Mr. Deacon is a member of the Antisaloon League, and this "outburst"

was duly published by that body and sent broadcast as "proof" that all the Kansas homes are happy "irrespective of what the booze element may say."

But he probably did not know that there is such an institution as the "Confidential Exchange" in Topeka, which, according to the State Journal of February 9, 1916, is "Topeka's clearing house for charities." "During January," continues the Journal, "42 new charitable cases were reported to the Confidential Exchange, according to a report filed with Mayor House by Miss Mabel Adams, secretary of the exchange. In addition to the 42 new cases, 87 reports were made by agencies cooperating through the central office. On January 11 the exchange celebrated its first birthday, the report brought to light. It was organized January 11, 1915, and since that time 441 new cases have been added to the records of the office in addition to the 629 that were taken from the records of the most prominent charitable organizations when the exchange opened. While the exchange was opened a year ago it has been in operation but eight months, the office having been closed during the summer. The local exchange is the only central office for charities in the country that is being maintained by the city and supervised by a committee from the Commercial Club."

Just what this means probably Mr. Deacon can better explain than his foregoing article would indicate, if he will but study the underlying reason why such institutions are necessary. If they were not, they would not be organized—especially not under the supervision of the city. Unfortunately, people either refuse to see what's before and about them, or they insist that "all is well" as long as they are "all well." That these charities are rendered necessary also by the innumerable broken homes caused by the hundreds of divorces in Topeka year after year goes without saying. The "happy home" and "efficiency" talk is all right away from home, but it must be a joke to the mother of several puny tots, whose back is lame and bent from days of constant labor and nights of sleepless vigil. To men of Deacon's type the talk is a means of livelihood. To the mothers it is little short of murder, for the outside world doesn't know the truth about her, and the ever-increasing army of her kind have long since sapped the local, county, and State resources until they must turn her down out of sheer lack of funds.

The divorce rate in Wichita and Lawrence, Parsons, and other Kansas towns is but slightly different from that prevailing in Topeka, and much the same class of cases are filed there constantly.

The matrimonial troubles of the young and old alike fill the Kansas newspapers, of which the following is a sample from the Topeka Daily Capital, January 27, 1916:

"Although 19 years of age, Samuel Bain, of Cottonwood Falls, Kans., deserted his 18-year-old bride for Mildred Smith, a 17-year-old 'soul-mate.' They eloped. Being short of money Bain sold a neighbor a portion of the winter's food supply; went to Emporia and from there to Pittsburg, Kans. Before leaving, Bain assaulted the grandfather of the Smith girl and tore up his own home."

On January 30, 1916, Rev. Jehu John Ramsey, of Leavenworth, was located at Hastings, Nebr., according to the Daily Capital, with the wife of William Titel, a guard at the Federal Penitentiary at Leavenworth, and celebrated his excursion by having a charge of white slavery placed against him. Mrs. Titel left three children behind when she took the quiet little swing around the circle with the reverend, who was an evangelist and "some bear" when it came to hammering Demon Rum, according to press reports.

A. J. Bollinger, a prominent Topeka attorney, got his foot in it, too, according to the State Journal of the same date, for running away with Ella Kline, wife of Roy Kline, of Topeka. Cabaret shows and wine suppers in quiet pure Topeka started the trouble, according to the report. Bollinger wound up facing white slavery and disbarment. He is one of the 'rising young men' of the city, in good standing at church, and an active member in temperance work clubs.

"The Wrage household in Topeka was stirred to its foundation on February 2, 1916, not by the thought of how many blessings arise from the fact that the children have never seen an open saloon, but because Milo, aged 11, stole his father's pay check, cashed it, and 'started out to see the world,'" says the Capital of that date. "When Patrolman Joe Wonderly and T. J. Morgan took Milo home," it continues in describing the involuntary return of the prodigal, "his mother apparently cared little for the money, but she was glad to see Milo home again. The unruffled Milo at once devoted himself to playing games with the other children. Mr. Wrage was out looking for the boy, said his wife. * * * Milo has been under the jurisdiction of the probate court a number of times. His conduct so aroused Hugh MacFarland, probate judge, at one time that the juvenile court's presiding officer was considering taking entire charge of the boy. Not long ago Milo and another boy looted a butcher shop in North Topeka and took money out of the till."

Which is further proof that when boys do not loaf around alcohol-laden atmosphere in open saloons they are much better equipped for the world's battles. Especially if they are 11 years of age.

Indicative that Christmas "cheer" comes done up in all sorts of packages for stalwart Topeka husbands is shown in the news item appearing in the Topeka State Journal of May 12, 1916, in which the family rows of the Charles C. and Ella Jones family, prominent people of that fair city, are aired. It is scarcely necessary to say that they landed in a divorce court. Yes; Mrs. Jones stood it as long as she could, and then cast her lot with the Blind Goddess.

"That her husband enlivened the Christmas holidays by throwing a hot coffeepot at her and turning the furniture upside down is the charge made by Mrs. Ella J. Jones in a divorce petition filed in the district court to-day against Charles C. Jones," remarks the Journal. "Besides all that Mrs. Jones says her husband kicked her in the stomach and used language toward her that made her sick. The Joneses, according to the petition, were married February 14, 1895, at Easton, Kans., and have three children, the oldest of whom is 15 years. Mrs. Jones says her husband possesses a violent temper, over which he exerts little control, and that during the holidays he lost what little control he had. She states that he has cursed her and used language toward her that is too vile and indecent to place in a public record. She states that he 'rows around home all night' and that on one occasion it was necessary for her to call the police to protect herself and the children.

"It is a common practice, she says, for him to throw the dishes on the floor and turn the furniture upside down in the home. She declares that he has repeatedly threatened to kill her and asks for an injunction restraining him from coming near the family home. She also asks for a divorce and reasonable alimony."

In addition, Jones should be made to commit to memory every line of Gov. Capper's "Bulletin," which was issued a short time before Jones got busy by the Temperance Society of the Methodist Church and sent broadcast, telling how smooth things are running in all Kansas homes since the eventful occasion of the final burial of Jones's old friend, John Barleycorn. Maybe Jones doesn't know anything about the funeral.

Arthur Warfield, a negro bootlegger and a notorious character about Topeka, was "flagged" by the officers with 11½ pints of bootleg booze, according to the Capital of May 15, 1916, just as he was "making the rounds" of his regular customers and "subagents."

Wedded bliss and dual law violation again came to light, according to the Topeka State Journal, May 22, 1916, when a detail of officers sneaked into the home of Mr. and Mrs. J. I. Brownell, 205 Madison Street, Topeka, basing their "hunch" on a tale told by a gabby neighbor. They found a large quantity of whisky hidden under the dining-room table. "Old stuff! Old stuff!" cried the "law" as they spied it. "This stall is out of date; nothing doing with hiding it under a table." Brownell and wife were jailed, but immediately released on bond. That batch of whisky was "confiscated" by the officers.

In desperation the Capital shouted on May 30, 1916, after hearing of the "thousands" of "converts" Billy Sunday had made in Kansas City: "In Kansas City Billy Sunday is credited with converting something like 1,000 drunkards. Still we would like to hear once in a while of an evangelist who converted a few hundred bankers, for instance, or editors."

The little tragedies of life that fill the Topeka press are not all built around the family fights and divorce-court proceedings by any means, as the following from the Capital of June 1, 1916, plainly shows:

"Because her husband left her Saturday night, and the contributory cause, alleged by the police, that she had drunk too much liquor, Mrs. Pearl Stolper, who had been rooming at 311 Madison Street, made two attempts to commit suicide yesterday noon, and although the coroner was called the woman is still living and little the worse for her experience.

"Persons living in the house detected the odor of gas. They traced it to the woman's room. The door was locked and was forced open. Mrs. Stolper was found unconscious. The gas was flowing out of several gas jets and from a gas stove. Those finding the woman believed she was dead. The coroner was called, and at the same time the city pulmotor at fire headquarters was started on its way. It arrived before the coroner did and the woman was revived.

"The firemen left, and after the woman had time to realize that her attempt to take her own life had failed she broke away from the coroner and rushed back into her room and again turned on the gas. Detective Thomas was sent from police headquarters. He found that the woman was having her own way in the suicide matter, no one interfering. Morgan opened the door of her room. The woman seized a screwdriver and attempted to stab him with it. She was taken to the county jail for safe-keeping. She is 28 years old."

Twenty-eight? She was born several years after prohibition was adopted and should have known nothing about demon rum. When the white flag was hoisted over Topeka, about 11 years ago, Pearl was only a little slip of a girl 17 years old. No doubt she used to help bury old John every time they had "Friday afternoon exercises" in school, not to mention all the white-ribbon parades down the street every time some one thought it was time to stir things up with the "little children," and their "appeals" they were carefully trained to sing, whether they knew what they meant or not. But Pearl isn't alone in her predicament. She has plenty of company among the younger crowd at Topeka, at Leavenworth, Atchison, Salina, Wichita, Parsons, Independence, and, in fact, every city, town, and village in the State.

A movement was on foot a short time ago to have an official "press agent" appointed for Topeka. Of course, like almost everything else that is "progressive" in Topeka, it was being boosted by the Anti-saloon League. Just what his duties were to be was not made clear, but probably he was to be clothed with authority to "censor" all press reports. Somebody should, or else the Topekans should tip it off to some of the sob squad to open their eyes and read a little. Topeka is becoming the laughing stock of America.

That the steady stream of home wrecking flows on unabated year in and year out is further proven by two very recent and doggedly typical accounts of divorce, attempted suicide, beatings, and disgrace set forth in the Topeka State Journal of February 9, 1917.

Under the headline "Booze is blamed," the following appears: "Dangerously ill at Stormont Hospital, Mrs. Gladys A. Hatton to-day, through her attorneys, filed a petition for divorce against her husband, Eugene P. Hatton. In her petition Mrs. Hatton charges her husband with drunkenness and extreme cruelty at their home, 426 Madison Street.

"At one time, Mrs. Hatton alleges, he took a butcher knife and sharpened it in her presence and conveyed to her through actions the belief that he intended to use the knife on her. She further charges that he sold and mortgaged personal property belonging to her. They were married in Topeka December 25, 1906. Mrs. Hatton asks to be restored to her maiden name of Gladys Brokaw.

"The same charges—drunkenness and extreme cruelty—are found in a divorce petition filed this morning by Mrs. Nelle May Read against John W. Read. She alleges in her petition that Read has threatened her with a razor, a stove poker, a club, and other weapons and has taken rings, watches, and jewelry belonging to her. They have five children and were married in Topeka in June, 1898."

Under the headline "Her only relief," appears this:

"After failing in her third attempt to commit suicide and escape the cruelty of a husband, a typical Kansas Jamaica-ginger jagger, Mrs. T. J. Brown, mother of four children, has decided to free herself from the strings of matrimony. For 14 years county and city officials have watched the unequal struggle of a brave, capable woman against a husband addicted to the Jamaica-ginger habit.

"That struggle ended Thursday night, and Jamaica ginger came out victor, when Mrs. Brown, wild eyed and breathless, rushed into the Shawnee County courthouse, closely pursued by a drunken husband apparently bent on further physical cruelties on the person of his wife. Bob Miller, undersheriff, arrested Brown instantly, and an exciting chase from the Brown home on North Jackson Street to the courthouse was ended.

"To-day Mrs. Brown, in company with Miss Kate King, welfare worker, appeared at the courthouse ready to swear to a complaint charging her husband with assault and battery. Furthermore, she avowed her intention of suing for divorce.

"Time after time county and city officials have been called to the Brown home to witness the sight of a woman cowered and bleeding from beatings given her by a husband under the influence of Jamaica ginger. Three times following such assaults Mrs. Brown has attempted to kill herself. Once she rushed to the street-car tracks and placed her head on the rail as a Shorey car approached. Only the quick action of the motorman in stopping the car saved her.

"At another time an effort to end it was equally desperate and was made by Mrs. Brown. On November 14, following a beating, she drank carbolic acid. Prompt action on the part of a physician saved her then.

"Mrs. Brown was hysterical when led into court this morning. Since Christmas there has been nothing in the house to eat excepting molasses and bread and salt pork. This, despite the fact that her husband is capable of being an excellent meal ticket. He is a paper hanger and plasterer of ability, who can make $20 to $25 weekly."

County officials vouch for Mrs. Brown's capabilities. She often helped her husband with his paperhanging. "He wouldn't work unless the boss would pay him the money instead of me," said Mrs. Brown, "and he always took the money for Jamaica ginger, which he mixed with whisky."

On Tuesday night, Mrs. Brown declares, he choked and beat her over the head. Thursday night he started out to pursue the same tactics, but Mrs. Brown fled from the house and jumped on a street car. Brown mounted the same car and stood reeling on the rear end. At Fifth Street she jumped off the car while Brown staggered from the rear portion of it, and the chase to the courthouse followed.

And Jamaica ginger is sold by all the druggists in Topeka and elsewhere throughout the State of Kansas. Beer is thrown into the sewer and whisky dashed on the rocks, but Jamaica ginger is given a free rein. No wonder the chief of police was ashamed to make the record of his department public. John Barleycorn has a ready ally when he sneaks into a home through the mail-order house dispensary and becomes mixed with this vile poison. No wonder Mrs. Brown tried to commit suicide. If license is wicked and ungodly, what is the Kansas system? Isn't there enough reforming to do in Topeka, without need to travel a thousand miles to tell "the truth" about prohibition? What manner of State is it that will sit idly by with these stories piling up to the skies with every issue of the local papers, and permit its legislature to proclaim to the world such nonsense as is contained in the notorious resolution put through for the Anti-Saloon League?

How many thousands of homes are being wrecked the same as the Brown home, no one knows.

Pride keeps thousands of homes loosely connected and it is only when the torture becomes unbearable that Kansas wives cry out for public help. It is all right to live in the embrace of hope and to dream of what will some day become the order of things when all the evil has passed away. That's the tender imaginative mind of a child. But for men charged with public knowledge, not to say with an unlimited amount of private information, to shield such conditions as are constantly becoming world-wide gossip, drifting through the daily press from Topeka every day, to persist, because they hold public office and it behooves their private fortunes, political and otherwise, that only peace and harmony pervade the whole State, and crime, wickedness, penury, and woe were driven out by act of the legislature, is short of criminal—either criminal ignorance or criminal untruthfulness, either of which should disqualify them from holding any position of trust within the State or Nation.

In 1910, according to Table No. 55, United States Census, bulletin covering divorces, the Kansas rate of divorce was 286 for every 100,000 of its married population. Twenty-nine States showed a much lower rate. Since then the Kansas rate has been climbing with steady increase year after year.

No claim is made that open saloons would reduce the rate; they may and they may not. Neither is a claim made that indiscriminate drinking would reduce it. Both these agencies have increased it. One, the absence of a legitimate, licensed, regulated place of sale where care and caution can be exercised both in the sale and consumption of the beverage if consumed at all, and the other and most powerful agency contributing toward the great increase is the indiscriminate consumption without let or hindrance.

If some of the Kansas women could only speak through the press on the fruits of prohibition. If some of these Jamaica-ginger-tortured wives could only lift their voice. But they are "nobody." The men "high" in office, who know what the people want and what they are to get better than the people themselves will ever know, must speak.

Wyandotte County, where Kansas City, Kans., is located, famous for its extremely high population of juvenile delinquents, numbering 522 during the past year, and dependent and neglected children numbering 405 during the same period; further famous because of the public whipping post for wife beaters established last summer, has a vast amount of litigation, about 35 to 40 per cent of which is divorce litigation. An average of from 15 to 25 cases are filed each week for divorce alone—and that is the city wherein Gov. Hodges said "happiness in home and prosperity in business life increased a hundredfold when the saloons were closed."

It is a packinghouse industrial community and naturally more or less prosperous due to war prices, but the packing houses were there long before the period of crusading began. The divorce rate wasn't, though. It has grown up since—and so has the astounding population in the juvenile division, including delinquent and neglected children.

And prohibition can not cure these conditions. Common horse sense can, but horse sense has taken wings.

A Kansas Tax Increase.

The dry slogan that prohibition will decrease taxes, because the money usually spent in criminal costs is diverted into the treasury to build streets, roads, and highways, sidewalks, parks, boulevards, etc., and after they are complete, then the levy is smaller as the general fund is not required to be as large as formerly, because of the decreased police force, etc., was discredited in Kansas during the year 1915 and was destroyed in 1916—and 1917 will cause it to be forgotten entirely.

In his antisaloon league speech in Columbus, November 12, 1913, Gov. Hodges enlightened the country on the "low taxes in Kansas." He declared that Kansas property is assessed "on not to exceed 70 per cent of the actual cash value," which he knew was not true, as the law of 1911 required an assessment on a valuation of 100 per cent. While boasting of low taxes in Columbus, the governor returned to compliment the legislature for their "good work" in levying taxes on everything in sight, in their effort to raise sufficient money to operate the State government, including moving-picture reels and dogs. Dogs are taxed "four ways" in Kansas. Corporations have been gouged with so many different kinds of "taxes" and assessments, scores have left the State in recent years, although the records in the office of the secretary of State are so loosely kept it is impossible to secure any kind of a report—only an estimate. Aside from the oil and gas concerns, most of which are "foreign corporations," organized under the laws of Arizona and New Jersey, no new corporations worth mentioning have been organized in Kansas since 1910.

Fully one-third of the large business establishments in Kansas City, Mo., have removed there within the past 15 years, from Kansas towns. Atchison lost the largest wholesale drug house in the West, soon after the dry laws went into effect in 1907. Leavenworth has furnished many large institutions to Kansas City, Mo., none of them engaged in "wet" goods, however, but hundreds of Kansas people have removed to the progressive licensed city on the western border of their sister State, to engage in the liquor business as well as in the dry goods business. Thousands of Kansas people live in Kansas City, Mo., and the Missouri progressive spirit has reached as far west as Salina and as far south as Wichita, to claim as its own some of the largest industries that are building a mammoth metropolis at the mouth of the Kaw, across the mud hills in Missouri, while Kansas is losing in population yearly.

When the Kansas City Stock Exchange building was recently erected, it being second in size in the world, the entire property was placed in Missouri to escape the Kansas tax gouging. Formerly it was placed on the State line dividing the two States. And if the large packing industries could remove their property to the Missouri side of the State line, no time would be lost in doing so.

In his Anti-Saloon League speech, delivered in Chicago, April 2, 1912, John Dawson declared that "our cities like Lyndon, Manhattan, and Burlington" had a lower tax rate than Pittsburg (Kans.), because the former had for many years refused to receive revenue from saloons. According to the census of 1915 Lyndon is a "metropolis" of 763 men, women, and children; Manhataan boasts of 6,816, and Burlington, a "city," of 2,251, while Pittsburg has nearly 20,000, with paved streets, electric lights, etc., in the rich mining district lying off toward the southeast corner of the State. Pittsburg has been building and chasing bootleggers, permitting open joints to run, and otherwise conducting itself in a "progressive" though not a "Christian" manner. "Leavenworth has no city buildings of any kind," declared Dawson, as proof that when a city accepts revenue from joints it is not progressive. Well, it has been 10 years since Leavenworth was supposed to have stopped, and nearly 7 years since Dawson delivered his supreme effort in Chicago, and Leavenworth has fewer residences, fewer business blocks, fewer hotels, and less need for city buildings than ever. Once a prosperous, thriving city of nearly 30,000 people, Leavenworth has degenerated into a decadent village, with scarcely any public enterprise, but plenty of scandal. City officials are continually being chased by attorneys general, "inquisitioned," and thrown out of office.

In 1905 Leavenworth "boasted" of 20,934 people, including the old soldiers, inmates of the penitentiary, guards, etc., and in 1915 showed a wonderful "increase." That year, counting the inmates of the insane asylums there, the hospitals, the soldiers' home, the penitentiary, etc., it returned a population of 22,090. An increase of 1,156 is a great "victory" for prohibition, especially when it requires 10 years to accomplish it. During the same period Leavenworth County showed an increase from 38,880 to 40,625, between 1905 and 1915, but both the city and county showed a decrease between 1910 and 1915 of several thousand.

Thirty-nine cities in Kansas over 1,000 in population showed marked decreases in population between 1905 and 1915. Thirty-four counties showed marked decreases in population during the same period, and 20 counties showed an increase of less than 100. Only two counties doubled in population. They were Morton, which had a population of 211 in 1905 and 1,729 in 1915; and Stevens, which had a population of 749 in 1905 and 2,370 in 1915. Cherokee, Wyandotte, Sedgwick, Montgomery, Harper, and Harvey, all industrial centers, showed slight increases.

Cost of Government and thousands of dollars piled up annually in costs for "law enforcement" did not decrease any, as the huge increases in taxes will bear witness.

Declaring from the start to the finish of his speech on that occasion that taxes had been lowered and "will continue to be lowered," he rode roughshod over the law that had been passed in 1911 to raise the "assessed violation" from 33⅓ to 100 per cent of actual valuation.

Gov. Stubbs punctuated his Chicago Anti-Saloon League speech delivered March 27, 1910, with promises to "introduce proof" that taxes had been greatly reduced under prohibition, but as far as he got was to produce a letter written him by William Allen White as far back as October 22, 1909, in which White claimed that the low tax rate in Kansas had built "the best school system in the world," barring the systems of 29 other States, of course, which are better than the Kansas system, according to the State superintendent of public instruction and Dean Blackmar, of the Kansas University.

Mr. White's letter showed that the taxes for 1908 were "only" 14.98 mills in Emporia. That was under the 33⅓ assessment plan. Strange Mr. Stubbs didn't dig up some "tax evidence" as late as January 15, 1911, the date of many of his other documentary proofs" attached to his "speech." And strange he didn't explain why it was necessary to raise the assessment plan to 100 per cent.

In his Boston cloud-burst Gov. Capper avoided any reference to a tax decrease in Kansas. "The liquor interests do not fight fairly," said the governor, "and because they can not, they resort to falsehood and innuendo and subterfuge. What else is left to them? Obviously there is one thing, and one alone, that the liquor interests can do, and that is to wade into the statistical masses of the census, trusting to the confusing power of twisted figures to make black appear white in the eyes of the average man," but he did not refute with any reference to the "statistical masses of the census" or any State report of Kansas, that the "liquor interests" had ever misrepresented a single fact.

Another of the governor's important reasons why prohibition is a success in Kansas, was divulged in the Boston speech. "The Santa Fe Railroad says that labor is more efficient in Kansas than in other States traversed by this great system," which, if true, means that Mexican laborers rank higher than Kansas laborers, for that is the class the Santa Fe uses almost exclusively in the State.

While it is persistently proclaimed throughout the Union that all Kansas is unanimous in its verdict that prohibition has worked wonders in Kansas; that all political parties favor it; that the schoolteachers and bankers, merchants, and professional men praise and swear by it, it developed in the governor's speech in Boston that such is not exactly the case, for he says, "Of course there are men in Kansas—a few of them (of course, 'just a few')—who do not believe in prohibition."

When Gov. Capper cautioned the legislature on February 15, 1915, that unless a program of criminal parsimony was adopted the tax rate would have to be increased, though the "assessed value" farce had been carried to a tragic point, he spoke only half the truth. The result of bootlegging, enormous criminal costs, revenue leaving the State by the millions and spent in other States, the enormous growth of the mail-order dry and wet goods business, the steady stream of

business men, laborers, etc., leaving the State, is shown by an article printed in the Topeka State Journal, December 6, 1915, under glaring head lines, announcing "Must raise limit" of taxes.

"Fifty per cent of the counties of Kansas will be forced to adopt sweeping economy measures or issue bonds to cover deficits in their general revenue funds unless the next legislature raises the limit of the general revenue tax levy, according to men in touch with the financial condition of counties over the State," declared the Journal. "The limit of the general revenue is 1.23."

"Shawnee County was forced to choose the former remedy several months ago.

"Fred Nipps, chairman of the Shawnee County board, stated this morning that he was unable to verify the reports that one-half of the counties would be forced to adopt the bond or economical 'remedy,' but did state that he had heard reports that half of the counties were in financial difficulties owing to the general revenue situation.

"It is expected that the county commissioners of the State will get together and take the matter up at their next annual meeting, which will be held next year in Topeka. An attempt will be made to get a bill raising the levy through the next legislature, it is said in political circles, and it is likely that the majority of the worried commissioners will indorse it."

A slight reason for this terrible condition may be gleaned by reference to a dispatch from Topeka, under date of November 13, 1915, and published in the Kansas City Journal of November 14, 1915:

"BREWSTER HINTS AT OUSTER SUITS—MAY ACT AGAINST WICHITA AND LEAVENWORTH OFFICIALS—SAYS LAW IS VIOLATED—DECLARES LITTLE ATTEMPT IS MADE TO ENFORCE PROHIBITION.

"TOPEKA, *November 13.*

"Two towns—Wichita and Leavenworth—are causing Attorney General Brewster more sleepless nights than all the rest of the towns of the State combined. Scarcely a day passes but what he receives a delegation of officials from one or the other of these two towns in his office and 'reads them the riot act' in regard to the enforcement of the prohibitory law.

"Patience has about ceased to be a virtue. Some ouster suits may be started most any day.

"Some days ago a complaint was made by the county attorney at Wichita that the jury box had been filled with the names of men who were not in sympathy with the enforcement of the prohibitory law. He had tried about 10 cases and got a verdict of guilty in only 1. He threatened to dismiss more than 30 other cases yet to be tried. The attorney general made an investigation and says he found that the mayor had taken the city directory, instead of the tax roll, in making up the jury list. One of the district judges before whom the liquor cases were pending consented to brush certain objectionable jurors aside. This was a most unusual proceeding. However, it prevented an open rupture between the county attorney and the court.

"The attorney general is looking up the law, and if there is any way to throw out the list of jurors selected by the mayor he will do it.

"When the Federal court was in session at Wichita recently there was a move on foot to try to indict several attorneys for alleged tampering with witnesses. The only thing that prevented the matter being pressed to the grand jury was the fact that the witnesses whom the Government would have to rely upon were of such a character that a jury would hesitate to believe them. The district attorney didn't want to get into a big fight and lose out.

"In Leavenworth the officials all promise to enforce the law, but the attorney general or his assistants, when they slip over there, find numerous joints in operation. Brewster believes they are 'playing horse' with him. (Why, the idea!) He has given the county and city authorities one more chance. If they come through, all well and good; if they don't, he says he will bring ouster proceedings against them."

According to a statement published by W. E. Davis, State auditor, in the Topeka Daily Capital of November 15, 1915, "Kansas spent nearly two and one-half million dollars for educational purposes in the fiscal year ending June 30, 1915. * * * The report shows $2,438,119.10 for educational purposes. During the same period the State spent nearly $1,000,000 on its charitable institutions, $923,469.63 to be exact. The penal institutions spent $618,247.47.

"It cost a little more to run the State departments, governor, auditor, treasurer, utilities commission, etc., than it did to run the State penal institutions, the total bill for the State departments, boards, commissions, and societies being $673,431.48."

(Note: The State penal institutions all have their own farms and the penitentiary operates the large coal mine and binding-twine factory, as well as other industries, which is also true of the reformatory, and these industries make a large net return to the State annually. It is carefully estimated that they made the cost of maintenance at least one-half what it would otherwise be. Figuring on a basis of actual expense, allowing nothing for the income from the institutions, these penal institutions cost the State at least $1,300,000 a year. In this "crime cost" no record is made of the enormous expense borne by the taxpayers in prosecutions, nor the amount spent by various counties and cities, towns, and townships for the criminal upkeep. This amount as shown for 1915 is greatly in excess of any previous year within the State's history and much below the amount spent during the succeeding fiscal year, which totals almost $800,000 for the State penal institutions alone.)

Thus prohibition scores another "victory" as a tax reducer, crime minimizer, and increaser of happiness among the people, in their homes, in their business institutions, and at the tax collector's office.

In an effort to reduce the cost of prosecutions that are piling sky high in the Topeka courts, Judge Whitcomb, of the Shawnee County District Court, began doubling the fines on joint keepers and bootleggers, according to the Topeka Daily Capital of October 9, 1915, but the system "severe" as it was advertised as being, did not stop the habit.

Reduction of taxes is not the only thing that is neglected in Kansas either. When all the time of the attorney general, the State departments, the board of health, etc., must be spent "educating the people up to prohibition," things are bound to crack and split open in other and more important directions, as is evidenced by a map and an intensely interesting contribution of Kansas literature not used by the antisaloon league boosters, in Kansas or elsewhere.

"Neglect Kansas babies," said the Kansas City Star, September 3, 1915. "Kansas is paying more attention to raising good hogs, wheat, and corn than it is to raising good babies," continues the elaboration. "One in every nine children born in the State in 1913 died before the same date in 1914.

"As a part of its campaign to lower this stupidly high death rate the newly established division of child hygiene of the State board of health has issued a bulletin reciting conditions and urging remedies.

"The bulletin is accompanied by a shade map showing the high and low spots in infant mortality. Wyandotte, the most thickly populated, and Stanton, with the least population, are among the counties appearing in black, meaning more than 1 infant death to 6 births. Chase, Phillips, Trego, Gove, Sheridan, Decatur, Clark, Stevens, and Greeley are counties in which the infant mortality rate is less than 1 in 15."

Among the recommendations accompanying the bulletin this is given: "Do not give the baby wine, beer, whisky, or dose it with patent medicines." What a strange commentary upon the dryness of bone-dry Kansas when the State board of health has to beg the mothers and fathers not to kill their babies with "booze" in a State that has been legally "dry as a bone" for 35 years.

In speaking of the patent-medicine curse that has swept Kansas ever since the advent of the "bone-dry law enforcement program" in 1906, the State board of health declared in Bulletin No. 5, issued May, 1915, that "it has been stated by those engaged in the drug trade that the sale of patent medicines is on the wane. Doubtless that is true of the average highly advertised and worthless fake remedies. However, there has grown up in the last decade a large trade in the so-called household remedies. These are usually distributed throughout rural districts by the itinerant vendor or medicine wagon traveling from house to house, delivering these remedies at the door. While doubtless most of them consist of simple remedies, yet the indiscriminate self-dosing of these remedies is a custom to be deprecated."

Just how many of these fake remedies are causing the intense conditions in rural communities, from which an unusual per cent of increase in insanity, feeble-mindedness, and epilepsy is witnessed from time to time, is not known. Most of them are gladly purchased because of their "kick" propensities. The rate in Sedgwick County (Wichita, county seat) was about 1 in 10, meaning that 1 in every 10 of the babies born during 1913 died before the end of 1914. Morton, Stanton, Finney, Wichita, Lane, and Ness, all sparsely settled western counties, were in the "more than 1 in 6" classification. Shawnee County's rate was 1 in every 7, which was the rate in nine other counties, all but one of which was an inland county, and the only border county having this rate being Wallace, a short-grass county on the Colorado line. Topeka's rate increased for the year 1916 to the 1 in every 6 class.

That no stone is left unturned to keep taxes down in Kansas, even to the point of resorting to desperate measures, is well explained by Judge J. C. Ruppenthal, of Russell, Kans., in his speech before the sixteenth annual session, Kansas conference, charities and correction (Report of proceedings, p. 27), and his remarks throw a new and intensely interesting side light on the boast made that prohibition is emptying and keeping vacant an unusual number of Kansas jails.

After explaining the harm done the general public, as well as the dangerous temptation thrown in the path of the ordinary Kansas criminal, by turning him out of jail as soon as arrested, convicted, and fined, either on parole or with an admonition to "get out of town," Judge Ruppenthal said:

"Newspapers openly advocate making pariahs out of petty offenders of chronically insubordinate tendencies, and advise marshals, police, and sheriffs to drive them on, with total disregard to the rights of such persons, and quite unmindful of the fact that arousing every man's hand against such and forcing them to raise theirs against every other, the making of Ishmaelites of any part of our population may be temporarily an easy and slovenly way of finding social peace, but very dear, in the long run, to organized society.

"The reason for this lawless and unauthorized practice is not difficult to find. Almost every taxpayer chafes under the burden of supporting men and women in idleness, and, in fact, in vice, in the jails.

"In not a few of the counties which boast of having the jail empty the year round the county commissioners view with great dissatisfaction the advent of any prisoner into the jail.

"The county attorney does not like it, because it makes expense for which he may be in some degree blamed.

"In some instances the sheriff, too, dislikes the annoyance of caring for prisoners, and all of these officials think and plan how to adjust matters in order to empty the jail or to keep it empty.

"But with this as a general principle in many counties of our State, we need not overlook the fact that now and then a county is found wherein sheriff and jailers are zealous in a high degree, with a view of always keeping at least one prisoner in jail so as to draw the daily allowance for keeping the jail, and sometimes they seek to have as many more in jail as possible in order to draw the allowance for feeding them. Perhaps these sordidly mercenary cases are rare, but they are met with from time to time.

"We may conclude, then, that more often than should be the case jails are empty to save the taxpayers expense and not because no crimes are committed or no wrongdoers are found in the county."

Time was when the Carnegie Library distribution placed Kansas in the same class as other States and many buildings dotted the Kansas prairies, but within the past two years these libraries have been refused to a score of Kansas towns because of the failure of those having them to execute their part of the contract or keep them in a decent and respectable state of repair. High taxes, bootleg and joint crusading has raised the taxes to the limit, and this, added to the millions that leave the State annually to be spent in other States for wet and dry goods, have placed Kansas in a class by itself. It is the only State where the libraries have ever been established that applications are denied because the people are not financially able or willing to do their part.

According to the governor's publication, the Topeka Daily Capital, of November 14, 1915, "Miss Laura A. Neiswanger, special agent of the Kansas State Board of Health, is conducting an investigation over the State of Kansas to learn the cause of the increasing infant mortality.

"In speaking of her work Miss Neiswanger says: 'Kansas has no slum district in her cities [she hadn't taken a good look at Wichita, Topeka, Kansas City, Parsons, and Pittsburg yet, apparently], but the mortalities among infants is nevertheless on the increase. It is noticeable in all sections of the State, and it is the plan of the State board of health to conduct an investigation and learn the cause.

"'It is customary for every physician to report to the State board every birth which he attends. This is not done as conscientiously as it should be.'"

Perhaps if Miss Neiswanger would read the newspaper reports published in Lawrence, Atchison, Topeka, and other "centers of morality" she would better understand why they do not.

In speaking of the glories of prohibition, Gov. Hodges, in his Columbus, Ohio, Anti-Saloon League speech, said "the same abstinence con-

tributes to about 35,000 healthy, new-born Kansans every 12 months," in the face of an increasing infant mortality rate that takes even the breath of the rankest "drys" in the State.

Sometime, perhaps, the Kansas "statistics" will cease to be written in Westerville, Ohio, and the "testimony" given by her State officials will come from the heart and not from the mail box with a special-delivery stamp on them dated at Westerville; but it hardly seems probable that such a unanimously hoped-for day will dawn soon.

The auditor of state recommended to the present legislature that the appropriation for the coming biennium to be used for child hygiene and disease prevention alone among children be doubled over that allowed during the past biennium, stating that "even this will no doubt prove insufficient."

"KANSAS OUT OF DEBT."

After saving, cutting the corners, pinching, counting pennies, and raking nickels and dimes up into a heap, at the expense of everything in the State in the nature of public improvements, good roads, etc., Kansas at last achieved the acme of perfection in the eyes of the Anti-Saloon League on January 1, 1916, and the flag of prohibition freedom was unfurled from the dome of the State capitol.

Needless to say, the governor made the only "real speech" of the occasion. It was so "real" that it was afterwards printed on the press of his publication plant and sold by the Anti-Saloon League as one of their "most recent documents" to prove that anyone who favored license should be taken out into the back yard and drawn and quartered.

Of course the governor did not sidestep the chance to hand all the credit for the master accomplishment to prohibition, more especially, by the way, to the brand brought about by his administration than any other. Mr. Stubbs, Mr. Hodges, and Judge Dawson were conspicuous on this occasion by their absence.

Prior to the ceremonies, word was sent out in flaming colors that Kansas was the only State in the Union to be without a State debt, a fact quoted thousands of times in Anti-Saloon League literature, citing Gov. Capper as proof of the truth of the statement."

However, so many denials of the truth of the statement were fired into the governor before the ceremonies, he changed his tune when delivering his speech and classed Kansas among five other States having no debt, but refused to name them. As they all happen to be license States that would not make very good reading matter in the churches, so he preferred to overlook that little detail.

In speaking of the proposed celebration, the Kansas City Star of December 31, 1915, said:

"The Kansas State officials have planned a pleasant little jolification for to-morrow morning on the occasion of the burning of the last bond outstanding against the State.

"Yet every Kansan who knows anything about his own State knows that its public institutions are suffering from lack of funds. Its Cheap John legislature last winter refused to make sufficient appropriations for the proper maintenance of its schools, charitable institutions, or prisons.

"The condition of the Kansas prison at Lansing is a disgrace to the State, but the governor last winter vetoed an appropriation for sanitary cells for the prisoners because the State was so poor.

"The Kansas schools are dropping to second and third rate places among the schools of the country. Its public roads are mudholes. Kansas is first in nothing."

Condemnation of the silly performance was by no means confined to the Kansas City Star, Journal, or Post. Daily and weekly papers throughout the State hammered the governor and ridiculed his false claims, but they were not quoted by any of the Anti-Saloon League contemporaries throughout the Nation, and in the State-wide campaign for prohibition in Missouri during the fall of 1916, the Kansas City Star was not big enough to reiterate its charge, but preferred to publish only what the governor and other Anti-Saloon League specialists dumped into its columns. It was talking plain sense on December 31, 1915, and printing twaddle for a price when boosting prohibition.

A roar about the State having no debt rent the air as soon as the weekly newspapers were turned off the press the week following. Cities, towns, and counties that are wallowing in a mire of debt and commercial despondency poured forth their venom, but they were not given a hearing before the "unbiased" press board of the Anti-Saloon League, then or now.

The $159,000 bonds burned, however, were not the only "State debt" in existence, according to the books in the office of the State departments at Topeka. They were, in fact, the balance due on a $3,000,000 bonded debt created to build the State house.

The total bonded debt of cities, townships, boards of education, and school districts, district drainage and special road funds, amounted on June 30, 1916, to a grand total of $56,473,618.93, all of which is a State debt, because the credit of the State is behind every dollar's worth of bonds voted therein, for any purpose. This sum does not include the debts of the various counties, which aggregates an enormous sum, but owing to the poor system used in the State offices at Topeka, can not be determined with a sufficient degree of accuracy to be vouched for as being correct.

Owing to the terrible condition of Kansas schools, the governor was importuned scores of times by citizens and educational societies during the 1915 session of the legislature and every day since has witnessed his attention being called to it again, to pursue the policy of issuing State bonds to aid the schools and colleges, more particularly the State university, but to these entreaties the governor turns a deaf ear.

That the condition of the State capitol is a disgrace is well known throughout the State. Speaking of its condition, the State board of health sent a report to the governor, according to the Topeka State Journal of June 12, 1916, in which it said: "This place, right in the heart of the city of Topeka, and above which our State departments, including the State board of health, are located, would not be tolerated if situated on some of the streets and alleys of a second or third class city." The portion of the building occupied by the State board of health was found to be in miserable condition, and a thorough overhauling needed, but it can not be done, as the State has no money. It can send a delegation to the Anti-Saloon League national convention or pay for having ex-Gov. Hodges's speeches printed on the State plant and sold by the Kansas State Temperance Union or the league, but there is nothing to spend on the State capitol building.

"The report states that some of the passageways have been cleaned of dirt, rubbish, and combustible material, but it has not been removed; just moved to another place," continues the Journal. "Under the quarters of the State board of health are found leaky pipes, the dampness from which penetrates through the decayed floor to the rooms above. Among some of the things found by an investigating committee are: A barrel of rotten apples; combustible material stored in the basement; openings in basement walls, some of which have gas and water pipes passing through. These would act as drafts in case of fire. Drop electric lights wound around the iron pipes as a means of shortening the cord; should the insulation become worn off, these pipes would become charged. The film room is moldy and filled with bad air; ventilation fans are recommended." But none of the recommendations can be complied with. The State can not afford to vote bonds.

In the State auditor's report for 1915, it is stated (p. 10) that "the appropriation for the upkeep of the State capitol is not enough to do very much repairing," and in the first biennial report of the board of administration they declare (p. 5): "We have at all times been hampered by lack of funds."

In his report (twentieth biennial) for the period ending June 30, 1916, the State auditor declared that $73,500 should be appropriated at once or bonds issued to raise the money for repairs that can not be longer delayed on the State capitol building. He stated on page 30 that while the State architect had recommended $10,000 additional to be used in repairing the east wing of the building by waterproofing the walls to prevent crumbling and deterioration of the same from freezing water, he (the auditor) considered the other appropriations of even more importance. The legislature of 1913 (under the Hodges régime) reduced the salary of the engineer of the capitol to $1,000 per year from $1,200, in the interest of economy, he said, and this salary should be increased to at least $1,200 again, if not higher, as no competent help can be hired at that ridiculously low figure.

The State capitol building is not the only Kansas institution that has suffered and is still suffering through the program of economy instituted, is amply shown by the last two reports of the board of administration, which has charge of the university, the State agricultural college, the State normal school, school for the deaf, school for the blind, etc.

"The people of Kansas are invited to erect memorials at the State university," declared the board in its first biennial report, published in 1914, "as we need the buildings and have no funds to build." On page 6 of the same report, after decrying the need for funds and speculating on ways and means to raise it, they declare: "The university has 1,268 acres of land very near Lawrence, for sale—no buyers." It is further suggested that portions of the State land on hand, for which there are no buyers, be planted to alfalfa, if the State can arrange to secure the seed, etc., on credit, and use the proceeds in meeting some of the crying needs of the university.

On page 7 of the same report, the board, in speaking of some of the greatest drawbacks of the university, declared that accommodations around the State university were so scarce and prices charged students so high they were almost prohibitory. It bewailed the fact that the State did not have enough money with which to build dormitories.

And on pages 27 and 28 the board declared: "The university is in worse shape in the matter of classrooms and office room than institutions of its character anywhere in the country."

In reciting some of the "crying needs" of the institution, the board said:

"In our university 19 professors with their students are compelled to meet in a room 8 by 12; university medical work has to be done in a dark basement, one small building, and the attic of another; our music and fine arts department is located in an old dilapidated building that is cracked and the plastering and the walls are buckling out, which makes it very dangerous.

"The Federal Government is criticising us because of our lack of facilities and funds to carry on our chemistry work. We have no permanent room or facilities for 1,200 students who are taking a course under difficulties in household arts. Our domestic science department, who instruct more than 1,000 women in the university, is located in a dark, gloomy basement, immediately opposite the men's toilet, which is unsanitary, to say the least."

See First Biennial Report, Board of Administration, page 27, et seq.

The governor simply murdered the requests for appropriations for all of the institutions under this board—in the interest of economy, which caused universal complaint throughout the State.

In its Second Biennial Report, for the period ending June 30, 1916, the board stated, on page 10:

"It is to be regretted that we have no dormitories to standardize living conditions and to reduce the cost of rooms. * * * Kansas sends larger numbers of young people to college in proportion to her population than any other State. For some of them circumstances make it hard to live while 'learning how to live.' To help them by furnishing good, nourishing food, to enable them to make the best of the advantages provided for them, is, the board of administration believes, a duty.

"* * * The young women who come from Kansas homes to its institutions of higher learning, have a right to the most thoughtful care as to health, conduct, and education. Modern methods of teaching make it possible for girls to finish high school very young. Modern social carelessness leads many mothers to overdress their daughters instead of clothing them with the dignity and simplicity which forever characterize the well-bred girl or woman.

"The mild discipline of many of the homes of to-day which permits the spending of too much money and too great freedom on companionship in the immature years of the high school, sends large bodies of both boys and girls into the wider life of the college without the judgment necessary to meet it.

"All of these things makes the work of the advisers of women complex and difficult. Especially is this true of the task which they have with members of the teaching force, of getting the student to realize what he or she is at college for.

"The next legislature should provide funds for an adviser of men. The man who fills this place should have a wide and practical knowledge of the world at large, and should be able to help the young men to lay out a program for life.

"It is unsafe to allow the young to rely too strongly on the advice of men who are deeply absorbed in a specialty and who have no broad knowledge of the world's demands and opportunities.

"Neither is it becoming to education that talks so much of efficiency to allow its students to spend four years within its walls without a program. If the schools are to be the leading exponents of efficiency they should themselves be efficient."

KEEP STUDENTS IN KANSAS.

"On an average, every student who attends school away from home spends at least $500 a year. Kansas has felt it to be her duty to educate her sons and daughters, but she has not been blind to the fact that this result can be accomplished at a great saving by keeping within her borders the money that otherwise would be spent at large

educational centers like Chicago and Columbia. It is a safe estimate to say that by reason of the crowded condition of the Kansas schools and the lack of adequate facilities to handle the students in the various subjects, that 2,000 students take their college work outside of the State, and this means a monetary loss to the State of Kansas and its people of at least $1,000,000 per year, to say nothing of the great loss that comes from encouraging these educated men among our young people to find their homes in other States.

"This condition of affairs is bound to continue until we can furnish our students with adequate laboratory and library facilities and give them the share of the time of the instructor that other States are willing to give.

"A small portion of this amount which is taken out of the State in the form of tuition and expenses paid in other States would make it possible for Kansas to meet the demands made upon her by the young men and women who are seeking an education. It would make it possible to reduce the classes to a reasonable limit; to establish offices in which students might consult and advise with their instructors and be helped over the hard places in their courses of study. It would decrease the mortality among students, which is so expensive to the State: * * *. The high cost of living and the big loss of idleness in our children are problems that the schools should be reaching far more effectually than they now are." (Supra, pp. 12, 13.)

Complaint was registered on pages 16 and 17 that there is not sufficient money on hand for printing and publishing information brought to light by the research of the faculty, owing to the fact that the State printing plant does not receive enough money to buy the materials with which to print it; that general conditions require much more money than the State seems able to give, and that the musical department of the schools under the board's control must necessarily be neglected to a great degree because of the policy of economy instituted.

The board, of which ex-Gov. Hoch is a member, could not pass up a chance to put in a plug for prohibition as it wandered through the labyrinth of crying needs, etc., and a discussion of the Household Arts seemed the most fertile ground onto which they could dump their usual "appreciation," so here it is:

"Having in addition to her material wealth the fine moral assets of prohibition and an enfranchised womanhood, it becomes the peculiar responsibility of the State to make a Commonwealth which shall be an example to the world. This means a State of beautiful, happy homes first in which families may be so rooted to their foundations that each one becomes a permanent temple of life. Next must come villages, towns, and cities which are well-paved garden cities, with lasting, beautiful public buildings as well as homes. It means the best roads in the world, serving as trails of service back and forth between these homes and groups of homes.

"Instead of this we find too often the robbing of soils, the desertion of farms, and the growing of tenancy—almost the greatest State question." (Aside from making prohibition "prohibit" and shower onto the State all the blessings that are advertised to go with it; yes, that is perhaps the greatest State question.)

Continuing, the board says: "We often find the courthouse—the one public building which is the common possession of each county, and which should be an architectural honor—nearly always violating every rule of beauty and with one common attribute, a hideous tower, calling attention to its ugliness."

But speaking of courthouses, it perhaps would interest the reader to know that the Shawnee County courthouse was recently sold for taxes, or that the Leoti courthouse is being overrun with rats and is falling completely down, and that the one at Smith Center is without enough plastering on the walls to throw through what few remaining windows there are in it and break one of them. The Kansas farmers would rather buy Fords and mail-order booze than build courthouses. Over 12 proposals to build new courthouses have been voted down there within the past year, including several similar proposals for high schools. Millions for gasoline, prohibition, and mail-order wet and dry goods, but not one cent for an "architectural honor!"

"Rural schools, with few exceptions, are pathetically forlorn, inadequate, and inartistic," the board continues. "Instead of inside conveniences, or a screened yard for outside comfort stations, these buildings are so exposed as to be a very disgrace to the school patrons of any district."

"The board of administration has investigated the dormitory question quite thoroughly. We believe that the State should adopt a policy of furnishing dormitories to a part of the girls and boys who attend these institutions. Student members have outgrown all possibility of proper care by the immediately surrounding communities. It is especially difficult for the girls to find suitable rooming places, and the prices are very high. Student environment would be much improved if we might have central dormitories for a part of the girls, and, if possible, a part of the boys. These dormitories would assist materially in improving the condition of the other rooming houses in the cities where they are located, and furnish a standard for them. It would assist in solving the perplexing social and health problems with which we have to deal.

"Each school has the same problem, and each one of the fifteen hundred mothers who each year send their girls for the first time from their protected homes into strange cities are praying that dormitories may be erected at once and put in charge of refined, motherly women.

"As we said in our last report, the university is in worse shape in the matter of classrooms and office rooms than any other institution of its character in the country. It is absolutely impossible to meet the class demands, and in addition to that we have no office-room facilities for members of the faculty. If the faculty is to do good work and is to help these students who most need help by consultation and advice, it must have consultation rooms, and we regard that as one of the most important features of the student's life. Many a student has had his career blighted and failed of an education that would have made him much more useful to society because he did not have the advantage of the advice and consultation with his teacher in helping him over some rough places in his course of study." (Supra, pp. 34, 35, 36.)

"At the university we have a department of English, where 19 professors hold consultations with their students in two small offices, each of them about 8 by 14. In the department of German we have 12 or 14 instructors who have to consult with their students in about the same quarters. Many of the departments are in the same condition. We have two years of medical work there that is located in three buildings. Other departments are partly in the basement of one building, partly in another building, and partly in an attic of the third. Our domestic science department, which has been mentioned before, continues to instruct more than 1,000 women in the university, and is located in the dark, gloomy basement of Fraser Hall, immediately opposite the men's toilet, and in rooms with floors that are beyond description. We are using the basement and the rooms in the tower, five stories up, in Fraser Hall.

"Over 50 years ago there was hastily thrown up a building on a foundation started by a denominational college. This building was used by the university until the completion of its first building. It was then used for a great number of purposes, among them as an imbecile asylum. Several years ago the crowded condition of the university forced the school of fine arts into this old dilapidated building, and it is still used for that purpose. The building is old; it has wide cracks through the walls; the pilasters are buckling and threaten to let the whole building fall. It can no longer be safely used, and this department must have quarters at once." (Supra, pp. 35, 36.)

The board made sweeping demands that economy be thrown to the four winds and all the State educational institutions cared for, even though it require a bond issue of several hundred thousand dollars to meet the crying needs of the State's most fundamental groundwork on which to construct a lasting manhood and womanhood.

According to a Lawrence dispatch, dated October 4, 1916, and published in the Topeka State Journal, October 4, 1916, Chancellor Strong, of the Kansas University, "many of the university buildings are practically unfit for further use, because of their age and crumbling condition, and must either be repaired or replaced by new ones. The chancellor further emphasized the need of a campaign by both faculty and students urging the next legislature to appropriate money for new buildings. * * * North College, Snow Hall, and the medical building are the main buildings that need attention. North College has been declared unfit for use after next year by three men, John M. Shea, superintendent of buildings and grounds of the university; Prof. Goodwin Goldsmith, of the department of architecture; and the State architect."

The visiting committee of former students of the State University, addressed a communication to the alumni association of the university, which was published in the Topeka State Journal February 3, 1917, and contains many interesting disclosures. This committee included the names of some the most prominent people of the State.

"Last year the man who paid taxes of $1,000 worth of property paid $1.30, and no more, toward the liquidation of all State expenses; $1.30 a year for peace, order, security, the protection of life and property, the promotion of health and morality, the preservation of liberty, the development of industry, suppression of crime, and the higher education of the young. Of this $1.30 less than the sum of 65 cents was spent on the State schools as a whole, and less than 25 cents on the State University."

The report does not show just how much was spent "for the suppression of crime," exactly, but since prohibition is advertised to decrease crime year by year until it "is no more," there seems to be something wrong with the Kansas system again. Surely the amount spent for the suppression of crime should not be over 2 or 3 cents. But the record shows it is over half the combined amount allowed for all educational purposes.

"The old North College * * * has been a scandal for a quarter of a century. It has been three times condemned. It is unsafe and unsanitary. It is overcrowded. It is devoted to the department of fine arts, which had an enrollment in 1916 of 286 students. It is as great a disgrace to the State of Kansas as the worst East Side tenements are to the city of New York."

And after paying its respects to the other tumble-down buildings, the committee turned its attention to the needs of the young women:

"If the young women of Kansas are to be given equal opportunities with the young men, and if they are to be induced to avail themselves of those opportunities to a desirable extent, dormitories must be established. Very many parents are sending their daughters out of the State for their college work, largely on account of the insufficient and inadequate housing conditions at Lawrence, and the lack of desirable supervision.

"There should be erected on the campus dormitories capable of accommodating at least the freshmen girls. Too much can not be said about the importance of the first year in college; and, especially, during the first year the girl student, who is upon the average 18 years of age, should have pleasant and comfortable surroundings and a degree of wise supervision and direction, which could best be given under the dormitory system." Apparently the "home influence" of the dry Kansas homes does not sink in very deep, after all. What happens, we must necessarily inquire, to the poor, unfortunate girls who by the hundreds lose their father or mother, or perhaps both, before reaching 18, in the Kansas towns which Warden Codding says are all rotten? If a girl, educated and fitted for college life, has to have a policewoman watch her, what about the "common herd" who have to plod along and work for a few dollars a week in the little towns or for three or four a week in the 5 and 10 cent stores of the larger towns? No wonder the women's clubs complain because the legislature is not giving the women the protection they should have.

It should be borne in mind, as we pass along, that no "expert" has been imported from Washington, D. C., or elsewhere, to instruct the legislature how to protect the 18-year-old girls at college, or how to protect them from the stinginess of the 5 and 10 cent store jobs, or the evils that necessarily flow from their having to receive less than a living wage. The antisaloon leaguers may think of the trials and tribulations of the "poor downtrodden women and little girls," but they only use them as "horrible examples" and reasons why the gold should find its way into their coffers, to be used in "extension work" of buying mansions and high-power motor cars.

"WE MUST WHIP UP!"

Under the above headline the Topeka State Journal of March 31, 1916, carried an extensive news story of the speech delivered before the Pittsburg (Kans.) Chamber of Commerce that day.

The subject matter of his speech was not directed toward ways and means in, by, or through which to enforce the prohibitory law; neither was it of such a character that the Antisaloon League cared to print it or have the governor print it on his press and permit them to sell it as campaign literature. It was an admission "in open court" that Kansas has been battered, beaten, and torn to pieces commercially by the long drawn-out series of crusades which were started during the Hoch administration in 1906 and carried on with the fury of a tornado ever since. As John Dawson put it in the Antisaloon League speech in Chicago, a contest "waged with fury and bitterness," ending, of course, in "triumph of the law."

The subject matter of the governor's special message sent to the legislature on February 23, 1915, almost took the breath of the country when it became public. In it he cautioned economy, reminding the legislature that the demands of the various educational, penal, and charitable institutions could not be met, and while he recognized the

fact that they were entitled to the relief asked, loss of population and of taxable property worth $5,000,000 during the year preceding would not permit of an appropriation sufficient to meet the end. This message was treated in a very matter-of-fact way by the newspapers of the Nation. In fact, it was hardly mentioned by any of them. The Kansas City Star and other publications subsidized by the Antisaloon League did not as much as mention it. No magazine published in America, including the Christian Science Monitor, paid any attention to it, although it was without doubt one of the most startling admissions ever made by the governor of a State.

Speaking of the governor's handling of the State affairs, however, it was declared in the Topeka State Journal on October 5, 1916:

"He is continually complaining. He has failed to deliver the goods as governor. * * * He talks about economy and efficiency, when his administration has cost more than any other administration we ever had. Yet with all his expenditures nothing has been done to relieve the orphans at the State orphans' home or to provide ample quarters in order that the insane shall not be compelled to sleep on the floor.

"He talks about a business administration, and at the same time added 27 new jobs to the pay roll."

"He handed the farmers a package by raising the valuations of their farm land in order to raise more taxes, yet he permitted the railroads and corporations to go at the same old rate. He approved the paying of $30,000 a year for the new job holders that he wanted in, and seems to be proud of it. He has paroled a number of men from the penitentiary whose crimes were a menace to the safety of our women and children."

It was only natural that the governor raise the taxes on the farmers. The corporations would leave the State in a body if gouged any more, and the farmers can't get away. They have to stay, because they can find no buyers—half of them at not over two-thirds of the "assessed valuation" on which the "wonderful" per capita of wealth is figured. As for the railroads, the less said the better. However, since prohibition has become "the burning issue" in Kansas, the railroads have had things pretty much their own way. The Santa Fe shows its gratitude by "testifying" that prohibition makes more efficient track laborers and workmen than are to be found in any State through which the line runs, which helps some in boosting things along for the league.

Getting down to brass tacks, Gov. Capper, in his speech before the chamber of commerce at Pittsburg, made statements which, were they given the same brand of publicity that the "success" of prohibition is given, would result in much more good to the State, and much more good to the Nation at large. In his heart to heart, man to man, review of the actual conditions in the State there, he stated that Kansas must whip up industrially. "The State needs more industries, a larger pay roll, and more people," the governor declared. He cited manufacturing conditions in Iowa and other States, which he said showed that Kansas was far behind.

The things the world needs can be most easily provided by Kansas industries, and millions of dollars sent to manufacturers in other States should stay right at home. The money paid to laborers in other States should be a Kansas pay roll.

"Much of the wealth which we produce annually is sent out of the State in exchange for commodities which we can produce and ought to produce at home," the governor said. "We have been backward in developing along industrial lines, and as a consequence we are not making the gains in population that we ought to make, and we fall far short in taking advantage of our opportunities for material advancement."

"Kansas products and material should be Kansas manufactured," the governor urged. "The opportunities are here, but because of a lack of development Kansas has taken a big slump in the rank of industrial States of the Union.

"The big per capita wealth and the fat bank accounts are sent to other States to pay for materials manufactured in other States.

"There is no reason in the world why we shouldn't be making in Kansas not only a large part of the $10,000,000 worth of boots and shoes we buy every year, but also a part of the billion dollars' worth that the Nation produces," Gov. Capper said.

Continuing, the governor said in part:

"Neither is there any reason why we shouldn't manufacture in Kansas all of the nearly $2,000,000 worth of harness and saddlery which the people of the State purchase every year. We couldn't only make that but we could supply the rest of the Nation with $60,000,000 worth that it uses.

"The output of the wagon and carriage factories of the United States is $40,000,000; Kansas purchases $1,400,000 worth—despite the automobile—and manufactures practically none.

"We buy eleven and a half million dollars' worth of furniture and refrigerators; the Nation buys half a billion dollars worth—little of which we produce.

"We manufacture a little soap, but nothing like the two and a quarter million dollars worth we buy. The Nation uses $114,000,000 worth, and we might be producing a big share of it. There is a $40,000,000 market for thrashing machinery in the United States and nearly a $3,000,000 market in Kansas; there's a quarter billion market in the Nation for knit goods and hosiery; Kansas alone buys $3,700,000 worth and produces none. And so on through the entire list of the ordinary commodities of life. Incubators, brooms, cereals, and breakfast foods—hundreds of them which Kansas might produce from raw materials just at hand.

"Here is a little comparison of the way Kansas ranks with Iowa in its manufacture:

"COMPARED WITH IOWA.

"Excluding flour mills and packinghouses, Kansas has 2,900 establishments manufacturing products to the value of $90,000,000; while Iowa has 5,200 establishments manufacturing products to the value of $187,000,000 every year.

"Iowa has 512 butter, cheese, and condensed milk factories, while Kansas has but 60.

"Iowa has 235 brick and tile factories, while Kansas has 55. Iowa has 229 woodworking establishments, and Kansas 26. Iowa has 119 carriage and wagon factories, and Kansas 26; Iowa has 42 establishments for making agricultural implements, while Kansas has only 18; Iowa has 71 canning and preserving factories, while Kansas has a lone little 3; and so on down the line.

"Kansas has 1 factory making dairymen, poultrymen, and bee supplies; Iowa has 17. Kansas has 1 boot and shoe factory; Iowa, 10; Kansas has 1 women's clothing factory; Iowa, 19.

"Kansas has 1 stove and furniture factory; Iowa 13; Kansas has 1 coffin factory; Iowa, 10; Kansas has 1 glove factory; Iowa, 10; Kansas has 1 cutlery and tool factory; Iowa has 16; Kansas has 1 woolen mill; Iowa, 8.

"And Iowa, as Kansas, is primarily an agricultural State, but at the same time she manufactures hundreds of articles which her own people use, and sells many of them to Kansas and the other States. I cite Iowa because she is a typical Western State, with no greater natural advantages for manufacturing than we have—not as many as you have here in Pittsburg.

"POINTS TO INDIANA.

"Take Indiana as another typical agricultural State. With an area of 36,000 square miles, as compared with our State of 83,000, Indiana has a population of 2,700,000, while we have only one and three-fourths million. (The correct figures are 1,672,545.)

"She has 75 inhabitants to the square mile, while we have only 22. (The correct figures is 20.7 people to a square mile in Kansas.) But she has 51 cities of more than 5,000 population to our 24; and 7,969 factories to our 3,435. Her industries give employment to 218,263 persons, while we have only 54,649 engaged in the industries. The value of the products of her industries is $579,075,000, while Kansas manufactured products amounting to $325,000,000. Indiana annually adds to her permanent wealth by manufacturing $244,700,000, and Kansas only $66,220,000.

"We do not know, we can not foresee, what will happen to America in a business way when the great tragedy that now envelopes Europe is ended. We do not know what place America will take in the commerce of the world. If we hold our own in Europe and in South America, in the Orient, there will be an abundant outlet for the products of this section of the country.

"If we slip back, should the war-stricken nations turn with fresh vigor to the arts of peace and flood the markets of the world with their goods, there is all the more reason for Kansas to study its home market and develop it to the limit; all the more reason why Kansas should utilize within its own borders as much of its raw material as possible and produce at home from Kansas materials, with Kansas fuel and Kansas labor and Kansas capital and Kansas enterprise, the greater part of what Kansas consumes."

Gov. Capper failed to take into account, when comparing Kansas with Iowa and Indiana that those States have been busy for the past decade, building up their industrial life. During the past year or so Iowa voted again prohibition, against an overwhelming public sentiment, as was shown by the result of the State election in the fall of 1916, when the prolicense forces beat the bootleg whisky ticket off the face of the earth. Iowa is now undergoing the same ordeals on a limited scale Kansas has been suffering since 1906, but will soon throw them off her back.

Indiana, led to believe by the antisaloon people, and aided and abetted by "glowing tales of success" furnished by Mr. Capper himself, that prohibition had worked wonders in Kansas and was far superior to Indiana in every way, commercially, socially, financially, and morally, was forced into the mail-order, bootleg whisky column by a legislature that was afraid to permit the people to decide the question at the polls. So Indiana, unless redeemed from the blighting hand of the fake panacea, will soon be in the class Kansas belongs in, according to Gov. Capper's own admissions. No State, city, town, or county can become commercialy sound or morally strong when tax increases become such a burden under a law enforcement crusade lasting 10 years that the governor, himself a prohibitionist and active worker in the ranks of the antisaloon league, must at last admit the State is not progressing in any material manner whatever. Mr. Capper could have gone further, and no doubt had he spoken his own mind entirely, or completely, he would have continued his speech by giving some of the reasons why people are leaving the State to escape the burden of high taxes and the crushing despotism of intolerance. He could have also told why the charitable and penal institutions are filled to overflowing; why insane asylums refuse longer to take patients, because they can find no places for them to sleep on the floor; why the epileptic institution is sending delegations of business men from all over the State to the legislature, as petitioners, demanding that the appropriation be large enough to meet in a measure the increasing requirements of that institution, and why the board of administration and the visiting committee of the State and of the Kansas Alumni Association, respectively, make public in no uncertain terms, the terribly rotten conditions existing there.

It would hardly seem possible that within a few months after the delivery of the Pittsburg speech, the selfsame governor would deny the matters and things stated therein, but that is what the governor did when confronted with his own statements during the campaigns in various States in the fall of 1916, when the Antisaloon League was endeavoring to get a death grip on the State politics of the various States in which "wet" and "dry" campaigns were waged in hellish fury. When asked to either affirm or deny the statements the governor passively said the men attempting to make the public believe he ever said such a thing were representing the "booze interests" and let it go. The public in distant States was lead to believe by the leaguers that no such statements were ever made, intimating and openly charging that Gov. Capper considered the matter a huge joke.

But the Pittsburg speech attracted considerable attention in Kansas, whether it was printed and circulated by the Anti-Saloon League or not. In his paper, the Topeka Daily Capital, of May 21, 1916, appear "appreciations" from numerous Kansas newspapers, commenting on his attempt to get the State started back in the right direction. The Overbrook Citizen said:

"Gov. Capper thinks it a shame that the Kansas farmers raise the raw material, ship it out of the State to be manufactured and buy it back. He thinks it ought to be manufactured up in this State. He is right."

Blue Mound Sun: "In Gov. Capper's speech at Pittsburg, he told the chamber of commerce that a State could not prosper on corn, wheat, cattle, and hogs alone, and that it was not the best policy to sell raw material at low prices, ship it east and buy back the manufactured product at high prices. He compared the agricultural State of Iowa, which has from twice to twenty times as many factories in the various lines as agricultural Kansas. He also compared the 36,000 square miles of Indiana with the 83,000 of Kansas, whose manufactured products are only one-fourth those of the Hoosier State. Blue Mound is one of the towns which might profit by the governor's suggestions. We have a fine dairy country and are shipping cream from two stations and buying creamery butter shipped from distant points, so that we lose the income from labor, the profit from manufacturing, and also pay freight both ways. Every can of corn and most of the canned vegetables used in our neighborhoods could be produced and put up at home canneries, and all the cost of manufacturing and transportation be added to the wealth of the community."

Holton Recorder: "It is so obviously unbusinesslike to ship our raw products to Eastern States to be made up into finished products and then pay the freight on them back to Kansas that the governor is wondering why this profit can not be saved to the State and the number of wage earners largely increased. Simply because Kansas is a rich agricultural State is no reason why it should not also be a manufacturing State. The market is here, the gas and oil and coal for fuel is here, and the transportation facilities are adequate. All that is lacking are the factories. And the reason we have so few factories is due to the fact that Kansas enterprise and capital have been too slow to start them.

"The fact is the future growth and prosperity of towns such as Holton and even the larger Kansas cities depend on the development of industries that will furnish employment to wage earners. We can't hold our population, or expect to gain more, without furnishing people employment. This is one of the big problems for Kansas to solve in the next decade, and Gov. Capper's suggestions should challenge the most serious thought and consideration."

Douglass Tribune: "Gov. Capper calls attention of Kansas people to the fact that manufacturing is sadly neglected in this State. There are a thousand things in the manufacturing line that could be made to succeed in Kansas that would be privately profitable and of general benefit to the State."

Arkansas City News: "There is so much waste in our industrial system it is a wonder we have accumulated such vast wealth. People are suspicious of manufacturing concerns. We are accustomed to look to the Kansas soil and hard-working Kansas farmers to support the entire people, and he has been succeeding admirably, but there is a profitable help in many lines of endeavor if we could but see it and develop it. One thing necessary for a change is the change of the mind of the Kansas farmer toward industry. We should realize above all other business men that the State can be far more prosperous with a well-developed industrial system than by depending upon a limited number of resources. We must stop selling our raw material at a low price, shipping it to the East and then shipping it back, and buying it as finished products at a high price, paying the freight both ways and a handsome profit to enterprising men beyond our borders."

Chapman Advertiser: "* * * A number of elements conspire to retard the growth of Kansas in this direction and keeps our State from enjoying the prosperity that rightfully belongs to the people whose homes are made within the confines of the State. The fact that Kansas pays the freight both to and from the manufacturing centers of the East, besides paying handsome profits to the middle man on the vast amount of raw material that is produced annually, is one of the obstacles that must be overcome."

Chanute Tribune: "* * * It is not very creditable to Kansas industrialism that we paid out this year for 85,000 automobiles probably $60,000,000, or more than five millions a month, to foreign factories. (While Kansas was credited with having 85,000 motors, the number was based on licenses then alive, many of which were duplicates, or held-over licenses from the year before.) There was once the beginning of an automobile industry in Topeka, but local capitalists lacked staying power, and it faded away. It is not industrial efficiency for Kansas to pile up enormous deposits and reserves in its banks, boasting of such a feat, and to ship cattle east to be stripped of their hides, the hides to be shipped farther east to be tanned, and the leather to be shipped farther east to be turned into shoes, Kansas buying back the finished product and paying all the intermediary profits and the various freight charges of the whole process.

"Cooperation is necessary to begin to develop manufacturing industries from Kansas raw materials. There must be cooperation of commercial clubs, cooperation with men with capital saved up, cooperation by banks, which must be liberal loaners to manufacturing plants. There will be such cooperation when all the different factors are convinced of the practicability of going in for manufactures. This first move is educational in the sense that there must be work by commercial clubs in systematically and persistently setting forth facts to convert people to the manufacturing idea, hard facts that can not be poohpoohed aside, as to what others are doing, in detail, and of the existence of the necessary factors of successful manufacturing."

Fort Scott Tribune: "Kansas cities and Kansas towns have got less to show for the amount of money they have spent for factories in the past 30 years than for money spent in any other constructive line. Most every city of any size in the State has spent from $100,000 to $1,000,000 to secure factories which to-day are not.

"Kansas isn't a factory State yet. She will be some day, when the population thickens west and the freight rates are equalized so as to remove the handicap from the interior west. In the meantime the wisest thing for Kansas to do is to discover what lines of agriculture she is best adapted to, which will best conserve and build up rather than deplete her soil, and otherwise develop her own natural resources.

"One-half the amount of money spent in dairy cows and barns and equipment that we have spent on factories would have long ago made this the greatest dairy community in the world. The dairy cow is the factory Kansas should develop. If Kansas communities will invest their promotion money in her there'll be no abandoned smokestacks around as monuments to the folly of the town booster spirit."

Atchison Champion: "* * * His speech was an industrial survey of the State, bringing out in a glaring way the weakness of Kansas. We buy away from home and at the same time we produce raw materials.

"If Atchison were in Indiana, Illinois, or Iowa city property would be worth double its present value. The city would be growing with leaps and bounds. Investors would be attracted in large numbers. Located on four railroads, and the natural supply base for one of the richest farming sections in the world, Atchison would be looked upon as a favored city. Yet Atchison is doing only a little better than holding her own. Why? For the same reason Gov. Capper points out as one of the greatest needs of the State the lack of industrial development.

"In time Kansas will become important industrially as well as agriculturally. When Kansans are aroused from contentment and adopt the slogan, 'Kansas goods for Kansas people,' as a real everyday motto, the awakening will take place."

What put Kansas to sleep? Twenty years ago Atchison was a much better town than it is to-day. In 1905 it had a population of 18,159 and in 1915 the census showed a decrease of 2,896. Atchison County showed a decrease during the same period of 2,799. Its population in 1905 was 30,026 and in 1915 it had decreased to 27,227.

Ottawa Herald: "* * * No man is so social that he is willing to concede to Kansas only its province of raising corn, wheat, and live stock; none so cosmopolitan that he would have the Sunflower State known simply as the producer of raw material and leave the East the big margin of profit that comes from converting these raw products into the goods that are sold from wholesaler to retailer and from retailer to customer.

"The governor would not have capital rush blindly into the factory business, but he is right in his contention that Kansas must not remain lethargic to its opportunities. Modern farming is fast teaching the State how to raise more of a variety of products than an enormous crop of a few things, although the State will continue for years to excel in wheat and corn and hogs and cattle. As a State Kansas can afford to vary its occupation.

"Not only is this a State problem, but it is divided up into community issues. Is every town doing its utmost to encourage more factories? Getting factories is simply the problem of salting the tail of capital. The job is one for every town and community. We have the resources and the enterprise. Let us get an all-consuming desire in this one direction and accomplish results. Kansas people can make Kansas a manufacturing district that will rival other States."

Getting an all-consuming desire to push manufacturing is indeed a difficult thing when the all-consuming desire is to catch a bootlegger or single out a jointist or pool-hall operator and leveling the guns of the law and the church on him, them, her, or everybody, as the case may be. The sentiment of the Herald is indeed touching, but for the fact that it soon died out and was forgotten in the rush of crusading, it might possibly have gotten Ottawa and the rest of the State somewhere

Russell Record: "One of the most able, as well as practical, commonsense addresses it has been our privilege to read in a long time was delivered by Gov. Arthur Capper last Monday before the Chamber of Commerce at Pittsburg, Kans. The governor believes that the most important problem in Kansas to-day is the development of industrial enterprises."

While these various newspapers and others throughout the State praised the governor's attitude, the real truth of why Kansas is backward industrially and will remain so lies in the fact that Kansas has found it highly necessary to tax her industrial life to death in order to maintain her foolish and fallacious policies of law enforcement and endeavoring to make successful measures attempting to rule the morals of her people, which measures and policies are overwhelmingly opposed by an irate public, proof of their attitude being in the call for successive legislation, running headlong in the direction of despotic bigotry.

Perhaps the most potent reason why Kansas is leagues behind Iowa, Indiana, Illinois, Missouri, Nebraska, and other States in her group as an industrial center can be no better explained than by a communication directed to the Topeka State Capital, by Hon. Joab Mulvane, one of the most wealthy, progressive, and at the same time one of the most successful business men and bankers in the State, which statement was published in the governor's paper under date of June 5, 1916, and is as follows:

"I read with much interest that part of Gov. Capper's Pittsburg speech relating to the lack of manufacturing industries in Kansas and the need of more of them. All intelligent people must agree as to the vast importance to the State of increased manufacturing industries. It is too true that Kansas makes a poor showing in this respect.

"A home market within the State for its food products and raw materials would realize more profit to the producer, and manufactured products made and consumed within the State would be cheaper, at least by the freight saved, and in both cases all the money be retained to enrich the State.

"There could be no controversy as to the need of securing more manufacturing industries in this State, but the real problem is how to secure them. Most manufacturing industries are operated by and through corporations; that is, the most favored method of investment, as the interest is definite, and the liability limited, and the stock representing it may usually be readily sold. And it affords people of small capital a chance for investment; in short, manufacturing industries and commercial affairs are largely conducted by corporations. They have become necessary to modern business, and if the State is unfair or unjust toward them, such antagonism toward essential methods of industrial development is surely bad public policy.

"Is the law of Kansas unjust and unfair toward corporations? Does the law discriminate against them? Has the capital invested in the corporations equal chance with individual or partnership capital investment? Let us see. The corporation gets from the State a permit called a charter to do business, and is charged certain fees or a price for the privilege; receives a charter defining and restricting what it may do, and with it must make reports of its business to the State. An individual or several individuals as partners may without cost for the privilege and without obligations to make public reports enter upon any lawful business without restraint.

"The corporation and the individual or partnership are each required to pay like taxes upon the capital invested, but a corporation, in addition to paying the same general tax imposed upon its property of, say, a million dollars (that being its capital) is under the present law of Kansas compelled to pay a special tax imposed since the granting of its charter of $1,000 annually, and the legislature may increase this tax at its next session to $2,000 annually, or any other amount it chooses to impose. In short, the law now puts a burden upon corporations, not borne by individuals or partnership business, and the legislature has the power at any session to increase this class taxation ad infinitum.

"This hold-up tax is graded according to the size of the capital of the corporation.

"The reason given for such a law is that some other States impose such a tax and that it brings more revenue into the State treasury. All States do not impose such a tax or have such a law; and if all other States have such a law that constitutes the greater reason why Kansas ought not.

"If capital invested in corporations must bear costs and burdens not imposed upon individuals or partnership business, and with the known hazard of unlimited increase of such cost, it is pertinent to ask whether or no industrial development is impeded or blocked thereby.

"Capital is timid and intelligent, and discrimination against capital invested in corporations tends to drive them away from the State.

"This law has led to the reduction of capital with corporations in this State, and with some others that were in shape to do so to get out of the State, and certainly leads contemplated enterprises to avoid the State.

"The law is wholly wrong in principle and ought to be repealed. Sound public policy demands the repeal of the law."

One of the "really important" things that was given more prominence by a hundredfold than the article written by Mr. Mulvane was a news story covering a new "reform" hatched up by "Dr." Charles M. Sheldon. "Lurid picture-show posters arouse young men's passions," declared the Topeka Capital in bold headlines, January 7, 1916:

"That the highly colored posters of scenes from moving-picture plays, as displayed in front of theaters in Topeka, are indecent, a means of exciting the passions, and an enticement to young men to enter the playhouses, was the charge made yesterday before the Federation of Women by the Rev. Charles M. Sheldon, pastor of the Central Congregational Church.

"Dr. Sheldon said that the State is making enough from its censorship law to afford additional censors to inspect these posters, which sometimes are worse than the pictures they advertise.

"APPEAL TO PASSIONS.

"'I am not saying anything against the films themselves, nor the work of censoring the films,' said Dr. Sheldon, 'because I do not attend the picture shows, and therefore can not speak authoritatively. But I have seen the posters in front of the theaters, and they need censoring badly. There have been in front of a Kansas Avenue theater for several days posters which I think immoral and tending to excite the passions of the young.

"'To these posters I have taken several parties, and they agree with me that they are indecent. The causes of immoral pictures are in a great measure to be laid at the door of the writers of the stories, who have flooded the country with sex plays and stories appealing to the passions. The themes of the stories are wrong, according to the synopses I have read of them in the papers. They teach wrong ethics. Often the villain gets a reward, vice is made a funny and sometimes a pleasurable thing.

"'There are several ways of working out a remedy for this evil. We can stay away from such places when we know that an immoral picture is to be shown. We can go to the manager and protest against such pictures. Or, getting into a show and finding such a story being told by the pictures, we can leave, telling the management why we dislike the exhibition.'

"'When Topeka had saloons the farmer had somewhere to go and loaf during his visit to the city,' Dr. Sheldon said, 'but now that the saloons have been taken away he has nowhere to go.'

"Dr. Sheldon said he had been informed by police officials that if 300 people were moved from Topeka the town would be practically clean of the criminal element 'I understand that there is that number in the criminal element in Topeka,' said Dr. Sheldon, 'the habitual members of the crime colony. Their removal would practically obliterate the crime in our population.'"

Another prohibition boost was noted in the Kansas City Post of January 2, 1916, when it quoted an interview with Dr. C. S. Kinney, head of the State tubercular sanitarium at Norton, Kans. "It's time we paid a little less attention to protecting cattle from imaginary diseases and get busy with some protection for babies," the doctor said.

On January 3, 1916, the Kansas Peace and Equity League, headed by Dr. Charles M. Sheldon, Mrs. H. O. Garvey, and S. H. Allen, held a meeting in the First Baptist Church. Gov. Capper, president of the league, presided, and Dr. Sheldon, Gov. Capper, Dr. Frank Strong, chancellor of the State University; Mrs. W. D. Atkinson, of Parsons, president of the Women's Kansas Day Club, and T. A. McNeal, editor of the Mail and Breeze, a Capper publication, furnished the fireworks. "Preparedness, as advocated by President Wilson and jingoists, came in for some rather severe criticism," said the Topeka Daily Capital of January 3.

Another important "victory without blood" for prohibition was noted in the Topeka State Journal of January 6, 1916, under large and distinguished looking headlines in the form of glad tidings from the "city" of Byers, Kans., a real typical Kansas town, with a real typical habit. "Byers swore off," declared the Journal. "The most extensive turning over of new leaves this New Year's in Kansas doubtless is at the town of Byers," continued the news dispatch, which was relayed via Hutchinson. "The whole town crawled onto the water wagon this week, and not only that, but practically every man in the town swore off smoking and chewing tobacco.

"Byers is in earnest about it, too. Probably the thing that brought it all about was a recent tragedy in the town in which one man killed another in a drunken frenzy. Byers is a new town, only a few months old, in the northern edge of Pratt County.

"The tragedy a few weeks ago was a shock to the community. It brought about a reaction. It did what churches and law and order leagues could not do, perhaps, in so short a time. Prominent business men and leading citizens decided that it was time for Byers to put the lid on.

"A committee was appointed, and an old-fashioned pledge-signing campaign was put on. The pledge binds the signers not only to abstain from the use of intoxicating liquors but also from the smoking of cigarettes and the use of tobacco.

"The business men of the town set the example, practically every one of them signing the pledge. Within the first two days the pledge was circulated more than 50 names were attached, and that took in about all of the men in the town, which is not very large. The pledge is to remain in effect one year. 'We are determined that never again shall there be a tragedy in Byers due to booze,' declared one prominent citizen of the town. 'And we are setting the example to the young men of the community. We hope to be able to drive both liquor and cigarettes out of our town and expect to.'"

(Byers had the enormous population of 26 people at the time this story was written. Another interesting thing in the above story is what the murderer got drunk on. It sounds very much as though Jamaica ginger played its little part in the tragedy, and, if so, the "pledge" will not reach that brand of prohibition booze, for it is not considered as an intoxicating liquor in Kansas. Anyway, here's hoping they met their "hope" to keep booze and cigarettes out. That's what the 26 get for moving out there in the first place.)

The Topeka State Journal of January 10, 1916, bewailed the fact that the showing of the last census, with respect to population, and noting the decrease of 18,404 from 1910, declared that there should be a much different and bigger story to tell at the end of the next decade, further proclaiming that such would be the case "were Kansas to advertise her wares as she should and as several of her sister States are doing."

The trouble with Kansas is she forgets the world is laughing at her antics and wonders why she doesn't attract more people. She is notorious and thinks she is famous. Producing Carrie Nations and that type of reformers always bodes evil, and some day perhaps the Kansas newspapers will begin talking more of constructive measures and devote less time tickling the vanity of blatherskites.

In an address before the annual meeting of the Kansas State Board of Agriculture, held in Topeka January 13, 1916, Hon. Peter W. Goebel, of Kansas City, Kans., president of the American Bankers' Association, declared that, "The real prosperity and happiness of the people does not depend upon the accumulations of a few millionaires but upon the masses of the savings of the people," according to a report of the meeting in the Topeka State Journal of that date. And on the 18th of January, 1916, in an address to 200 boys of the Kansas City, Kans., high schools, guests of the Mercantile Club, Mr. Goebel, according to a report of the meeting appearing in the Kansas City Post of that day, admonished the boys to "be honest, and never forget that work is the salt of the very existence of a man. The installment house is one of the greatest dangers to young people. Saloons are bad, but to my mind, installment houses are worse. Never cheat. It never pays. Be a man, broad of heart and always extending aid to the human family, and you will attain success which will comfort you in later years."

Mr. Goebel, who is a millionaire, started life in a blacksmith shop in Louisburg, Kans.; always worked hard; is opposed to the Anti-Saloon League and believes in the personal liberties that are vouchsafed to every American citizen by the Constitution. However, he is not "advertised" as one of the Kansas "wares," because he will not stultify himself by cutting up silly antics for the entertainment of snoop committees. Kansas has many such "wares," but they are never heard from. And that is another reason why Kansas is looked upon as she is.

Addressing the students of the Kansas State Agricultural College, the only State institution enjoying the distinction of having a real live "arm" of the Anti-Saloon League organized under consent of the governor and the board of administration, Gov. Capper declared on January 20, 1916, according to his own paper of that day that the greatest menace to Kansas home life is the tendency toward tenancy and the lack of interest the people, especially the younger ones, are taking in their home life on the farms. "Kansas is in the making right now," he declared. "We must work for stronger and better rural schools for the vast number of boys and girls in the State who are unable to obtain the advantages of higher education. * * * Kansas needs good roads," he concluded.

The Kansas City Star of January 24, 1916, carried an interview given by William Allen White, in the Ohio State Journal, in which Mr. White boasted of the low death rate of the Sunflower State. "The reason assigned for this," said the article, "agricultural life, prohibition, the absence of slums, and the lack of large industries, account for the longevity of the people. William Allen White refers to the fact that the rate is 9.8 in every thousand, but what is there in it for Kansas if she is prosperous, intelligent, and healthy, but had produced no great statesman, no more gifted authors, painters, or thinkers than her neighbor Nebraska? Why, everything. Prosperity, intelligence and health are greater than statesmanship, literature, or art. It is for the former that the latter are important."

A wild chase of two bootleggers, headed for Emporia, occupied the front pages of the Kansas and Kansas City, Mo., newspapers on January 28, 1916. The officers finally ran down the motor filled with prohibition redeye, near Olathe, where a blockade had been formed a few days before for the purpose of holding up the bootleggers going into the State by a main road from Kansas City. The liquor was all confiscated, the culprits arrested and thrown into jail. Fourteen cases of whisky was all that was left in the car after the thrilling chase ended. A farmer, "a strict prohibitionist," tipped the officers off. Harry Comfort, one of the men in the machine, ran when he saw the officers were about to overtake him, dodged several shots from the six-shooters of the officers, who were joined by the prohibitionist, armed with a double-barrelled shotgun loaded with buckshot. Comfort suffered the pains of exposure and froze both his hands, which were liable to be amputated later, according to the Kansas City Post. He was to be tried soon, said the Post. The prohibitionist, being the informer, earned a part of the "fees and costs."

Hard cider went under the ban by the church contingent in Dodge City on February 1, 1916, when it was discovered that by the simple process of running it through a cream separator, the strong alcoholic rose to the top and produced a "kick" like a coast-defense gun. This great discovery, which, of course, was another "victory" for prohibition, occupied a prominent place in the Kansas dailies, although that day's assignment did not mention any ways and means to further the good-roads movement or the rejuvenation of industrial assassination.

"Kansas is rich in motors, but poor in roads," proclaimed the Kansas City Star February 6, 1916, declaring that there are only five States in the Nation having a smaller per cent of permanent roads than Kansas. The names of the States were not given, but Nebraska and Missouri were not in the list.

The decadent school system was given a body blow by State Superintendent Ross in the Wichita Beacon of February 8, 1916. In speaking of the "progressive school system," so often the subject of unwarranted claims made to boost the ramshackle Kansas system, Mr. Ross said:

"I know a school district in Kansas where two railroads pay 55 per cent of all school taxes, but the school district is so poor that it doesn't have a chair for the teacher. It has what once was a chair, but what by gradual process of weathering has been reduced to a stool. If we had a county unit of taxation, a county board to distribute and see to the expenditure of a common fund for all the districts and that disrict saw that it was going to get as much money as its neighbor, it would get a chair for the teacher." Mr. Ross declared that one of the greatest educational dangers in the State was the pitiable system in operation as applied to the rural schools. "It is no wonder Kansas has hit the toboggan slide and is headed for the bottom in school efficiency," he declared.

Another "prohibition prosperity" item appeared in the Beacon of the same date, however, which shows how much difference there is between "assessed valuation" and actual valuation in Kansas. "According to Mr. Coleman, taxable values have been too high in many parts of the city," said the Beacon. "Actual sales of property have proved this." Which proves again that prohibition lowers taxes.

And just to show that all the "fame" is not centered in and about Wichita and Topeka, Concordia, a little western town broke into print the same day in the Topeka Capital (Feb. 8, 1916), by recording the arrest of "two more boys" for smoking cigarettes. The "law" took them before the county attorney who, after threatening to throw them into jail, wormed out of them the name of the "culprit" who sold them the weeds. "This makes five arrests on the charge, and warrants will probably be issued soon for those who sold the goods."

A special meeting of the retail merchants of the State was called at Lawrence on February 9, according to the Topeka Capital of February 10, 1916, to discuss ways and means for the local merchants who were hitting the thorn-paved trail to the bankrupt court, because the farmers and residents of the little towns were shipping dry as well as wet goods into the State by the carload, and passing up the local merchants whose little dusty out-of-date stock did not furnish the thrill that a mail-order house catalogue brought to the children. An expert named H. Leslie Wildey was imported from Iowa to tell the merchants how to do it. After telling the merchants to compete with the prices of the mail-order houses and that would solve the problem he declared that the mail-order house was the outgrowth of distrust the farmer had for the ordinary small town merchant. "Be honest with your customers," he advised them.

Otta Buehrmann, instructor in salesmanship, from Carson, Pirie, Scott & Co., of Chicago (a large mail-order house, by the way), advised the merchants to remove all temptation from the clerks. Most of them admitted they had already done that by keeping the 76 cents in their pants pocket, and not even trusting the clerk to take it to the bank.

Columbus, Kans., another "bone dry" city, where even card playing is under the strictest sort of a ban, came forth with testimony, according to the Topeka Daily Capital, of February 11, 1916. "Slim" Cravens was being tried for running a gambling "den," where poker and pitch were being played. The jury was out an unusual length of time. Sheriff Martin sneaked in to see what they were "at," and found them playing a social game of pitch, while deliberating, at $2 apiece per day, on the fate of "Slim." The jury had been hung up on a vote of 11 for acquittal and 1 for conviction. The preacher on the jury demanded an investigation, denouncing the other jurors as blacklegs and gamblers. Judge Dunbar promised to conduct a "probe."

THE PLEBEIAN AND PAUPER.

Upon returning from California, in February, 1916, Mr. Frank P. MacLennon, editor of the Topeka State Journal, did some straight talking about the conditions in Kansas.

"Why don't we live up to our high rank and station?" he demanded in an article specially prepared and bearing his signature in his paper of February 11, 1916. "Other States are getting the good things of this world, are living by the way, as they pass through life, are receiving now that to which their generation and success and condition entitle them. But not so with Kansas. Other States are spending their money. We are miserly, hoarding ours; bending every effort of State, city, and county to that end—to hold down the taxes.

"What if Gov. Capper did for himself and his family and business what he does for the State? What if the county commissioners, if they were wealthy and had the means the county has, kept poor walks around their homes and kept poor roads through our counties? What would our city commissioners, if they were wealthy like Kansas and individuals of means, think of themselves if they failed to guard their homes to protect them from crime, as we as a city fail to provide the money and the men to police Topeka and guard the city? Think of a city as wealthy as ours, which has hardly enough police to protect our Sunday schools and gives the chief $125 a month, less political assessments, and can not pay him enough to live on comfortably, befitting his position?

"Our State, prosperous, growing, expanding, improving, we are holding down the taxes, the county taxes, the city taxes; and withal, with a State full of wealth about which we boast, are impoverishing our State institutions, making our roads a disgrace, and holding ourselves up to ridicule before enlightened communities which are spending their money for the people, as they are for themselves, and giving to the State, to the county, and to the city the same comforts in life which they secure for themselves by spending their money.

"What would you think of Gov. Capper, personally a most generous man, liberal with his employees, and giving his family the comforts to which they are entitled, with parsimonious policies only for the State? What would you think of Gov. Capper if he had an old out-of-date printing office, unequipped for doing business on present-day requirements? What would you think of him if he lived in an old frame house, instead of the handsome home he now occupies and can afford? What would you think of him if he constructed an expensive foundation for a needed building for his publications and let the foundation disintegrate and crumble away for years because he was too miserly to use the money he had to put up the superstructure?

"And yet this is the State's policy which has prevented the university from putting up a needed building; has deprived the Norton institution for tuberculosis of equipment for housing the patients; it has debarred the children at the home at Atchison for soldiers' orphans from beds in which to sleep, and the governor has been placed in the humiliating attitude of asking private families in the State to take care of our wards.

"Our road situation is disgraceful. Heavy rains, somewhat continued, put them out of business; even those that have been classed among our best. * * * California, with all her gold and silver, oranges and lemons, and grapefruit combined, bringing less annually than the wheat crop of Kansas, gives to its rural districts, and thereby the thoroughfares between the towns, roadways which, barring the curbing and gutters, are as good to drive over as our city pavements. She gets these roadways by expending money for them. Californians are not afraid of a few bonds—several million dollars' worth."

After explaining that certain counties in California with less wealth than the average county in Kansas's eastern division built roads never heard of in Kansas, and showing that Florida, with nine-tenths of the State undeveloped, had road systems which have cost millions, and even Arkansas, a backwoods State, has better roads than any Kansas ever dreamed of having, Mr. MacLennon gave glorious prohibition Kansas another wallop in this fashion:

"People go through Kansas. Not enough of them stop either to reside or to remain overnight. They go on to other States of less opportunities but better roads and better hotels." And better judgment, too, he should have added. "Traveling men as a rule do not like Kansas cities. They come to Topeka in the morning and return to Kansas City or St. Joseph in the evening, or take a Pullman for the night for the next city in the State."

In commenting upon the hotels of Kansas, with which Mr. MacLennon is quite familiar, he declared: "Our hotels as a rule are neither altogether safe or comfortable, nor do they satisfy the appetite. We lack hostelries that are fireproof, that have chefs who are worthy of the name, good rooms with baths, and for the display of samples they are woefully deficient. It is doubtful if there is a modern steel-reinforced concrete fireproof hotel in all of Kansas."

"Let us make Kansas real to others as she appears to us, the best State in the Union, and Topeka her worthy capital. * * * The taxes which hurt us most and are really burdensome, are the taxes levied to go into waste, to bad management, inefficiency, and for graft. * * * Kansas must wake up and spend thousands, even to a few millions, for roads, and it will be the best investment she ever made. * * * Let us be up and doing and get this notion of eternally keeping down the taxes out of our heads for it is not so much what our expenses are, as what we get for the expenditures. * * * Let us loosen our purse strings ere we pocket our pride before the fall below our sister States now climbing the heights of progress and preferment."

As sensible and timely as was this declaration, yet Mr. MacLennon overlooks a most important feature of Kansas's so-called greatness. He like the other boosters lays great stress upon the wealth of the State. It is not there. While the per capita "assessment valuation" is high, there is very little real wealth in the State. With over 44 per cent of the farms and nearly 40 per cent of the homes under heavy mortgage, a Ford car, "Yo ho, and a bottle of rum," do not speak for a great gold-laden Commonwealth that will willingly give up tax money for any purpose. Taxes are the bane of the industrial and agricultural life of the State, and if Mr. MacLennon would spend a little more time in Kansas studying the actual conditions, and not view them from the window of a Pullman while whizzing through headed for California, he would better understand that "wealth" means what you have, not what the assessor or the county board or the State tax commission says you should have to make up the great deficits staring every department of finance from the township to the State treasury in the face continually.

Just to show that John Barleycorn was right when he declared in 1881 that his "funeral" was a joke, Warren Jury, a native-born, prohibition-soaked, and Jamaica ginger soaked youth of Fort Scott, returned a unanimous verdict that Miss Minnie Gaulding, the 18-year-old daughter of a wealthy farmer living near there, must die because she would not marry him. Walking into her home, he shot her down in cold blood before her mother and killed her father, according to the Topeka State Journal of February 15, 1916.

"A Parsons young man," according to the Parsons Sun of February 18, was "hurrying down Broadway last night, dropped a bundle of laundry and broke all four bottles," while "an Atchison man who aspires to high political honors was on one grand toot at a leading Kansas City (Mo.) hotel last Saturday," according to the Kansas City (Kans.) Weekly Press, which further stated that "at home, however, he behaves admirably and there he has lots of good friends." According to the Topeka Capital of February 20, 1916, some boys at Yates Center, Kans., a small inland town were cutting up high jinks with some homemade booze, manufactured by freezing cider, mixing it with water and Jamaica ginger. "The law enforcement league" was on their trail but could do nothing. "Grandma" Erskine, 76 years old and her daughter, Mrs. Helen Hennessy, were roped in by the police of Kansas City, Kans., for running a bootleg joint at 838 South Fifth Street, according to the Kansas City Star of February 21, 1916, and to show that the bone-dry law has worked wonders in other directions (the bone-dry law of 1915, which Capper said rendered the State absolutely dry for the first time since 1881), Mrs. Rose Parusich, 358 North Fifth Street, in the same city, pleaded for freedom from a charge of maintaining a joint, on the ground that that was the only manner in which she could support her six children, her husband having deserted her. Mrs. William Balke, of 623 South Forth Street, Kansas City, Kans., was also arrested the same day. The Snoop Committee found "a gallon of whisky, a barrel of beer, and a pint of alcohol, and business going well," commented the Star. All these women were notorious bootleggers, and all were "fined heavily" but given a stay of execution, pending "good behavior," and all went right back to "work" again, as they tumbled out of police court to freedom.

Fearing it would raise the taxes, Salina, Kans., another Kansas town that has "become great" because all the liquor selling is by the bootleggers and through the mail-order route, refused to accept the State law governing workmen's compensation "when City Attorney Crowther told the members of the city council that if a street man working for the city went to sleep and fell off his wagon the city could be held for damages," according to the Topeka Daily Capital of February 24, 1916. "A number of Salina business firms have withdrawn from under the act," further stated the dispatch. And the only business concern of any size in the city, the Lee Mercantile Co., recently "withdrew from Salina" and removed to Kansas City, Mo.

And, speaking of education, the Topeka Daily Capital, under date line of Leavenworth, February 24, 1916, said:

"Owing to the large number of failures in studies of the high-school pupils—105 out of 573 students—Principal H. T. Steeper has decided to have all-day sessions for those who fail. Only morning sessions of the high school have been held in Leavenworth, and this plan is now working in a satisfactory manner. The parents want morning and afternoon sessions, and it is believed that better results can be obtained.

"The boy students especially do not study at their homes in the afternoons, and they make up a big percentage of the failures."

In an extensive article headed "In dry Kansas," the Kansas City Journal of February 26, 1916, describes the "Kansas Barbary Coast," across the bridge from Leavenworth, in which the "oriental life" is in full swing most of the time, and "the only place in or about Leavenworth where there is any sign of life any more. The city is dead and going to rack and ruin," declares the Journal. And the "school efficiency" with it, apparently.

While the Wichita school-teachers were threatening a strike because of low wages, the W. C. T. U. of Harper County, "the largest organization of women in the county," according to the Topeka Daily Capital of January 7, 1916, "unanimously condemned President and Mrs. Wilson for their expressed intention to dispense with the use of non-intoxicating beverages and begin serving wine at the White House dinners," just to show the world that they are for a "bigger, better, and more stable industrial Kansas." "Members of the temperance organization are of the opinion," remarked the dispatch, "that the use of wines at the White House will have an undesirable effect upon the spread of temperance and prohibition in the Nation." They took no action on the tumbled-down school-system situation nor the good-roads movement nor the crumbling industrial life in the State, however.

And at the same time the city of Parsons was ripped wide open, according to a dispatch in the Topeka Daily Capital of January 7, 1916, because of wholesale vote frauds perpetrated by "our best young men," who were caught serving booze and cigarettes, and such elevating things, at and near the polls.

"Are you a saver?" asked the Topeka State Journal of January 22, 1916, in an article describing the lack of thrift on the part of Kansans, and showing that Kansas has taken a decided step backward in this respect. In answer to the query put, the Journal says, "No; decidedly no," with respect to an overwhelming number of Kansas people. It overlooked mentioning the fact that Gov. Capper admitted in his Methodist Temperance Union Bulletin, published about a year before that over $6,000,000 left the State every year for bootleg booze.

A "bone-dry" dispatch from Wier City, a southeastern town in Kansas, dated February 27, 1916, showed that one brewery agency in that city had sold 325 carloads of beer there during the past five years, and Weir City is a "bone-dry" metropolis of 2,159 perfectly good and staunch prohibitionists.

And as further evidence of how highly edifying prohibition can become as regards the morals of the community, "Seven widely known citizens of Beagle, Kans., a bone-dry center of 183 people, were arraigned before James Hunter, justice of the peace," according to a dispatch to the Topeka State Journal, January 18, 1916, "on statutory charges preferred by Marjorie Sedgwick, a 16-year-old orphan who lives with the family of G. W. Carey, at Beagle. * * * It is said

that several other arrests may follow. The girl was a ward of the industrial school at Beloit, Kans., until 1913, when she went to live with the Careys."

And on January 29, 1916, the Democratic State committee settled for 19 kegs of "booze," purchased and used during the campaign in dry territory, boosting for votes and prohibition, according to the Topeka Capital of that day. The Democratic Party in Kansas is bone-dry—just like the Republican Party is.

On April 3, 1916, according to the Kansas City Post of that day, "Coffeyville is becoming metropolitan, at least in regards to her police department. Only a few members of the force, from the chief down, has escaped gossip and formal or informal charges. The accusations range from drunkenness on duty to grafting. Patrolman E. T. Hall was suspended from duty and Night Chief J. D. Fletchall was shifted to the day squad. Both officers were asked to resign, but refused. Another patrolman, against whom grave charges are said to have been made, was asked to resign, and he did under promise of immunity. Several members of the merchants' association have threatened to ask the attorney general of the State to bring ouster proceedings. A few years ago a similar condition arose and several city officials were ousted, a few finding it convenient to reside elsewhere for a time." The attorney general, armed with his trusty spear "that knows no brother," lost no time in getting down there, and the usual commotion with the usual expense, for which the taxpayers had to pay, was staged.

Receiving a tip that a still was working full blast in a back alley, a Topeka officer slipped down to see how it was done, but found he was mistaken. All the boys were doing was making a new brand of intoxicant. "He discovered there was no still at all," said the Topeka State Journal of May 6, 1916, in commenting on the water haul staged by the sleuth. "That while it might be whisky that was being turned out it lacked a lot of coming within the meaning of the word as set forth in the pharmacopea. True, it had alcohol in it, but the alcohol was placed in it after the drink was made, and the people supposed to be running the still were not selling the alcohol."

"They were merely selling 'Zanol,' and Zanol is nothing more nor less than an extract made in Cincinnati. Since the 'still' theory blew up in Topeka the town has been flooded with 'Zanol' literature, and much of it has reached the office of the county attorney. It points out the way by which every man can become his own distiller, and the literature declares this method of making whisky saves the maker 50 per cent over the regular dealers' price. * * * It states that 48 bottles of Zanol cost $4 and that it means the purchaser can get 48 quarts of whisky for the $4, counting nothing for the cost of sugar, water and a mite of alcohol. * * * 'It may be,' said Robert Garvey, the assistant county attorney, 'that the Zanol people can get away with it, but I doubt it. If they can, we just have another prolific source of trouble.'" If they were ever stopped, or if anything was ever even done trying to stop them, it escaped being put into the Topeka papers. No dry law on earth can overcome the desire of men and boys for alcohol when they have the habit ground into them as they have in Kansas. The tighter the law is made the more cleverly they work out means to violate it.

Overeating and dissipation in other directions was given as the reason for the enormous crop of "fiunks" at the State agricultural college at Manhattan, by Dr. R. T. Nichols, the college physician, according to the Topeka Daily Capital, June 2, 1916.

Another bone-dry prohibition prosperity and good government, happy-home article appeared in the Kansas City Star of about the same date under a Columbus, Kans., date line, like this: "Telephone reports from Melrose, in the extreme southwest part of Cherokee County, tell of a battle which took place between bandits and drivers of liquor-laden motor cars near there this afternoon. Whether any of the persons were injured is not known. Five motor cars loaded with Joplin liquor and bound for Coffeyville, passed through Melrose about 4 o'clock. A big motor car followed a moment later. A quarter of a mile west of Melrose the car passed the other five and the two men in the rear of the big car stood up and covered the drivers of the liquor cars. When some of the drivers refused to give up their liquor or turn their cars over to the bandits, the battle opened with terrific fury."

Sounds like the real thing. During the summer of 1916 all motor cars loaded with whisky and boot-leg booze traveled all through southern Kansas with an armed guard, as in the old days of stage-coaching. Holdups by officers and bandits were frequent. The automatic gun, loaded to the teeth, and the double-barrelled shotgun have taken the place of dry resolutions down in that part of the State also.

With the hundreds of thousands of dollars filched from the taxpayers' pockets to carry on the Kansas system it is not surprising that as the jails and penitentiaries, asylums, orphans' homes, industrial schools for girls and boys, and poor farms fill up that the State and county treasuries go "dry." "The State needs money," said the Topeka State Journal, under date of June 21, 1916. "Sixty per cent of the money levied for the use of the State during the current year is gone," it declared. "A 5 per cent draft on county treasurers to-day will raise $180,289.35, with which to help pay the State's bills for June. The drawing took from the treasury 60 per cent of the money levied last year by direct taxation for the payment of the State's bills during 1916. Fifteen per cent of the money for this year was used for the payment of State claims in December last year. An additional 45 per cent of the money has been required to meet the running expenses during the first six months of the year. The 40 per cent remaining in the treasury must meet the demands of the State until December 20. At that time the State can follow the policy pursued in former years and draw on the new taxes."

Thus, the State is never even. Drawing ahead and using funds that should not be used put Topeka in the embarrassing position during the present session of the legislature of asking the law-making assembly for permission to float a special bonded indebtedness to take up the slack the county officers there have permitted to grow up, as the new county attorney discovered that Shawnee County "borrows" from the treasury money with which to run the county, and which, under the laws of the State, is in bold violation of the rights of a county, and could, if proper steps were taken, mean prosecution, heavy fines, and imprisonment for the county officials.

As to the method of raising county and State taxes, permit it to be said here, parenthetically, that all live stock, wheat, corn, etc., is taxed by the county assessor at its full value, based on the market at the time the assessment is made. Should the market go down the farmer is stuck, of course; but what's the difference? An illustration from the Dickinson County News, a paper published at Abilene, will show the methods employed in Kansas: "The State tax commission has increased the valuation on several classes of live stock, corn, and wheat as assessed this year and certified by County Clerk King to the commission." And there is no appeal from their decision. Horses, cattle, mules, etc., were all raised from 3 to 17 per cent, and yet the papers of the State wondered why the farmers cleaned the country of live stock when the foreign live-stock buyers went to Kansas. The county levey of Dickinson County was "readjusted" to 2.45 mills for 1916, which, as county levies go in Kansas, is about "normal," but exceedingly high as compared with levies made in other States, and not one cent for industrial improvement or good roads.

"That a system of rural credit is sorely needed in Kansas, is the opinion of Theodore Macklin, instructor in rural economics in the Kansas State Agricultural College," declared the Topeka State Journal, under a Manhattan date line of June 7, 1916. "If the farmers of Kansas are to become land-owning farmers there must be a credit system which will make it possible to obtain money for long periods of time and at a low rate of interest to use in carrying on farm operations. The farmer should be the economic leader of the country, since he is the primary producer of a large portion of the necessities of every Kansas community," declared Mr. Macklin.

The fact that Kansas had no "State debt" was advertised extensively by the Anti-Saloon League, all over America, during the fall campaign of 1916. Vehement denials were made by Mr. Capper, that copies of his Pittsburg, Kans., speech, made in March, 1916, or his message to the legislature, dated February 23, 1915, were "genuine." They were brushed aside by the old claim that they were made by the "booze crowd," to hurt "the cause." California was shaken from end to end in an effort to get the voters to adopt the Kansas system, so ruthlessly and bitterly condemned by both Capper and Mr. MacLennon, upon their returning from California during the earlier portions of the year—but not one single line was ever printed in any newspaper, in fairness to the people of the States voting, giving them even a hint at the real industrial, social, agricultural, or moral situation, as laid before the world in the daily edition of every Kansas newspaper, but not read, because the subsidized press of other States refuse and are afraid to print what they know will hurt the cause that pays them well.

However, after the smoke of battle had cleared away, the Kansas City Star of November 29, 1916, carried two items of more than passing interest. One of them was under a Topeka dispatch headline, dated the 28th, and quoted an interview with Earl Akers, the State treasurer. "Kansas is out of debt now, but ought to get into debt for good roads just as quickly as possible. This is the view of Earl Akers, State treasurer, in his biennial report to the governor," declared the Star. All State reports were held back until after the fall elections in 1916, for very good reasons. They are always printed not later than September 1, but it was after the first of the year 1917 before some of them appeared, covering the biennium ending June 30, 1916; and information as to what they would contain was not obtainable prior to the elections, either.

"'Kansas should not enjoy the distinction of being out of debt overlong,' says Akers. 'If she does, she is all too apt to become an over-conservative State. Kansas needs roads, real roads, hard-surfaced roads, and can afford them. I hope your excellency will recommend to the coming legislature a real, progressive road building program,'" the item concluded.

And the other item of intense interest bears on the moral side of Kansas Prohibition, and is of more than passing interest also:

"LAWRENCE, KANS., *November 28.*

"Some of the mystery surrounding the 'shooting up' of the university of Kansas campus shortly after midnight this morning was cleared up to-night when it became known that the mysterious motor car from which the shots were fired belonged to the Lawrence police department. Tire tracks in the frost in the student district early this morning showed the car had visited a house near McCook Field, several inmates of which forfeited bonds several days ago for appearance in police court on charges of keeping a disorderly house. Last night's shooting is supposed to have followed a visit to the house by the police, and that the shots were fired at those escaping in the raid."

McCook Field is one of the portions of the campus of the State university. Is it any wonder the 1,500 Kansas mothers who have daughters attending the university are praying nightly that the State will wake up and build dormitories where they can at least feel their daughters are reasonably safe, when disorderly houses, with policemen visiting them after midnight, are permitted to operate wide open right under the eaves of the "Temple of Learning and Justice," supported by the taxpayers of the State?

And it is little to be wondered at that 2,000 young Kansans are sent out of the State to spend that $1,000,000 the board of administration wept over in their last report, because the Kansas brand of immoral houses and prohibition have driven them *into* license States where law and order will at least permit them to be educated in arts and sciences rather than in drunkenness, vice, and crime! There are a lot of things besides "architectural honor" that need fixing in Kansas, and the fixing should not be applied entirely to broken-down courthouses or unsightly outhouses around rural schools.

During the latter part of the summer of 1916, oil in large paying quantities was accidentally discovered in Butler County, Kans., and the little village of Eldorado, which had 2,500 inhabitants before that, as well as Augusta, with 1,300, began to take on city airs. The population increased, doubled and quadrupled, by reason of the large influx of laborers, speculators, oil drillers, etc., but as typical of the lackadaisical habits into which the Kansas people who never see anything but "the Flyer" scoot through during the afternoon, or engage themselves in a stiff game of checkers down in the country grocery store after supper, and before the curfew rings, the following news article in the Topeka State Journal, of October 11, drives the point home. Here is the text:

"Women—men, too, of course—Witchita booze and failure of county commissioners elected when Butler County was a peaceful agricultural community, to realize that the quadrupling of the population in a year calls for the expenditure of money and handling of a big problem in a big way are reasons assigned by Maj. R. Neil Rahn for the trouble at Augusta and Eldorado. Maj. Rahn, who was commissioned to go to Butler County and ascertain the exact cause of trouble, returned to Topeka to-day with a story that would make a proper setting for a Bret Harte novel.

"Citizens in Butler County are clamoring to State authorities for relief from the liquor that is flooding the county, and also demand that women who aid in demoralizing the peace of the community be driven from the confines of Kansas. Another demand is that county

commissioners appoint deputies sufficient in number to aid Sheriff Newt Purcell, one of the nerviest officials in Kansas, to properly handle the thousands of rookies from the Oklahoma oil fields, who have poured into Butler County fields in the last few months.

"Insanitary and good-natured lawless conditions described by Maj. Rahn to-day existing in a county in a prohibition State, seem almost unbelievable. Unless prompt action be taken Maj. Rahn predicts that depredations of magnitude that will stir the State will be enacted in the county, which in a single night, so to speak, has sprung from a sleepy agricultural community to one in which exists all the elements of the wildest mining camps of early days.

"Furthermore, Maj. Rahn declares, the perplexing problems facing the law-abiding citizens are in their infancy. Frantic efforts are being made by the producers to erect 101 more tanks, with 100,000-gallon capacity, within a year. This will necessitate the bringing of thousands of additional rookies from the slums of the cities, from the railroad camps, and from the oil fields of Oklahoma.

"When Maj. Rahn arrived at Augusta he found a plucky sheriff and one deputy attempting to maintain order in the big county, which has nearly quadrupled in population in a year. One other deputy has been appointed since Maj. Rahn's visit who will look after conditions south of Augusta.

"'There are thousands of rookies in the oil fields living in the bushes, in caves, in improvised houses and huts,' said Maj. Rahn. 'The rookies work in relays, one band a certain number of days and then another. Immediately after one band is paid off booze is poured in in wagonloads from Wichita, 18 miles away. Then the wild time begins, and women infest the camps and add much to the trouble encountered by the officials. It is one fight after another in the oil camps. The producers are powerless to obtain men wanted. They employ hundreds of rookies who stick together, and when an official wants one of the rookies the producers can do little to aid. They have to live there and live off the work of the men.

"'As I walked down the streets of Augusta with the sheriff there was fighting going on. We saw one man knocked down. The sheriff saw that he was not hurt and walked on. A mere fight is a trivial affair, and unless a man is hurt the officials have no time to investigate.

"'The night I was there they arrested four men at Augusta, where the jail had been torn down. Just for a joke the big fellows—all good-natured in a rough way—set fire to the mattresses in an improvised jail. The smoke became suffocating and forced them to act as their own fire department. Then they decided to play some more, and tore down the plumbing and piled the fixtures on the floor. The sheriff finally conveyed them to Eldorado and placed them in a jail already overcrowded.

"'Four women were arrested that night and placed in a room, and four blankets were given to them. The women tied the blankets together and broke through the window, tied the blankets to a bedpost, and crawled to the street.'

"Good-natured lawlessness abounds throughout the oil camps which spread all over the county, looking much like a bunch of little towns. But under it all there is the deadly feud, the threats with a bite in them, that exist, many believe, only in novels.

"There's the story of the Crowe brothers driven out of Augusta only Saturday. They came from the oil fields of Oklahoma and had bad records, according to information received by State officials. But they were sworn in as marshals at Augusta. The specialty of the Crowe boys was to arrest all automobile owners who drove without tail lights or broke any minor traffic rules. It is declared by Augusta citizens that proper notice to discontinue certain infringements on traffic rules had not been made.

"Augusta citizens tired of being yanked into jail for such things; so Saturday night Bill Pell, a well-known Augusta citizen and a candidate for the legislature, arranged for a burlesque. He got a red lantern, placed it on a stick, mounted an old gray nag with the stick with the lantern on it, rode through the streets as the rookies and the townspeople cheered. The Crowe boys arrested him. A near riot ensued. Pell was released from the jail after it had been torn down, and the Crowe boys aren't anywhere around Augusta these days.

"With the Crowe boys when they walked into Augusta came a man named Cooper. Cooper was their pal, and finally went to Eldorado, where he was placed on the police force. Now, there are threats that the Augusta rookies will march on Eldorado some night and get Cooper.

"'There'll be trouble then,' said Rahn to-day. 'The sheriff is plucky and they'll never get Cooper without a fight.'

"Strenuosity and no little trouble will face State officials if they go after the liquor business in Butler County, it is said. The liquor isn't shipped from Wichita; it is hauled in wagonloads. All bootleggers convicted have been supplied with an attorney from some mysterious source, and with the demand existing among the thousands of rookies, members of the I. W. W., the State will have trouble shutting off the supply."

Dry resolutions didn't interest the men who were digging holes to let millions rush to the surface, and dry holes, dry parades, dry raids, and dry "statesmen" with dry preachers urging them on to do their duty, have no place in Butler County—or anywhere else in the world where the wheels of progress and the hum of industry sings from morning until night.

Bootlegging by jitney lines, operated by young girls from Wichita to Augusta, played the middle portion of the stage for quite some time during the same month. A score or more State warrants were sworn out by the county prosecutor on information filed by the fathers and mothers of the girls—in dry Kansas! Of course, being only 16 and 17 years of age, the girls probably had never seen an open saloon; but they knew what bootleg booze cost, just the same, and were getting the price by the hatful!

Thus is the history of Kansas written. Like mushrooms in the night, joints are located all over the State. Railroad lines prior to the enactment of the most recent bone-dry law were loaded down to such an extent that extra baggage cars had to be added, as well as extra express cars. Schedules were of necessity lengthened by the dry board of railroad commissioners so the trains could make their "run" somewhere within two hours of the schedule and handle the booze traffic en route. No one in the State ever declared it to be bone dry, and all the silly twaddle sent out from the State capitol, the State registrar's office, and through the various newspapers, being "inspired articles," carried with them fake tales of progress, prosperity, and peace. Kansas is not dry and everyone knows it; and what is more, it never will be, because the people of the State do not want it to be.

THE BATTLE IS ON; THE KING IS DEAD; LONG LIVE THE KING.

On January 9, 1917, the dawn of a new day opened one of the most interesting chapters of Kansas history, for on that day the Supreme Court of the United States declared the Webb-Kenyon law to be a constitutional measure. It was a sign for the visitation of the millennium in Kansas—a day marked with much hilarity and high feasting, much clanking of cymbals, steel, and sharpening of hatchets and spears, and patting of lean purses among the law-enforcement crowd.

It was likewise a day of reckoning, for it ushered into being, quite suddenly and with great surprise, the time when the Kansas hand of prohibition was "called"—and the showdown displayed two deuces of dusky hue. To the sincere prohibitionist it meant "big things," and for the little band of faithful who for years have been watching the eastern horizon for some sign of a promised coming of the millennium. To the hypocritical politico-religio bunk peddler it meant just one more "stand for the right" in the halls of legislation, with an eye on the dry crowd and a wink for the bootleggers. To the busy every-day business man it meant increased trouble and the dawn of an era of higher taxes, more raids, less personal liberty.

Although a clarion call was sent out by the newspapers of the State on the first of the year 1917, begging more industries to come to Kansas, setting forth the various kinds of industries the towns or the State wanted capitalists outside the State to start, all thought of industrial welfare was thrown to the four winds the minute the news was clicked over the wires from Anti-Saloon League headquarters in Washington that "the deed is done"—everybody got busy on the morning of January 9.

The "prominent people" of Topeka were immediately interviewed, and with flaming headlines the Topeka State Journal printed their declarations on the front page that evening, as follows:

Gov. Arthur Capper: "The Webb-Kenyon law, backed by a bill to be presented by the legislature probably to-morrow, will do more to drive the bootlegger out of business than any legislation passed in years. The big problem, one almost impossible in solution up until the present, has been stopping shipments across the State line."

F. D. Coburn, former secretary State board of agriculture, and ex-president State Temperance Union, and one of the "grand old men" of Kansas: "The decision on the Webb-Kenyon law is the foremost victory for decency and righteousness known to any age. History records none greater. The Lord reigns!"

Frank M. Stabl, superintendent State temperance union: "The passage of the Webb-Kenyon bill, should it be backed up by the passing of the Stone bill now before the legislature, marks the end of the long crusade against liquor by Kansas prohibitionists. There will be minor troubles of enforcement, but the men and women who have for years fought for freedom from the liquor evil in Kansas can lay down their arms now, for to all intents the battle is won. I have worked for prohibition during my 60 years residence in Kansas, and I regard my labors in my life work as ended."

Charles M. Sheldon, noted preacher, lecturer, and writer: "There is just one thing to say about the bill—it is a splendid forward step. It will virtually eliminate the illicit liquor traffic in Kansas. The next step, nationally, to take will be to forbid its sale for medicinal purposes. Before the accomplishment of such a step, there must be a wide propaganda to instill in the minds of the public its entire worthlessness as a medicine."

Hugh Larimer, sheriff of Shawnee County: "If the bill is passed making shipments into Kansas impossible with the Webb-Kenyon law to back it up, a large percentage of crime in Topeka will become a thing of the past. Many of the crimes in Topeka are caused by liquor. If they can't get it in excepting by smuggling on trains and automobiles, its sale will be cut down, crime will be decreased, and the bootleggers will be forced to cease operations."

Harvey Parsons, chief of police: "It won't aid materially in cutting down crimes, such as murders and robberies. Yet it will be a great boon to the police. Our force is small and not capable of handling properly the prohibition and major-crime problem. But it is large enough to handle either one or the other, and with the prohibition problem practically settled we can cope successfully with the problem of major crime. There will always be bootlegging in suit cases and trunks, but it will cease to be a big problem for us."

The wheels of legislative progress were at once clogged by the introduction of bone-dry bills from every corner of the State. The newspapers talked of little else, save and except only the proposed legislation accompanying the bone-dry liquor bills, eliminating not only the sale but the use of cigarettes, the sale and use of cigars and tobacco for chewing or pipe purposes. The prohibitionists engaged in a carnival of delight never before witnessed in a civilized or semicivilized community. Reform was rampant. Every day witnessed a parade of female politicians from some remote corner of the Commonwealth bent on settling the matter without delay. Of all the freak legislation ever proposed before, the hoppers of the Kansas law-making assembly held more after January 9, 1917, than had ever been dreamed of before.

A little breathing spell was afforded on January 14, however, when a dispatch from Topeka to the Kansas City Journal, of that day, announced the forever glad tidings to the happy-go-lucky taxpayers of the State:

"The people of Kansas can figure right now on $1,000,000 increase in State taxes during the next two years. It is coming just as sure as the sun rises. There is no way out of it. The increase could be $2,000,000 and still all requirements would not be satisfied.

"It will take $100,000 more to feed all the State wards than it did formerly. The clothing bill will be another $100,000. Then comes the hike in salaries, necessitated by the increased cost of existence. The rest of the increase will be taken up in new buildings and improvements, absolutely required by different institutions.

"Nearly every institution in the State—educational, charitable, and penal—wants extensive improvements. * * * Many of these buildings must be authorized, else the State will drop behind in its educational standing and fall short of taking proper care of its wards.

"The total taxes raised in Kansas now aggregate about $35,000,000 a year. One-tenth of this amount, or $3,000,000, is State tax. The rest is school, county, and municipal. The State tax is $1.30 per $1,000.

"Many people wonder how the State money is spent. The State tax commission has figured it out. Out of every $1.30 raised, 57 cents goes for education, 27 cents for charitable institutions, 14 cents for penal institutions, 4 cents for soldiers' homes, and the remaining 28 cents for paying the expenses of all other State departments."

During the "rush of business" preparatory to shooting across the "best dry-bone law yet," one of the most intensely interesting features of the history of prohibition in Kansas, occurred. It was the "purchase" of the Kansas State Temperance Union by the Anti-Saloon League of America, put over by ex-Gov. Hodges and Supt. Howard H. Russell, of Westerville, Ohio. This occurred on January 17, a week

and a day after the declaration of the Supreme Court of the United States, that the Webb-Kenyon bill is constitutional and that States may become "bone dry" by direct vote or statutory enactment.

In the March, 1916, issue of the Kansas Issue, the official organ of the Kansas State Temperance Union, Frank M. Stahl bitterly opposed a plan which had been worked out by Hodges and Russell, to sell the union out to the Anti-Saloon League. "One point especially objectionable was giving the National League the power to veto the choice of the people of Kansas for superintendent. Two other points were unsatisfactory, but the interfering with the will of the people was the greatest grievance," he declared. How strange the "will of the people" is invoked, when your own scalp is being viewed with watering teeth by the Indian with a sharp knife.

That the league was preparing to pull the world out from under the patriarch of Kansas prohibition and install the modern dish-pan system, was evident from his feeble and at times vehement protests that the "will of the people" was being trammeled under foot, all during the year, and it will be recalled that when the union slammed the door on Russell's fingers at the 1915 meeting in Kansas, he smiled and said he was "satisfied" that everything would work out all right, though some of his "lieutenants" who did not understand what was going on inside the inner circle, were rather peeved.

A flash of lightning broke out in the December, 1916, copy of the Issue when it was stated that "The Lawrence meeting," which seems to have been a secret conference behind closed doors, with a few of the "select." "The Lawrence meeting was a surprise to the officers of the Kansas State Temperance Union," declared Mr. Stahl. "Not a single officer or member of the headquarters committee had received even a hint of the call to organize a branch of the Anti-Saloon League of America. The first inkling of the meeting was obtained from a notice in the Kansas City Star of December 4. The union believed it was working in full accord with the National League, under a constitution prepared by Mr. Russell and approved by Supt. Baker." But Brother Stahl is a "sincere," not a "practical" prohibitionist, and lived to learn a lot.

"The union has been an incorporated body nearly 50 years. The league, for a number of years, has recognized it as an auxiliary. The trustees chosen by Kansas have been admitted into their counsels, but there was dissatisfaction at the headquarters of National League with the union, or some of the officials, with or without reason, matters not from one standpoint. There is no need of two organizations in Kansas. There ought not to be. There must not be, and for the sake of the temperance question here in the State as well as in the Nation, the union will make such concessions as will compel the newly formed organizations at Lawrence to acquiesce in a proposition to merge the two bodies into one." And to that end, says the Issue, committees were appointed.

Speaking of the passing of the Temperance Union and the birth of the bootleggers' union as the official guardians of the liberties of the people, the Topeka State Journal of January 17, 1917, said:

KANSAS STATE TEMPERANCE UNION NO MORE—FAMOUS PROHIBITION ORGANIZATION GOES OUT OF EXISTENCE—IT MERGES WITH THE NATIONAL ANTI-SALOON LEAGUE—A STORMY SESSION TO-DAY—MEMBERS MAKE BITTER FIGHT ON CONSOLIDATION PLAN—THEY FINALLY GIVE IN, HOWEVER, FOR GOOD OF CAUSE.

"Unfortunate and unfair as was the formation of the Anti-Saloon League last month and intrusion upon our territory, and in spite of that organization's neglect of the pressing problems of local enforcement, in the interest of the cause the Kansas State Temperance Union must merge with the Anti-Saloon League. There must be no war or division in temperance work in Kansas. The cause is paramount, and in its interest I am ready to resign my superintendency." (Frank M. Stahl, in this morning's session of the fifty-second and last meeting of the Kansas State Temperance Union.)

The above statement, followed by the appointment of a committee of five, with power to act, to confer with the similar committee of the Kansas branch of the American Anti-Saloon League, marked the beginning of the end of the most famous prohibition organization in the world. It ended a stormy session this morning.

The details of the dissolution were settled at the committee conference this afternoon at the Y. M. C. A. As the result of the conference the Kansas State Temperance Union passed over its assets, amounting to more than $20,000, and obligations amounting to $2,700, and tossed its 50 years of experience into the discard.

The members agreed to the appointment of an out-of-the-State man for the superintendency of the merged organization. Two provisos were insisted upon: First, that the work of local law enforcement will not be neglected in Kansas in the interests of national legislation, and that the league will recognize and cooperate with the Kansas W. C. T. U.—two things which are not the policy of the organization in its work in other States.

That much was saved out of the wreck of the Kansas State Temperance Union. Before the tacit agreement of the union to its dissolution was made, stormy scenes featured this morning's session of its final session. Delegates to that convention reminded the organization that the interests of the Anti-Saloon League were primarily to raise money, of its disregard of law enforcement, and its refusal to recognize the W. C. T. U. It was pointed out that the assets of the union were five times as great as those of the new league.

"The fight on the Kansas State Temperance Union was started primarily because they were not getting enough money out of Kansas. Kansas was emphasizing the work in Kansas and was not providing monetary ammunition in the State," was a statement made in the meeting.

"The bootleggers will rejoice in the downfall of the union," one member stated. "Supt. Russell, of the National Anti-Saloon League, told us in our convention two years ago that Frank M. Stahl was the most efficient superintendent in the matter of law enforcement of any prohibition society in America.

"But he said that Stahl was not a money raiser, and that is the crux of the whole matter and the reason why last summer they refused to consider our society any longer a member of the national league.

"We never will get another superintendent like Stahl," the member continued. "The law-enforcement work has necessarily to be kept quiet, and few Kansas citizens are aware of the immense good done in this department of the work. Also we refused to surrender our right of electing our own superintendent last summer, which is another reason of the war. The league wants to appoint its own friends to the jobs."

Stahl's magnanimity received high praise at the meeting conference of the two committees this afternoon, and resolution of commendation of his nine years' service with the union will undoubtedly be passed at this evening's meeting.

The national league headquarters have already selected a superintendent for the 1-month-old Kansas branch of the Anti-Saloon League, which absorbed the Kansas organization to-day. He is the Rev. W. H. Berwig, assistant superintendent of the Texas branch of the Anti-Saloon League.

Dissatisfaction with the actions of the league is general in the union, but it was unanimously concurred that "the cause shall be given first consideration."

Mr. Stahl and the other members of the union could not understand why it was "necessary" to send to Texas for a superintendent, according to the January copy of the Issue. But they have a lot to learn yet.

After the rout of the Temperance Union was completed, the merry work of boosting for the bone-dry legislation was renewed with fresh vigor. Although members of the house and senate were hoping something would happen to sidetrack the measure, the league was on the job with its paid lobby, working day and night to put it over. They had the cooperation of the governor and the attorney general. Appropriations for emergencies such as the tumble-down university, the overcrowded State institutions, etc., were all tossed to one side for the sake of "the cause."

Although the counties were urging the members to hurry through and use economy in their legislative program, and cut down the taxes wherever and whenever they could, the members were acting "under orders" and became the puppets of the king—the superintendent of the league, who ran senate and house committees with the agility exercised by a bootlegger in a Ford.

Occasionally the State newspapers would have time to turn their attention to some constructive measure and an editorial would slip through the sieve such as appeared in the Topeka State Journal during the "hot time" that was burning up the very atmosphere:

"Suggestions that the State of Kansas levy a 'gross-production' tax on oil, similar to the one which is in force in Oklahoma, and which would possibly produce a revenue of $1,000,000 yearly, is certain to strike a responsive chord in the hearts of most of the Kansas legislators, who will be confronted with large bundles of necessary appropriation bills, and who will be interested in 'keeping down the tax rate' to the lowest possible figure for purely personal political purposes. But the people should remember that all such revenue measures, whether they be directed at oil companies, insurance companies, grain inspection, and so on, etc., are nothing more than indirect taxes against them."

And again, on January 27, while "between acts," the legislature was busy with some new plans on hand to raise more taxes, finally landing another blow in the direction of the house dog, the Topeka State Journal said:

"While the legislature is wrangling over the dog tax and seeking new ways of raising money, why not impose a tax on cats? They are more useless even than dogs and kill vastly more birds than they do rats and mice. A nickel trap can give a cat cards and spades and beat her in the mouse-catching game."

Which might make it appear that the dog tax is put on for the purpose of killing the dog, but it isn't. It "kills" the dog's owner, but not the dog.

"Fewer Flour Mills in Kansas" was another prosperity news item that graced the columns of the Topeka papers during the early part of January, but the bone-dry law was making too much racket to share the center of the stage with a little thing like that.

Among the first flood of bills introduced was one by Senator Montee, of Crawford County, prohibiting the shipment of liquor into the State for any purpose, including sacramental purposes. A dispatch from Topeka to the Kansas City Journal of January 13 stated that he was being deluged with letters from various religious organizations throughout the State, asking him to make the exception that wine could be used and shipped in for communion and sacramental purposes.

"If wine and other liquors are a bad thing for beverage purposes for average humanity, they are not a necessity in religious worship," he replied. "If they are a necessity for the perfection of the church, let's all have a little perfection. There's no reason in the world why a religious organization should use intoxicating liquor even in the smallest amount for religious worship."

On the same day the papers carried a dispatch from Pittsburg, Kans., saying that because of the stinginess of the 1915 legislature the State Normal School was facing a $7,000 shortage, and demanding an emergency appropriation, but a deaf ear was turned to it. The State was too busy pleasing the newly-appointed superintendent of the Anti-Saloon League to fool with a little thing like a State normal school."

"Representative Sullivan, of Grant County (an extreme western county—inland and sparsely settled), is inclined to be reasonable in the matter of making Kansas a bone-dry State," stated the Topeka State Journal of January 17, 1917. "Sullivan believes a thirsty Kansan ought to struggle along with a case of beer and a quart of whisky a month. He has a bill in the house providing a statutory limit for that amount of liquor.

"Sullivan makes no exception to his rule. In event of a New Year's party, the arrival of a baby boy, inheritance of money, or other events occasioning a celebration, it will be necessary to have saved a little from the stock of previous months before a successful party can be staged. While Sullivan is a strong advocate of prohibition, he believes the State may rush into a complete drought too hastily and should approach the matter with a reasonable degree of caution.

"Bills have been offered in the legislature which provide penalties for shipments of liquor into the State, for ownership or possession of liquor. Even wine for church use would be placed under the ban by certain members. But the Sullivan bills hold out a faint, glimmering hope to the men with a thirst.

"Section 4 of the Sullivan bill amends section 5549 of the General Statutes of 1915 to read as follows: (Providing that it shall be unlawful to deliver more than one case of beer and 'any other intoxicating liquor,' one quart."

On the same day, according to the Journal, the house committee "sat down" on the bills introduced some time previous, demanding an investigation into the high cost of living. "The lower House declared it did not have the time nor the inclination to look after matters other than legislation, and refused to probe living costs." This bill was not sidetracked, however, until after the organization of the Anti-Saloon League.

Bills to prohibit newspapers circulating within the State, carrying liquor advertisements, were introduced on January 18, as were bills providing for violations of bone-dry measures, being punishable by all the way from one to two years in the penitentiary, on conviction of "first offense." The law of 1915 provided that the second offense should be a felony, and the defendant upon conviction could be sent to the penitentiary for any term not exceeding one year—with the "hard labor" clause thrown in. Few if any have ever been convicted and sent there, however. Some have been convicted but paroled.

As companion measures to the bone-dry bill, the hopper of the house and senate were filled with measures making smoking cigarettes a misdemeanor, selling them a felony, etc., and the bone-dry anticigarette smoking and selling bill finally passed the house, but got no further.

"Alfred R. Kent, of Marion County (the home of ex-Gov. Hoch), to-day contributed his mite toward the legislative crusade to make Kansas a 'nice' State," declared the Topeka State Journal of January 22, 1917. "Kent offered a bill in the house providing for the creation of municipal welfare commissions for the inspection of theaters, dance halls, and all places where people gather for recreation or amusement. If the place does not meet the approval of the commission, it shall be closed and the license revoked.

"Nearly every Kansas town has adopted an ordinance providing that dance halls and theaters shall be closed when not properly conducted. The Kent bill, though, provides a smelling committee to take over the work and find a place on the city pay roll.

"The Marion County representative provides much power and authority for the welfare commission. The commission is to be composed of five members, whose duty is to look in on all public places at any and all times they may desire. If the style of dances does not meet the approval of the commission the hall may be closed. If a motion-picture show offers a reel that does not meet approval of the commission and inadvertently slipped by the Rev. Mr. Festus Foster the house may be barred to the public.

"If the chorus ladies wear their skirts too short or become too chummy with the customers in the bald-pate row the commission may stop the play and revoke the theater's license. Other public places that do not meet the commission's idea of a really nice place for Puritan Kansas may also be closed, if Kent's bill becomes a law."

This bill has not yet been disposed of, and from last accounts will probably pass the house. A strong lobby, headed by Rev. Sheldon, is urging its passage.

Addressing itself to the anticigarette legislation that passed the house the Topeka State Journal, of January 22, 1917, said editorially:

"Tobacco in any other form would smell as loud. Why the war on the meek and lowly cigarette, while the big black cigar and clay pipe are allowed to go free? Perhaps the lawmakers want to try out on the 'coffin nail,' and if they get by will attack the weed in other forms later. It will be recalled by old-timers that the Prohibitionists in the beginning of their fight declared they merely wanted to banish the saloon—nothing more. What they have done to liquor itself since is history."

O. P. Jewett, of Lane County, a western short-grass region, with a population of 2,120, and no city or town worth mentioning, introduced a bill on January 22 as a companion measure for the bone-dry law, which had the united support of the Woman's Christian Temperance Union and kindred dry and "bone" organizations of the State, making it a misdemeanor to use tobacco in any form, in any public conveyance or car, in any room of any building used by the public, or in any building, room, etc., where children are or may be kept, or live, or in any public street, building, vehicle, or car where children are riding. The fines provided ranged from $10 to $25. Permission was granted the cities, upon referendum vote, to provide a public smoking room, "separate and apart" from all "civilization."

This bill may sound like a joke, but was seriously considered by the house, and a very strong lobby pushed it along with startling rapidity. It was finally tripped up, though, but numerous bills almost as strict are still awaiting disposition. The women and the preachers have gotten such a hold on the house they can push through almost any measure they desire. The newspapers of the State, strong for prohibition, screamed their heads off when the anticigarette bill passed the house, claiming that the "liberties of the people" were being taken away, although they all boosted the bone-dry law to the limit, except a few of the more sensible papers like the Topeka State Journal.

Senator Satterthwaite, of Butler County, took his place in the Kansas Hall of "Phame" by introducing as a companion measure to the bone-dry law a measure to look after the morals of the cities and country districts of the State, according to the Topeka State Journal of January 25, 1917. "With the two bills on the statute book one need have no fear as to the character of anything in the way of a public entertainment," said the Journal. "The censors and welfare workers will attend to that."

"After their introduction Senator Satterthwaite stated that both bills were introduced by request, and that while he would like to see the matter discussed in the senate he had not studied either bill sufficiently to determine whether he is for them or against them.

"In the city, under the one bill, the program of every theater, every dance hall, and every other place where entertainment is furnished for profit would be censored. It would be censored by a commission of five persons, selected by the churches, the Sunday schools, and the civic organizations.

"Besides being censored the managers of the public amusement places would be taxed to pay the censors. They would be required to obtain a permit from the commission before giving any entertainment, and the commission would have authority to revoke the permit any moment the entertainment did not live up to the advance notices.

"The country people would be looked after equally well under the other bill, although their welfare worker would be selected by the board of control instead of by the churches. This bill provides for the appointment of a county superintendent of public welfare upon recommendation of local people.

"The welfare superintendent to look after the morals of the country people is destined to be a busy personage under the terms of the bill creating his job. Upon his appointment he becomes a parole officer, probation officer, recreation officer, agent for the orphans' home, agent for the State free employment bureau, local statistician on such subjects as agriculture and labor, and assumes any other job he may find lying around loose. Any spare time he may find weighing him down he may devote to an inspection of the morals of his constituents.

"Notwithstanding the numerous duties handed over to the welfare superintendent, the people who drafted the bill are taking no chance on overpaying him. It provides that in counties having a population of 3,000 he shall receive $400 a year. But by encouraging immigration and staving off starvation long enough he may eventually build his salary up to a living wage, for the bill provides that in counties having a population of 50,000 or over the officer shall receive a salary of $1,500 a year."

These bills are backed by a strong lobby headed by the W. C. T. U. and the preacher contingent of the State, who are daring the senate committees to refuse to report them out with recommendations that they be passed. Urging their passage are many resolutions and petitions, demanding that as "we are going to rout demon rum, let us clean up all the way around"; and if the senators do not give the bills "due consideration" they will "clean up all around," and, believe me, when they start "cleaning" they never stop.

"Senator Montee, of Crawford, has discovered something new upon which to place a tax," further remarked the Journal. "He thought for a time that everything had been covered, but after diligent search he discovered that a man owning his own farm could install a rig and drill a well with oil or gas in prospect without paying the State or county a dollar. Senator Montee seeks to remedy this matter at once.

"He introduced a bill in the senate requiring every person or corporation, even the owner in fee simple of the land, to obtain a permit before starting each well. And the permit for each well will cost the applicant $10. Seventy-five per cent of the money collected by the county clerk in this manner goes to the county and the remainder comes to the State treasury.

"Even after he has paid the fee for the permit the man who wishes to know what is under his land may not be through. If he is fortunate and strikes nothing, he is through. But if he has the other luck, he continues to pay tribute as long as his good luck lasts. If he strikes oil, he pays a tribute of 3 cents a barrel on every barrel, and if it is gas, he pays 3 cents upon every 10,000 feet the well produces.

"In order that the State and county will get what is coming to them, the bill provides for an official inspector in each county, who shall draw only $5 a day, the money to be paid from that collected by the well owner. There is a penalty attached for failure to pay up also."

Being a "bone" bill with a tax-raising feature, this measure is receiving very serious consideration at the hands of the solons, and will probably be passed, and if so, will become a law at once.

THE BONE-DRY BILL FRAMED.

The house temperance committee presented a bill on January 25, 1917, according to the Topeka State Journal, "that will make Kansas a bone-dry State, with liquors only for church, communion, and medicinal purposes. Under the house committee bill a Kansan with a thrist and a bottle of liquor is liable to a fine of from $100 to $500 and a jail sentence of from 30 days to 6 months. Shipments of liquor into the State are also prohibited under the bill. * * * When the committee bill went to the house hopper it was drafted to cover the ground desired by various individual measures. An effort will be made by the committee to advance its bill and exclude all individual measures. There is little question but that the committee bill would put Kansas bone dry, with the exception for church and medicinal purposes."

Registered wholesale drug houses with a capital exceeding $60,000 were permitted under the bill to purchase alcohol to be sold in one to five gallon lots for medicinal purposes only. This feature of the bill was amended soon, however, as there were but one or two, if even that many, wholesale drug houses in the State with that much capital. The limit was placed at $20,000 by the amendment and took in but very few at that low figure.

While "bone-dry day" was being arranged for, and things were somewhat quiet around the capital, Representative Jewell, of Crawford County, "broke out" and introduced a measure, which is still pending and will no doubt pass the house, providing, according to the Topeka State Journal of January 27, 1917, that "Kansas teachers must be total liquor and tobacco abstainers if they expect to teach in the schools of this State. * * * The Jewell bill denies to all examining boards the right to issue a license to any person using liquor or tobacco in any form and prohibits employment of such persons in any college, university, or school supported wholly or in part or in any manner by the State.

"Jewell's bill is more far-reaching than the first reading might indicate. Under existing laws in this State almost every school receives State aid. Many of the schools receive only revenue from the semiannual distribution of school funds. None the less the money is State aid and such schools would doubtless be closed to all teachers who use tobacco or liquor in any form.

"Persons who apply for certificates to teach in this State must qualify under the provision which the Crawford County member would place on the statute book. The matter of a high grade is one thing. But the taking of an occasional drink or the smoking of a cigar, cigarette, or pipe is quite another. And Jewell thinks the State should look at the tobacco and liquor matter first. Use in any form of either tobacco or liquor would be sufficient to deny any applicant who might seek a certificate in this State. That is not all. Jewell would compel the boards of education, board of administration, and other administrative school bodies to deny a place in their schools if the tobacco and liquor clauses are not strictly observed." Should the school board "with knowledge" employ a teacher who smoked or drank, chewed or looked as though he, she, or it wanted to do any or either, the members of the board could be fined from $25 to $100 each. This bill is being very seriously pushed and will likely pass.

"Liquor and religion are going to be badly mixed when the Montee liquor bill comes up for consideration in the senate," declared the Topeka State Journal, January 29, 1917. "Senator Montee, of Crawford, has a hundred or more letters from ministers and church organizations protesting against any amendments to the prohibitory law that will prohibit churches from having wine for use in sacrament. * * * The tenor of the letters is that the writers are heart and soul in harmony with the spirit of the Montee bill so long as it does not apply to religious organizations. One of the letters, of which the following is a part, is typical and was received from one of the senator's constituents from Crawford County:

"You say that the bill in no way prevents the use of unfermented wine, which, in other words, is grape juice, as some churches use for sacramental purposes. I know that, but grape juice is not wine. Our Savior used wine when he instituted the Holy Eucharist. By His institution we wish to abide, and the Constitution of the United States grants us the liberty and freedom to exercise our religion according to our convictions. * * * Why should our convictions regarding the Lord's Supper be disrespected, even curtailed by law, just because others that are in the majority administer the Holy Euchre contrary to Divine institution? * * * All we wish and request is to preserve our religious rights and liberties regarding the Lord's Supper."

January 31, 1917, was "argue booze bill day" in the house, according to the Topeka State Journal of that day. The fur flew, and as it did the State sat up and took notice. All was not smooth sailing for the temperance committee's pet measure, all the bunkoing and ragging of the well-trained lobby to the contrary notwithstanding. Plenty of well-placed bumps and rocks impeded the presumed well-greased track in the house and many surprises sprung. For instance, Hon. Robert Stone, speaker of the 1915 legislature, and a floor leader in the 1917

session, president of the Kansas State Temperance Union and an ardent political prohibitionist, representing Shawnee County, introduced an amendment to the bone-dry law permitting every person in the State to import and keep "for personal use," mind you, one nice, healthy quart of John Barleycorn, in whatever, whichever, or whatsoever form the heart of the Kansas prohibitionists might desire. This would render the bone-dry "booze bill" of the State equal to the neat little sum of $2,508,816 per month, or "only" $30,105,792. In his bulletin, prepared specially for the Temperance Society of the Methodist Church, and sent out over his own signature March 25, 1915, Gov. Capper admitted that the "booze bill" of the State was $5,303,666.04 per year; and although he has steadfastly refused to divulge the source of his information, Mr. Stone probably came nearer hitting the mark than the governor was pleased to admit it might be.

"Rights of the thirsty are hanging in the balance to-day while the Kansas house considers proposed bone-dry bills before the State legislature," declared the Topeka State Journal January 31, 1917. "All liquor bills on the house calendar come before the lower branch of the legislature to-day under a special order.

"If the house adopts a bill which originated in its own temperance committee Kansas will be denied the right to ship liquor into this State for other than sacramental purposes. The burden is placed on the railroads and the place of delivery is made the place of sale. In writing the committee bill members embodied the main features of the Stone bill, which was smothered in a committee two years ago and introduced in the 1917 session, following action of the United States Supreme Court on the Webb-Kenyon Act.

"Ben Endres, of Leavenworth, fought to remove section 1 in its entirety. His fight was in advance of the Harvey substitute and was voted down by an overwhelming vote. Much applause from the lobbies, members joining. Endres appealed to the members to vote as they drank.

"'A prominent temperance advocate two years ago told me if the members of the house had voted on this bill as they drank the bill wouldn't have a chance,' said Endres. 'I don't believe in drunkenness or intemperance, but every man should have the right to possess his own bottle of liquor if he wants it. Don't you know that under the provisions of this bill, which permits a druggist to have 5 gallons of alcohol in his possession, that 15 or 20 gallons of mighty good whisky can be made from it?'

"That let down the bars of oratory. Members on both sides of the house clamored for an opportunity to talk. Party lines were wiped away and for 15 minutes the members, with one eye trained on the women's lobby, argued for most strict and rigid temperance. Then the Endres motion went down under an overwhelming vote.

"Harvey, of Clark County, started the trouble all over again. He offered the substitute section which permitted the individual to keep a private stock for his own use. The substitute did not remove the provision prohibiting common carriers bringing liquor into the State. It merely said that a person might keep a supply on hand in his own home for his own use.

"Robert Stone, of Shawnee County, defended the substitute (having offered a similar one to a similar bill himself). He declared the substitute was written in conformity with the decision in the Webb-Kenyon case, and that a law with the personal-possession provision would stand the test of the courts. The question of personal liberty was also argued by Stone in urging the adoption of the substitute. He declared that under the bill as submitted by the house temperance committee serious doubt existed as to the constitutionality of the measure. In any event it would involve the State in long-drawn-out and expensive litigation. Stone was author of a bill making the place of delivery the place of sale. He advocated a strong antiliquor measure, but declared the State might destroy its own purpose by overstepping the Constitution.

"As he took his seat, Stone was besieged with questions. He answered all of them. 'Would this permit me to go to Chicago and bring home 2 quarts of liquor?' asked Frank L. Martin. 'It would if it were for your own use,' said Stone.

"'Would it permit a Leavenworth man to hire a jitney, drive across the river, and bring back his own stock?' asked Gilman, of Leavenworth. 'If for his own use; yes,' Stone replied.

"Thompson, minority leader, took the floor in opposition to the substitute. So did Jewett, of Lane; Jewell, of Crawford; Gilman, of Leavenworth; and others. Wilmoth, of Cloud, fought with Stone for the substitute."

According to the Topeka Daily Capital, February 1, 1917, the bill, as drawn by the house temperance committee, passed the house after a bitter fight lasting over five hours. It declared that the Stone amendment previously made to another dry bill was made to the house temperance measure, and that "Stone was followed by a long list of house members protesting against his amendment," which was lost by a vote of 17 to 96, 12 members not voting. Those supporting the Stone amendment represented various districts all over the State, among them the representative from Douglas County, where Lawrence is located.

"The fight continued all afternoon," said the Capital, "the house consistently voting down every amendment offered that it thought would weaken the bill. The stiffest fight, except for the Stone amendment, was against the exemption for the clergy of churches using fermented wines for the sacrament. On this measure the friends of the bill split up, and a motion to make the law apply to all clergymen and all churches the same as to laymen, offered by Layton, of Osborne, was finally voted down—71 to 44—10 members not voting. On the one hand, the gist of the speeches was that the church should not be exempt. On the other, it was argued that if a part of any man's religion included the use of fermented wine the State of Kansas would not interfere with his worship."

And thus the first step was taken to make the Sunflower bone dry for the tenth or twelfth time since John P. St. John and his little band of sincerely hopeful prohibitionists gathered to bury poor old John Barleycorn 36 years ago.

Aside from a bill or two directed at the moving pictures, Sunday baseball, and the usual amusements enjoyed in the little Kansas towns on Sunday, being introduced, the next great matter of importance that arose was the question, "What will the senate do with the bone-dry law?"

Rumors were rife that $15,000 in bribe money was to be spent by certain Kansas City liquor interests to head it off there, and the word was passed around that an investigation was due, etc. One wholesale liquor dealer displayed more zeal than brains in writing letters to his customers, who numbered tens of thousands in the State, that the senate was going to slip a joker into the bill, and one of the letters got to a preacher who, in turn, took it up with the local Woman's Christian Temperance Union, who, to make the thing interesting, trotted down to Topeka with it and flashed it on the governor. And then things began to pop.

According to the Topeka State Journal, February 3, 1917, Senator Price, chairman of the judiciary committee, was not satisfied with the bill as passed by the house. "It is also said that Attorney General Brewster is not satisfied with it," said the Journal. "These two attorneys have been in conference frequently since the measure passed the house and it is rumored that they have reached the conclusion that the house bill will encourage bootlegging and make law enforcement more difficult."

The Montee bill, heretofore mentioned, said the Journal, seems to be causing the most commotion throughout the State. "No day passes when a petition is not read from aggregations of citizens from some point in Kansas urging the senate to pass the Montee bill and to make no exceptions in it. One petition read Friday was signed by 300 of the citizens of one locality asking that the Montee bill be passed and that it be allowed to stand absolutely prohibiting the shipment of liquor into Kansas for any purpose, church or otherwise."

In the little lull occurring between the introduction of the bill in the senate and the final disposition on it several things happened. One of the least important, of course, was a petition asking that the legislature immediately declare an emergency and appropriate money to investigate the conduct of the officials at the Topeka State Asylum who have been under fire for several years, because evidence was ready to be introduced that they permit patients to be parboiled and murdered in hot bathtubs, and permit the help to subdue patients who are difficult to handle by knocking their teeth down their throats, according to the Journal, February 7, 1917. On the same day a movement was started, but soon blocked by the bone-dry legislation, to call an investigation to delve into the situation at the State reformatory, where charges of theft by the officers in charge and misuse of money appropriated filled the air, but these matters were of so slight importance, compared with the bone-dry program, that they had to be sidetracked. The legislature did pause long enough, however, on February 7, 1917, to knock the proposed bill to take the tax-rebate law off the statute book into a cocked hat. It is a revenue producer which is sufficient reason for retaining it, no matter how unfair.

A member from a country district did awaken long enough on February 16, to suggest that when an adjournment is taken it be for six years, as he felt the people were tired of the legislature and nothing of any importance was ever accomplished anyway.

In commenting on the cigarette bill which passed the house, the Topeka State Journal said editorially on February 16, that—

"The cigarette bill which passed the house will, if it becomes a law, have a tendency to bring father and his young son closer together. Both will be compelled to resort to the woodshed or the barn when they want to smoke. If the people of Kansas do not become a community of law breakers it will not be due to lack of encouragement."

Under a bold headline, "Churches in line," the Topeka State Journal of February 12, described the ardent efforts that were being put forth by the "church in action" to swing the senate into line for a totally dry State, including the ban on wine for sacramental purposes.

"Church organizations and church leaders in all sections of the State are showing a willingness to come under the bone-dry liquor bill," declared the Journal. "Petitions, resolutions, letters, and telegrams received by members of the legislature in the last few days have indicated a desire by the church for the Layton amendment to the proposed dry law. The amendment provides for placing churches as well as individuals under the act. * * * In the last two weeks a strong effort has been made to line up the church element in a demand for the Layton amendment. E. W. Hoch, former governor, and many prominent Kansans are behind the movement. They have declared that the churches should not be placed in the light of blocking the final step in making Kansas absolutely bone dry."

A warning note was sounded in an editorial appearing in the Kansas City (Mo.) Journal of February 12 respecting "bone-dry" legislation:

"The foes of prohibition and some of its mistaken friends are busy carrying the laws in the several States to an absurd and intolerable rigidity. The inevitable effect of this is to weaken prohibition and to cause a retrogression such as occurred in Vermont and Iowa. Any 'bone-dry' law, so called, becomes a personal irritation to almost every citizen regardless of any use of liquor as a beverage, and the effect is sure to be a line of legislation quite away from the 'bone-dry' idea.

"We advise a most careful consideration of any proposed law on this subject, as on any other subject, which will lead to the direct personal irritation of the individual citizen. Such laws are never even reasonably well enforced except as regards the grosser crimes."

An example of how these freak and uncalled-for measures can be forced through the Kansas Legislature, also typical of the men who are sent to Topeka to frame measures that "the people" want, is shown in an incident described by the Topeka State Journal of February 3, 1917, and throws much interesting enlightenment upon how easy it is to "represent public sentiment" when a lobby as strong and powerful as the church and W. C. T. U. maintain there from one end of the sessions to the other is on the job from early morning until late at night:

"One new member of the Kansas House is waiting anxiously until the legislature adjourns. He has spent more than four weeks in Topeka as a lawmaker and quietly admits he does not know what it is all about. Not only is the new member puzzled, but he is peeved and disgusted.

"Only the arrival of a friend from his old home town brought out the confession of sorrows of a new legislator. The friend had come to Topeka, fresh from the old town with news and gossip of all the community. In the course of the visit, the man who had left the bosom of his family to make laws and protect the rights and property of the people grew confidential.

"'Do you know what's going on here, George?' inquired the new legislator.

"The visitor from back home thought maybe it was some mysterious, complicated, deep-laid political plot which the new member had discovered. So he frankly admitted his ignorance as to the inside workings of the legislature.

"'You haven't anything on me,' said the new member. 'I don't know either. Been here four weeks now and, by golly, I don't understand it. Everything you try to do, everybody else is against. I sit here all day and listen to a lot of gabble. Then I read the paper in the evening and see where a lot of bills were passed and a lot of other things done. I was there all the time, too, but blamed if I saw it.'

"The visitor from home asked if the new member had secured the passage of any legislation.

"'Lord, no. At least, I guess not,' said the new one. 'You know I came here with a lot of good bills, too. But where they are I don't know. One of my bills was announced one day from that desk up yonder. Then the next day it went to a committee. I conducted a searching party for it, but didn't have a bit of luck. They told me the

bill had been re-referred and then referred back again and then substituted. After I got that much information, I quit. See that fellow over there?'

"The legislator pointed to Frank L. Martin, of Reno County, chairman of the house judiciary committee.

"'Well, that fellow got up one day and says, "We have killed seventeen out of eighteen bills, and I rather guess we should have killed the eighteenth one, too." That's the way they do things here. Everybody is against everything everybody else is for. I don't know what the thunder it's all about and I don't mind telling you. Say, how's Ann and the baby?'"

An interesting and at the same time a tragic sidelight was thrown upon the dry situation in Kansas, however, on February 15, according to the Topeka dispatch of that date appearing in the Kansas City Star and also published more fully in the Topeka papers. "A bill that will allow the State to treat drunkards and drug habituals was introduced in the Senate to-day by the committee on temperance and hygiene," says the Star. "It provides persons addicted to the use of intoxicating liquors and narcotic drugs may go to any of the State hospitals for the insane on their own application or on an order of the probate court. At present the State can give treatment to drunkards and drug habituals only when they actually become insane. The drug users now in the State asylums outnumber the drunkards there, as insane patients, considerably."

In commenting on the proposed bone-dry law, the various newspapers of the State, except the smaller publications, and many of them joined in the sentiment, felt constrained to support the measure providing it gave the people of the State the privilege of carrying it in even in suit cases or automobiles, and generally all over the State the sentiment seemed to favor the Stone amendment. In commenting on the measure, the Atchison Globe, in its issue of February 8, said: "There is a rumor that the senate will either kill the bill or amend it." In order that no one would mistake his position on the measure, Barney Lyons, legislative representative from Atchison County, declared in the same issue of the Globe, that "I'll vote 'no' on the bone-dry bill, if I am the only man in the house that does," and the Globe proceeds: "Nothing in line of law enforcement has been too drastic for Kansas, and the senate probably will fall in line for investigating ice boxes in private homes."

And the Topeka State Journal declared editorially on February 19: "The prohibition of the sale of substitutes for beer, which have appeared on the market, is all right on general principles, but why allow Jamaica ginger to escape? It is one of the best-known and most certain jag producers offered for sale." And again: "In addition to the bone-dry law the Atchison Globe suggests that the legislature may be responsible for several bonehead laws."

SAVE BONE-DRY BILL—ANTISALOON LEAGUE OF AMERICA TAKES UP FIGHT—GHOSTS OF OTHER DAYS BEFORE SENATE COMMITTEE.

"The silence enveloping the bone-dry bill in the senate judiciary committee is so intense it can and has been heard all the way back to the headquarters of the Anti-Saloon League of America. Wayne B. Wheeler, counsel of the league, heard it and he's coming to Topeka the first of the week to tell the judiciary committee what he knows about prohibition. Of course Kansas has had prohibition for 40 years, but Wheeler is the man who drew the Webb-Kenyon law."

(After commenting on the very cool reception handed an expert on the initiative and referendum when he appeared before the senate, urging the passage of that measure which was killed several years ago and has never seen daylight since, the Journal proceeds:)

"The senate judiciary committee is made up of lawyers. Having been reared and schooled in prohibition they are assumed to know a little about the proper construction of bone-dry measures. But they have brought forth nothing, and their silence has reached the fount of bone-dry knowledge. The judiciary committee accepted the offer of Mr. Wheeler's services, made by Rev. W. J. Berwig, superintendent of the Kansas branch of the league, and a meeting will be held upon his arrival.

"As a matter of fact, the senate judiciary committee all but reported out a bone-dry bill the first of the week, but a discovery was made and it was dragged back by the scruff of the neck before anyone had a chance to see it. It was discovered by some member of the committee that a bill had been drawn and agreed upon making it a felony to bring liquor across the State line, but no offense to have possession of it after it was safely across the line."

Great consternation reigned in the dry camp, and the wait between the time Chief Bone-Dry Wheeler was sent for and his arrival period was indeed a terrible suspense. "The senate was deluged by petitions from all parts of the State to-day urging the passage of the 'bone-dry' bill," said the Topeka State Journal of February 20. "Some of them implored the legislature 'not to adjourn until the bill had been enacted into law.' Almost an hour was devoted to the reading of the titles to the petitions. There were 80 of them on the subject of liquor legislation, and the average number of names on each was about 200—making about 16,000 names in all.

"Every hour action is delayed means additional petitions. There was no comment among senators as one petition after another was read. The probabilities are that the house bone-dry bill, reported out for passage by the senate judiciary committee Monday evening, will not be reached until Wednesday. The bill is on third reading subject to amendment and debate, but it has not been printed."

The same issue of the Journal noted the action of the senate judiciary committee on the bill, taken after the arrival of Chief Wheeler:

"Whereas at noon yesterday the judiciary committee was 'in the air' over the proposed liquor legislation, to-day the stage is all set for one of the real fights of the session. Of course, the whole senate may flatten out like the judiciary committee did and pass the bill without a single protest, but it doesn't appear likely.

"Several members of the judiciary committee, while they voted to report the bill out, have remarked on the outside that its provisions are too drastic. There is some opposition to it among the rest of the senators.

"It may have no bearing upon the action of the committee, but for more than two hours Monday afternoon Wayne B. Wheeler, of Washington, D. C., general counsel of the Antisaloon League of America, addressed the committee on the subject of 'bone-dry legislation,' and 15 minutes later the favorable report was brought in. He looked over the proposed Kansas law for holes. He held it up to the sun and scanned it every inch. Not a hole could he find, and he so informed the committee.

"Mr. Wheeler was the target for numerous questions shot by Senator Getty, Senator Price, and Senator McClain, members of the committee, and at times he became somewhat groggy, but on each occasion Attorney General Brewster, who knew the questions by heart, went to his rescue. It developed in committee that several of its members believe most of the cities of Kansas are 'wet.'

"'Why don't you enforce the laws you have?' demanded Senator Price of Attorney General Brewster at one time.

"Mr. Brewster explained that as long as automobile routes could be maintained across the State line it was impossible to shut out all liquor."

With two senators "missing," the bill was passed by the senate on the morning of February 21, 1917, by a vote of 37 to 1, Senator Brunner, of Pottawatomie County, displaying the only semblance of backbone in the entire senatorial delegation. Denouncing the bill as un-American, despotic, and beyond all reason, he bared his breast to the shafts, snarls, derision, and threats of the prohibitionists, their boisterous and well-trained lobby, and cast a negative vote. While he was admired and congratulated by many of the senators for his bravery, the path he chose was too thorny to welcome any daring on the part of the spineless, brow-beaten comrades whom he bade a fond adieu and followed the only course real manhood would permit him to choose.

"Not a single amendment was made to the bill," remarked the Topeka State Journal of February 21, 1917. "Half a dozen were offered but only one vote was recorded for each amendment, and that was the vote of the man who offered it. * * * The first real amendment was offered by Senator Sutton, of Stafford. It struck from the bill the paragraph permitting ordained ministers to receive or possess wine for communion purposes. 'I have been asked by several ordained ministers to have that provision stricken out,' Senator Sutton said. That started an argument.

"Senator Malone held that the amendment would bring about an unfair situation in that the bill still permitted priests that privilege." Several other senators expressed themselves in like manner, and the amendment was defeated, Senator Sutton casting the only vote for it.

"Senator Price said that section 1 bordered on intolerance, because it prevented a person from having liquor in his own home," according to the Kansas City Journal of February 22, 1917. "But," said he, "I am a temperance man and believe in prohibition. If this bill, by putting all decent people in the same class with bootleggers and joint keepers, will result in better enforcement of the prohibitory law, then it is all right with me, and I shall vote for it."

When the senate bill was referred back to the house—the house adopted the minor amendment made by Senator Price to its bill—there were 5 votes cast against its final adoption, among them the representatives from Reno and Leavenworth Counties.

When the news reached Leavenworth, according to a dispatch from there, dated February 21, to the Kansas City Journal, that the senate had passed the bone-dry bill, "many telephoned to Drydale for a supply to meet a 'drought.' Extra wagons were running to-night bringing liquor, and this will be kept up until the law actually goes into effect.

"Some of the joint keepers stated to-night that they would quit while the others say they will keep right on. The only question with them will be some way to get a liquor supply. * * * The number of saloons in Drydale is expected to increase."

"With the bone-dry bill coming into effect to-morrow," said a dispatch from Atchison to the Kansas City Journal, February 22, "East Atchison wholesale liquor houses are swamped with orders to-day from their Kansas patrons, who are preparing for the drought. Atchison people do not believe the law will be enforced to the point of searching their homes, and those who use liquor are ordering larger quantities. Most of the liquor ordered is beer, with wines second on the list. * * * Retail saloons in East Atchison are pleased with the bone-dry bill, as they feel that it means increased business for them."

The railroads ceased carrying liquors on or about February 23, as the bill was published promptly in the Topeka State Journal, after Gov. Capper had signed it, and another chapter of bone-dry legislation in the State was closed.

Just how the thousands of homes within the State are to be searched daily for liquor, and how the enormous cost of watching her four borders with their thousands of roads leading into other States is to be met is not stated, but Kansas knows this law will not and can not be enforced. Furthermore, Kansas, after 35 years of experience with prohibition, knows public sentiment is against its enforcement. No jury will convict; judges will become more weary than they have been during the past 10 years, dragging through "joint" and "bootleg" cases, county and city officials will become "derelict" in their duty, and the State will drop off again, now that the thunder shower is over, into its customary slumber, while State university buildings crumble and fall down, asylums cry for more room, and penitentiary cell houses continue to be breeding stink holes of tuberculosis.

"Kansas," remarked the Atchison Globe of February 22, with the prohibitory law in mind, and addressing itself to the cigarette bill which was being pushed so strongly by the church-dry lobby in the senate, "if the senate follows the example of the house, and the law making it a crime to smoke a cigarette even within the confines of your own home, will again advertise itself as a crank State. Just as it is getting over the effects of prohibition it is about to take another step that will give it a black eye. Reform is all right, but why not let some other State take the lead for a time? Kansas has fought a commendable battle of prohibition at a tremendous cost. If you don't believe it, look at the way the towns across the Missouri River in Missouri have grown while the cities on the Kansas side have stood still, or nearly so. There is no denying the fact that big capital, when it comes to a choice between a dry town and a wet town, has almost invariably chosen the wet town. Towns that have suffered from being dry may now benefit if new crank laws are not forced upon people. Some of the best men in every community smoke cigarettes, and to say they can't smoke them in private is inviting new public condemnation at a time when we should follow, instead of lead. The senate should push the anticigarette and other cranks aside and give the State a chance to catch up."

Though the Globe fails to show wherein Kansas "is just getting over the effects of prohibition," the subject matter of the editorial strikes deep. When men with the far-sightedness of Ed Howe will rise out of turn and speak aloud the almost universal disgust that envelops the State and which men of less bravery dare not speak aloud, it means there is an undercurrent working at the foundation of the State government that some day will reap a terrible harvest.

The bone-dry law is just like other measures reeking with despotic tyranny and puritanical bigotry. Kansas City, Mo., newspapers of February 25 note the ineffectual efforts made in Kansas City, Kans., to en-

force the measure; detail an ambitious assistant attorney general's hopeful attempts to catch all violators, aided and abetted by a police force declared by a leading temperance crank within the past few months to be in league with the bootleggers; describe the laudatory remarks of the police of that city, and recount their unbounded efforts to seek out the dive keepers and jointists, that they may be crucified on the cross of religious politics, but the dragnet held few when the "crusade" had finished. Ten of those caught were haled before the court, fined the minimum, and promptly paroled "pending good behavior."

The newspapers throughout the State will refuse, as usual, to carry stories of the multitude of cases that clog the criminal courts or of the conditions that are growing worse every day, fearing lest they admit prohibition to be the sham it is, but should the legislature of 1919 have proposed by the Antisaloon League or any of its cohorts "further and better" bone-dry legislation, a "demand" by 16,000 out of the 1,672,545 people will again be met—registering another admission as the recent act did that all past enactments failed so totally of their purpose they were worse than no laws at all.

Kansas has never expressed itself on the question of prohibition, and in all fairness to "the cause" throughout the Nation she should be accorded that privilege. She has had it long enough and "hard" and "bad" enough to thoroughly understand it by this time. But the result in Vermont sent a cold chill down the spinal column of the Kansas dry leaders that has kept them shivering ever since. If the people do rule, they should be accorded that high privilege in the Sunflower State.

As has so well been said by Mr. Paul S. Conwell, a native of the State and a close student of Kansas conditions for years, "Kansas people are never permitted to forget the governing power. A noisy government is a nuisance government. Driven by despotic bigotry, it strangles progress, murders prosperity. If given a chance, the people would register an overwhelming preference for a sane and regulated system of handling the liquor industry. Not that they desire saloons because they prefer drunkenness to sobriety, but because they prefer constructive statecraft to political demagoguery. Kansas is drunk now—drunk on prohibition, bunk, and piffle. She is suffering from an overcapitalization of hot air and an overproduction of wild-eyed reformers, yap statesmen, and political tyrants. Common horse sense has taken wings; intolerance is king!"

And the toll of the bone-dry law in every city, county, and town in the State, from Topeka to Wichita, and stretching out into the most remote and sparsely settled short-grass community to the far western portion of the State, and back again to the Missouri border, where Kansans flock to play and live as men and women, not as the inmates of inebriate asylums, will soon render those sentiments more true than when uttered a year ago.

—

A Kansas Pet.

Kansas is probably the only State in the Union that throws the arm of legal protection about the almost universally despised loan shark. Though feeble attempts have been made in years gone by to curb his activities, like the bootlegger and the mail-order whisky house, he is always ready to supply the demand. Though a "necessary evil," he has escaped condemnation by the Antisaloon League panhandlers, because he works better in "dry" territory. He is the political brother-in-law of the prohibitionist, created and fed by dry agitation, and the best possible proof obtainable that the promises of the league are made without a semblance of truth as a foundation.

That he has grown fat and sleek on the harvest gathered in dry towns is proven by the fact that an open fire is being made on him by the 1917 legislature. But he has plenty of defenders. A faithful contributor, no doubt, to the league, and ready and willing at all times to "stand up in meetin'" and testify to the providential blessings of prohibition, this scoundrel who has been outlawed by common decency in nearly every industrial center in America thrives unharmed throughout the length and breadth of the Garden of Eden of the twentieth century.

"The loan shark gets it in the neck in to-day's batch of senate bills," remarked the Topeka State Journal of January 18, 1917. "Four bills introduced by Senator Coleman, of Johnson, are aimed at him. Taken individually, each would make him squirm; and collectively—if passed—they would put him out of business.

"One of the bills makes it unlawful for a money loaner to charge more than 2 per cent a month as interest upon a loan. More than that would subject him to the penalty of a fine of from $100 to $500 or a jail sentence of from 30 to 90 days, or both fine and jail sentence.

"Another provides that proof of usury shall be a defense in civil cases. If a loan shark loans money at a usurious rate, the borrower defaults in payment on the principal and the loaner brings suit, the proof that he agreed to pay more than the legal rate shall serve as his defense.

"A third bill provides that a mortgage on personal property given to secure a loan upon which a usurious rate of interest has been charged shall be invalid. The holder of the mortgage can not foreclose if the borrower proves in court that the lender charged him more than the legal rate of interest.

"The fourth and last of the loan-shark bills makes it a misdemeanor for anyone knowingly to transfer any negotiable paper or contract in which a usurious rate of interest is charged. Such an act is made punishable by a fine of from $100 to $500 or by a jail sentence of from 30 to 90 days, or by both fine and imprisonment.

"One or more bills of this character have been in the legislature for years gone by and have failed to pass. There is always a stiff fight over them, and many times the argument has been made that such laws would shut the needy borrower of small amounts off from ready money."

None of the foregoing bills will pass, and most of them have been thrown into the wastebasket or otherwise "disposed of" by the representatives of "the dear people."

The strangest feature of this entire matter, however, is the fact that the Topeka State Journal, one of the leading, if indeed not the most influential and most sane publication in the State, defends the loan shark, as a "necessary evil," and, in doing so, lays bare the causes that make his habitation in the State mandatory. The Journal is above reproach and can be depended upon as telling the naked truth, no matter what the cost, which adds tons of weight to its argument as set forth in the issue of January 20, 1917, two days after the introduction of the four bills above mentioned:

"A desire to curb the activities of the loan shark has led to the introduction of bills in the legislature for that purpose. Laws on the statute books already apparently are sufficient, but for some reason they don't work.

"The money lender covers his tracks so carefully that it is hard to catch him. He rarely seeks business. He merely lets it be known that he has money on hand for the needy. His method of doing business is usually about as follows:

"A man is in dire need of, say, $100. He goes to the loan agent and makes his wants known. It is a last resort. He has no standing at the bank and dislikes to appeal to his friends. He signs a note payable in 30 days, bearing interest at the rate of 10 per cent per annum after maturity.

"The lender charges him a 'commission' of anywhere from 3 per cent to 10 per cent, which he takes out of the loan, handing over, if the rate be 5 per cent, $95. At the expiration of 30 days the borrower comes in and announces that he can not pay. Very well; the note will be extended. He pays another $5 and is granted another 30 days. This is continued indefinitely, and no record of the transaction is given him. The written contract calls for the legal rate of interest; no more. To make the transaction more difficult for the courts to reach, the lender usually makes it appear that he is not handling his own money.

"A favorite basis of loans of this character by some operators is a mortgage on the salary of the applicant. This type of borrower rarely makes complaint, because he doesn't want the boss to know.

"Probably not one borrower in a hundred makes any fuss regarding his bargain. Most of them look upon the loan shark as a real friend in need. They can always get money from him when all other sources have failed.

"So it is doubtful that any law can be framed that will stop the business, unless it be one which will cause the lenders to shut up shop. This would work a real hardship on many, unless some way be provided to take care of them.

"The system is undoubtedly bad, but conditions must be dealt with as they are found.

"What seems to be needed is a place provided by the municipality or by some philanthropic organization where the needy can be accommodated at a nominal rate of interest, one that will merely cover the expense of operation. The thing has been done elsewhere. Why not here?

"Let some of those who are so greatly interested in the 'victims' of the loan sharks set about helping them in a substantial way, instead of trying to do it through the uncertain channels of the law and the courts."

TOPEKA'S POLICE RECORD.

In his speech delivered in Chicago, March 27, 1910, ex-Gov. Stubbs declared that drunkenness had been reduced to such a point in Kansas that he had not seen a drunken man in Topeka, a place of 50,000 inhabitants, and "that in making a campaign throughout the entire State and delivering public addresses in 92 counties, I do not recall seeing a drunken man during the year."

This speech was delivered upon invitation of the Illinois Anti-Saloon League. Rev. J. K. Shields, superintendent of the league, had written the Kansas State Temperance Union, at Topeka, saying, "The fight for local option in Chicago is on in earnest. The liquor element is thoroughly alarmed, and are making desperate attempts to counteract the onslaughts of the Anti-Saloon League, and one of their strongest cards is the conditions existing in Kansas. They are saying that the prohibitory law can not be enforced, and that more intoxicants are sold than under an open régime; that drunkenness is increasing and business decreasing; that houses and business buildings are empty, rent lower, crime increasing, and that a general demoralization exists throughout the State, because of existing prohibition laws." After hearing what the liquor men were saying about Kansas (according to the "introduction" statement preceding the governor's speech, as per published copy thereof), the governor, knowing the statements were untrue and could be proved false, said: "I'll not stand for it: I'll go to Chicago and tell them the truth concerning prohibition in Kansas." And go he did, after arming himself with the usual "statistics" and "facts"—the main one of which is quoted above, touching the drunkenness in Topeka and all over the 92 counties the governor claimed to have covered in his campaign.

The public—that is, that portion of it far enough away from Topeka that personal observation is not possible—has been told so many times, in so many various ways through "inspired" statements such as the governor's, that Topeka is without any crime, drunkenness, or disease such as scourge other cities, and all because the law enforcement propaganda has proven such a great "success," that many well-meaning people have come to understand that any statement to the contrary is either made for the purpose of misleading the public, or, as Gov. Stubbs shouted in his Chicago "outburst of enthusiasm," "On my honor as a man, and upon my word as the chief executive of nearly two million sovereign people, I say to you they are infamously conceived and maliciously false." Statements made by men holding the position of governor, etc., are always given wide publicity in matters of this kind, and thousands of copies of the Stubbs speech have been distributed broadcast throughout America; the press carried a full account of his "speech," and every antisaloon organization in the Union made the most of it.

On September 26, 1915, the Topeka Daily Capital, owned and published by the present governor, Mr. Capper, carried a story that Rev. Edgar P. Smith, the new pastor of the First United Presbyterian Church of Topeka, declared that day how glad he was to be called to a real clean city where at last he could feel assured he was in a city without crime. His previous charges had been in Pittsburgh, Pa.; Pueblo, Colo., and Monmouth, Ill.

Eastern newspapers have carried hundreds of "stories" in recent years, as have southern, western, and northern publications, praising the sobriety, moral cleanliness, and godliness of the people of Topeka, because of the persistent news items and other matters of publication and "testimonials" that have been sent out by men high in public office in Kansas. And Topeka has become the second Garden of Eden in the eyes of the prohibitionists.

There are no published police records there. Chief of Police Harvey Parsons, a former newspaper man, is reticent to the point of being haughty, in the matter of giving any information regarding the number of arrests for drunkenness or other infractions of the law. During the months of July, August, and September, 1916, numerous requests were sent him for information upon the subject, but he refused, according to the Topeka State Capital, July 29, 1916, which, in commenting upon the matter, said: "Harvey Parsons, chief of police, is bombarded with letters from States in which the liquor question is involved in pending elections. Scarcely a day passes without receiving a letter of this kind. 'I think most of them come from antiprohibition associations,' said Parsons. 'Some of them probably are by persons on the temperance side of the question. They ask for information concerning the number of arrests for drunkenness.

"'I answer none of the letters. One reason for not giving replies is the probability of anything I might say being garbled. The other reason is that the number of arrests made means nothing at all for either one side or the other. Especially is this true so long as Jamaica ginger is held by our courts not to be intoxicating, and is shipped into the State in barrel lots.'"

On January 4, 1916, the Topeka State Journal commented upon the great amount of liquor shipped in under a headline "Mail order brew bats high in '15," and proceeds: "Are the prohibition forces in Topeka cheerfully smiling under a feeling of false security in ignorance of the situation which they have to combat? Legally John Barleycorn is walking the straight and narrow path in Shawnee County. * * * Legally, Topeka is 'dry,' but—

"Besides 135,368 quarts of liquor and beer shipped into Topeka over the Union Pacific Railroad—December 16 to 31, excluded—24,801 shipments, varying in size, were consigned to Topeka during the year of 1915, according to an incomplete record on file in the office of O. K. Swayze, county clerk.

"The incomplete record:

"Wells Fargo Express Co., Jan. 1 to Nov. 30, 1915 10,835
"American Express Co., Jan. 1 to Dec. 30, 1915 4,586
"Rock Island Railway, year of 1915, excluding August and December, 1915 4,584
"Santa Fe, Jan. 1 to June 30, 1915 4,796
"Union Pacific, Jan. 1, to Dec. 15, 1915, 10,486 quarts of liquor (whisky and wine) and 124,882 quarts of beer.

"Ninety-nine out of every one hundred shipments are 'within the law.' Sizes of shipments vary. The American Express Co.'s shipments from May 15 to 31, 1915, included:

"One hundred and twenty-six gallons of whisky, in from 1 to 32 gallon lots; 225 quarts of whisky, in from 2 to 48 quart lots; 48 one-half pints of whisky, 2 gallons of alcohol, 64 gallons of beer, in lots from 8 to 16 gallons; one 16-gallon shipment, 1,176 quarts of beer, from 24 to 124 quart lots; 144 pints of beer in lots of 36 pints.

"The American Express Co. shipments from June 1 to 15 included:

"One hundred and four and one-half gallons of whisky in 1 to 7 gallon lots, 166 quarts of whisky in 2 to 30 quart lots, 24 pints of whisky and 48 one-half pints of whisky, 158 pints of beer in 36 to 72 pint lots, 112 gallons of beer in 8 to 24 gallon orders, between 600 and 648 quarts of beer in 24 to 72 quart lots and one-half beer.

"The Missouri Pacific Railroad had nothing to report in September, 40 shipments in August, and 7 casks of beer in July.

"One hundred and ninety-two reports were filed from April 1 to November, covering shipments to Shawnee County outside of Topeka. These include shipments to Wakarusa, Berryton, Pauline, Tecumseh, Rossville, Valencia, Silver Lake, Richland, Menoken, Willard, and other small places.

"'The June report of the Union Pacific refers to a shipment of 1,120 quarts of beer to be 'consumed at a Russian wedding.'

"During the last year the liquor records filed by different railroads have been guarded closely by O. K. Swayze, county clerk. In several instances demands for permission to inspect the records by the State Journal were turned down by Swayze in the face of supreme court decisions and rulings of the attorney general's office, which held the records are open for inspection. Once not long ago he told a reporter he would compel the latter to bring mandamus proceedings before he would surrender the statements."

In this connection it is persistently stated by Kansas prohibitionists that they figure the per capita "booze" expenditure on the records in the office of the various county clerks of the State and find it to be very low. Hodges claims it is $3.04 per capita, and Capper $1.25. Just where they secure their information is difficult to determine in the light of the following letter from O. K. Swayze, which is similar to the replies he sends to all inquirers:

"I have not the time nor inclination to supply the information you desire for the reason that I can not give an accurate summary of the quantity shipped into this county from any reports on file in my office. Being unable to do this intelligently, I refuse and have constantly refused, to attach my certificate and seal or even my signature to any statement or compilation of the figures. It is impossible to correctly estimate the contents of a box of liquor, cask of beer, keg of beer, or a package of liquor. Many of the shipments are so billed and reported to this office. There is no compilation on file nor have I ever made one or attempted to make one. Furthermore, I will not sanction or approve or certify any compilation made by anyone else. No one can make even a good guess on quantities unless the gallons are set out clearly in the consignment and report.

"Hope you won't think me impertinent or discourteous, but I simply want to set you right on the matter. Then, too, while I am willing and ready to furnish any information from my records that is within reason, I have not the clerks nor clerk hire to devote to the hundreds of requests that have come to me for similar information."

The Mahin law, passed for the intended purpose of finding out who was getting liquor so the raid committee could either pass a resolution at Sunday School and boycott them or go and smash it up, has been used as a source of "statistics" by the Kansas prohibition agitators in other States, and their information is about as correct as whatever they claim to have from Topeka, if Mr. Swayze's letter sets forth the true condition in his office.

The police reports of Topeka for the year 1916, showing the comparison of arrests for drunkenness for that year and the year 1915, indicates beyond all doubt that a great portion of this liquor was not used altogether for "medicine." Bootleggers are plying their trade in defiance of the law, and, although, as stated in the Topeka State Journal, January 4, 1916, the chief of police and sheriff's office is constantly engaged in running them down, they continue to supply the demand for their wares.

The fiscal year of 1916 was much the same as other years in Topeka so far as arrests, crime, etc., are concerned, except that the police record crept a little higher, as it has been doing every year for the past 10 at least. Dry on paper, it has most surely been wet enough in the alleys, clubs, hotels, private homes, alley and kitchen joints, and behind billboards and in box cars. One can hardly believe his own eyes when day after day the record of lawlessness brought on by intemperance in this the State capital of the most overrated dry State in the Union, as delineated in the daily press from time to time. For the past 10 or 12 years every candidate for office in the city has pledged himself to a "strict" law-enforcement program if elected. The present mayor, Jay E. House, is an editorial writer on Gov. Capper's paper, a liberal minded, sane man in every particular. When he announced himself as a candidate for his present office the governor and all the other elements constituting the "law-enforcement element" and the "better class" attacked him viciously, prophesying if he were elected it would mean "liberal town," with plenty of booze, etc., although Mayor House is perhaps the most level-headed, temperate man in the State. He didn't belong to the "church crowd," and when one doesn't belong to that crowd in Kansas they dare to call him anything.

After his election Mayor House cleaned out a lot of fad reform job holders and has been conducting the business of the city in an admirable manner, even though his chief of police is afraid to publish the police record for 1916. His reason is that the city is too poor.

That there is and always has been plenty of vice in the Kansas capital has never been denied by anyone even slightly acquainted with the town. The crime and vice record for 1916 seems much larger, and is, according to the official report of the police department, despite the efforts of the police and sheriff to stamp it out. Other types of crime also increased. "We can not catch burglars and thieves when all our time is required to catch bootleggers and pick up delinquent girls," said a high police official there recently, in commenting on the situation.

Speaking of the "success" of prohibition in Kansas generally, and in Topeka especially, J. B. Billard, who served several terms as mayor of the city, recently said:

"Prohibition has been a farce for 35 years. The law has been enforced as well as such laws can be enforced, and especially so in the last 10 years.

"Many good citizens have been prosecuted, arrested, fined, and put in jail with real criminals. They have been degraded, their families disgraced. Many more have left the State in disgust; drunkenness has not been stopped; has not even decreased.

"I believe that fully 90 per cent of the men use liquor and evade or induce some one to violate the law to get it. The law is a disgrace to any civilized community."

There were 2,478 arrests made in Topeka during the year 1916 according to the police records, aside from 182 arrests in cases that were turned over to the State. There were 1,318 male whites, 90 female whites, 668 male colored persons, 192 female colored persons, 142 male Mexicans, 5 female Mexicans, 61 male Indians, and 2 female Indians arrested during the year.

Compared with 681 drunks arrested during 1915, there were 700 plain drunks, 31 drunk and resisting officers, and 75 drunk and disorderly arrests made during the year, making a total of 804, as compared with 681 of all kinds during the previous year, an increase of 123 or 18 per cent.

One hundred and ninety-seven arrests were made during 1916 for disorderly conduct, as compared with 177 for the same offense in 1915, an increase of 20.

No arrests were made for running disorderly houses in 1915, but in 1916 there were 112 arrests on this account. One white-slavery case appears in the 1915 report, while six appear in the report for 1916.

The 1916 report scores higher than any for years in the matter of liquor selling. One hundred and sixty-four arrests were made for that crime.

Street-walking arrests increased to 20 from 15 during 1915; reckless driving and speeding increased from 3 to 133. Assaults of various kinds, including wife-beating, totaled 121 for 1916, a large increase over the preceding year, and stealing of all sorts mounted the aggregate high score of 232. Gambling hit the high-water mark at 103 cases, and the arrests for rape skied to nine aside from five turned over to the State authorities.

There is scarcely a day in which either the Topeka Daily Capital or the Topeka Daily State Journal do not report many cases of drunkenness, crime, or bootlegging within the city. Many times columns are filled with reports of escapades, spectacular raids, murders, fights, shooting scrapes, and lesser vicious "indoor sports" always engaged in blind pigs and alley joints. The law is a joke to most Topekans. Some are living in fear of it constantly, but they are the most notorious criminals with long police records, who are liable to arrest at any time by the ever-vigilant law-enforcing element. But they, too, ply their trade in open defiance of law most of the time, fly when raids are made, only to return after the cyclone passes and settle down once more in the pursuit of their nefarious traffic.

Of the total of 2,200 arrests made in Topeka by the police during the year 1915, 661 were for drunkenness. During the same year 177 arrests were made for disorderly conduct, 146 for keeping a nuisance, 1 for chewing tobacco, 15 for street walking, 3 for joy riding, 10 for selling cigarettes, 74 "found in" (those "found out" not given), smoking 85, and the balance of the total made up of various petty offenses, such as being a dope fiend, white slaver, keeper of opium dens, inmates thereof, leaving a pop-pop on the sidewalk, and hitching Old Dobbin to a fire plug.

In commenting on the arrests, the Kansas Issue, official paper of the Kansas State Temperance Society, said:

"This year, perhaps more than ever, the necessity of a new jail has been strongly urged. The present edifice was constructed more than 30 years ago, when the police force was small and prisoners few and far between."

"Thirty years ago" just about brings us back to the time the prohibitory amendment took effect. Strange after 30 years, with all the morality read into the Kansas people, and those of Topeka especially, by the legislative enactments and activity of her high officials in other States while preaching the doctrine of "Dry, happy, moral Kansas," it should be necessary to insist on having a new jail.

During the early season of the year 1916 the demand for a new, modern jail in Topeka became so persistent that the plan was conceived of holding a bond election to raise money for that purpose. At the same time a proposition was submitted to vote bonds for a municipal auditorium. Both were rejected because of high taxes.

In commenting on the necessity for the new jail, before election, the Topeka State Journal of April 27, 1916, contained the following:

"Tentative plans for the proposed new city jail, which is to take the place of the present much-abused structure if the bonds should be voted at the coming election, have been drawn and provide for a modern, sanitary, steam-heated, fully-equipped building, with separate apartments for different grades of prisoners, bathing facilities for prisoners, modern lavatory equipment, and everything needed in a modern jail building. These plans were made upon the suggestions of Mayor House and Judge Robert Yates of the municipal court. The new jail is to cost $22,500.

"There will be two separate sections, one for men and one for women prisoners. Each will be equipped with showers and lavatory facilities, neither of which exist at the present jail.

"'Instead of throwing human beings into the bull pen, we will throw them into a bathtub,' said Judge Yates, epigrammatically."

The present jail, the article added, is but a one-story affair and the new one provided for two full stories. "Public sentiment seems to be strongly in favor of the new building, and opinion is general that the voters will indorse the bonds for the new jail by a good majority," but the reason for their defeat was given in both papers after the election: Taxes too high now.

According to the 1916 report drunkenness ranks first out of the total of 2,478 arrests, which is a very strange thing, considering that ex-Governor Stubbs told an audience in Chicago as long ago as 1910 that "we have at last stopped the liquor traffic"; investigation cases rank second, which indicates that prohibition has not wiped out the crop of "suspicious characters" to any appreciable extent; disorderly conduct among men, women, and children ranks third, an unusual thing in a city wherein Mr. Stubbs has never seen a drunken man; liquor selling fourth, which also presents an interesting speculation; arrests for running disorderly houses rank fifth, although ex-Governor Hodges proclaimed to the world in his Antisaloon League speech in Columbus, November 12, 1913, that "Kansas, after 34 years of prohibition pioneering has demonstrated to its entire satisfaction and has proven to the world that whisky, houses of prostitution, and gambling dens are a commercial liability of the heaviest sort; coupled with their attendant evils of crime, divorce, murders, paupers, untold suffering, and ignorance."

Despite which fact there were 103 gambling cases in Topeka last year. That many were brought to the "bar of justice." No telling how many were either not "pinched" or were running the year around without molestation for various reasons.

Thirty-six "gun toters" were apprehended, and such minor offenses as larceny from the person, murder, rape, assault, forgery, running hop joints, shoplifting, bigamy, embezzlement, arson, nonsupport, and impersonating an officer, aggregate 368, which is at least a very fair showing for a city that boasts of more religious organizations than any city in the State, where John Barleycorn is buried at least once every week by every Sunday school and two or three times a week at prayer meetings; where revivals and temperance agitations are holding forth almost the whole year round, and where the State capitol with the attorney general's battery of law enforcers are constantly on guard with a contingent raid fee before their eyes.

With becoming modesty, Gov. Hodges added, in his Anti-Saloon League speech (he was then the governor): "Perhaps one of our great achievements and greatest cause for a pardonable self-commendation is that the church, civic organizations, and men who believe in strict law enforcement hold the political power in our State to-day that is being used for the betterment of humanity."

The Kansas City Post, July 1, 1916, throws a very interesting side light on vice conditions in Topeka, and without affirming or denying the truth of Mr. Hodges's statement that when the open saloon was "outlawed" with it went houses of prostitution and all other forms of social crime, this reproduction "sounds strange" to say the least:

"SOCIETY WOMEN LIVE IN RESORTS TO UNMASK KANSAS CAPITAL VICE—SPYING ON HABITUES OF RESTRICTED DISTRICT, THEY REVEAL CONDITIONS THAT CAUSE A POLICE SHAKE-UP AND CHARGE OF 'GRAFT'—NAMES KEPT SECRET.

"TOPEKA, *July 1.*

"Topeka police power is shaken to its very seat. An official shake-up is under way and was felt first yesterday when Sergt. Lon Sauls resigned under pressure. More resignations are expected hourly. And society of the capital is agog.

"For women of the upper strata—society—descended into the red-light district and lifted from it the veil of secrecy. Living in the confines of the restricted district by day and spying on its habitues by night, the women have revealed to the city the vice which honeycombs the city.

"With the unmasking came charges from the officials untouched by the revelations that police authorities have been in league with bootleggers and keepers of disorderly houses. It is charged the police have collected a regular stipend to overlook the sale of liquor and conduct of resorts.

"Officials have long known there has been vice existent in the city, but it only came to light through occasional arrests. Then the defendants only drew light fines or were discharged for lack of evidence.

"But with the new administration came a change. And the purity squad was called upon to aid in cleaning up the city. Four women—they are left unnamed by the league, because of their high social standing—volunteered for service.

"Down in the tenderloin they went, down where night is day and sin is business. Many weeks they lived there as habitues. They laughed as loud as any and seemed to drink as deeply. Their lights burned as bright and as far into the night, did those of the society women gone aspying on the underworld.

"And when arrests were made down in the 'bottoms' there was evidence to substantiate the charges. The inmates soon began to squirm at the regularity with which their secret caches for liquor and private channels of trafficking were uncovered. But they couldn't find the 'leak.'

"All about them sympathized and danced gaily to the din of the pianos. All cursed the impudence of the law, paid to keep away, for the frequency with which it interrupted the nighttime frolics.

"The climax arrived. It came when Mary Chesney, one of the leaders of the underworld of Topeka, was arrested and confronted with a mountain of convicting evidence.

"She was given the alternative of paying a fine and quitting the city or serving a term in the penitentiary. She has yet to decide.

"'Tis whispered that a member of the purity squad lived in her house for several days."

But the "revelations" above noted by no means stopped the liquor traffic in Topeka, as is evidenced by an interesting news story in Gov. Capper's paper, the Topeka Daily Capital, of August 5, 1916:

"If you are ordering beer by telephone, to be delivered by jitney, ask for 'shirtsleeve.' If it is whisky you want, order 'cream.'

"The booze sellers' code was explained in police court yesterday afternoon by Iva Tipp, a good-looking woman, who testified that she had been in Topeka three months and lived at half a dozen locations in the city; did not work; did not need to, and had plenty of money.

"She was testifying in the trial of George Seymour, proprietor of an auto livery at 116 West Fifth Street.

"'Seymour told me that whenever I wished to order beer over the telephone I should tell him I wanted a 'shirtsleeve,' and that if I wanted whisky I should call it 'cream.' I telephoned him that I wanted three 'shirtsleeves.' In a short time one of his drivers delivered three bottles of beer at my home.'

"The woman also testified that she bought a half pint of whisky from Seymour, paying him 75 cents for it. The sale, she said, was made in the office of the garage and the whisky was concealed in a waste basket. At the same time she gave him $4.50 for a case of beer, to be delivered later, she said, and complained that he gave her only 12 bottles, saying in explanation that he had to make a profit.

"Charles White, who said he was a glassblower, and visiting in the city, testified that he had purchased a quart of whisky from Seymour and was in the city park drinking it when an officer surprised him and he was taken before W. E. Atchison, county attorney, and subjected to an "inquisition." The Tipp woman testified that she had also been "inquisitioned" and given the choice of telling the truth or going to jail."

Several years ago the present mayor of Topeka, Hon. Jay E. House, casually remarked to some friends that he had been in a certain central western Kansas town and had been served with or had seen liquor served to others in a private club. The news got to Stubbs, who "inquisitioned" him before a justice of the peace, in an effort to make him tell where it was, Stubbs having a short time before said Kansas was as clean as a hound's tooth; but Mr. House refused to "come through." The case attracted much attention, but House stood pat. Finally, after he had called the governor's bluff good and hard, he was "fined" $1 for contempt of court and the matter blew over.

When he became mayor of Topeka he announced that a clean-up was on, which accounts for the purity squad roosting in the red-light district, no doubt.

During the month of May an effort was made to secure the services of Billy Sunday to clean up the city of Topeka, and in answer to an invitation to come, he stated, according to the Topeka State Journal, May 6, 1916:

"I use Topeka as an example. It would be like fighting the air for me to crusade there. I can do no good in Topeka."

When questioned as to his attitude on Sunday's answer Rev. Robert Gordon, pastor of the First Baptist Church, said:

"If Billy knew the facts about Topeka, he'd come here in a hurry."

The next day, May 7, 1916, the Topeka Daily Capital (Gov. Capper's paper), carried the following news item:

"Common-law wives, dead ones, and grass widows do not count at police headquarters. If a man does not have a live, legal wife living with him, he is booked by the desk sergeant as a single man.

"Naturally, such a system being followed, the single and unmarried men predominate in the roster of persons arrested by the police. Three times as many single as married men fall into the toils of the Topeka police.

"The single men enjoy more variety in crime, while the married men run to drunkenness. More than one-third of the arrests of married men are on the charge of drunkenness. The record month in the number of arrests made by the Topeka police was March of this year. Of the 122 persons locked up, 92 were single men and 32 were married, and yet the number of arrests for drunkenness was equal in the two divisions. Larceny and family rows, necessitating police interference, added to drunkenness, just about cover the field of activities for married men.

"Whether men drink to drown their domestic troubles, fight to settle their domestic quarrels, and steal to meet their domestic wants, is a question presented by the police-court records.

"* * * The sporty charge of gambling is rarely entered against a married man, while one "single" in every nine arrested is accused of toying with chance.

"* * * Roughly classifying the offenses of single men, most of them come from a desire for pleasure, excitement, or adventure, while those of the married men are committed through desperation or necessity."

IF BILLY ONLY KNEW!

In a speech before the Kansas editors at Lawrence, while "saving" Kansas City, during the spring of 1916, Billy shouted, "If I loved Kansas and Kansas editors for nothing else, it would be for prohibition, which they made possible so early. In my fight for prohibition I have preached its glories in Kansas to millions who have never crossed the State boundaries, and I intend to do it until the undertaker pumps me full of embalming fluid and the quartet sings "Lead, Kindly Light, Amid the Encircling Gloom."

A general clean-up started in Topeka, as directed by Mayor House, in the spring of 1916. Among the first to feel the "iron hand of the law" was Ralph Methena, charged with vagrancy. Pleading not guilty, he proved that his wife was a hard-working woman and that he was not without means of support. It developed during his trial, according to the Topeka State Journal of May 10, 1916, that he was a business man himself, carrying on a business that was all profit. He approached strangers who looked thirsty, and offered to find liquor for them. They passed him the money, and he forgot to come back.

The Topeka Daily Capital of May 11, 1916, noted a gigantic raid of the "Queen of the Jointists," one Mrs. Kathryn Tassell. "With Mayor J. E House and City Attorney George Hayden directing operations from easy chairs in the police station," says the Capital, "the purity squad, under Chief Harvey Parsons, last night raided three alleged joints. Mrs. Katheryn Tassell, 219 Jackson Avenue, was caught in the first excursion, and Pearl Butler, William Butler, and Buelah Jones, alias Jessie Strong, were found at 310 Kansas Avenue in the second. * * * Several young men caught in the Tassell place were grilled by Mr. Hayden at an inquisition held before 'Bing' Bartell, assistant city attorney, and a justice of the peace. * * * A quantity of beer and whisky were found in each place.

"* * * In the arrest of Mrs. Tassell city officials claim they have a queen of the liquor gang in Topeka. * * * City Attorney Hayden said that the administration was out after the 'higher ups' in the booze-selling game." The "victims" were all locked up. "A few minutes later," the article continued, "'Mr. Pulliam,' whistling and jauntily wearing a boutinerre in his coat, stepped into the door of the police station. He seemed rather disgruntled when told that he would be unable to give bond for Mrs. Tassell." Several bottles of beer, wrapped as if ready to be delivered, third of a barrel of beer, and "a choice assortment of other liquors" were taken in the Tassell raid. A large quantity of both beer and whisky were found at the other places.

The Topeka State Journal of next day (May 12, 1916) stated that Mrs. Tassell kept books, and the officers "will have no trouble whatever in producing a long string of witnesses." And in conclusion states: "It is said that a surprising list of names of men and women, young and old, has been connected with the Tassell place on Jackson Street."

On the same day this came to light—a little matter some one forgot to tell Mr. Sunday, no doubt (Topeka State Journal, May 12, 1916):

"Albert Stark, the 14-year-old boy to whose delinquency May Burnett is charged with contributing, was called before the sheriff's force this morning and questioned. He made the same sort of statements with reference to his relations with the Burnett woman that he had already made to Harvey Parsons, chief of police, and to F. W. Dawdy, probation officer.

"May Burnett declared to-day that there is absolutely nothing to the charges.

"'I am running a decent and respectable place,' she said, 'and have been trying to do what I thought was right. The police have done all they could to make trouble for me, no matter how I have conducted myself.'

"The Stark boy is small for a boy of 14 years. He declared to-day that he had been sent out to steal by Mrs. Burnett, and that she had taught him other things which the officers agreed no 14-year-old boy ought to know anything about. He told of other small boys who had been in her company."

It was discovered since May had set a new pace in Kansas, that there was nothing to be done with her save give her a short jail sentence for "contributing to delinquency." "Conviction of a man of a crime such as is alleged," the county attorney said, "would keep him in the penitentiary the balance of his life." May was duly tried and convicted and duly served her sentence in jail.

The Topeka Daily Capital of May 14, 1916, again recites a list of raids made:

"Sheriff L. L. Kiene and Undersheriff Hugh Larimer pulled off a big raid when 191 quarts of beer were seized at the Wellington Walton place," the news item declared. "Katheryn Tassell, arrested by the police last Wednesday night, was gathered in again yesterday by the county officers, who made a second raid on her place at 219 Jackson Street. She is charged with selling liquor and maintaining a nuisance. Leonard Lyons, who has a long list of automobile accidents, as well as his liquor trouble, was arrested on a similar charge at 224 Jackson. Minnie Spooner was taken at 207 Quincy Street. Fred Verity, a transient, was arrested on a plain bootlegging charge. All four were white."

Several colored bootleggers were arrested at the same time. And several more bootleggers were arrested, according to the Capital, May 15, 1916. While on their way to clean up a few more joints, the police heard the victim of a pickpocket say if he would return his money he would not call the police. The raid parade was stopped long enough to apprehend the pickpocket, according to the Capital, May 16, 1916.

Since then scarcely a day passes when at least one news item appears in these papers, setting forth "raid news" or crime in all its branches, from assaults upon children with attempt to rape to selling liquor. Note: Selling liquor is the "worst of all" crimes in Kansas, and a liquor raid will take precedence over anything else.

Because he didn't blame his "downfall" on the saloon the case of Clarence Woodall deserves special mention. Clarence, according to the Topeka State Journal, June 1, 1916, was facing a white-slavery charge with Nina Scott, scarcely more than a child. He had "imprisoned" her in a "house" run by a friend of his, and because she would not walk the beat he chose for her, in the manner demanded, proceeded to "beat her up."

"He told me how the other girls acted," the child said, in describing his methods, "and told me to do that way. He said to ask some man what time it was or something like that, and if he did not answer, not to bother him any more. He told me it might be a detective." Asked if she followed his instructions, she replied in the negative. "And when he came back to the house he wanted to know if I had any money. I shook my head and he dragged me out of the door and commenced to beat me out in the front yard. Geneva Jackson saw him and tried to make him quit. He kicked her." She also testified that he had induced her to commit other crimes before endeavoring to make her his white slave. "The testimony of the Scott girl disclosed conditions at Park Place and other places in that part of town that may lead to several arrests," the news item concluded. But if it did, the papers failed to get the story.

Because they had at last made prohibition a success and had at last succeeded in cleaning Topeka up, just as Billy Sunday would have done, the board of temperance, prohibition, and public morals of the Methodist Church, headed by Clarence True Wilson, concluded they could do no more "saving" in Topeka, and concluded to remove their "safety-first" devices, office, bank account, etc., to Washington, D. C., according to the Topeka Daily Capital, June 5, 1916.

During the year 1916, according to the report of the Topeka police department, 1 in every 15.7 persons within the city was arrested.

One thousand and thirty-five arrests were made prior to June 1, and 1,464 were made subsequent to that date, so apparently all the real work of the board wasn't finished after all. But Washington needed them. It was on the verge of being "lost," so Topeka had to take care of itself. And they went.

The physical condition of the capitol building came in for many scathing remarks in a report filed with the governor on June 12, 1916, according to the Topeka State Journal of that day: "Condemning the health conditions at the State house in no uncertain terms," declared Journal, "A committee report was turned in to Gov. Capper this morning, and strong recommendations are made for a sufficient appropriation from the next legislature to permit a thorough overhauling of certain parts of the capitol. 'This place, right in the heart of Topeka,' reads the report, 'and above which are our State departments, including the State board of health, would not be tolerated if situated on some of the streets and alleys of a second or third class city.' The portion of the building occupied by the board of health is found to be in the most miserable condition, and a complete overhauling is recommended."

Up to the present time no relief has been voted for this purpose by the legislature.

On June 16, 1916, according to a lengthy news report in the Topeka Daily Capital of that day, another "Clean-up order" was issued by the mayor, commanding the police force to stop bootlegging, gambling, and loafing and round up the law breakers. "Catching before hanging" was remark made by one of the old hands on the force, when the report was read.

According to the Topeka Daily Capital, June 25, 1916, England was about to adopt the "efficient methods" in use by the Topeka Methodist Temperance Society, as a "solution" of the liquor problem.

Topeka's "underworld" and the "purity squad" were shaken to their depths by a "blow up" detailed in the Capital of June 30, 1916, when the jealousy of several notorious characters led them to unearth the secret operations of several others. Some of them fled to Kansas City, others remained behind and were "caught" by the police with the aid of the Federal purity squad. Young girls were imported to aid in the work of lifting the veil. Many more were "employed" in the institutions.

On June 29, 1916, according to the Topeka State Journal of that day, A. J. Stout, a principal of the Topeka High School, completed a report covering "flunking statistics," entitled "Why high school children fail—A guide to parents."

"Many of the reasons attached by the teachers relate directly to the home," continues the news story, "as 'lack of home cooperation' in 22 cases and 'too many outside interests' in 69 instances. 'There is one cause which I believe is more prominent than the teachers give it

credit for,' Principal Stout said to-day. 'That is the misfortune of having boy or girl on the brain.' Thirty-four failures are assigned to this reason."

"There were 763 failures out of a total of more than 6,000 individual studies taken by 1,400 students. Of this number 340 began failing with the first day at school, according to the teachers, and 161 during the first few weeks, 190 between the 7th and 12th weeks and 72 during the last 6 weeks.

"Following are the failure causes: Lack of ability, 395 cases; lack of application, 288; too many absences, 186; laziness, 161; slowness, 94; indifference, 160; too many outside activities, 69; sickness, 60; ignorance of how to study, 71; lack of foundation, 102; too many distractions, 39; cigarettes, 20; discouraged, 23; bluffing, 28; subnormal, 35; stupidity, 27; discouraged, abnormal timidity, 29; quitters, 20; lack of home cooperation, 22; lack of study, 15; inability to grasp subject matter, 19; under age, 20; bad morals, 18; irregular work, 18; cheating, 16; physical weakness, 14; too rapid growth, 13; boy on brain, 19; girl on brain, 15; wrong attitude toward school, 14; nervous instability, 5.

"In reply to the question, 'What could have been done to have prevented the failure'? the following answers were received: Nothing, 277; daily tutoring, 172; 'don't know,' 125; keep after school, 38; personal interest and encouragement, 38; demoted, 14; family cooperation, 17; a more intimate understanding of the pupil, 19; to take less work, 5."

Seven hundred and sixty-three failures out of 1,400 is an astounding percentage. So these are a portion of "our 500,000 school children" who have never seen an open saloon and are unacquainted with the appearance of a saloonkeeper, are they? Just how many are acquainted with the bootleggers, blindpiggers or keepers of the many immoral resorts, streetwalkers, gamblers, and other persistent law violators in pure Topeka, is not shown. No argument is advanced here or elsewhere that these failures would have been reduced if Topeka had her saloons back as she did in the "good old days" when the Copeland Hotel was the clearing house for the Kansas politicians, when things were rocking along swimmingly and everybody was happy and content to work and sing and play a little, but accomplish much for the State, but the fact remains that the "young manhood and womanhood" hasn't shown any great advancement as claimed, under a legal system that puts a premium on lawlessness, secret vice, and "police cooperation" and quiet understanding with the underworld. The board of temperance and public morals had a program as long as the moral law to work out in the State capital and either did not know it, or did not care to tackle the undertaking at the time it concluded "all was well" and quietly took its typewriter, press agent, and bank roll and wandered toward the National Capital.

On July 1, 1916, Steve Prouty, "King of the Bootleggers"—they have more "kings" and "queens" in this class in Topeka than they have politicians—was landed again, according to the Daily Capital of that day. "After finding Prouty guilty on charges of keeping and maintaining a liquor nuisance and also of keeping a house in which gambling was permitted and fixing his appeal bonds at $250 on each conviction, the judge announced that no longer time would be allowed in which to pay his back fines, and, protestingly, he was thrust into the calaboose.

"Prouty uncovered a rich vein of trouble a few weeks ago," continues the article. "While intoxicated he drove to the police station in a new automobile and, in the absence of Chief Parsons, bulldozed the officers. Prouty got away then without being arrested, but arrests followed thick and fast, and the percentage of convictions in police court ran high. Bondsmen became alarmed and insisted upon stiff charges for the risks they assumed.

"Down at Prouty's 'club' business went to the bad. * * * A few nights ago only 12 men and 3 women were present, when a few weeks ago probably 150 persons would have gathered."

In commenting upon the "system" in vogue in Topeka, the Daily Capital, July 4, 1916, said:

"During the 12 months ending June 30, 1916, just one fine has been paid to the county for violating the liquor laws of the State. There have been approximately 60 convictions, running from one to a dozen counts in each case. (These are cases tried in the district court, not the police court.) The minimum sentence which can be imposed for a single count is 30 days in jail and a fine of $100. When the judge decrees that the fine be paid he also orders that such person be held in jail until the fine and costs are paid.

LOSES $10,000 ANNUALLY.

"But nothing like that happens. When that part of the sentence calling for 30 days in jail has been complied with the prisoner is turned loose 'on parole.' The county foots the bill for the costs in the case and fails to collect the fine.

"In fines alone, not counting the costs of the prosecutions, the county is failing to collect approximately $10,000 annually.

"For the term of court just closed the amount in fines totals $4,300. There are two terms of criminal court each year, and the preceding term ran heavier than the last.

"When one enters the criminal division of the Shawnee County district court while a liquor prosecution is under way it appears to be a very solemn proceeding. There is an array of witnesses and from one to three attorneys on each side. From half a day to three days is spent by these lawyers, witnesses, judge, and jury of 12 men hearing a statement of the case, presentation of evidence, argument, and deliberation as to the guilt or innocence of the accused person. After from one hour to two days of deliberation the jury returns a verdict of guilty (maybe), and in due course of time the judge pronounces sentence of '30 days in jail, a fine of $100 and costs on each count, and that the prisoner be held in the county jail until the fine and costs are paid.'

REALLY LOOKS SERIOUS.

"The affair looks very serious, and while it is going on the county is paying the salaries of the judge and the prosecuting attorneys, the fees of the prosecuting witnesses, and for the service of the jurymen. To the uninformed the affair looks very businesslike—the prisoner is to pay the costs in the case and $100 besides or be held in jail 'until paid.' The law intends that the guilty person should pay the expenses he has caused by his wrongdoing. As the thing is managed in Shawnee County the county pays it.

"A State law provides how these fines and costs can be collected, but the county commissioners have not availed themselves of this law. County prisoners can be put to work in whatever manner the board of county commissioners may direct, and prisoners thus worked are entitled to credit at the rate of $1 per day. It is not even necessary for these prisoners to be worked under armed guard. The law provides that they may furnish bond that they will not run away if liberated, and they can thus be sent to any part of the county to work without the necessity of placing guards over them.

NO INCENTIVE TO WORK.

"Under the present system there is no incentive for a prisoner to work, for he knows that he will regain his liberty just as quickly if he does not work. He is given no opportunity to work even if he wants to. It costs 50 cents a day to feed a prisoner in the county jail. This is the reason no fines and costs are being collected. The board of county commissioners figure that as soon as a prisoner has served the jail portion of his sentence it is useless and expensive to hold him until he pays the fine and costs.

"The members of the board figure that they are saving 50 cents a day for the county by getting rid of the prisoner as quickly as possible, so a parole is issued.

"Sometimes the county board issues the parole and sometimes the judge of the court imposing the sentence does the liberating.

"Frequently the sheriff and the prosecuting attorney attach their signatures to an application for a parole. Of these two officers one never signs unless the other does. This is by courtesy."

The glorious Fourth witnessed many hilarious times in the State capital city, according to both daily papers. One touch of pathos was added to the merry raiding, foot racing among the box cars, down the alleys, and through the streets, however, when Chief of Police Parsons sorrowfully remarked, according to the State Journal July 4, 1916: "It goes against the grain to stick poor old Aunty Stephenson when there are so many real bootleggers doing business in town to-day." Old aunty "lives down on First Street and can fry chicken and bake biscuits that melt in one's mouth," but made one mistake, according to the news item. She ordered her beer under the name of J. Brennon, and as the police probably knew Mr. Brennon did not live where aunty lived, they were forced to confiscate her wares—by taking them to the station. Plenty of the "real bootleggers" were rounded up that day, too, among them Porter Patterson, "convicted and sentenced to the penitentiary as a persistent violator of the prohibitory law, which sentence has been affirmed by the supreme court" but was granted a "temporary parole" to attend his brother's funeral. He stretched his parole a little too long and the sheriff had to hunt him up. Gov. Capper was quoted as saying that "Patterson would not be paroled permanently until he has served a part of his sentence" in jail.

(NOTE.—Gov. Capper presented as one his strongest dry arguments in the Nebraska campaign during the campaign of 1916 that Shawnee County, "because of prohibition," had a very low rate of sentences to the penitentiary.)

Lon Sauls, the police sergeant who resigned "under pressure" about July 1 because of the evidence procured by the society women, members of the purity squad (Kansas City Post, July 1, 1916), broke the silence on July 6, 1916, according to the Topeka Daily Capital, and read the riot act to Chief Parsons and Mayor House.

"Lon Sauls, who 'resigned' last week as police sergeant," reads the item, "believes that an injustice has been done him. Sauls was the officer in charge of a raid on Mary Chesney's place the same night that Kathryn Tassell was raided. He reported 'nothing doing' at the Chesney place, and did not arrest the woman. Last week a girl, who said she was in the Chesney place at the time of the raid, testified in police court against the woman. She also said that Sauls made a joke of the raid; that there was liquor in the room in plain view and Sauls 'failed to see it.'"

Sauls says: "On the night in question I was given two warrants for the Chesney place, one a liquor warrant and the other charging the conduct of a disorderly house. I was also given warrants for two other places. I was told by Chief Parsons to bring Mary Chesney to the station, if any evidence was found, and that not much evidence would be required, because, the chief said, 'We know what Mary is.'

"With Carl Goff, Robert Miller, and A. A. Woodward, all police officers, I went to the Chesney place, 129 Kansas Avenue. We made a thorough search for liquor and failed to find even a drop of either whisky or beer, or even an empty bottle. There was just one other person besides Mary Chesney in the house, the girl who testified in police court. She said she was Mary Chesney's nurse. None of us had seen anything out of the way.

"I telephoned to Chief Parsons, using Mary Chesney's telephone, and asked the chief what I should do about placing the woman under arrest and taking her to the station. Chief Parsons told me to use my own judgment. Goff, Woodward, and Miller are ready to swear that this statement is true.

"I have been a member of the police force 10 years, and I defy any person to prove one instance of dishonesty or unfaithfulness in the discharge of my duties as a police officer. I never made a dishonest dollar in my life, and this is the first time there has been even an intimation of such a thing. During my 10 years of service I never was called on the carpet by any mayor or chief of police.

"I am a candidate for office and the stories which have been circulated concerning my resignation are hurting me. I desire that the truth be known. I have nothing to conceal."

When shown Sauls's statement, Mayor House said:

"Before the raid on Chesney's place, which was made on my orders, I had issued instructions to the police to bring in all suspects, no matter whether incriminating evidence was found or not. Sergt. Sauls led the raid on Mary Chesney's place and came in without her.

"The reason the raiding party found no liquor was because they failed to look in the bookcase. In raiding a joint it is always advisable to inspect the bookcase."

In commenting on the matter the State Journal quotes the girl who testified, and who was arrested one night after the Chesney raid in a "restaurant" along with many others, as saying that Sauls, who "is off the police force, but maintains he is taking a vacation which does not terminate until July 10," plainly saw the liquor, and made fun of the raid. (State Journal, July 7, 1916.)

Rev. Gordon was right: If Billy knew the facts about Topeka, he'd come here in a hurry. If Billy only knew!

The juvenile court record up to June 30, 1916, was made public July 8, 1916, according to the Topeka State Journal of July 8, 1916. "During the year," says the Journal, "ending June 30, 7 girls and 10 boys were sent from Shawnee County to the State industrial schools through the juvenile court. Twenty-seven more delinquent children were placed under the jurisdiction of the court, and were required to report each week under their parole. In all, 28 boys and 15 girls were brought into court as delinquent children." The court is required to find homes for neglected and dependent children, also place them in public homes such as the Topeka Orphans' Home, and in such private homes as are available. "During the year the court also handled 41

such cases," the report continues. "Twenty-five of the dependent and neglected children were girls and 16 were boys." This is the high-water mark.

"Fifteen such children," further says the report, "many of them mere babies, were placed in the Topeka Orphans' Home, 5 in the State Orphans' Home at Atchison, and 12 were placed in private families. One grandmother assumed the charge of five dependent children.

"Seven parents were brought into court charged with delinquency in the care of their children. Two of them were convicted and paroled to support their children." F. F. Dawdy, the parole and juvenile officer, said he had placed 32 children in the county detention home and 25 elsewhere.

Mayor House directed another raid July 11, 1916, according to the Topeka State Journal of that date, at 619 Quincy Avenue, in which six persons were arrested. Those arrested were Mrs. F. D. Elbs, charged with maintaining the place, Jessie Carter and Fay Morse, inmates, and three men. "Mrs. Elbs put up a 'paper bond,'" remarked the Journal, "and was released. Fay Morse put up a cash bond of $10 and was released."

In speaking of this raid the Topeka Daily Capital, July 11, 1916, said:

"Acting under orders from Mayor J. E. House, the police raided the rooming house upstairs at 619 Quincy Street at 10.30 last night. Six persons were brought to the station. A girl said to be 15 years old was also in the place, but was left there by the police.

"The raid was headed by Chief Harvey Parsons. Shortly after 9 o'clock last night Mayor House and City Attorney George Hayden arrived at the police station and delivered their instructions to Parsons. The location of the place to be raided was not given to the six other officers until it was almost reached.

"Those arrested were Mrs. F. D. Elbs, a large middle-aged woman, charged with maintaining a disorderly house, Jessie Carter and Fay Morse, girls charged with being inmates, and William Nachland on the same charge. Two other youths, who were not booked, were found in separate rooms with the two girls, but were allowed to go by the officers.

"The girl left at the place is said to be a sister of the Carter woman. City Attorney Hayden said he did not understand why the younger girl was not arrested along with the rest. He thought instructions were to bring all inmates to the station.

"* * * Numerous complaints have been received concerning the rooming house and the fact that a girl little more than a child was allowed to be there.

"At the police station the Carter woman was told that if she would not try to shield Mrs. Elbs, and would testify that she was running a disorderly house, the charge against her would be dismissed.

"'We do not care to prosecute the girls,' said Mayor House. 'We want to get the woman who is really responsible.'

"When Mayor House and City Attorney Hayden left the police station just before midnight they understood that the Carter and Morse women would be held at the police station last night. They were released on bond shortly afterwards by Chief Parsons.

"When the raiding squad arrived at 619 Quincy Street Mrs. Elbs was not home. Shortly afterwards she arrived in an automobile, driven by a much younger man. A youth who had watched the police enter the place informed Mrs. Elbs that a raid was in progress. She left the machine and climbed the stairs. Evidently Mrs. Elbs had been out in the country, for she was dressed in a comfortable Mother Hubbard and was carrying a tempting bunch of onions.

"At the top of the stairs she met Chief Parsons. 'What is going on?' she demanded. 'Did you find any men there?' she continued. 'When I left at 7 o'clock I thought everything was all right. I guess things happened after I left.'

"The police say that the man with Mrs. Elbs was her husband."

More raids were made on July 12, 1916, according to the Topeka Daily Capital of that date. Among those raided were Kathryn Tassell, who has been the subject of many such "parties" recently in Topeka, but somehow always gets out, on bond or otherwise, and goes at it again.

Mrs. Elbs, according to the same paper, was fined that day $100 for running a "disorderly house," and the girls were touched up for $10 apiece. They all appealed to the district court and were released at once.

"It was not the first visit for Mrs. Elbs in the same court," laconically remarked the Capital. "On March 5, when Mrs. Elbs was living at 305 East Eighth Street, her place was raided and well-known Topekans, among them a Federal officeholder, were found. The records show she forfeited a $25 bond. Among the girls arrested at the same time were Edith Carter and Fay Morse.

"Next to the 'racy' testimony," continues the Capital, in speaking of the trial on July 12, 'the greatest interest of the crowd was in the appearance of Mrs. Elbs and the two other feminine defendants. Mrs. Elbs, as befitted her portly carriage, was gowned in a simple frock of white material. She wore no hat. The girls wore broad-brimmed millinery creations. Miss Morse's coat was of the prevalent fashion, with green and yellow stripes. After Judge Yates's verdict the women were released on appeal bonds signed by Mrs. Elbs's father, S. J. Joy, formerly a restaurant owner. Both Mayor House and City Attorney Hayden were surprised yesterday to learn that Mrs. Elbs had been given bond for the night. They thought Mrs. Elbs was to be kept at the station. Mrs. Elbs's bond the previous night was also signed by Mr. Joy.'"

Kathryn Tassell was at last landed in jail, according to the Topeka Daily Capital of July 13, 1916. "Mrs. Kathryn Tassell, 'queen of the jointists,' slept last night in the city jail," remarked the Capital. "She was arrested at 10.15 o'clock last night at her home, 219 Jackson Street. The charge was the usual one for Mrs. Tassell—that of keeping and maintaining a nuisance. When Mrs. Tassell walked to the station she wore her usual confident and jaunty smile."

Speaking of her "record," the Capital continues: "Six weeks ago she was arrested by city officers on liquor-selling charges. She was convicted in police court and appealed to the district court. The appeal has not been heard. The county officers took the city's evidence and issued a county warrant for Mrs. Tassell. She pleaded guilty in the district court. That was a month ago. But Mrs. Tassell has not been sentenced on this finding. Why, the city officers do not know. For a month Mrs. Tassell has remained at liberty. Meanwhile, the city officers assert, they have received complaints that Mrs. Tassell has continued in the liquor-selling business, while Mr. Atchison, the county attorney, has waited to say the word that would send her to jail.

"But Mrs. Tassell received her raiders last night with customary éclat," continues the Capital. "When the officers knocked at the door the house was darkened. When she appeared she announced she had been sleeping. Mrs. Tassell was allowed to go to her room to prepare for her entry at the police station. The party had advanced only a few steps from the house when an automobile containing two men stopped by Mrs. Tassell. The men were Mike Thompson and Leonard Lyons. Lyons, brother of Mrs. Tassell and himself a jointist, had secured Thompson to go on Mrs. Tassell's bond."

When arriving at the station, it was learned that she was not to be allowed a bond. "As Mrs. Tassell heard the news," continues the report, "another woman rushed up to her. It was Mrs. Leonard Lyons, who had apparently just awakened and ran from her home at 224 Jackson Street. Mrs. Lyons's hair was disheveled in contrast to the neat coiffure of her sister-in-law. 'What's the matter?' Mrs. Lyons gasped. 'I'm going to jail, honey', Mrs. Tassell replied. 'Then I'm going with you.' exclaimed Mrs. Lyons.

"There was an argument, with Mrs. Tassell still cheerful and Mrs. Lyons ready to cry. Mrs. Tassell finally walked on with Officer Goff, while Leonard Lyons jumped out of the car and held his wife to prevent her from going to the city jail. At the police station Mrs. Tassell saw Mayor House and City Attorney Hayden sitting in front. 'Good evening, gentlemen,' she said pleasantly. At the conclusion of the booking ordeal, both Officers Walker and Woodward offered to take Mrs. Tassell to her room—the matron's."

The officers had caught a man coming out of Mrs. Tassell's house before they raided her, and upon searching him found a pint of whisky he had purchased while there. He was taken to the station and was not locked up, on promise to appear against her as a witness.

A solution of the question of why so many are arrested, tried, and convicted of charges that mean a penitentiary sentence in Topeka is found in the declaration of Attorney John Schenck, as told by the Capital July 13, 1916, that as high as eight and sometimes more prisoners were kept in the county jail, at a cost of $4 each to the county and city taxpayers, instead of being sent to Lansing as the court order of commitment directed. "It is costing the county $4 every day they are kept here," he said, referring to eight prisoners then on hand, "and it would only cost $2.24 to have them taken over to the penitentiary." The Topeka colony at Lansing is large enough, no doubt, but it would not add much "fervor" to the prohibition speeches delivered by the State officials if the entire number went at any one time.

Mrs. Tassell was fined $200 and given 60 days in jail, according to the State Journal, July 14, 1916.

And just to show how prohibition "reduces taxes" the following appeared in the Capital, July 15, 1916: "Hope that the city tax levy for 1917 might be lowered received a knockout blow when it became known yesterday that Mayor Jay E. House would ask for an increase of between $8,000 and $10,000 in the budgets of the city fire and police departments." Because the city was too deep in debt already and the tax limit had been reached, these departments and others had to become the victims of the usual Kansas policy of "economy," according to the State Journal of July 21, 1916.

The carnival of bootlegging, crime, misdemeanor, delinquency, and dissatisfaction as slightly touched upon here, continues the year around in Topeka. And Topeka is no exception to the general rule prevailing in Kansas towns. The conditions at Wichita are even worse, but space will not permit their delineation. No Kansas town or village is immune, and all share in the general notoriety that infests the State from one end to the other, anything that may be said, with a greater or lesser amount of sincerity by State officials, ministers, or coworkers in the prohibition movement, to the contrary notwithstanding.

A more clear understanding of the actual conditions in Topeka and other towns can not be made than the "explanation" appearing in Gov. Capper's newspaper (the Topeka Daily Capital) under date of July 23, 1916, in which those charged with enforcement of the law lay bare the handicaps under which they labor in a manner that speaks volumes on the utter failure of the law to reach the desired end. Aside from any possible "understanding" that may have ever been had, or is at present existing between the law violators and the petty officials, or even the "higher ups," this revelation is a complete indictment, trial, and conviction of the failure, fallacy, hypocrisy, and sham of the whole system:

"In the opinion of Harvey Parsons, chief of police; L. L. Kiene, sheriff; and W. E. Atchison, county attorney, the automobile is defying the liquor laws of the State. In times past liquor was sold over a bar in violation of the law. Difficulty then was not in locating the liquor or the seller, but in acquiring convictions before a jury upon which were at least some men who regarded the law none too seriously. The laws were strengthened and the expensively equipped joints went out of business.

"These joints were followed by locations in back rooms of drug stores and other less elaborate and better concealed places. But the sales had to be made where the source of supply was kept and frequent raids in which liquors were seized took the profit out of the business.

"Then the bootlegger had his turn. It was a small-change business. No man can successfully conceal a large quantity of liquor on his person. The bootlegger had to peddle his wares in small quantities. To do much business he had to make frequent trips to the base of his supplies, usually concealed about the man's home, so the bootlegger encountered the same discouragement as did the drug-store jointists. Officers could detect the bootleggers and by watching them find where their goods were stored and seize them.

"Now the automobile is revolutionizing the liquor-selling business in the State of Kansas. A jitney or a taxicab driver, with easy and rapid means of transportation at his service, can conceal his supply in places not easily detected. He can have his supply concealed in some vacant barn many blocks from his garage, or even in some isolated place some distance from the city, and the telephone is a handy aid. Once the liquor seller learns the voice of his customer, he can fill an order for liquor promptly and with only a remote chance of detection. Instead of the customer going after the liquor; it is brought to him.

HOW THE SYSTEM WORKS.

"The State liquor law allows every man to keep a reasonable supply of liquor in his own home and for his own use. The liquor-nuisance clause can not be made to apply as long as the liquor is not consumed by outsiders on the premises or sold to them there. So the automobile jointist, receiving a telephone call at his garage or taxicab office, can drive to his own home, take his beer out of his own box, and deliver it. It is impossible for the police department to trail every person who drives an automobile. Frequently the customer has an automobile and a meeting place is arranged by telephone.

"Even the Mahin law which enables city and county officers to learn what persons are receiving shipments of liquor by freight or express is avoided by the use of the automobile. The liquor seller who owns an automobile can very easily drive to Kansas City, buy a stock of wet goods, place it in his automobile, and return without detection.

"Only a few persons engaged in the illegal sale of liquor can afford to own automobiles. They can also afford to handle liquors of a fair quality. The man who walks the streets, frequents pool halls, and other places where he may sell liquor out of a bottle carried on his person, and to only chance customers, must handle such brands as he can purchase cheaply, and thus have as wide a margin of profit as possible.

"The result is that discriminating drinkers patronize almost exclusively these automobile booze peddlers; and these automobile jointists being limited in number and knowing that liquors of recognized brands are hard to get, except from them, are able to command good prices. The prevailing price for a quart of whisky purchased from an automobile driver is $2.50, and half that or more is profit. With the profit so large only a few sales a day or night make a good business, and the whisky seller does not need to take many chances. He is able to select his patrons, and this means increased difficulty in enforcing the law.

AUTO AS A DISPENSARY.

"'I think a lot of whisky is being brought into Topeka in automobiles and sold from automobiles, and the persons who do this are the hardest in the world to catch and convict,' said W. E. Atchison, county attorney. 'We are handicapped from the very start, because we have no way of knowing in the first place what persons may have secured liquor they might sell; and they flit about from place to place so, that it is almost impossible to catch them.'

"Harvey Parsons, chief of police, expresses the same views. Both find some consolation, however, in the reflection that the fact that whisky in Topeka costs $2.50 a bottle indicates that it is hard to get. Only one automobile driver has been arrested for this kind of liquor selling, and he is not yet convicted."

While these revelations might seem sufficient to satisfy any fair-minded person that "all is not Heaven" in Kansas, or in Topeka, especially the ground covered by the Jamaica ginger bootleggers is not covered in the above, but produce even worse conditions, if possible, than the wares of the cheap-whisky bootlegger who does not belong in the Kathryn Tassell and Leonard Lyons class.

The press reports and the police record do not always show by what means an offender is brought to court, but Chief Parsons's refusal to publish any statement concerning or answer letter touching the police record, because of the drunks that use Jamaica ginger, it is safe to presume that many tilts, fights, and shooting scrapes, as well as many cases of insanity and other mental derangements can be traced to the wholesale indulgence in this choice bit of culinary delicacy.

For instance, the State Journal of July 24, 1916, reported the case of a brutal statutory offense committed by Robert Graham, 52, upon a 13-year-old girl in Topeka. "The story told to the county attorney by relatives of the girl was one of the most revolting related in that office for years," says the report. Another little girl 8 or 9 years old also told that Graham had attempted a similar crime against her. The culprit is the father of grown children. As long as there are no "legalized" saloons in Topeka this is one crime that can not be heaped up against the door of the saloon keeper or the brewer.

And again, on the same day, the Daily Capital carried a story of a fierce battle between two men over a woman, a sister of one of them. "After a lively battle, which resulted in some damage to furniture and considerable damage to the clothing of the combatants, police intervened," said the story. "Both men and the woman were arrested. Cunningham's clothing had been torn from his body. He was locked up on a charge of drunkenness and disorderly conduct."

Drunkenness from what? From "booze" in a town that has been legally and, as Gov. Stubbs says, "actually" dry for a quarter of a century plus a decade? Possibly on Jamaica ginger, which perhaps doesn't count in Kansas.

And again on the same day the Capital carried this story: "For the seventh time since January 1, 1916, 'Bull' Davis, a well-known character was hauled into the police station last night, on the charge of bootlegging. The capture of a man who admitted that he had bought liquor from Davis led to the arrest."

Cheap, rot-gut whisky mixed with Jamaica ginger, water, and perhaps a little sugar, is the usual "store" of the average bootlegger, and it must have been some "capture" the officers perfected in running down and subduing Davis's customer.

But how strange this all sounds in view of the statements made by ex-Gov. Hodges (made when governor) at the Anti-Saloon League Convention in Columbus, November 12, 1913: "They concede that prohibition prohibits in rural communities, but they claim that the law can not be enforced in large cities. The same class of men said that gambling and dens of vice are necessary to the prosperity of large cities. These statements are frequently and persistently made by friends of the liquor traffic. These statements are absurd and absolutely untrue. Our State has proven the fallacy of the arguments.

"Is there anything inconsistent or unreasonable in removing the temptation, making it decidedly inconvenient for a workingman to be able to spend his wage in drink, and in this effective manner helping the weak mortal to conserve his wages so that on Saturday night the good wife may buy the children their schoolbooks, clothes, shoes, and then have enough to carry them through the next week without suffering? * * *

"Prohibition prohibits in Kansas! We have penalties and we invoke them. The second time a man is convicted of selling liquor he is sentenced to the penitentiary, and, paradoxical as it may seem, it has a salutary and depressing effect, I might say, upon the chronic bootlegger."

It does, does it? Why not upon Davis, Kathryn Tassell, and a hundred more in Topeka alone, not to mention Atchison, Salina, Wichita, Newton, Parsons, Independence, Pittsburg, and a score of other cities that are constantly before the public, admitting it either will not or the officers, fearing to cast the additional burden upon the taxpayers, either refuse to prosecute, refuse to convict, or insist upon paroles?

"Yet we do have violations of the prohibitory law, just as you have violations of your laws," declared Gov. Capper in his Anti-Saloon League speech in Boston, September 3, 1915. "But mainly in the border counties where Kansas adjoins 'wet' States and 'bootleggers' operate across the line."

"A red-light town is no fit place and no safe place for young men and young women to live," continued the governor. "Its influence, even, is degrading to mature men and women. * * * The gambling house and the house of prostitution are so closely connected and so dependent on the saloon that when the saloon is compelled to move out of a community they must go, too, as they have gone in our State. As Gov. Stubbs, a former governor of Kansas, has said before me, prohibition is the doctrine of self-defense."

"Can the prohibitory law be enforced where popular sentiment is against it?" inquired John S. Dawson, attorney general, in his Anti-Saloon League speech in Chicago, April 2, 1912, and then added: "It can. We have done it. * * * Don't bother about a jury. You can get an injunction from the judge. * * * It is often said that prohibition does not prohibit. And that is true." And speaking of the marvelous results of the efforts made while he was attorney general, Mr. Dawson continued: "It is rooted down to bedrock with our homes, our schools, and colleges and churches and institutions of charity and correction."

And just to prove that all these gentlemen say is true, two "sons of prohibition" of high social standing in Topeka, one 21 and the other 17, stole an automobile shortly before July 25, 1916, according to Gov. Capper's paper of that date, took Tillie Patterson, 15 years of age, and Dorothy Tracy, 16 years of age, on a 24-hour joy ride to various neighboring towns, stayed "Adam and Eve like" by country roads and all wound up in jail. It is almost needless to add that the boys had "some liquor" with them. The city and county officials declared war on the children, saying that such occurrences were becoming entirely too frequent in and about Topeka. Hundreds of cases of this sort never see the light of day in the press and create no commotion about Topeka or Wichita or other Kansas towns, because they are constantly happening.

Two interesting news reports in the governor's paper, both of which bear out the preachments he and Stubbs and Dawson and Hodges, not to mention hundreds of others, engaged in constantly, to show that "we make it prohibit," were published on July 26, 1916, consisting of nearly a column write up of a "real saloon" unearthed in the back room of A. W. Vogel's cleaning and pressing establishment on Tenth and Kansas Avenue, where a crowd of boys of school age were "taking a quiet nip" when the police finally located the place after the neighbors had complained until they were black in the face; and the other was an item noting the return to police court "once again" of the "King of the Bottoms." The charge was, as usual, bootlegging. Police court is held twice each week, states the Capital, and in the last two months "The King" has missed only two sessions, appearing as a defendant each time. "In spite of the near score of arrests and convictions of the 'King,'" remarks the story, "in police court in the last two months, he has spent only a few hours in jail, all his cases having been 'appealed' to the district court." Immediately upon his conviction on July 26, with a fine of $100 and 30 days tagged to it, he arranged for an appeal.

"Do you use liquor?" asked Judge Yates, police judge, of George Finney, in police court, the same day, according to the Capital. "Does a fish swim?" replied Finney. Finney said he had worked in the Santa Fe shops 36 years. Judge Yates was under the impression that the man had been in jail two days, awaiting trial, ample time in which to sober up. "He has been out on bond," explained Officer Summers, "and he is drunk again." Finney was charged with being drunk and disorderly. A little girl testified that he had frightened her badly and had made insulting suggestions to her.

The record does not show what he had been drinking, but the presumption is that in the light of the blatant claims of the governors, ex-governors, etc., it wasn't "booze." It couldn't be—in Topeka. Probably Jamaica ginger.

"Tragedy Corner" is the name people of the neighborhood have come to give that section of Oakland that lies within a short distance of Indiana and Green Streets, says the Topeka Daily Capital of July 27, 1916.

"Within the last two years," the article continues, "people living near there have figured in divorce, murder, suicide, and sensational charges that have led to broken homes." One of the affairs was the basis for a white-slavery charge against D. H. Hamilton, a real estate man, who was charged by Mrs. Stella Azlein, 354 Green Street, with forcing her to enter his house with him on several occasions.

On July 26 and 27, both the Topeka dailies carried a story of the outcome of the joy-ride party in which the Patterson girl, 15 years old and the Tracey girl, 16 years old, figured with young Burns, 21, and young Olson, 17. Statutory rape charges were placed against the boys. No disposition of the girls was made. "The Patterson girl has been in difficulty before," said the Capital, July 26, "and a man is now serving sentence in the penitentiary on conviction growing out of his relations with her. The Tracey girl has not been in trouble before."

One of the most nortorious bootleggers in Topeka is Wellington Walton, whose son is a driver for the American Express Co., and delivers packages "for personal use" wherever directed by his father. An effort was made, according to the Capital of May 17, 1916, to put them out of business, charging that the addressees were fictitious persons. Nothing came of the attempt.

And just to show again that Topeka's "system" works in all walks of life and cuts the high and low alike, the following "society squib" from the Topeka State Journal of August 28, 1916, indicates that when things start in that good old town of automobile-Jamaica ginger bootlegging, they "keep right on going."

"Grover Metzger went to the penitentiary originally because of a woman. That woman was his wife and he beat her up with a hammer and left her for dead.

"He started back to the penitentiary again Sunday afternoon to complete his term, because of a woman. But that woman was not his wife, and he goes back because she was not. He didn't beat her up.

"Metzger has a long police-court career in Topeka before he finally stepped over the line and was tried on a penitentiary charge. After a big row in the Metzger family, it was charged he picked up a hammer and beat his wife into an unconscious state. He left her for dead within a block of the police station. Upon conviction, he was sentenced to the penitentiary for a term of from 1 to 10 years.

"After serving two years, Metzger made application for a parole, and in spite of his long police career he was paroled. He came back to Topeka immediately. One of the first places he visited was the police station. He became acquainted with a married woman living in a small town northeast of Topeka, and eventually she came to Topeka leaving her husband at home. She has been working here in a restaurant since.

"The police state that they visited Metzger's rooming place on one occasion and found the woman and Metzger together; that they warned Metzger that he was headed for the penitentiary again, and that other arrangements were then made by the couple. He and the woman continued to spend time together and the matter was reported to the parole officer of the penitentiary. Saturday night he came to Topeka, and with the aid of local officers picked up Metzger. He was taken back to the penitentiary to complete his term.

"This morning, 'the woman in the case' visited the county attorney's office. 'I want to know,' she demanded of Rad Lee, assistant county attorney, 'why you sent Grover back to the penitentiary.' 'Let's see,' said Lee, 'what is your name?' She gave it. 'Oh, yes; I remember you. Your folks live up near ———. They are nice people and respectable. You are a married woman, are you not?' 'Yes,' she re-

plied. 'Then I want to know what business it is of yours why we sent Grover back to the penitentiary. He's not your husband and can not be. He is the worst character we have had anything to do with in Shawnee County in years. The best thing you can do is to forget that you ever knew Metzger.'

"The girl flared up and started to tell Lee what she thought of him and the rest of the force. 'Go slow, young lady,' cautioned Lee. 'You keep nosing into this case and the first thing you know you will nose yourself into the county jail. You'd be there now if it hadn't been for the fact that some of the county officers know your parents and want to make it as easy for them as possible. But if you want to start things and ignore the leniency that has been extended, go to it. But I warn you now that it will only take a few minutes to put you over in the county jail. Now, do you want to know why Grover was sent to the penitentiary?' 'Yes,' she replied again. 'Because of his association with you.'

"'Well, if that's the way you feel about it,' said the girl in a chastened voice, 'there's no use in my talking to you about it.'"

An occurrence of this nature might possibly not attract much attention elsewhere—and maybe it would—but it only goes to prove that with all the twaddle and piffle about how much happier homes are, etc., just because of the law prohibiting the sale of liquor at retail in a licensed establishment, things happen in Topeka and all over Kansas just about the same as elsewhere. Human nature is the same, whether confined in a rectangle 200 miles wide and 400 miles long that has a statutory or constitutional provision prohibiting license, as it is any other place on the face of the globe.

Another very interesting "human nature" story was contained in a police court report, under date of July 31, 1916, according to the State Journal, under the headline "Hot Day Justice."

"Steve Israel, who once confessed to a local murder in order to get free transportation back to Topeka," says the Journal, "from Salt Lake City, was before Robert Yates, police judge, to-day charged with being drunk.

"'Where'd you get it?' Yates shot at him almost before Israel had a chance to get seated. 'Get what, yer honor?' 'Now, look here, Steve, it's too hot this morning to play horse. What did you get drunk on?' 'Ginger, boss.' 'H'm,' said the judge, looking Israel over, 'there isn't any use for me to talk to a poor fool who has no more sense than to get drunk on Jamaica ginger with the sidewalk temperature around 110°. What are you doing here anyway? I thought you had a job when you were in here a few days ago.'

"'I did have a job. I——'

"'You didn't have a job,' Judge Yates broke in. 'Don't add lying to the court to the rest of your petty crimes. You didn't have a job. You haven't one now and you don't want one. Thirty dollars. Get out of here.' Israel hesitated. He looked toward the door that leads to the street. He started to say something.

"'Get out of here,' said the judge, 'and don't talk to me. You ought to feel lucky getting off with a fine of $30. They ought to keep fellows like you in jail the year around.'

"Israel turned his hat in his hand, opened his mouth as if to answer, thought better of it, and followed the jailer out to the bull pen.

"In sharp contrast to this was the next case. A woman, the mother of three children and the wife of a hard-working man, had been arrested for getting drunk. 'Were you drunk?' asked the judge. 'I don't believe I was,' replied the woman. 'I had three drinks of whisky out of a pint two other women had.' 'Were you ever arrested before?' was the next question. 'I was arrested once before,' said the woman. 'There was a police raid in which I was arrested with a whole crowd. My husband paid the fine.'

"'I am inclined to let you go,' said the judge. 'Your husband is a hard-working man and I don't want to take his money for fines. As a matter of fact, I won't. If you are fined I am going to make you lie in jail and serve it out. You, a woman with a good husband and three children, ought to know better than to get drunk. I'm going to let you go this time, but remember, if you come back, it will be the jail for you with no chance to pay out.'"

Who would believe that "our mothers," who according to ex-Gov. Hodges, are making prohibition possible, would ever be caught in a raid "with a whole crowd," while her hard-working husband paid the fine? He is one Kansas father and husband who doesn't put his money into the grocer's pocket since they closed the saloons. He puts it into the police court to save his wife from becoming an inmate of the prison the Kansas prohibitionists argue is about to close because there is no crime, drunkenness, or wickedness since "she went dry."

This is not a strange occurrence for even Topeka, and it isn't the first Kansas woman who has been let go because of her family ties or because of the mercy of the court. It is not set out to disgrace Kansas womanhood; it is set out to tell the truth and to show that these things we hear so much about in other cities and States being caused wholly by a license system can and do happen even in angelic Topeka.

To read the various and sundry speeches delivered by the Kansas boosters for the Antisaloon League game one would wonder why police courts were not abolished years ago. If the Kansas homes are or have been made happier than in the "old lean days" when the legalized joints were running full blast in Topeka and other Kansas towns, the record of arrests, fines, and convictions fails to show it. Substituting Jamaica ginger and rot-gut booze, even if consumed in an alley or in a select "rooming house," is not conducive to good morals, whether in prohibition territory or whatnot.

No race of people ever lived that could thrive on lemon extract, hair tonic, homemade liquor, jamaica ginger, or adulterated whisky, and to imagine for an instant that a system that makes these vile decoctions a "national beverage" is admitting senility and decadence are better than sanity and strength of character. The cases for the most part of mothers, daughters, and sons of tender years falling the victim of this ruthless system are indeed pathetic, but the world can only learn through experience. And the lessons taught and the examples cited by selfish interests in Kansas, parading as "the church in action" are adding nothing but sham to the efforts of those who are honestly engaged in the solution of the problem of intemperance.

Rev. O. L. Cook, pastor of the First Christian Church of Topeka, aptly remarked, according to the Daily Capital, September 22, 1915: "If people gave as much of their interest, time, and money to the spiritual life as they do to the material, there wouldn't be so much talk of the church being a failure. It fails because it is human." And so do men, women, and children fail because they are human. Law will not change character. It may furnish material for speeches, but in the last analysis the man is still as created. Remove temptation and make him weaker in his power of resistance. And that is why the Topeka police record is one of the disgraces of civilization. If all the men, women, and children in Topeka were in the jails and penitentiary, reformatory and industrial institutions that the law says must go there for violating the law, they would scarcely accommodate the new crop each year. Persistent bootleggers are not sent to jail. They are paroled. They come back. Notorious women, with a "pleasant smile," appeal their cases and return to their dives and continue to ruin the lives of young men and young women the same as they do everywhere when permitted to operate without restraint.

What are those people doing in Topeka? Ten years ago, when the law was enforced with big red padlocks, the prohibitionists declared the town was cleaned up. They have been using the same speeches for a decade, based on a false hope borne of a faith that would move mountains—of fleeting clouds. They can not see the law violations; they refuse to read their own papers; they are ashamed to admit defeat. Kansas would be better off, Topeka would be better off, the world would be better off, if the errors, the mistakes of judgment, and the vain hopes that have met with failure would be admitted. To say there is no crime because you can not see it, and persistently refuse to look at it before your very eyes, is but assuming the attitude of an ostrich who buries his head in the sand. The day of reckoning has been creeping upon Kansas with stealthy tread. Topeka feels the pinch of debt, the burden of a heavy tax to make the ramshackle law "work," but Topeka is afraid, her men are beaten and discouraged, and with a fear akin to panic refuse to take the broad, manly stand that characterizes bravery and tell the world the naked truth. Crime is prevalent in Topeka because the most sincere men who ever directed a raid can not stop it. It is everywhere. It is hidden, it is dangerous; it lies in wait for young girls; it ruins young men; it entices a mother to forget her sworn promise to love, honor, and obey; it gives to the youth the spirit of a sneak; it helps him defeat the purpose of the law; he learns to outwit the police and thereby secure the pleasure, adventure, and excitement he feels is his. He learns to hate law; to disrespect the power of a court; and to feel that even though landed by mistake or otherwise, a fine and a parole will again send him on his way, marked, but free. A saloon, a house of prostitution, and a gambling den are ofttimes thrones of iniquity; they are shadows ofttimes in the bright path of men's lives, but who says they do not exist in Topeka? Who says because the law prohibits them they are not huddled side by side on the side streets, on residence streets, down in the "bottoms," and on the edges of town? They are there, basking in the sunshine of immunity, and immunity makes them grow and become powerful. The church element swears they do not exist; the police know, but what's the use of continued and never-ending raids when a conviction in police court means a stay of execution by an appeal to the district court? And what if conviction there means jail or the penitentiary? A parole is handy, especially when officials high in the State's authority, whether locally or of the sovereign body, must hold down the record that the boast they make that crime is receding and the wave of pristine glory even now lashing the shores of the distant borders of the Commonwealth can be verified by the showing of the prison records.

It means hypocrisy enthroned; it spells but ruin. Soon or late, the ravages of the system will break the strength of manhood and womanhood. With insanity increasing at the enormous rate of 14 per cent per year; prisons groaning with their surplus population, poverty rampant, what matters it if the per capita of wealth be high and every fourth or fifth or even third family within the State owns a flivver? It is men and women of character we are aiming to produce, not jitneys. We have an overproduction of them now. God give us men! Give us such a distribution of common horse sense and money that the pangs of hunger, the curse of neglect, and the deadly sin of lust for gold will not drive the soul-consuming diseases that wreck nations and lay them waste into the hearts of our people and make the home a by-word where illegitimate traffic in flesh and bootleg booze answers to the quality of what but yesterday was the acme of our hopes, the breath of our prayer, the breastwork of our citizenship.

What manner of men will the next generation be when the dive life of Kansas will produce a fiend who will wantonly and criminally assault a baby 14 months of age when left in its presence but a short time, as happened in Topeka and told in the State Journal, October 13, 1916, in describing the unspeakable attempt of a degenerate answering to the inspiring name of Noble Wilshire? Or a ruthless cur of the sort of Frank Summerlott, who, according to the same edition of the same newspaper, lured Mary Arkright "old and feeble, with the crisscross wrinkles that come with age and hardship," into a vacant lot behind a high-board fence under promise of taking her to his home to work, and brutally assaulting her? Mrs. Arkright, according to the story, is 75 years of age and doesn't see well. She is poor and even at her advanced age must work. Meeting her on the street, this sparkling product of the Jamaica ginger hop, joint-automobile bootleg system, asked her what her destination was. Upon being told that she was on her way to the Provident Association for help, he promptly told her he had employment for her; that if she would go to his house and work for his wife and three children he would give her $4 a week. The rest of the story must be left to the imagination.

Filled with the exuberant and delicious concoction of ginger and bootleg booze, Albert Haley murdered Andrew Powell in cold blood, according to the ghastly story of the crime appearing in the State Journal under date of October 10, 1916. Betting a dollar against a pint of rot-gut in a game of horseshoes, the affair wound up in a quarrel, the result of which was that Powell's throat was cut from ear to ear, all connections between the head and body except the spinal column being severed. The murderer calmly went to a neighboring house, sat on the porch, and waited for an officer to come, saying he supposed he would be convicted of murder, but would get a parole in a short time, anyway.

In a drunken brawl in a secret dive at Atchison, Charles Galbreath, a Topeka boy, was shot and mortally wounded by Danny Ross, who claimed he was defending himself against a razor Galbreath was wielding in an attempt to settle a quarrel over a woman. Both were white; both were Kansans; both were carousing and drinking in a joint, which "is not there," when Kansas is described in Boston or California, Chicago, or Columbus. The affair as reported in the State Journal of October 11, 1916, will end in one death and one conviction for murder—and probably a parole a little later.

Should claim be rightly laid to the honor of being virtuous when every line of the public record of a community speak in thundering tones that the opposite is true? More prisoners were placed in jail in Shawnee County during the year ending June 30, 1916, according to a statement published by J. W. Howe, secretary of the Kansas board of control, in the State Journal, October 10, 1916, than in any county in the State, and but few scored in the prisonless class. Six hundred and twenty-one prisoners were incarcerated there; 561 in Sedgwick County, of which Wichita is county seat; 445 in Wyandotte County, of which Kansas City, Kans., is county seat; and 444 in Montgomery, of which

Independence is county seat. "Some of the western counties report a large number of prisoners, probably due to the Industrial Workers of the World," says the report. And probably not. Probably due to the mail-order whisky traffic or white mule or Jamaica ginger.

"In liquor convictions," the report further says, "Shawnee County ranks second, with 101 during the year. Cherokee County is first, with 147; Reno County (Hutchinson) third, with 90; and Sedgewick fourth, with 61."

How many men and women were running around Topeka who should have been in prison nobody knows, but from what few instances are given herein the number would swell the total much beyond that of the showing made. Persistent male and female bootleggers out on bond, whose appeals are never reached for trial in the district court, would make quite a showing if added, not to mention the town drunkards and others the county officers seem afraid to incarcerate lest the county commissioners complain and parole them shortly. Such practice is not good political thunder for the county prosecutors and other court officers. The "liberal vote" is a big thing in Shawnee County, especially now since women vote.

The liquor cases on the district court docket totaled 106 out of the 166 criminal cases for trial at the fall term in Topeka, according to the State Journal of August 29, 1916. "Not all of the liquor cases will be tried," says the Journal. "Some will be dismissed after they come to trial, the county discovering there is not 'sufficient evidence' to secure convictions. As a rule, about one-tenth of the cases brought charging violations of the prohibitory law are tried. They cost the county about $50 each. One noticeable thing about the criminal docket for the September term is that 46 of the joint cases are against women."

Among other criminal cases was one against Alfred Vawter for assaulting Bertha Curran, a school-teacher. "There are rumors," said the Journal, "that this case will be dismissed for 'lack of evidence.'"

And just to show what good home training will do for boys in sunny Kansas, where prohibition has blessed the homes with "good morals and good manners," according to Justice W. A. Johnston, of the supreme court, as reported in the Kansas City Star, March 14, 1916, "40 college men and 100 high-school boys, rotten eggs, and a big bass drum broke up a dance in a riot at the Varsity Club, at Kellam Hall, on the night of October 6, 1916," according to the State Journal. "Amid the screams of the co-eds the boys stormed the party, ruined dresses, and littered the place like a barroom fight. The police, arriving in the police auto some 15 minutes after the affair, were extremely sympathetic with the egged dancers," remarked the Journal. "They regretted deeply that they had not been able to make the one-block trip from the station to Kellam's Hall 15 or 20 minutes quicker in response to the four riot calls turned in over the telephone. 'That ain't right,' said one officer. 'The boys shouldn't throw them eggs.'"

If a "riot call" came in for a raid on a booze party—in the right location—no doubt they would have been on hand immediately.

As proof of what civilization, mixed with bootleg booze or cheap mail-order whisky mixed with Jamaica ginger, will do for an American aboriginal redman, the State Journal of October 12, 1916, portrays some more of the graces of prohibition, and shows what closing the saloons will do so far as removing "temptation" is concerned, in a news item headed:

"PARENTS TRIED TO KILL CHILD ON KANSAS AVENUE—TOOK TURNS KICKING AND SLAPPING THEIR 3-YEAR-OLD—FINALLY FATHER LIFTED IT UP AND THREW IT TO WALK—SPECTATORS RAN TO RESCUE—CHILD IS SAVED FROM DRUNKEN MOTHER AND FATHER—LAST ATTEMPT TO SMOTHER BABY WITH HER CLOTHES.

"When the little child ran first to its father and then to its mother for protection, John and Mary Skay, two drunken Indians from the reservation north of town, tried for 15 minutes to kill their 3-year-old daughter. It is through no tenderness of heart on their part that the child is alive.

"The Indians came to Topeka last night and no one knows what the little child passed through during the night. But early this morning the parents and the child were seen near the Shawnee Mill, on lower Kansas Avenue. The parents were taking turns slapping and kicking her. An Indian arrested later on another charge said to-day that he stopped the parents once when they were beating the child.

"The man and woman continued to drink and wandered on down Kansas Avenue, the child dodging blows as they walked. It was directly in front of the Davis Mercantile Co. that the parents attempted to rid themselves of the tagging child.

"Eyewitnesses say the father struck the child savagely and it ran to its mother for protection. The mother struck it and pushed it away.

"Screaming at the top of its voice, the child ran from both parents. The father staggered after it, caught it, lifted it at arm's length and threw it on the concrete sidewalk. The baby crawled to its feet and again ran to its mother. She bumped its head against the curbing. She tried to smother it with her clothes.

"Then the mother stretched the child out upon the sidewalk and tried in her drunken way to strike it with her heel. Failing in that, she held it while the father 'stamped' it.

"During all the time the parents were mistreating the baby, it was screaming and appealing first to the mother and then to the father for protection. Bystanders discussed taking a hand and eventually did. The child was taken away from the parents and a call was put in for the patrol wagon. The drunken father and mother were placed in jail. The child was examined for broken bones but none was found. It is badly bruised and there is a cut under its chin, where it was kicked by either its father or mother.

"The little child clung to the officers when they rescued it and when it reached the station, and Harvey Parsons, chief, spoke a few kind words to it, the baby cuddled down beside him and refused to move. He remained with it waiting for the matron to return, until he was called to the district court as a witness. The baby cried while he was gone, in spite of the candy, gum, and pennies lavished upon it by the officers.

"An Indian, not even an acquaintance of the little child, was brought in intoxicated and the baby shrunk back behind the chief. Not a word has it said since it was brought to the station. It has uttered no complaint, although it must be suffering from its many bruises. Its body was almost stripped of clothing, and the rags were pinned up by officers. The Indians, the father and mother will be tried as soon as they sober up sufficiently."

If an attack of that kind had been made upon a 3-year old baby in a town where there were open saloons, every newspaper in America would have carried the story; it would have furnished many a sweet morsel for the prohibitionists of Kansas and elsewhere; and many tears would have been shed over this poor, little defenseless tot. But it happened in dry Kansas. That was different. Not a metropolitan paper, least of all, the Kansas City Star, carried a line about it. It was a case most assuredly for the State to handle and both parents, as well as the man who sold the Indians the whisky, if he could be found, should have gone to the penitentiary. No clearer case of assualt with intent to kill was ever presented in a statement of facts. The child should have been taken from them at once.

No doubt they purchased their booze from a bootlegger, who is at home where his hat is off, or where the unfriendly officer "ain't"—perhaps from Kathryn Tassell or one of her flunkies; perhaps from some automobile jointist; perhaps from a mail-order whisky house in a far-away city. In any event, the seller wasn't a "fixture" with a license to be canceled, a bond to be forfeited, and a prison term to serve. That would never do in Kansas.

On October 13, 1916, these drunken Indians were tried in police court, a record of the proceedings having been set forth in the State Journal of that day:

"Police Judge Robert Yates to-day kept a wife in the city jail as security for the payment of a fine assessed against husband and wife. Following the hearing of testimony against John and Mary Skay, the two Indians accused of trying to kill their baby on lower Kansas Avenue, Judge Yates announced that a fine of $15 each would be placed against the two Indians.

"'I can get the money, Judge, by going to the reservation near Mayette after it,' said Skay.

"'What assurance would I have that you would return?' asked Judge Yates.

"Skay looked puzzled for a moment and then his face brightened. He pointed to his wife.

"'All right,' said the Judge, 'We'll keep her here until you get back with the $30.'"

And out John went, got the money, and returned to redeem his wife. Happy days, these, in dear old sunny, dry Kansas!

In a "Topeka society" item the Atchison Globe of July 6, 1916, gives some idea of how happy the Kansas homes can become and how peaceful, serene, and content prohibition renders the populace:

"Mrs. Lenore Feyh, of Topeka, started in Thursday of last week to fight her husband. He called a policeman and she handled them both. She was taken to jail and placed in a cell and attempted to flood things by turning on the faucets. She tried to wreck the plumbing, and did succeed in wrecking the windows of the cell and the furniture. Then she was placed in a padded cell, where she was busily engaged in tearing out the padding when a doctor who had been summoned arrived. The moment she saw the doctor the wild Mrs. Feyh became gentle, and started to make love to him. Edward Feyh, the woman's husband, added to the grotesqueness of the scene by bursting out laughing. Funny people in Topeka."

The society squib fails to state whether Lenore had been hitting a jug of Jamaica Ginger or only touching up a bottle of bootleg booze; but probably both.

Hattie Baldwin, 17, was suing her husband, Ray, for wife desertion, a very common type of action in Kansas courts, especially in Topeka, according to the State Journal of July 18, 1916, and during the trial the kin of both parties involved in the criminal action staged a free-for-all fight in court over whose duty it was to care for the unborn child, and in the general mix-up, charges and countercharges flew thick and fast. Baldwin, a soldier under orders, declared his wife was untrue to him, and denied being the father of the prospective heir. "Mrs. Baldwin admitted, under cross-examination," stated the Journal, "that she went to a picture show with the 'cousin,'" a man with whom she had been keeping "company" since her husband had been called to the colors. "Cousin" was a jitney driver, and was the cause of Baldwin refusing to further support his wife. She admitted, also, that she went to Garfield Park with him at night, and met him often on Kansas Avenue. "She described him as having dark hair and dark eyes. Baldwin has light hair and light eyes," the Journal said. "'Yes,' blurted out Baldwin, 'and she asked my sister and me if it wouldn't be a joke if the baby has black hair and black eyes."

The Atchison Globe was right—funny people in Topeka.

And by no means is the "cutting up" confined to drunken Indians, jitney drivers, high-school and college boys, 15-year-old girls in houses of prostitution, and 16-year-old girls out for a frolic; hardened criminals of the Leonard Lyons type, or women running dives who saunter into police headquarters with a smile and a passport to freedom by a county attorney who hasn't found time to demand that she go to jail on numerous charges that have been proven by a confession in open court. Topeka plays no favorites. The Federal officeholders are not the only ones who "hit the ball" in that old prohibition cradle, and no section of the fair city is immune.

On a recent occasion a lady prominent in society called police headquarters for help in her attempts to dislodge burglars, late at night. In due course of time the police arrived. "They were drunk and acted too silly for anything," she said, according to both daily papers. "One of them insisted on looking through the house, though the burglar had taken what he wanted and left long ago. They asked very impertinent questions and seemed entirely too much inclined to become familiar," which only proves again that there are "funny people" in Topeka.

The crime, booze, and bootleg record of Topeka during the past several years has attracted a great deal of attention throughout the State, to such an extent, in fact, that the September, 1916, edition of the Kansas Issue, edited and published monthly by the Kansas State Temperance Union, made a feeble effort to excuse the Topeka situation in a way, and yet lay at the doors of the public officials in charge of law enforcement the blame for the conditions that exist.

It is so persistently proclaimed in all Anti-Saloon League campaigns that "public sentiment" will in time only elevate men to high office who will enforce the law, and that "in time, probably in the next generation" the antibooze sentiment will become so strong that it will cease entirely to arrest the attention of the voters, such an abundant crop of "law-enforcement sons of justice" being on hand that no worry will then disturb the public as to whether or not they believe in booze, as the thought even of liquor will be gone.

And as usual Kansas is again paraded before the public to prove that the prophecy will be fulfilled, in view of all of which the revelations in the Issue prove doubly interesting.

There is no place within the State of Kansas where as many efforts have been made, from the statehouse to the most humble church organization, to carry the white flag into every county and city office, and yet humaa nature refuses to become curbed, but is the same in Topeka as everywhere.

"Topeka, Kans.," declares the Issue, "capital of the State. * * * Probably the best shaded city in the State. Has four great lines of railroads. And as cities go (by comparison), one of the clean cities of the State. Far better, so far as the traffic in booze is concerned, than quite a number of larger and smaller cities and towns.

"But Topeka is not ideal, and there is no reason why she should not be the cleanest city in America.

"REASONS WHY SHE SHOULD BE.

"The State officials, both governor and attorney general, are strong for a rigid enforcement of our liquor laws.

"The county attorney and sheriff are counted as sound on law enforcement along liquor lines. Our mayor was elected under a promise to make the city of Topeka 'as tight as a drum.'

"REASONS WHY SHE ISN'T.

"The minimum fine for selling liquor is $100, with a jail sentence of 30 days. The maximum is $500 and six months in jail. The usual plan (even of the old offenders) is to let them plead guilty to one or two counts—no matter if there is really half a dozen—take a minimum sentence as to fines, and parole them as to the jail sentence.

"No man can plead a first offense as a reason for a light fine and jail sentence. The time for that ought to have passed more than 10 years ago.

"There are some judges who never give the booze seller less than $300 and 90 days, and never parole. When the booze vendor faces a deal of that kind, he won't keep it up very long. There is no hardship in a deal of that kind for anyone.

"Quite a number of old offenders are allowed to plead guilty and take a nominal fine that under the law could be sent to the penitentiary.

"Then, again, the law allows the officials to demand a peace bond that has a tendency to keep him good for two years. This is seldom demanded, and it would be a great help to keep a man good for the life of the bond. There is no hardship in demanding a bond of this kind—no violation of law, no bond to make good.

"Then comes the injunction. It ought to be placed on every property where liquor has been or is being sold. If that had been done through the years it would be difficult to get a place to sell liquor without being in contempt of court. Laws were made to be used, and a good law not used is a law misused. Nearly all liquor cases tried in police court are appealed to the district court.

"If our county attorney and judges would use our laws concerning liquor for all they are worth, Topeka would be the cleanest city, so far as the booze deal is concerned, of any city in America.

"In quite a number of cases the county attorney gets $25 for each count, while the wet outlaw goes free from the jail sentence. This is in addition to his regular salary.

"A large majority of the county attorneys in the State are using detectives (furnished by the temperance societies) to get evidence and claim they can not get the evidence in any other way. * * * In Topeka, so far as the county is concerned, there has been open opposition to detective work.

"There is no question of the honesty of the officials of Shawnee County, but the Mahin law and the taking of orders for liquor have not been pressed as they should be. Used for all they are worth and Topeka would be the cleanest city in America.

SUMMARY.

"Heavier penalties. Less compromising on number of counts for sake of reputation. More prosecutions for second offense. Peace bond in all cases. Mahin law violations should be pushed; get buyers of wet goods—not be common carriers—taking orders for liquor should be watched; drinking places closed. These are some of the weapons that are furnished by the State for the use of State, county, and city officials. What's the trouble?

"WHAT'S THE TROUBLE?

"Several things; and we are going to name some of them. One of them is '30 days and $100'—and paroled on the jail sentence. There may be several counts that could be clearly proved, but for the sake of a 'record' the guilty party is allowed to compromise on '30 days and $100.'

"The thrifty jointist or bootlegger doesn't care very much for the fine, especially if it doesn't come too often.

"'Thirty days and $100'—paroled on good behavior. Why for the first offense? Our law is 35 years old; been in existence over a generation; why 'first offense'? 'First offense' as even a mitigation is a travesty on justice.

"For a money consideration there are professional bondsmen who stand ready to turn the outlaw loose until called for trial. He is about as much of a nuisance as the lawyer who gets him out of the toils of the law on some trick or technicality, turning him loose to ply his nefarious vocation until his trial is called.

"THE LIQUOR LAWS OF KANSAS WERE MADE FOR CRIMINALS.

"They were made to be used! No matter how drastic they might be, or are, no one is hurt if he does not violate the law. And there would be fewer violations of the law if county attorneys and judges and county commissioners would use the law for what it is worth! 'First offense' is a genuine baby act, and this may be applied to either the outlaw that makes the plea or the official that condones the offense for the plea.

"Why should mercy be shown any outlaw booze seller to-day? Every one is a studied, willful criminal, knows the law but takes his chance hoping with good reason (in the capital city of the State) that he will be able to condone his many offenses by a plea of guilty on one count with a promise of '30 days and $100,' and a parole on the jail sentence. As a rule, in this kind of a deal, the county attorney gets $25 extra. It might not be one of the reasons for the compromise, but then again it might."

In cautioning the members of the Kansas State Temperance Union to use care in selecting the officials at the coming (November, 1916) election, the Issue instructs them to "Look out for your sheriff. He is a very important official. Watch out for your county attorney. He is worth more to his county than any other officer on the ticket. Look well to your representative. Be sure that he is 'right' on the liquor question. Some legislation is needed along liquor lines and we want men that 'think right' on these great questions."

And then laconically added: "All that any criminal asks is to be let alone"—a "prohibition boost" from the American Issue. Also, from the same organ: "If alcohol is a real disease, it surely is one of the preventable diseases." Yes; it seems so.

"The United States Public Health Service brands strong drink as the most efficient ally of pneumonia," says the Issue, in quoting the Topeka Daily Capital, March 14, 1916, edition. "It declares that alcohol is the handmaiden of the disease which produces 10 per cent of the deaths in the United States. This is no exaggeration. We have known for a long time that the indulgence in alcoholic liquors lowers the individual vitality, and that the man who drinks is peculiarly susceptible to pneumonia. * * * The liberal and continuous user of alcoholic drinks will do well to heed this warning, particularly at this season of the year when the gruesome death toll from pneumonia is being doubled."

Which is fairly good advice to distribute in the "driest city in America," especially in view of the fact that the health department records a high increase in deaths caused by pneumonia in Topeka each year, as well as throughout the State.

In an effort to explain why so many Topeka people get drunk, the Issue gives this lucid explanation: "Why? Why? Why? Does anyone drink or get drunk in prohibition Kansas? Ask Missouri. Ask Nebraska," and then adds with suspicious extenuation, why so many Topekans are thrown into jail: "In Topeka the policeman takes the suspect, holds him off at arm's length and says: 'Now blow in my face and blow hard.' If he gets the scent of booze he goes to the station as a drunk." We don't quite get this: Who is supposed to have the whisky breath? Read it again and figure it out if you can.

And bitterly complaining that the "remedy" had failed in its mission after 35 long and weary years, the same edition of the Issue (August, 1916), contained this: "The capital of Kansas does not deserve a 'white' mark so long as it makes so black a record." And then proceeds: "The 'wet' and 'dry' proposition has been in evidence in every election since 1880," but, it further states, "at no time has a backward step been taken along law-making lines." And then just to prove that the "remedy" for continual failure is always on hand, especial attention is called to two "entirely new and better means to curb the growing liquor evil of the State," to wit: "A law was passed during the last session of the legislature requiring the appealing party to give bond in double the amount in question and in addition a 'peace bond' for good behavior pending the result of the appeal, in an amount of money to be named by the judge," and then the Issue triumphantly adds that "The result of this law will be that few appeals will be taken." This observation was made prior to the issue a month later in which the editor bitterly denounced the courts in Topeka and the officers for "forgetting" the "peace bonds" and also for "compromising" the joint cases.

"During the last session of the legislature," it concludes, "two laws were passed with intent to draw the net closer around the 'traffic.' One law makes the city wherein liquor was sold responsible for any damage that may occur to property or persons because of the sale of drink. Another law holds the owner of a building or place where liquor is sold responsible for any damage that may result from the use of liquor obtained on his premises." Which gives rise to a very interesting speculation: Why was this law found to be necessary? Haven't Stubbs and Hodges, Capper and Dawson, not to mention the "trench fighters" in the prohibition army, been hammering it into the American public, in season and out of season, that prohibition does prohibit in Kansas; that this generation is better, more law-abiding, and that John Barleycorn has been buried for good and all? No law is passed without a good and sufficient reason for it. The taxpayers of the State would refuse to indorse such legislative action were they not disgusted, bitter, and grasping at a straw in their attempts to make it work, whether it costs them much more or not. As Stubbs truly said, "Prohibition is the doctrine of self-defense." Rather than see the manhood and womanhood of the State develop into a race of accursed drunkards, imbeciles, and halfwits, the taxpayers submitted to this "new dry measure" in the hope that it might in some measure reduce drunkenness, but no good results have ever been noted. If the Kansas statesmen truthfully explain the "home conditions" such legislation as this would never be thought of.

That Topeka suffers the financial drain constantly flowing in the direction of "mail-order houses," can be no better shown than by the "Boost the home town" news item appearing in the Topeka State Journal, January 21, 1916. "One hundred and fifty posters advertising Topeka and urging the people to 'Boost for the home town,' have been put up throughout the city by the Hinkson-Crawford Advertising Co. The plan is one proposed to the Commercial Club by the advertising company, a local concern, and indorsed by the club. At a meeting of the officers R. K. Hinkson offered to place the huge posters throughout the city free of charge, if the club would indorse the plan. Immediately employees of the company began posting them at various places throughout the city.

"The first field covered was on Kansas Avenue (the main business street), where posters were placed in empty show windows." What's that? "Empty show windows" in a dry city? Impossible!

"The letters are in red, a foot high, and on a white background," continues the story. "Following are the words appearing on one of the placards:

"Dollars spent in Topeka remain here and work for us!

"Dollars spent out of our city are gone forever! Money talks! Boost for our home town!"

And nobody knows that better than the Topeka merchants. "Boost for our home town" is the cry of every Kansas town. Run out the saloon and "decrease crime, insanity, and poverty" and build up a mail-order business in wet and dry goods 50, 100, or 500 miles away from home. Blow and grand stand; claim and proclaim; bluff and stall—and then hang out "Boost for our home town" sign! Prohibition consistency.

As the Topeka State Journal well said on January 4, 1917, after reviewing the "success" Kansas has enjoyed after her long and weary decade of raiding, confiscation, jailing, trail hitting, law making, and four flushing. "Nothing is more fallacious than the more or less general idea that legal enactments are the great social and economic cure-alls."

One of the most interesting "side lights" ever thrown on the Kansas situation first came to life in October, 1915, and ended in tragedy, physical and commercial, a year later. F. G. Hurrle, an Italian, and his good wife furnished the tragedy, Leavenworth County the stage, society people from all over the State were the "supes," and Attorney General Brewster, of Kansas, assumed the usual rôle of clown, with "Judge" F. P. Lindsay, an assistant attorney general, working on a contingent basis, as his spear carrier.

Descriptive of the "first act," we learn from the Topeka Daily Capital, October 30, 1915, after the initial raid had been completed, that "Even the plea by Lee Bond, the Leavenworth attorney, that his client had been allowed to do business—meaning sell wine—at his place for the last 20 years without interference failed to move the obdurate Brewster yesterday afternoon.

"The 3,200 gallons of wine captured in the recent raid on the Hurrle road house, in Leavenworth, is still in the custody of the Leavenworth County sheriff if that official is doing his duty.

"Incidentally the attorney general has sent word to the sheriff that if any of the wine is missing when the case against Hurrle comes to trial, it will cost the sheriff his job.

"S. M. Brewster, attorney general, was notified day before yesterday by Frank Lindsay, of his office force, that when the high-class Hurrle place was raided recently there were 3,200 gallons of wine captured, including 1,300 gallons not yet fermented. Brewster then announced that Hurrle would be prosecuted for manufacturing liquor as well as for selling it.

"Bond explained yesterday that Hurrle is an Italian who had been making wine and selling it in Leavenworth County as far back as he could remember. The Hurrles were good cooks, Bond explained, and the best society in Leavenworth went to his place for dinner. Really, it wasn't the wine especially that attracted the guests. The wine was only incidental to the magnificent dinners that were served.

"As the old man never had been interfered with before, Bond also told Brewster, he naturally, being foreign born, supposed that his business was perfectly legal, and to confiscate his entire cellar of wine would put him out of business and break him; he never would be able to make a living. Brewster suggested dryly that, if it was the dinner and not the wine that attracted Hurrle's guests, he ought to make a good living selling dinners without the incidentals. The conference ended without any concessions on the part of the attorney general, and then Brewster gave Lindsay strict charge to see that the sheriff didn't allow any of the evidence to get away before the case come to trial."

A year elapsed. The trial, with all its turmoil, expense, uncertainty, finally drew to a close. The third act is about to begin. The "victors," strutting about in superb dignity have had their pound of flesh. The law has been "satisfied," no matter what the cost. Another "fee" has been chalked up for "Judge Lindsay." Brewster has had his picture before the public; more loud amens have been grunted from the audience that never fails to show up with the whole family to enjoy the free show—and now for the climax:

"Wine garden closed; Topeka society winces," announced the State Journal October 12, 1916. "Famous Hurrle resort near Leavenworth no more," it adds. "Attorney general decides it is against the law."

"Society items appearing in Leavenworth newspapers for years and involving the elite of Topeka, Lawrence, Atchison, Leavenworth, and the two Kansas cities came near playing a prominent part in testimony produced in Leavenworth County's district court this week in a case brought by Assistant Attorney General F. P. Lindsay, in which he won and closed probably the last existing liquor-producing plant in Kansas. Mr. Lindsay admits that only the frantic appeals of a good-looking, captivating society reporter in Leavenworth kept him from proving the existence of the notorious Hurrle wine garden by using the society clippings she had been writing for the last 'steen years.

"Enough grief has been produced in the State's action to close the Hurrle winery. F. G. Hurrle, according to his attorney, will be near a bankrupt when the Leavenworth district court's order is carried out and 2,550 gallons of wine manufactured by Hurrle from grapes in his own vineyard are destroyed. The value of this wine estimated by the attorney general's office will aggregate $5,000.

"'Nor is this all,' smiled Lindsay. 'I understand that since we raided the exclusive wine garden at Leavenworth October 5, 1915, Hurrle's wife has died, the result of grief and worry over the affair.'"

But "Judge" Lindsay had his fee allowed on the basis of $5,000 in property confiscated, had "carried out the law" under the instructions of his "master," Mr. Brewster, and what difference did it make to him? Didn't he get his pound of flesh—and several hundred dollars along with it? Didn't Brewster get his? Who else would have any right to complain? The preachers were tickled over the "gallantry" displayed, so what is a dead woman, anyway, or a broken, bankrupt man who for 20 years enjoyed "immunity" under a secret understanding? Bah!

"For years," continues the Journal, "a 'night at Hurrle's' was a night of joy for society people from all cities in the vicinity of Leavenworth. Acre upon acre of grapes were grown by Hurrle on his place on the outskirts of Leavenworth. These grapes were used in making wine of a quality hardly surpassable.

"Hurrle's wine garden was open to high and low. There Army officers danced and sang with the girls from Leavenworth and other cities. Wealthy people from Topeka journeyed there and enjoyed a 'night at Hurrle's.' And Leavenworth clerks and mechanics were welcome, too. He always maintained order, and yet he permitted a good time. His home held a dance hall and a dining hall. The cooking done by his wife was superb.

"'TWAS A SOCIETY AFFAIR.

"The papers of Leavenworth looked upon a night at Hurrle's as a society affair. Time after time an item of this character has appeared: 'Mr. and Mrs. ———, of Topeka, entertained a number of friends at Hurrle's place last evening.'

"When Hurrle was finally raided, Leavenworth threw up her hands in horror.

"'Would the prohibitionists from Topeka dare put their hands on Hurrle's, patronized by the people of Topeka themselves?' they asked.

"HURRLE MUST PAY A FINE.

"The attorney general did, and won in a hard fight in the district court. Hurrle must pay a fine, must pay the court costs, and has a jail sentence to his credit, and the wine must be destroyed. Personal calls have been made upon Attorney General Brewster by Hurrle's attorney to get permission for Hurrle to keep a part of the wine, which, it is claimed, has turned to vinegar since the raid was made, in October, 1915."

As proof of the "success" of prohibition in the simple matter of rendering "our homes more happy," when "friend husband" turns on lemon extract, hair tonic, Jamaica ginger, and bootleg booze as a stimulant, the legislature of 1911 (Laws of Kansas, ch. 163, p. 247) passed the famous Kansas "wife-desertion" law and covers the case of "any husband who shall without just cause desert or neglect or refuse to provide for the support and maintenance of his wife in destitute or necessitous circumstances; or any parent who shall without lawful excuse desert or neglect or refuse to provide for the support and maintenance of his or her child or children under the age of 16 years in destitute or necessitous circumstances, shall be guilty of a crime, and on conviction thereof shall be punished by imprisonment in the reformatory or penitentiary at hard labor not exceeding two years."

It has been argued many time and is persistently pointed out that there is little use for this law, and as proof of that fact the record of the reformatory and penitentiary are pointed out. However, all the counties containing towns and cities of any size in population have been flooded with this type of criminal work.

"In any effort to decrease county expenses amounting to hundreds of dollars yearly," says the Topeka State Journal September 29, 1916, "for wife-desertion cases wherein after the husband is arrested, and many times brought from neighboring States at the county's expense, the wife refuses to prosecute, the county commissioners inaugurated new tactics today." "Put up or shut up," was the answer made to a frail, poverty-stricken woman who desired her husband brought back from Nebraska. She was told to go and procure a "good bond" guaranteeing she would prosecute him after his return.

"Since the wife-desertion law was enacted it has been prolific in piling up court costs against the State without getting many husbands convicted," continues the Journal. "Too often the wife visits the husband before the trial, the county attorney's office has decided. They make up. He offers to stay at home and support her if she will not send him to jail." So the county attorney would rather chalk up a good record for "prosecutions and convictions" that aid in reuniting families? And, then, it costs the taxpayers several hundred a year.

Since the Anti-Saloon League of America has "annexed" the Kansas State Temperance Union we may look forward to many more "examples" of the successful operation of "the law" within the State of Kansas. But the little tragedies of life, murders, thefts, long processions of arrests for white slavery, rape, assaults, and kindred prohibition blessings growing out of brawls brought about by the free indulgence by boys and girls, men and women in vile alcoholic intoxicants furnished in "sporty rooming houses" where Federal officers sometimes tarry too long without accounting to the local police; or from jitneys, or in pool halls, behind billboards, and in and about lumber yards, mills, and in fact any place in the city with very few if any exceptions, will continue to play an important part in the "social development" of Topeka. Tales of grief and sorrow, blasted hopes and ruined lives will continue to leak into the newspapers, but hushed up immediately, lest "our better element" be not called to many and varied fields of battle, where with "Snow-white Kansas and Pure Topeka" as the slogan, "Demon rum" must be buried beneath an avalanche of ballots. The record of 668 arrests for drunkenness in that city for 1913 increased to 681 in 1914 and further increased to 746 in 1915 only to be inflated to 804 in 1916 will never be wiped out by a legislative resolution or a dry parade, no matter how loud the band plays "Onward, Christian Soldiers." Nor will it be decreased in any other way than in the application of sound, horse sense, carefully and honestly applied to the conditions as they exist—not as they are painted on foreign canvas at so much per stroke.

And in conclusion we find, according to the Kansas City Star, February 11, 1916, that Senator Schoch, of Topeka, has introduced in the Kansas Legislature a measure to prohibit sale of Jamaica ginger. "Many Kansans," said the Star, in a Topeka dispatch, "who have had a hard time obtaining real liquor have turned to the use of Jamaica ginger and flavoring extract. The Schoch bill would remove one of these from the hands of druggists who have been selling Jamaica ginger without restraint, even though some of them knew their customers were using the ginger as a beverage."

"Remove one of these" from the hands of the druggists? Why not both of them? And, then, after that, prepare for bills prohibiting dandelions from growing, as dandelion wine is popular there; prohibit silos from producing its strong alcoholic beverage; prohibit lemon pie; prohibit the sale of cologne, stove polish, shoe blacking, and uproot the peach, plum, pear, and apple trees; burn the grapevines and stop the sale of oranges, lemons, dates, prunes, strawberries, and plums. They all must go. God save the land!

—

WICHITA'S BONE-DRY SHOWING.

Mail-order whisky and bootleggers have kept Wichita on the wet map for a good many years, although on the Anti-Saloon League's it is as pretty and white as Topeka, Atchison, or any other Kansas town.

An unusual number of arrests have been made there, ranging all the way from incarceration of common thugs, pickpockets, streetwalkers, dive keepers, bootleggers, and "rum sellers" in drug stores, to the chief of police, on a charge of running a wholesale blind pig in the basement of the city hall.

A short time ago a youth, well this side of the voting age, went to a first-class drug store on Douglas Avenue and purchased some alcohol, which, under the "bone-dry" laws of Kansas, can be secured by the retail druggist strictly for "medicinal purposes," the druggist, of course, having qualified as being of good moral character and not a violator of the law. The young Kansas "dry," soon got himself on the outside of his "kick" and proceeded to kill a policeman. His mother sued the city, the druggist, and everybody in sight. After the policeman's funeral, and the matter had settled down a bit, the Wichita drys gave the boy a clean bill of health by charging the whole thing up to "John Barleycorn." If he was ever prosecuted and sent to the reformatory, to jail, or the penitentiary, the record fails to show it.

During the year 1913 there were 2,562 arrests in the city of Wichita, of which 841 were for drunkenness, being 32.82 per cent of the total, or an average of 1 out of every 20.5 persons arrested for all causes and 1 out of every 62.5 of the city's population, for drunkenness.

During the year 1914 out of a total of 3,792 arrests for all causes 1,380 were for drunkenness, equivalent to 1 in every 13.8 of the population arrested for all causes, and 1 in every 38.8 of the city's population, arrested for drunkenness.

During the year 1915 out of a total of 4,391 arrests for all causes, 1,525, or 34.95 per cent, were for drunkenness; thus an average of 1 out of every 11.9 persons in Wichita was arrested for all causes during the year, and 1 out of every 34.5 persons for drunkenness.

During the year 1916 out of a total of 4,587 arrests for all causes, 1,679, or 36.59 per cent, were for drunkenness; thus an average of 1 out of every 11.4 persons in the city was arrested for one cause or another during the year, and 1 out of every 31.3 persons for drunkenness.

Thus, where during 1913, 1 out of every 20.5 of Wichita's population was arrested, the showing for 1916 is 1 out of every 11.4 persons, an increase of 79.8 per cent; and where, in 1913, 1 out of every 62.5 of the population was arrested for drunkenness, 1 out of every 31.3 was arrested on an average, during 1916, an increase of 99.6 per cent.

Wichita enjoys another distinction which is shared by few Kansas cities or towns. While Gov. Capper was praising "bone-dry Kansas" in California during the summer of 1915, Chief O. K. Stewart, of the Wichita police force, was yanked out of office and thrown into the county jail on a charge of operating a wholesale blind pig, selling confiscated liquor taken in raids for profit to bootleggers and patrons who stood in with him.

Testimonials praising prohibition, written by Chief Stewart before he was caught red-handed by the use of marked money given him by a dissolute negro bootlegger of the city, were sent out by the Anti-Saloon League as a part of their "proof." These "testimonials" are still being used throughout the length and breadth of the land, though Stewart has been out of office nearly two years and is now in the hands of the Federal Government facing prosecution.

The Wichita Beacon (Henry J. Allen's paper) of July 7, 1915, said, in speaking of the Stewart affair: "A startling surprise was sprung at 10 o'clock this morning on the city administration, as a result of which O. K. Stewart, chief of police, has been arrested for selling liquor to bootleggers, and is now in charge of the sheriff." At the hearing before the county prosecutor Mr. Allen, according to his own newspaper, testified to circumstances which had led him to believe that O. K. Stewart was selling liquor from the city hall to bootleggers. "Mr. Allen opened the market basket," said the Beacon, "and, taking out various bottles of whisky, told how they had been purchased from the chief by Frank Gardenshire. The bottles were all dated. The witness also explained that on one occasion Dave Leahy, who was private secretary to Gov. Stubbs during the time of the Stubbs machine reign, had stood in the Coronado Hotel and looked across the street where he saw Stewart hand Gardenshire a bottle of whisky and then place a bill, which Gardenshire had given him, in his pocket. This was on June 30. On July 2 S. A. Coleman sat in the office of the Coronado Hotel and watched the chief hand Gardenshire four bottles of whisky, taking them two at a time from his pockets. This liquor was brought to the Beacon office.

"Yesterday, after Mr. Allen learned that he was to testify, he gave Gardenshire a marked dollar and told him to go buy some whisky from Stewart. Gardenshire did not know the money was marked. When Gardenshire returned to the Beacon office Sheriff Sarver was waiting for him. He searched Gardenshire and got two pint bottles which Gardenshire had just purchased from Chief Stewart for the $1. Sam Jones, a colored politician, was sent over to the chief's office to see if he could get the dollar. He made a pretense of needing a paper dollar to send in a letter and traded the chief a silver dollar for a paper one. When he brought it to the Beacon office it was disclosed to be the same dollar Gardenshire had given the chief a few moments before for two pint bottles of whisky."

Later Chief Stewart was "tried." The first fiasco ended in a hung jury, the second in an acquittal, although there was enough evidence introduced to have convicted him times over.

The Kansas City Journal of April 30, 1915, throws an interesting sidelight on the home life of Wichita in a telegraphic report from that city, under date April 29, 1915, and entitled "Whole family in jail."

"Judge Thomas C. Wilson, of the district court, to-day applied, for the first time in this county, the new State liquor law," says the dispatch. "Charles B. Wise and wife had been found guilty of a charge of maintaining a nuisance. The court ordered the sheriff to lock the Wise home, put both in jail until they give bonds in the sum of $2,000, and then required a peace bond in the sum of $15 each in the event of an appeal. The Wises went to jail, and their daughter Leah, who is charged with cursing the witnesses who testified against her parents, was placed in jail with them, being unable to give a bond of $1,000 fixed by Judge Wilson."

Although it is against the Kansas law to sell liquor, 2 wholesale and 26 retail Government licenses were issued to Wichita, among the 106 issued shortly prior to August 7, 1905, according to the Kansas City Star of that date. Attorney General Brewster immediately started a "probe."

When Mayor Bentley, of Wichita, took the oath of office on April 12, 1915, a clean-up order was issued, according to the Kansas City Journal, April 14, 1915. In a dispatch under Wichita date line of April 13 it said:

"A clean-up order was issued to-day by Mayor Bentley, who took office yesterday. The order, addressed to O. K. Stewart, chief of police, reads: 'You will at once proceed to suppress the illegal sales of intoxicating liquor in this city.'"

And the chief did—by raiding the joints and capturing the wares of the bootleggers and selling it back to them at a good profit.

When Gov. Capper, of Kansas, appointed the "official" Kansas delegation to attend the antisaloon national convention at Atlantic City, June 15, 1915, Henry J. Allen was the only Wichita dry to land on the "select list." Mayor Bentley and Chief Stewart were too busy chasing the bootleggers. Fifteen days later Allen caught Stewart with the marked dollar bill in the hands of a notorious character whom he bribed into violating the law to get the goods on the chief.

As proof that Wichita has always been "dry" the following from the Kansas City Post, August 14, 1915, should settle the matter forever:

"PADLOCK PLACED ON WICHITA JOINTS—MAYOR BENTLEY WILL MAKE DRINKERS' THROATS SO DRY THEY'LL CRACK.

"WICHITA, KANS., *August 14.*

"After serving of injunctions on 21 property owners who rent to 'joint' proprietors by County Attorney McCormick the rented buildings have been padlocked by the sheriff. McCormick and Mayor Bentley have declared that all 'joints' are doomed.

"'I'll make these whisky and beer drinkers' throats so dry they'll crack,' declared the mayor.

"The mayor has ordered persons who call for liquor at express offices arrested and taken to police headquarters for investigation. The confiscated liquor at the city hall has been placed under lock and key and one man made responsible for it."

After the exposure of Chief Stewart an ordinance was whipped through prohibiting transportation of liquor through the streets, and endeavoring to tighten up the town as it had never been tightened up before.

Under date of August 14, the Kansas City Star carried a dispatch from Wichita, under date line of the same day, entitled "Wichita the Dryest Ever."

"WICHITA, KANS., *August 14.*

"Mayor Bentley's whisky snipers got their first game to-day under the new ordinance making it a misdemeanor to transport liquor in the streets of Wichita. C. W. Williams, who had a pint of whisky on his hip was detected by a policeman who tapped the 'lump' with his club and took Williams to the city jail.

"In police court Williams refused to tell Judge Dedrick where he got the whisky and he was fined $10. He was remanded in default of payment to 'think it over.' Police Judge Dedrick announced that if a man were hauled before him with a few under his belt and not exactly drunk that he would apply a fine under the 'transporting' clause in the new ordinance. The breweries have asked that Judge Dedrick pass on the new ordinance, and he has taken it under advisement until next Tuesday.

"A man going to the freight depot in his own motor car, signing for a case of beer or jug of whisky he had ordered from Kansas City, and lifting it into his machine to take home to a sick wife, is liable to arrest and a $500 cash bond, Judge Dedrick ruled to-day, under a charge of transporting as an agent. He said that the ordinance does not interfere with interstate commerce because the liquor is not ordered direct from the producer. Wichita never was so dry as it is now. Hundreds of men who have come to town to spend a little saved up cash in a manner not to be recorded, walk the streets with their tongues parched and their throats cracked unless a soft drink can help them."

A sample of the "bone-dry" ordinances adopted by the Wichita city commissioners and above referred to briefly, were set out in the Kansas City Star, August 3, 1915, under a Wichita date line of August 2, 1915:

"The city commissioners at a meeting this afternoon adopted two ordinances aimed at liquor users in Wichita. The first ordinance was prepared by Mayor Bentley and will prevent the express companies from delivering liquor to the user's home or office. He must call at the depot for it.

"The other ordinance was prepared by Jerry Howard, commissioner, and fixes a severe penalty on any police officer who sells any of the liquor at the city hall that has been taken from bootleggers."

It would appear the Chief Stewart is not the only official bootlegger in the town.

Even the railroads were enlisted in the "new dry program," in an effort to prove that prohibition will prohibit, if the bolts and nuts are are just tightened up enough, and so the Missouri Pacific, in an anxious endeavor to save the boys and girls of Wichita, pathetically offered such assistance as it could to the end that at least one Kansas town become the real anteroom to Heaven. The following from the Kansas City Star, under a Wichita date line of August 3, 1915, tells the story:

"The Missouri Pacific Railroad Co. has cut Wichita and Sedgwick County out of liquor shipments. No whisky or beer can come within the confines of the county after an order that went into effect to-day. Agents have been getting liquor under fictitious names and in wholesale lots. Rather than get into the courts for carrying liquor illegally the road quit taking the consignments.

"The Rock Island, Santa Fe, and Frisco roads are still handling liquor shipments in here, however."

Wichita isn't the only Kansas town, however, that can boost of "the law" selling confiscated booze. On August 2, 1915, the Kansas City Star contained the "bone-dry" news story of the arrest and suspension of Captain of Police Ira Bonwell, of Kansas City, Kans., on the charge of selling "empty bottles" taken from joint keepers and bootleggers. He was tried, convicted, and "suspended" for a short time by the civil-service board. "He is a valuable officer and we can not get along without him for long," the chief told the board, in pleading for an early reinstatement. The board relented finally and reinstated him after a short time. It would never do to deprive the chief of the services of such a valuable man. Plenty of testimony was introduced at the hearing that the bottles weren't all "empty," but as he was only being tried for selling "empties" the board ruled the evidence out as incompetent, irrelevant, and highly immaterial to the issues joined.

The entire set of charges on which he was finally tried were as follows, according to the Kansas City Star, September 11, 1915:

1. Cursing, browbeating, and intimidating subordinate officers.
2. Failure and refusal to cooperate with patrolmen in making raids on gambling dens and blind pigs.
3. Intimidating witnesses who were subpœnaed to testify against him.
4. Showing favoritism in the handling of women prisoners who were hauled in by other members of the force.

NOTE.—He must have been a very "valuable officer" to the chief!

In a further attempt to tighten up the clamps on the Wichita lid drastic steps were taken there, according to the Topeka Daily Capital, September 10, 1915, for the purpose of making it dry "for sure this time, with no fooling":

"WICHITA, KANS., *September 9.*

"Wichita citizens who privately consume beer or liquor in the future will have to make a record at the city clerk's office, showing their names, addresses, quantity of liquor which they use; that they are of good moral character, and an affidavit that they can be relied upon not to furnish 'wet goods' for sale before they can have beer or liquor shipments hauled from the depots to their homes."

That this law proved highly "successful" is witnessed by hundreds of news items appearing since, showing almost unbelievable conditions of drunkenness, crime, wife beating, etc., caused by the bootleg, rot-gut, rot-brain system in vogue there.

It will be noticed that none of the ordinances or measures attempt to prohibit the sale, possession, or receipt of Jamaica ginger, the old ally of the Kansas drunkard. Poured in cider, it becomes a vile and highly intoxicating beverage, white as milk, and deadly in its effect.

That bootlegging, joint keeping, and Jamaica-ginger selling are close bedfellows of crime is again clearly proven by a news item appearing in the Wichita Beacon of date October 4, 1915:

"The district court of Sedgwick County will open Monday morning at 9 o'clock with the heaviest criminal docket since the court's establishment 45 years ago. The civil docket is also exceptionally heavy.

"In the two divisions 865 cases are scheduled for trial. Of these 509 are in Judge Thornton W. Sargent's division and 356 before Judge Thomas C. Wilson. Judge Sargent will have the criminal docket, consisting of 135 State cases and 35 city cases.

"* * * There will be four murder cases. They are: Auda Caplinger, for the murder of Detective W. L. Humphries; Bob McAdams, for the killing of Ben Ryder, a harvest hand; Guy Curtis, for the shooting of Burton Reed; and Clarence Richardson, for the murder of his wife.

"Liquor cases form nearly 70 per cent of the criminal prosecutions for the term. There are 90 State cases and 18 city cases docketed. This makes 108 whisky out of a total of 170 State and city criminal prosecutions."

An interesting "bone-dry" news item was contained in the Topeka Daily Capital under date of October 28, 1915, relative to some of the above-mentioned "whisky prosecutions," under date line "Wichita, Kans., October 28":

"When Judge Thornton W. Sargent, of division No. 2 of the district court, opened court this morning to resume the trials of liquor cases which were postponed because a charge had been published that the jury had been fixed up to free the jointists he made a lengthy statement. * * * Four of the jurors in Judge Sargent's court were excused because the county attorney objected to their services. He claimed they were disqualified for various reasons, principally because they were not taxpayers and had expressed opinions to liquor men. * * * Judge Hawks, assistant attorney general, is assisting the county attorney in the prosecution of liquor cases. The row began in court when three consecutive verdicts of not guilty were returned by as many juries, the county attorney declaring there was no use in trying any more."

Public sentiment seems to be "crystallized" all right in Wichita, but the crystallization is not in favor of enforcing the law by juries.

"Deluded and misguided people seem to think all they must do to make prohibition a success is to pass laws," recently said a prominent member of the Wichita legal bar (they have several different kinds of "bars" down there) in commenting on the liquor situation in Kansas, and particularly in Sedgwick County. "The time may come some day when the energy now wasted in fool prosecutions will be spent in building good roads, but it will never arrive until we quit putting a premium on hypocrisy and begin to frown upon the antics of the political prohibitionists. Wichita was all right before they began 'cleaning up,' and now all law is a joke. Juries refuse to convict just the same as in the 'good old days,' and the dry newspapers are ever ready to print any kind of a fool story declaring they are 'fixed.' You have to be 100 per cent insane to be a good Kansan any more. No wonder the legislature is taxing dogs and contemplating putting a tax on cats to raise enough money to keep the asylums going."

Another "booze and happy homes" item decorated the front pages of Wichita and Topeka newspapers on October 24, 1915, and the same delightful prohibition prosperity news continues to flood the Kansas news organs daily. Each time they arouse the "investigators" to the crying need for "more law and more penalty," but they run merrily on, and all the "bone-dry" laws in christendom will never put an end to them. If it is not "booze" it will be Jamaica ginger. But here is what "one of our prohibition homes" produced in Wichita:

"Gus Anderson has been drunk many times. Sunday when he looked into the cup too many times to retain his dignity and decorum and began to tear up the house Mrs. Anderson gave up. Anderson was arrested and yesterday his wife announced that she would move back to Lawrence, where she had employment waiting for her that would enable her to retain the respect of her acquaintances.

"Anderson's son Charley was taken to the reformatory Friday of last week."

It developed at Anderson's trial that he had been "looking into a cup" filled with Jamaica ginger, water, and sweetened with sugar. When a man looks into that kind of a cup something is going to be torn up. It is no wonder Gus's son is at the reformatory. The druggist who sold him the poison can go scott free under the Kansas laws, as Jamaica ginger is not considered "legally intoxicating"!

On November 12, in his own paper, Gov. Capper thanked God by way of a Thanksgiving proclamation "for our freedom from the blight of alcohol; for the sobriety and industry of our people," and the proclamation was promptly published as an "official document" and sent to the Antisaloon League to be published as more "proof." The governor must have had Topeka and Wichita especially in mind when writing this contribution to the league's literature.

"Leavenworth is clean," declared the attorney general, according to the Kansas City Journal, November 14, 1915. The next day a woman took an armful of bricks and smashed a joint in which 40 men were drinking.

Other Kansas towns were enrolled upon the "white flag of honor" during 1915, as well as 1916, but the following is typical of the inside working of the prohibitory law, and it is interesting to speculate just how public sentiment will be cared for should the bone-dry law just passed by the legislature be enforced in dead earnest:

[Topeka Daily Capital, Dec. 7, 1915.]

"ALTA VISTA, KANS., *December 6.*

"Dr. W. H. Little, a prominent physician of this place, was arrested by Sheriff Addie, of this county, yesterday, and taken to Alma, where he was charged with selling intoxicating liquor, on six different counts. He was later released on an $1,800 bond. He is proprietor of the Little pharmacy at this place, and a former member of the city council.

"His wife is an active club woman and is county president of the Woman's Christian Temperance Union. She was quite active in the last county and city election against the booze element."

Wichita's record as a "bone-dry" city is not confined to the summary removal of Chief Stewart, however. One of the policemen in this haven of prohibition "liberty" was given his passports February 18, 1916, when the fire built under him was too strong to resist and too hot for comfort. The Topeka Daily Capital of that day carried the story:

"WICHITA, KANS., *February 18.*

"Police Patrolman Robert Martin yesterday tendered his resignation when confronted with certain findings by Police Chief Hay and Assistant Chief Hanes. The police officials had been making an investigation of a complaint by Mrs. Fannie Fisher, a widow, that an officer in uniform had spent some time one night with a girl who was rooming at Mrs. Fisher's residence at 711 North Wabash.

"Martin asked that nothing be said about the matter to the newspapers. Martin is said to have admitted to the heads of the police department that he took the girl to the Fisher house on the night of the occurrence, which Mrs. Fisher reported. He denied any misconduct while there, but offered no explanation as to why he left his beat to go to the house. He said he considered his resignation 'closed the affair.' The young woman has not been found. An effort by Chief Hay to find her was not successful. A friend said she had left the city. The young woman became a roomer at the Fisher home several weeks ago. Mrs. Fisher believed the roomer was respectable, but asked her to give up her room following the visit of the uniformed policeman to the residence."

During the week prior to October 17, 1916, Attorney General Brewster and his trusty clan of "law enforcers" riddled things at Wichita. They "cleaned up the town" as it had never been cleaned up before. The ordinances passed more than two years by the city commissioners, all the crusading, jack-sniping, and snooping has thus far failed to "save" that somewhat lawless and at the same time prosperous city. Wichita, whatever its shortcomings, is rated as one of the best towns in the State. Located as it is in the rich oil and gas region, it attracts thousands of people every year. It is about the only city in the State that shows any gain in population since 1910, the other "towns" having lost enough, plus the county loss, to show a decrease in 1915 of 18,404 in population.

But Wichita must remain "famous" for the raids as long as the "fees" continue to flow into the pockets of the special prosecutors, so on October 17, 1916, another "blow-off" was staged there. This time it wasn't the chief or a "common policeman" who was landed. Worse. The "night captain," in whose hands the real destiny of the "law" rests, came in for a trimming. Just how it was done is best explained by the Topeka State Journal of that day:

"WOMEN, LIQUOR IN THE ROOMS OF WICHITA POLICE!—ATTORNEY GENERAL BREWSTER FILES CHARGES HERE TO-DAY—ASKS SUPREME COURT TO OUST NIGHT CAPTAIN—SOLD BOOZE TO CLASSY BUYERS—WILLIAM MURRELL SAID TO HAVE CONDUCTED A RESORT—STATE'S ATTORNEY STARTS OUT ON SOLID WEEK'S CAMPAIGN.

"Following numerous liquor raids in Wichita last week, S. M. Brewster, as attorney general, to-day turned his guns on the Wichita police force, when he asked the supreme court for an order ousting William Murrell from service as night captain of the force. Brewster, in his petition, alleges that Murrell has shielded law violators and has himself sold intoxicating liquors.

"Evidence against Murrell was gathered recently when Brewster used a drag net in securing testimony against Wichita jointists. In his petition Brewster alleges that Murrell sold liquor in rooms in which he lived. He also charges that men and women were permitted to gather in the rooms for the purpose of drinking. On certain occasions, the petition alleges, the rooms were used exclusively for Wichita ladies who travel the primrose path and consort with men who burn holes in the night.

"Immediate suspension of Murrell as night captain of the Wichita police force is asked. It is charged that Murrell is not in sympathy with the Kansas liquor and gambling laws and has winked at violations. On various occasions, it is charged, information has come to Murrell concerning the sale of liquors. The night captain has failed to present this information to the county attorney or to ask arrest of the violators, the petition recites.

"In the statehouse circles to-day was a feeling that the charges against Murrell were but the first card to be played by the attorney general in his fight on Wichita law violators and the police force of the town. Immediately following the filing of his complaint, Brewster left the city to begin a week's campaign tour. He did not outline his future plans."

Murrell was "gotten," and the furore of crusading, political flipflopping, and "covering up" lasted in Wichita for some time. The bootleggers, on the police force and elsewhere, merely shut up shop and waited until the storm had passed and then opened up again. While Brewster was hammering them over the head, others sprung up all over the State—in Leavenworth, Atchison, Topeka, Salina, and elsewhere. Not that they ever quit, but a new crop went to work in all the big and small towns with impunity, keeping an eye on the activities of the State constabulary in Wichita. When he quit there they kept right on. Public sentiment demands these sellers or they would not sell. And Wichita is another living example of how futile it is to enforce a law that is unpopular.

Recently the city administration cut out Sunday amusements there. The people demanded a referendum vote to show they did not want the law enforced. No heed was paid to the demand, and upon a plan being launched to take a "straw vote" on the matter the preachers flew into court and secured an injunction against it. And the people continue to rule!

Exclusive of appeal cases from police courts, of which there were a very great number—for the most part all bootlegging cases—the years 1914, 1915, and 1916 recorded 318 in the criminal division of the district court at Wichita. During the same time there were 459 divorce cases. While a very large number of divorce cases allege "abandonment and nonsupport," there is no way of telling from the record just what the real causes were. Owing to the slipshod manner in which the court records are kept in Wichita, it is almost impossible to determine to a certainty the disposition of many of the cases filed, and there is no way of determining the number of county-jail inmates for any year or to determine what caused their incarceration.

Very few, if any, police judges in the State will keep an accurate record, either, of the cases in their tribunals. "We have a number of arrests for drunkenness," said the police official of an inland Kansas town recently, "but they are all booked as 'disturbing the peace,'" which probably answers the question as to why they refuse to make any annual report showing the exact number.

Space will not permit an analysis of the police reports of Wichita, but that for the year 1916 is typical. Aside from the enormous number of arrests for drunkenness, maintaining liquor nuisances amount to 171. This, considered in the light of the connections existing there between the police and the underworld, and the fact that many of the whisky peddlers are given protection by the high officials would naturally result in a smaller amount of arrests for drunkenness than if the officers were instructed to "bring in" all bootleggers and intoxicated men and women. A large number of arrests on this account always results in public investigation by the ardent contingent hoping sometime to make prohibition such a success that law violations and drunkenness will cease to exist. The surest way, in their estimation, to bring this about is to rout the seller and arrest his customer. Police protection means license to do and dare, and they have been doing and daring in Wichita so long public sentiment is strongly opposed to any other system. The exclusive set likes it; they enjoy the adventure of a "slum trip" and the police see that they get it. There is no place in America, whether laboring under a license system or a bootleg system, where prohibition has made as sorry a showing as in Wichita. It is looked upon as a "red letter" spot in the prohibition area, and the more raiding done the worse the conditions become.

When ex-Gov. Stubbs prepared his "statistics" he claimed he used in his Chicago Antisaloon League speech, delivered March 27, 1910, he wired Judge Wilson, of the Sedgwick County district court, among others, asking him if the prohibitory law was being enforced, to which inquiry Judge Wilson replied: "Convictions are not more difficult in this district for violation of the prohibitory law than for violation of the other criminal laws of the State. This was not always so, but it is easily within the truth at the present time." A queer thing about the governor's "statistics" appearing as part of the speech he delivered in Chicago, and which is now one of the best sellers of the Antisaloon League, is that the letters from the various district judges are all dated during January, 1911, nine months after he delivered the speech.

In any event, Judge Wilson's declaration in the light of the most recent report from Wichita, that the county attorney threw up his hands in disgust after four juries had returned verdicts of not guilty in the

first four bootleg cases they tried in October, 1916, would indicate that the criminal laws of Kansas are indeed poorly "enforced" in Wichita, if, indeed, the liquor-violation convictions are on a par with other "criminal" acts.

It is almost needless to add, but extremely interesting nevertheless to know, that as a part of the "speech" there appears a letter signed by Mayor C. L. Davidson, of Wichita, dated January 27, 1911, almost a year after the "speech" was delivered, assuring Stubbs that "prohibitory laws are strictly enforced in Wichita. * * * There is no sentiment for old conditions." At that time there were probably 100 "regular" bootleggers receiving protection from the city officials, if reports published by the attorney general tell the truth.

Arrests for disturbing the peace in Wichita totaled 344 during 1916, which was a large increase over 1914 and 1915; assault-and-battery arrests were 57; vagrancy and loitering, male and female, 531; running houses of prostitution, aside from the places operated by the police, 90; lewdly abiding, except protected vice, 110; gambling, except protected games, 107; miscellaneous, 316, including all stealing, street walking, etc., not otherwise shown. The "miscellaneous" charges are large for every year.

Briefly summed up, the police records for Wichita, covering the years 1913, 1914, 1915, and 1916, as shown by the original books in the police department there, are:

1913.	
Drunk	841
Miscellaneous	1,721
Total	2,562
1914.	
Drunk	1,380
Miscellaneous	2,412
Total	3,792
1915.	
Total	4,391
1916.	
Total	4,587
1915.	
Drunk	1,525
Vagrancy	438
Disturbing the peace	336
Lewdly abiding	84
Houses of prostitution	87
Inmates of same	96
Liquor nuisance	172
Gambling	96
Concealed weapons	41
Miscellaneous	272
All others, including petit larceny, fighting, violation of speeding ordinances, street walking, etc	759
1916.	
Drunk	1,679
Vagrancy	531
Disturbing the peace	344
Lewdly abiding	110
Houses of prostitution	90
Inmates of same	
Liquor nuisance	171
Gambling	107
Concealed weapons	44
Miscellaneous	316
All others, including petit larceny, fighting, violation of speeding ordinances, street walking, etc	477

These figures do not include cases where suspected criminals were held for "investigation."

To follow the daily papers of Wichita, Topeka, and Kansas City, Mo., from January to December of any year, setting out the various stories carried covering the carnival of crime in Wichita, would be to burden this study with a volume much more extensive than space will possibly permit. While the matter of prohibition is looked upon as a huge joke there, raiding occupies a greater per cent of the time and energy of the police department, under the constant threats of attorney generals to oust the officials under the notorious ouster law now in force in Kansas. Since the large number of injunctions were granted in 1907, 1908, and 1909, and as much property as was possible to confiscate taken to pay attorney fees and costs, the program now is to hold the officials responsible for law enforcement. The burden has been cast from the shoulders of the attorney general's office as much as possible onto that of the local officials. Though public sentiment there is overwhelmingly in favor of peace and quiet, though law violation goes on, and despite the fact that the thinking people of Wichita know it is impossible to build a great city on clamor, chaos, and constant cannonading, the reform crowd is there as usual on the job, digging up "nuisances," etc., and demanding that the attorney general stop it. His easiest course is to demand that the local men stop it, and when it becomes so "terribly bad" he buckles on his armor and slides into town with a six-shooter in each hand and a knife between his teeth. On those occasions he finds plenty to do, but has become tired of it all.

Some idea of how this crusading works, when mothers neglect their children to become expert snoops, or ranting revival extremists, is shown by the black record Wichita carries as a city where juvenile vice, crime, and delinquency are rampant. A dispatch to the Topeka Capital, bearing a Wichita date line of February 8, 1916, is a sample of how the Kansas brand of prohibition, as applied to that city, saves the boys:

"When Mrs. Joe Hendee returned to her home in the fashionable part of the city to-day, she found the house disarranged. Calling the neighbors, she learned that two small boys had been seen about the place. Mrs. Hendee led a search of the house, and giving up in despair, sat down to study and then out from under a bed crawled two lads 11 years of age. The boys, at the police station, admitted that they had robbed a dozen homes, using stove polish as a blind to find out if the families were away. They implicated two other lads who are 13 and 9 years old."

No claim is made that "the open saloon" would cure these boys of their criminal diversions. Not at all. The point raised here is that when efforts are made to cram down the throats of any people, a law so unpopular, so ridiculous and so overwhelmingly opposed to public sentiment, and 90 per cent of the "home energy" and club energy, police energy, church energy, and political energy is expended in trying to make it a "success," things more highly important are bound to suffer—and home life, booze ridden, and dissolute seems to be the "incidental institution" that is suffering from the rattle-trap system all over Kansas—and it is by no means confined to Kansas. Every prohibition city tells the same story.

On February 26, 1916, the Capital carried another "happy-home" item from Wichita, also typical of the resplendent results of a ramshackle system, cursed with vice, crime, and bootlegging, not to mention Jamaica ginger:

"WICHITA, KANS., *February 26.*

"Juanita Barnett, aged 12, quarreled with her brother Sidney, 15 years old, here to-day, and going to Valley Center 6 miles north of here, drank chloroform. She is in a critical condition. The girl left a note saying she would do something to make her brother sure enough ashamed of her. She made her home with her grandmother. Her mother is in Kansas City and the whereabouts of her father is unknown."

On the following day the Kansas City Star carried an interesting story of two girls, 16 and 17 years old, respectively, who ran away from a "dinky" Kansas town, near Wichita, going to Kansas City to enter lives of shame. "We are tired of being pestered to death by the nosey, pokey old women," they said. "Its no wonder they drive girls to ruination." And on the same day according to the Kansas City Star, Carl Sherman, a jitney driver was find $100 because the police "discovered" he was running a "jitney joint" in Wichita. Sherman said he could not recall from whom he purchased the liquor, but said he bought it all in Wichita.

Another "happy home" prohibition item appeared in the Topeka Daily Capital, under a Wichita date line, May 8, 1916, which is also typical of the general news that occasionally breaks through the dry crust in Kansas:

"When Mrs. Walter Morris, the wife of one of the richest men in Wichita, returned home Saturday morning from a trip to Missouri, she found her home locked against her. None of the family would open the door, and Mrs. Morris got an ax to break in. She was taken to the city hall by the police and held several hours.

"Morris later in the day filed a suit for divorce, mentioning Having Roberts or L. W. Roberts, a furniture dealer in Mexico, Mo., in the petition. Morris alleges that his wife met Roberts, and the two registered at the Baltimore Hotel, in Moberly, Mo., as 'L. Williams and wife, Hannibal, Mo.' They were arrested, he claims, charged with disorderly conduct.

"Mr. and Mrs. Morris were married at Manhattan, October 31, 1913. She was his second wife and before her marriage was a widow. Roberts had visited the Morris family in Wichita, and the husband alleges that on one of these occasions his wife's actions were not wifely.

"The Morris home in Riverside is a $50,000 mansion overlooking the river, and one of the few brownstone fronts of the West. It used to be known as Campbell Castle, having been built in the boom days by Barbecue Campbell, a famous cattleman."

From all appearances, Wichita could stand another "revival." A recent dispatch from Wichita, contained in the Kansas City Journal, tells the story: "County and city officials anticipate that Attorney General Brewster will make an attack on Wichita joints within a week. Letters have been received, * * * charging that the lid is off in Wichita, and that it must be clamped down. The letters give addresses where liquor is alleged to be sold. The sheriff and county attorney claim they are doing all in their power to close the town, while the mayor and police chief say they are doing their best with the material they have to work with, and that recently in particular so many robberies have occurred in Wichita that police have become compelled by public sentiment to quit chasing bootleggers and chase thieves."

And just to prove that Wichita is just like other towns all over the world, the revivals, bootleg footraces, and hundreds of robberies that go to "prove" that Bill Sunday saved the town and stopped up all the leaks that State-wide prohibition has possibly "overlooked," the glad tidings were "tided" forth by the Topeka Daily Capital of August 4, 1916, that they possess at least one real high financier there—one at least aside from former Chief of Police O. K. Stewart, who has been caught. "L. W. Kennedy, cashier for the Missouri & Kansas Telephone Co.," says a dispatch from Wichita to the Capital of that date, "in this city, was to-night placed under arrest charged with a State warrant with falsifying books of the company to cover up an alleged shortage of more than $20,000. His arrest followed an examination of the company's bank deposits by an auditor of the company." It was needless for the dispatch to add that "Brother Kennedy" was one of the Bill Sunday revival team and a prominent member of dry society.

But aside from all this, Wichita is "famous" for another and most important reason. A reason that is always at the bottom of the fame of dry cities. Wichita is not only the headquarters for drug sellers and dope dispensers, but their deadly narcotic traffic is fast cutting deep inroads into the social and commercial welfare of that community.

Dr. C. L. Katz, one of the most prominent physicians of that city, was arrested on June 1, 1916, in Kansas City, and had in his possession a large amount of "dope" to be delivered to his agent, a "formerly of Wichita" daughter of prohibition, at Kansas City. Federal agents nailed him as he left the Wichita train at the Kansas City, Mo., union depot, according to all the Kansas City papers of that date. At the same time a raid was made of his apparently respectable office in Wichita, and, according to a Wichita dispatch to the Kansas City Star, June 3, 1916, "Figures obtained by the internal-revenue officers here from records seized in a raid on the headquarters of Dr. C. L. Katz show a total of $14,510 worth of morphine and gum opium. That amount, which the revenue officers consider a conservative estimate, represents narcotics handled by the doctor between September 6 and May 25. In the nine months 1,442 bottles of morphine, in 40-bottle lots, were received by Katz, according to the confiscated records. Valuing that at the rate which Katz asked for the one bottle sold in Kansas City to a revenue inspector in disguise, the whole was worth $7,210. Twenty and three-fourths pounds of raw opium were ordered by Katz in the nine months.

"The revenue exacted by the Government on smoking opium is $300 a pound, and would have been $6,300 if paid on smoking opium made from the raw opium. This valuation on the opium handled by Katz does not take into consideration its real price in the dispensing and is a very low estimate, the revenue officers believe."

It developed on the hearing of Dr. Katz that many "prominent" people were among his patients in Wichita and in other Kansas towns.

Kansas has a most stringent cigarette law, making it a misdemeanor to sell cigarettes to minors and prohibiting their sale under any circumstances. While Gov. Capper added a glittering pebble of "fame" to the already overflowing cornucopia of notoriety of which that State boasts, by issuing a royal edict that cigarette smokers as well as booze fighters would be forever barred from State employment, according to the Kansas City Journal, August 17, 1915, "dope cigarettes" were being sold by the thousand throughout the State. According to the Topeka State Journal of June 21, 1916, Federal inspectors stated that there were not less than 1,300 dope users in Wichita, and while they would give no estimate as to the number in the entire State, they said from what progress they had made up to that time in their survey, the number could easily be put at 15,000. Nearly twice that number were found according to later developments.

Under the headlines, "Now It's Doped Cigarettes;" "Needle Artist in Wichita jail mixed morphine with Tobacco," the Topeka State Journal of February 2, 1916, stated, under a Wichita date line of that day, that many bootleggers and others, men and women, locked up in the Wichita jail have been caught making cigarettes with dope in them. In commenting on the revelations made by the Federal investigators, the Topeka and Wichita papers all remarked that they could not understand how the drug had gotten such a strangle hold on the men, women, and children of the city.

That morphine poured in whisky, "rectified" for bootlegging purposes, has been drunk for years in Wichita is on open secret. Other kinds of dope and "hop" are in common use there. During the past year cigarette bootleggers have been supplying boys and girls, as well as adults, with manufactured dope cigarettes. "We can not begin to catch these scoundrels," the officials declared when called upon to put a stop to the traffic. "They dispose of their stock quickly and even before we can start a search for them, they cross the State line into Oklahoma and are lost to us. They always come back, though. They are doing a thriving business here. But we have no way of detecting them or determining their purpose until they have gone."

At the present time liquor and drug "probes" are being carried on there. Chief Parsons, of Topeka, declares that when a bootlegger is "prohibited" from bootlegging by constant arresting, he turns thief, and it might be added in conclusion that when the public becomes "prohibited" from patronizing him, it will patronize another and let the thief the law has created go unapprehended. In this delightful process of creation and immunity, the police must necessarily lend a hand because, as the Wichita police declare, they are so busy chasing regular bootleggers the preachers and women dig up for them to catch they have no time for robbers and pickpockets. Neither have they any time for vendors of dope-laden cigarettes. State employees are fired if they smoke a cigarette containing tobacco, or drink beer containing a small per cent of alcohol, or wine made from the purest fruit that grows, but Wichita boys and girls are "licensed" by the rattle-trap system to peddle rot gut and rot brain booze, hard cider mixed with ginger ale, to drink it and to be exploited by the Antisaloon League stump-speaking contingent, as the "bightest, happiest children on earth because they have never seen an open saloon"; and are licensed to buy, sell, and use dope cigarettes, rob, cheat, and steal; fill houses of prostitution, jails, and penitentiaries, as well as premature graves, all because they are cursed with a system reeking with social filth and patched up and misrepresented by men who are afraid to tell the truth about it and who are paid Sunday school pennies and dimes, and big real dollars by the "larger and more interested" contributors.

On a recent trip to Wichita Attorney General Brewster confiscated a large quantity of hard cider in a grocer stock. Complaints had been sent in by the white-plague league that the cider was "fermented" and had made several deacons feel pretty "pert," so the hand of the law was slammed into the grocer's ribs. "A law must be passed prohibiting cider of all kinds. It will become fermented and then there is always trouble," said the State chief of constabulary. And no one doubts he told the truth. Thus the apple is doomed in fair Kansas. The only thing now left for the people of Wichita, Topeka, Salina, and other decadent commonwealths in that grand and glorious State of wind and noise is Jamaica ginger and cigarettes made of alfalfa and dope. These can be smuggled in and Jamaica ginger comes in by the barrel, according to Chief Parsons, of Topeka, is intensely intoxicating, and lies at the bottom of numerous murders, rapes, thefts, juvenile crimes of all kinds, and is one of the fondlings of dear old prohibition Kansas that is shooting the insanity rate up at the astounding number of over 700 cases annually. For a State that has witnessed a caravan of population headed toward other and more tolerant Commonwealths at the rate of 19,000 in less than four years, that is a very fair record.

Bootlegging has become an art, dope a necessity, and cheating the law by "cutting in" with the police has become a passport to freedom. These three "finished products" of prohibition constitute the great triumvirate of progress, which together with the antics of Carrie Nation and the farmer who fondly kissed Bill Bryan, have kept Kansas in the foreground of notoriety for, lo, these many years.

The Crime of Poverty.

EXTENSION OF REMARKS

OF

HON. WARREN WORTH BAILEY,

OF PENNSYLVANIA,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. BAILEY. Mr. Speaker, in these best of times and worst of times, in this era of high wages and a higher cost of living, at this juncture in our history when men more than ever before were confronted on the one hand with evidences of abounding wealth and on the other with the shocking manifestations of direst poverty, it seems not improper to invite attention once more to a remarkable address delivered more than 30 years ago to a western audience by the late Henry George under the auspices of the Knights of Labor, then the most powerful branch of organized workmen.

This address is as timely in 1917 as it was in 1885. It is illuminating in almost every sentence, and it throws a light on current facts and conditions which more than any other of which I know reveals their true relations. I am sure that this will be a helpful contribution to a vital discussion which is appealing to men and women of all classes, and I bespeak for it that considerate attention to which I believe it entitled.

The address follows:

THE CRIME OF POVERTY.

[An address delivered in the Opera House, Burlington, Iowa, Apr. 1, 1885, under the auspices of Burlington Assembly, No. 3135, Knights of Labor.]

Ladies and gentlemen, I propose to talk to you to-night of the crime of poverty. I can not, in a short time, hope to convince you of much; but the thing of things I should like to show you is that poverty is a crime. I do not mean that it is a crime to be poor. Murder is a crime, but it is not a crime to be murdered; and a man who is in poverty I look upon not as a criminal in himself so much as the victim of a crime for which others, as well, perhaps, as himself, are responsible. That poverty is a curse, the bitterest of curses, we all know. Carlyle was right when he said that the hell of which Englishmen were most afraid was the hell of poverty; and this is true, not of Englishmen alone, but of people all over the civilized world, no matter what their nationality. It is to escape this hell that we strive and strain and struggle, and work on oftentimes in blind habit long after the necessity for work is gone.

The curse born of poverty is not confined to the poor alone; it runs through all classes, even to the very rich. They, too, suffer; they must suffer, for there can not be suffering in a community from which any class can totally escape. The vice, the crime, the ignorance, the meanness, born of poverty, poison, so to speak, the very air which rich and poor alike must breathe.

I walked down one of your streets this morning and I saw three men going along with their hands chained together. I knew for certain that those men were not rich men; and although I do not know the offense for which they were carried in chains through your streets, this, I think, I can safely say, that if you trace it up you will find it in some way to spring from poverty. Nine-tenths of human misery I think you will find, if you look, to be due to poverty. If a man chooses to be poor he commits no crime in being poor, provided his poverty hurts no one but himself. If a man has others dependent upon him; if there are a wife and children whom it is his duty to support, then if he voluntarily chooses poverty it is a crime—aye, and I think that in most cases the men who have no one to support but themselves are men that are shirking their duty. A woman comes into the world for every man; and for every man who lives a single life, caring only for himself, there is some woman who is deprived of her natural supporter. But while a man who chooses to be poor can not be charged with crime it is certainly a crime to force poverty on others. And it seems to me clear that the great majority of those who suffer from poverty are poor not from their own particular faults but because of conditions imposed by society at large. Therefore I hold that poverty is a crime—not an individual crime, but a social crime—a crime for which we all, poor as well as rich, are responsible.

Two or three weeks ago I went one Sunday evening to the church of a famous Brooklyn preacher. Mr. Sankey was singing, and something like a revival was going on there. The clergyman told some anecdotes connected with the revival, and recounted some of the reasons why men failed to become Christians. One case he mentioned struck me. He said he had noticed on the outskirts of the congregation, night after night, a man who listened intently, and who gradually moved forward. One night, the clergyman said, he went to him, saying "My brother are you not ready to become a Christian?" The man said, no, he was not. He said it not in a defiant tone but in a sorrowful tone. The clergyman asked him why, whether he did not believe in the truths he had been hearing? Yes; he believed them all. Why, then, wouldn't he become a Christian? "Well," he said, "I can't join the church without giving up my business; and it is necessary for the support of my wife and children. If I give that up I don't know how in the world I can get along. I had a hard time before I found my present business, and I can not afford to give it up. Yet, I can't become a Christian without giving it up." The clergyman asked, "Are you a rum seller?" No; he was not a rum seller. Well, the clergyman said, he didn't know what in the world the man could be; it seemed to him that a rum seller was the only man who does a business that would prevent his becoming a Christian, and he finally said, "What is your business?" The man said, "I sell soap." "Soap!" exclaimed the clergyman, "you sell soap? How in the world does that prevent you becoming a Christian?" "Well," the man said, "it is this way; the soap I sell is one of these patent soaps that are extensively advertised as enabling you to clean clothes very quickly, as containing no deleterious compound whatever. Every cake of the soap I sell is wrapped in a paper on which is printed a statement that it contains no injurious chemicals, whereas the truth of the matter is that it does, and that though it will take the dirt out of the clothes pretty quickly, it will, in a little while, rot them completely out. I have to make my living in this way, and I can not feel that I can become a Christian if I sell that soap." The minister went on describing how he labored unsuccessfully with that man, and finally wound up by saying, "He stuck to his soap and lost his soul."

But if that man lost his soul was it his fault alone? Whose fault is it that social conditions are such that men have to make that terrible choice between what conscience tells them is right and the necessity of earning a living? I hold that it is the fault of society; that it is the fault of us all. Pestilence is a curse. The man who would bring cholera to this country, or the man who, having the power to prevent its coming here, would make no effort to do so would be guilty of a crime. Poverty is worse than cholera; poverty kills more people than pestilence, even in the best of times. Look at the death statistics of our cities; see where the deaths come quickest; see where it is that little children die like flies—it is in the poorer quarters. And the man who looks with careless eyes upon the ravages of this pestilence, the man who does not set himself to stay and eradicate it, he, I say, is guilty of a crime.

If poverty is appointed by the Power which is above us all, then it is no crime; but if poverty is unnecessary, then it is a crime for which society is responsible and for which society must suffer.

I hold, and I think no one who looks at the facts can fail to see, that poverty is utterly unnecessary. It is not by the decree of the Almighty, but it is because of our own injustice, our own selfishness, our own ignorance, that this scourge, worse than any pestilence, ravages our civilization, bringing want and suffering and degradation, destroying souls as well as bodies. Look over the world, in this heyday of nineteenth century civilization. In every civilized country under the sun you will find men and women whose condition is worse than that of the savage; men and women and little children with whom the veriest savage could not afford to exchange. Even in this new city of yours, with virgin soil around you, you have had this winter to institute a relief society. Your roads have been filled with tramps, 15, I am told, at one time taking shelter in a roundhouse here. As here, so everywhere, and poverty is deepest where wealth most abounds.

What more unnatural than this? There is nothing in nature like this poverty which to-day curses us. We see rapine in nature; we see one species destroying another; but as a general thing animals do not feed on their own kind; and wherever we see one kind enjoying plenty, all individuals of that kind share it. No man, I think, ever saw a herd of buffalo of which a few were fat and the great majority lean. No man ever saw a flock of birds of which two or three were swimming in grease and the others all skin and bone. Nor in savage life is there anything like the poverty that festers in our civilization.

In a rude state of society there are seasons of want, seasons when people starve; but they are seasons when the earth has refused to yield her increase, when the rain has not fallen from the heavens, or when the land has been swept by some foe—not when there is plenty; and yet the peculiar characteristic of this modern poverty of ours is, that it is deepest where wealth most abounds.

Why, to-day, while over the civilized world there is so much distress, so much want? What is the cry that goes up? What is the current explanation of the hard times? Overproduction! There are so many clothes that men must go ragged; so much coal that in the bitter winters people have to shiver; such overfilled granaries that people actually die by starvation! Want due to overproduction! Was a greater absurdity ever uttered? How can there be overproduction till all have enough? It is not overproduction, it is unjust distribution.

Poverty necessary! Why, think of the enormous powers that are latent in the human brain! Think how invention enables us to do with the power of one man—what not long ago could not be done by the power of a thousand. Think that in England alone the steam machinery in operation is said to exert a productive force greater than the physical force of the population of the world, were they all adults. And yet we have only begun to invent and discover. We have not yet utilized all that has already been invented and discovered. And look at the powers of the earth. They have hardly been touched. In every direction as we look new resources seem to open. Man's ability to produce wealth seems almost infinite; we can set no bounds to it. Look at the power that is flowing by your city in the current of the Mississippi that might be set at work for you. So in every direction energy that we might utilize goes to waste; resources that we might draw upon are untouched. Yet men are delving and straining to satisfy mere animal wants; women are working, working, working their lives away, and too frequently turning in despair from that hard struggle to cast away all that makes the charm of woman.

If the animals can reason, what must they think of us? Look at one of those great ocean steamers plowing her way across the Atlantic, against wind, against wave, absolutely setting at defiance the utmost power of the elements. If the gulls that hover over her were thinking beings, could they imagine that the animal that could create such a structure as that could actually want for enough to eat? Yet so it is. How many even of those of us who find life easiest are there who really live a rational life? Think of it, you who believe that there is only one life for man—what a fool at the very best is a man to pass his life in this struggle to merely live. And you who believe, as I believe, that this is not the last of man, that this is a life that opens but another life, think how nine-tenths, aye, I do not know but ninety-nine hundredths of all our vital powers are spent in a mere effort to get a living, or to heap together that which we can not by any possibility take away. Take the life of the average workingman. Is that the life for which the human brain was intended and the human heart was made? Look at the factories scattered through our country. They are little better than penitentiaries.

I read in the New York papers a while ago that the girls at the Yonkers factories had struck. The papers said that the girls did not seem to know why they had struck, and intimated that it must be just for the fun of striking. Then came out the girls' side of the story, and it appeared that they had struck against the rules in force. They were fined if they spoke to one another, and they were fined still more heavily if they laughed.

There was a heavy fine for being a minute late. I visited a lady in Philadelphia who had been a forewoman in various factories, and I asked her, "Is it possible that such rules are enforced?" She said it was so in Philadelphia. There is a fine for speaking to your next neighbor, a fine for laughing; and she told me that the girls in one place where she was employed were fined 10 cents a minute for being late, though many of them had to come for miles in winter storms. She told me of one poor girl who really worked hard one week and made $3.50, but the fines against here were $5.25. That seems ridiculous; it is ridiculous, but it is pathetic, and it is shameful.

But take the cases of those even who are comparatively independent and well off. Here is a man working hour after hour, day after day, week after week, in doing one thing over and over again, and for what? Just to live. He is working 10 hours a day in order that he may sleep 8 and may have 2 or 3 hours for himself when he is tired out and all his faculties are exhausted. That is not a reasonable life; that is not a life for a being possessed of the powers that are in man; and I think every man must have felt it for himself. I know that when I first went to my trade I thought to myself that it was incredible that a man was created to work all day long just to live. I used to read the Scientific American, and as invention after invention was heralded in that paper I used to think to myself that when I became a man it would not be necessary to work so hard. But, on the contrary, the struggle for existence has become more and more intense. People who want to prove the contrary get up masses of statistics to show that the condition of the working classes is improving. Improvement that you have to take a statistical microscope to discover does not amount to anything. But there is no improvement.

Improvement! Why, according to the last report of the Michigan Bureau of Labor Statistics, as I read yesterday in a Detroit paper, taking all the trades, including some of the very high-priced ones, where the wages are from $6 to $7 a day, the average earnings amount to $1.77, and taking out waste time, to $1.40. Now when you consider how a man can live and bring up a family on $1.40 a day, even in Michigan, I do not think you will conclude that the condition of the working classes can have very much improved.

Here is a broad general fact that is asserted by all who have investigated the question, by such men as Hallam, the historian, and Prof. Thorold Rogers, who has made a study of the history of prices as they were five centuries ago. When all the productive arts were in the most primitive state, when the most prolific of our modern vegetables had not been introduced, when the breeds of cattle were small and poor, when there were hardly any roads, and transportation was exceedingly difficult, when all manufacturing was done by hand—in that rude time the condition of the laborers of England was far better than it is to-day. In those rude times no man need fear want save when actual famine came, and owing to the difficulties of transportation the plenty of one district could not relieve the scarcity of another. Save in such times no man need fear want. Pauperism, such as exists in modern times, was absolutely unknown. Every one, save the physically disabled, could make a living, and the poorest lived in rude plenty. But, perhaps, the most astonishing fact brought to light by this investigation is that at that time, under those conditions, in those "dark ages," as we call them, the working day was only eight hours. While, with all our modern inventions and improvements, our working classes have been agitating and struggling in vain to get the working day reduced to eight hours.

Do these facts show improvement? Why, in the rudest state of society, in the most primitive state of the arts, the labor of the natural breadwinner will suffice to provide a living for himself and for those who are dependent upon him. Amid all our inventions there are large bodies of men who can not do this. What is the most astonishing thing in our civilization? Why, the most astonishing thing to those Sioux chiefs who were recently brought from the far West and taken through our manufacturing cities in the East, was not the marvelous inventions that enabled machinery to act almost as if it had intellect; it was not the growth of our cities; it was not the speed with which the railway car whirled along; it was not the telegraph or the telephone that most astonished them, but the fact that amid this marvelous development of productive power, they found little children at work. And astonishing that ought to be to us; a most astounding thing!

Talk about improvement in the condition of the working classes, when the facts are that a larger and larger proportion of women and children are forced to toil. Why I am told that, even here in your own city, there are children of 13 and 14 working in factories. In Detroit, according to the report of the Michigan Bureau of Labor Statistics, one-half of the children of school age do not go to school. In New Jersey, the report made to the legislature discloses an amount of misery and ignorance that is appalling. Children are growing up there compelled to monotonous toil when they ought to be at play; children who do not know how to play; children who have been so long accustomed to work that they have become used to it; children growing up in such ignorance that they do not know what country New Jersey is in; that they never heard of George Washington; that some of them think Europe is in New York. Such facts are appalling; they mean that the very foundations of the Republic are being sapped. The dangerous man is not the man who tries to excite discontent; the dangerous man is the man who says that all is as it ought to be. Such a state of things can not continue; such tendencies as we see at work here can not go on without bringing at last an overwhelming crash.

I say that all this poverty and the ignorance that flows from it is unnecessary; I say that there is no natural reason why we should not all be rich, in the sense not of having more than each other, but in the sense of all having enough to completely satisfy all physical wants; of all having enough to get such an easy living that we could develop the better part of humanity. There is no reason why wealth should not be so abundant that no one should think of such a thing as little children at work, or a woman compelled to a toil that nature never intended her to perform; wealth so abundant that there would be no cause for that harassing fear that sometimes paralyzes even those who are not considered "the poor," the fear that every man of us has probably felt that if sickness should smite him, or if he should be taken away, those whom he loves better than his life would become charges upon charity. "Consider the lilies of the field, how they grow; they toil not, neither do they spin." I believe that in a really Christian community, in a society that honored not with the lips but with the act the doctrines of Jesus, no one would have occasion to worry about physical needs any more than do the lilies of the field. There is enough and to spare. The trouble is that in this mad struggle we trample in the mire what has been provided in sufficiency for us all; trample it in the mire while we tear and rend each other.

There is a cause for this poverty, and if you trace it down you will find its root in a primary injustice. Look over the world to-day—poverty everywhere. The cause must be a common one. You can not attribute it to the tariff, or to the form of government, or to this thing or to that in which nations differ; because, as deep poverty is common to them all, the cause that produces it must be a common cause. What is that common cause? There is one sufficient cause that is common to all nations; and that is, the appropriation as the property of some, of that natural element on which and from which all must live.

Take that fact I have spoken of, that appalling fact that even now it is harder to live than it was in the ages dark and rude five centuries ago. How do you explain it? There is no difficulty in finding the cause. Whoever reads the history of England or the history of any other civilized nation (but I speak of the history of England because that is the history with which we are best acquainted) will see the reason. For century after century a Parliament composed of aristocrats and employers passed laws endeavoring to reduce wages, but in vain. Men could not be crowded down to wages that gave a mere living because the bounty of nature was not wholly shut up from them; because some remains of the recognition of the truth that all men have equal rights on the earth still existed; because the land of that country, that which was held in private possession, was only held on a tenure derived from the nation and for a rent payable back to the nation. The church lands supported the expenses of public worship, of the maintenance of seminaries, and the care of the poor; the Crown lands defrayed the expenses of the civil list; and from a third portion of the lands, those held under military tenures, the army was provided for. There was no national debt in England at that time. They carried on wars for hundreds of years, but at the charge of the landowners. And, more important still, there remained everywhere—and you can see in every old English town their traces to this day—the common lands to which any of the neighborhood was free. It was as those lands

were inclosed; it was as the commons were gradually monopolized, as the church lands were made the prey of greedy courtiers, as the Crown lands were given away as absolute property to the favorites of the King, as the military tenants shirked their rents and laid the expenses they had agreed to defray upon the nation in taxation, that bore upon industry and upon thrift—it was then that poverty began to deepen and the tramp appeared in England, just as to-day he is appearing in our new States.

Now, think of it, is not land monopolization a sufficient reason for poverty? What is man? In the first place, he is an animal, a land animal, who can not live without land. All that man produces comes from land, all productive labor in the final analysis consists in working up land, or materials are drawn from land into such forms as fit them for the satisfaction of human wants and desires. Why, man's very body is drawn from the land. Children of the soil, we come from the land, and to the land we must return. Take away from man all that belongs to the land, and what have you but a disembodied spirit? Therefore, he who holds the land on which and from which another man must live is that man's master, and the man is his slave. The man who holds the land on which I must live can command me to life or to death just as absolutely as though I were his chattel. Talk about abolishing slavery—we have not abolished slavery—we have only abolished one rude form of it, chattel slavery. There is a deeper and more insidious form, a more cursed form yet before us to abolish in this industrial slavery that makes a man a virtual slave, while taunting him and mocking him with the name of freedom. Poverty! Want! They will sting as much as the lash. Slavery! God knows there are horrors enough in slavery; but there are deeper horrors in our civilized society to-day. Bad as chattel slavery was, it did not drive slave mothers to kill their children; yet you may read in official reports that the system of child insurance, which has taken root so strongly in England and which is now spreading over our Eastern States, has perceptibly and largely increased the rate of child mortality. What does that mean?

Robinson Crusoe, as you know, when he rescued Friday from the cannibals made him his slave. Friday had to serve Crusoe. But supposing Crusoe had said, "Oh, man and brother, I am very glad to see you, and I welcome you to this island, and you shall be a free and independent citizen, with just as much to say as I have, except that this island is mine, and, of course, as I can do as I please with my own property you must not use it save upon my terms," Friday would have been just as much Crusoe's slave as though he had called him one. Friday was not a fish, he could not swim off through the sea; he was not a bird, and could not fly off through the air; if he lived at all he had to live on that island. And if that island was Crusoe's, Crusoe was his master through life to death.

A friend of mine, who believes as I do upon this question, was talking a while ago with another friend of mine who is a greenbacker, but who had not paid much attention to the land question. Our greenbacker friend said, "Yes; yes; the land question is an important question; oh, I admit that the land question is a very important question, but then there are other important questions. There is this question, and that question, and the other question; and there is the money question. The money question is a very important question; it is a more important question than the land question. You give me all the money, and you can take all the land." My friend said, "Well, suppose you had all the money in the world and I had all the land in the world, what would you do if I were to give you notice to quit?"

Do you know that I do not think the average man realizes what land is? I know a little girl who has been going to school for some time, studying geography, and all that sort of thing, and one day she said to me: "Here is something about the surface of the earth. I wonder what the surface of the earth looks like?" "Well," I said, "look out into the yard there. That is the surface of the earth." She said, "That the surface of the earth? Our yard the surface of the earth? Why, I never thought of it!" That is very much the case not only with grown men, but with such wise beings as newspaper editors. They seem to think, when you talk of land, that you always refer to farms; to think that the land question is a question that relates entirely to farmers, as though land had no other use than growing crops. Now, I should like to know how a man could even edit a newspaper without having the use of some land. He might swing himself by straps and go up in a balloon, but he could not even then get along without land. What supports the balloon in the air? Land; the surface of the earth. Let the earth drop, and what would become of the balloon? The air that supports the balloon is supported in turn by land. So it is with everything else men can do. Whether a man is working away 3,000 feet under the surface of the earth or whether he is working up in the top of one of those immense buildings they have in New York, whether he is plowing the soil or sailing across the ocean, he is still using land.

Land! Why, in owning a piece of ground, what do you own? The lawyers will tell you that you own from the center of the earth right up to heaven; and, so far as all human purposes go, you do. In New York they are building houses 13 and 14 stories high. What are men living in those upper stories paying for? There is a friend of mine who has an office in one of them, and he estimates that he pays by the cubic foot for air. Well, the man who owns the surface of the land has the renting of the air up there and would have if the buildings were carried up for miles.

This land question is the bottom question. Man is a land animal. Suppose you want to build a house; can you build it without a place to put it? What is it built of? Stone or mortar or wood or iron—they all come from the earth. Think of any article of wealth you choose, any of those things which men struggle for, where do they come from? From the land. It is the bottom question.

The land question is simply the labor question, and when some men own that element from which all wealth must be drawn, and upon which all must live, then they have the power of living without work, and therefore those who do work get less of the products of work.

Did you ever think of the utter absurdity and strangeness of the fact that all over the civilized world the working classes are the poor classes? Go into any city in the world and get into a cab and ask the man to drive you to where the working people live; he won't take you to where the fine houses are; he will take you, on the contrary, into the squalid quarters, the poorer quarters. Did you ever think how curious that is? Think for a moment how it would strike a rational being who had never been on the earth before, if such an intelligence could come down, and you were to explain to him how we live on earth, how houses and food and clothing and all the many things we need are all produced by work; would he not think that the working people would be the people who lived in the finest houses and had most of everything that work produces? Yet, whether you took him to London or Paris or New York or even to Burlington, he would find that those called working people were the people who lived in the poorest houses.

All this is strange—just think of it. We naturally despise poverty, and it is reasonable that we should. I do not say—I distinctly repudiate it—that the people who are poor are poor always from their own fault, or even in most cases; but it ought to be so. If any good man or woman had the power to create a world it would be a sort of a world in which no one would be poor unless he was lazy or vicious. But that is just precisely the kind of a world that this is; that is just precisely the kind of a world that the Creator has made. Nature gives to labor, and to labor alone; there must be human work before any article of wealth can be produced, and, in a natural state of things, the man who toiled honestly and well would be the rich man, and he who did not work would be poor. We have so reversed the order of nature that we are accustomed to think of a workingman as a poor man.

And if you trace it out I believe you will see that the primary cause of this is that we compel those who work to pay others for permission to do so. You buy a coat, a horse, a house; there you are paying the seller for labor exerted, for something that he has produced or that he has got from the man who did produce it; but when you pay a man for land, what are you paying him for? You pay him for something that no man produced; you pay him for something that was here before man was, or for a value that was created, not by him individually, but by the community of which you are a part. What is the reason that the land here where we stand to-night is worth more than it was 25 years ago? What is the reason that land in the center of New York, that once could be bought by the mile for a jug of whisky, is now worth so much that, though you were to cover it with gold, you would not have its value. Is it not because of the increase of population? Take away that population, and where would the value of the land be? Look at it in any way you please.

We talk about overproduction. How can there be such a thing as overproduction while people want? All these things that are said to be overproduced are desired by many people. Why do they not get them? They do not get them because they have not the means to buy them, not that they do not want them. Why have they not the means to buy them? They earn too little. When great masses of men have to work for an average of $1.40 a day it is no wonder that great quantities of goods can not be sold.

Now, why is it that men have to work for such low wages? Because if they were to demand higher wages there are plenty of unemployed men ready to step into their places. It is this mass of unemployed men who compel that fierce competition that drives wages down to the point of bare subsistence. Why is it that there are men who can not get employment? Did you ever think what a strange thing it is that men can not find employment? Adam had no difficulty in finding employment; neither had Robinson Crusoe; the finding of employment was the last thing that troubled them.

If men can not find an employer, why can they not employ themselves? Simply because they are shut out from the element on which human labor can alone be exerted; men are compelled to compete with each other for the wages of an employer, because they have been robbed of the natural opportunities of employing themselves, because they can not find a piece of God's world on which to work without paying some other human creature for the privilege.

I do not mean to say that, even after you had set right this fundamental injustice, there would not be many things to do; but this I do mean to say, that our treatment of land lies at the bottom of all social questions. This I do mean to say, that, do what you please, reform as you may, you never can get rid of widespread poverty so long as the element on which, and from which, all men must live is made the private property of some men. It is utterly impossible. Reform government—get taxes down to the minimum—build railways; institute cooperative stores; divide profits, if you choose, between employers and employed, and what will be the result? The result will be that land will increase in value—that will be the result—that and nothing else. Experience shows this. Do not all improvements simply increase the value of land—the price that some must pay others for the privilege of living?

Consider the matter. I say it with all reverence, and merely say it because I wish to impress a truth upon your minds; it is utterly impossible, so long as His laws are what they are, that God Himself could relieve poverty—utterly impossible. Think of it, and you will see. Men pray to the Almighty to relieve poverty. But poverty comes not from God's laws—it is blasphemy of the worst kind to say that—it comes from man's injustice to his fellows. Supposing the Almighty were to hear the prayer, how could He carry out the request, so long as His laws are what they are? Consider, the Almighty gives us nothing of the things that constitute wealth. He merely gives us the raw material, which must be utilized by man to produce wealth. Does He not give us enough of that now? How could He relieve poverty even if He were to give us more? Supposing, in answer to these prayers, He were to increase the power of the sun, or the virtues of the soil? Supposing He were to make plants more prolific, or animals to produce after their kind more abundantly? Who would get the benefit of it? Take a country where land is completely monopolized, as it is in most of the civilized countries, who would get the benefit of it? Simply the landowners. And even if God, in answer to prayer, were to send down out of the heavens those things that men require, who would get the benefit?

In the Old Testament we are told that when the Israelites journeyed through the desert they were ahungered and that God sent down out of the heavens manna. There was enough for all of them, and they all took it and were relieved. But, supposing that desert had been held as private property, as the soil of Great Britain is held, as the soil even of our new States is being held; supposing that one of the Israelites had a square mile and another one had 20 square miles, and another one had a hundred square miles, and the great majority of the Israelites did not have enough to set the soles of their feet upon which they could call their own—what would become of the manna? What good would it have done to the majority? Not a whit. Though God had sent down manna enough for all, that manna would have been the property of the landholders; they would have employed some of the others, perhaps, to gather it up in heaps for them and would have sold it to the hungry brethren. Consider it—this purchase and sale of manna might have gone on until the majority of the Israelites had given up all they had, even to the clothes off their backs. What then? Well, then they would not have had anything left with which to buy manna, and the consequence would have been that while they went hungry the manna would be lying in great heaps, and the landowners would be

complaining about the overproduction of manna. There would have been a great harvest of manna and hungry people, just precisely the phenomenon that we see to-day.

I can not go over all the points I would like to, but I wish to call your attention to the utter absurdity of private property in land. Why, consider it; the idea of a man selling the earth—the earth, our common mother. A man selling that which no man produced. A man passing title from one generation to another. Why, it is the most absurd thing in the world. Did you ever think of this? What right has a dead man to land? For whom was this earth created? It was created for the living—certainly not for the dead. Well, now, we treat it as though it was created for the dead. Where do our land titles come from? They come from men who, for the most part, have passed and gone. Here in this new country you get a little nearer the original source, but go to the Eastern States and go over the Atlantic. There you may clearly see the power that comes from landownership.

As I say, the man that owns the land is the master of those who must live on it. Here is a modern instance: You who are familiar with the history of the Scottish Church know that in the forties there was a disruption in the church. You who have read Hugh Miller's work on The Cruise of the Betsey know something about it; how a great body, led by Dr. Chalmers, came out from the Established Church and said they would set up a Free Church. In the Established Church were a great many of the landowners. Some of them, like the Duke of Buccleuch, owning miles and miles of land on which no common Scotsman had a right to put his foot save by the Duke of Buccleuch's permission. These landowners refused not only to allow these Free Churchmen to have ground upon which to erect a church, but they would not let them stand on their land and worship God. You who have read The Cruise of the Betsey know that it is the story of a clergyman who was obliged to make his home in a boat on the wild sea, because he was not allowed to have land enough to live on. In many places the people had to take the sacrament with the tide coming to their knees—many a man lost his life worshiping on the roads, in the rain and snow. They were not permitted to go on Mr. Landlord's land and worship God, and had to take to the roads. The Duke of Buccleuch stood out for seven years, compelling people to worship on the roads, until finally, relenting a little, he allowed them to do so in a gravel pit; whereupon they passed a resolution of thanks to his grace.

But that is not what I wanted to tell you. The thing that struck me was this significant fact: As soon as the disruption occurred the Free Church, composed of a great many able men, at once sent a deputation to the landlords to ask permission for Scotsmen to worship God in Scotland and in their own way. This deputation set out for London—they had to go to London, England, to get permission for Scotsmen to worship God in Scotland and in their own native home!

But that is not the most absurd thing. In one place, when they were refused land upon which to stand and worship God, the late landowner had died and his estate was in the hands of the trustees, and the answer of the trustees was that, so far as they were concerned, they would exceedingly like to allow them to have a place to put up a church to worship, but they could not conscientiously do it, because they knew that such a course would be very displeasing to the late Mr. Monaltie! Now, this dead man had gone to heaven, let us hope; at any rate he had gone away from this world, but, lest it might displease him, men yet living could not worship God. Is it possible for absurdity to go any further?

You may say that those Scottish people are a very absurd people, but they are not a whit more so than we are. I read only a little while ago of some Long Island fishermen who had been paying as rent for the privilege of fishing there a certain part of the catch. They paid it because they believed that James II, a dead man centuries ago, a man who never put his foot in America, a king who was kicked off the English throne, had said they had to pay it, and they got up a committee, went to the county town and searched the records. They could not find anything in the records to show that James II had ever ordered that they should give any of their fish to anybody, and so they refused to pay any longer. But if they had found that James II had really said they should, they would have gone on paying. Can anything be more absurd?

There is a square in New York—Stuyvesant Square—it is locked up at 6 o'clock every evening, even on long summer evenings. Why is it locked up? Why are the children not allowed to play there? Why, because old Mr. Stuyvesant, dead and gone I don't know how many years ago, so willed it. Now, can anything be more absurd?

Yet that is not any more absurd than our land titles. From whom do they come? Dead man after dead man. Suppose you get on the cars here going to Council Bluffs or Chicago. You find a passenger with his baggage strewn over the seats. You say, "Will you give me a seat, if you please, sir?" He replies, "No; I bought this seat." "Bought this seat? From whom did you buy it." "I bought it from the man who got out at the last station." That is the way we manage this earth of ours.

Is it not a self-evident truth, as Thomas Jefferson said, that "the land belongs in usufruct to the living," and that they who have died have left it, and have no power to say how it shall be disposed of? Title to land! Where can a man get any title which makes the earth his property?

There is a sacred right to property—sacred because ordained by the laws of nature, that is to say, by the law of God, and necessary to social order and civilization. That is the right of property in things produced by labor; it rests on the right of a man to himself. That which a man produces, that is his against all the world, to give or to keep, to lend, to sell or to bequeath; but how can he get such a right to land when it was here before he came? Individual claims to land rest only on appropriation. I read in a recent number of the Nineteenth Century, possibly some of you have read it, an article by an ex-Prime Minister of Australia, in which there was a little story that attracted my attention. It was of a man named Galahard, who, in the earily days, got up to the top of a high hill in one of the finest parts of western Australia. He got up there, looked all around, and made his proclamation: "All the land that is in sight from the top of this hill I claim for myself; and all the land that is out of sight I claim for my son John."

That story is of universal application. Land titles everywhere come from just such appropriation. Now, under certain circumstances, appropriation can give a right. You invite a company of gentlemen to dinner and you say to them, "Be seated, gentlemen," and I get into this chair. Well, that seat for the time being is mine by the right of appropriation. It would be very ungentlemanly, it would be very wrong, for any of the other guests to come up and say, "Get out of that chair; I want to sit there!" But that right of possession, which is good so far as the chair is concerned for the time, does not give me a right to appropriate all there is on the table before me. Grant that a man has a right to appropriate such natural elements as he can use, has he any right to appropriate more than he can use? Has a guest, in such a case as I have supposed, a right to appropriate more than he needs and make other people stand up? That is what is done.

Why, look all over this country—look at this town or any other town. If men took only what they wanted to use we should all have enough; but they take what they do not want to use at all. Here are a lot of Englishmen coming over here and getting titles to our land in vast tracts; what do they want with our land? They do not want it at all; it is not the land they want; they have no use for American land. What they want is the income that they know they can in a little while get from it. Where does that income come from? It comes from labor, from the labor of American citizens. What we are selling to these people is our children, not land.

Poverty? Can there be any doubt of its cause? Go into the old countries; go into western Ireland, into the highlands of Scotland; there there are purely primitive communities. There you will find people as poor as poor can be, living year after year on oatmeal or on potatoes, and often going hungry. I could tell you many a pathetic story. Speaking to a Scottish physician who was telling me how this diet was inducing among these people a disease similar to that which from the same cause is ravaging Italy (the pellagra), I said to him: "There is plenty of fish; why don't they catch fish? There is plenty of game. I know the laws are against it, but can not they take it on the sly?" "That," he said, "never enters their heads. Why, if a man was even suspected of having a taste for trout or grouse he would have to leave at once."

There is no difficulty in discovering what makes those people poor. They have no right to anything that nature gives them. All they can make above a living they must pay to the landlord. They not only have to pay for the land that they use, but they have to pay for the seaweed that comes ashore and for the turf they dig from the bogs. They dare not improve, for any improvements they make are made an excuse for putting up the rent. These people who work hard live in hovels, and the landlords, who do not work at all—oh! they live in luxury in London or Paris. If they have hunting boxes there, why, they are magnificent castles as compared with the hovels in which the men live who do the work. Is there any question as to the cause of the poverty there?

Now, go into the cities, and what do you see? Why, you see even a lower depth of poverty; aye, if I would point out the worst evils of land monopoly I would not take you to Connemara; I would not take you to Skye or Kintyre—I would take you to Dublin, or Glasgow, or London. There is something worse than physical deprivation, something worse than starvation; and that is the degradation of the mind, the death of the soul. That is what you will find in those cities.

Now, what is the cause of that? Why, it is plainly to be seen; the people driven off the land in the country are driven into the slums of the cities. For every man that is driven off the land the demand for the produce of the workmen of the cities is lessened; and the man himself, with his wife and children, is forced among those workmen to compete upon any terms for a bare living and force wages down. Get work he must or starve—get work he must, or do that which those people, so long as they maintain their manly feelings, dread more than death, go to the almshouse. That is the reason, here as in Great Britain, that the cities are overcrowded. Open the land that is locked up, that is held by dogs in the manger, who will not use it themselves and will not allow anybody else to use it, and you would see no more of tramps and hear no more of overproduction.

The utter absurdity of this thing of private property in land! I defy anyone to show me any good from it, look where you please. Go out to the new lands, where my attention was first called to it, or go to the heart of the capital of the world—London. Everywhere, when your eyes are once opened, you will see its inequality and you will see its absurdity. You do not have to go further than Burlington. You have here a most beautiful site for a city, but the city itself, as compared with what it might be, is a miserable, straggling town. A gentleman showed me to-day a big hole alongside one of your streets. The place has been filled up all around it, and this hole is left. It is neither pretty nor useful. Why does that hole stay there? Well, it stays there because somebody claims it as his private property. There is a man, this gentleman told me, who wished to grade another lot, and wanted somewhere to put the dirt he took off it, and he offered to buy this hole so that he might fill it up. Now, it would have been a good thing for Burlington to have it filled up, a good thing for you all—your town would look better, and you yourselves would be in no danger of tumbling into it some dark night. Why, my friend pointed out to me another similar hole in which water had collected, and told me that two children had been drowned there. And he likewise told me that a drunken man some years ago had fallen into such a hole and had brought a suit against the city which cost you taxpayers some $11,000. Clearly it is to the interests of you all to have that particular hole I am talking of filled up. The man who wanted to fill it up offered the hole owner $300. But the hole owner refused the offer, and declares he will hold out until he can get $1,000, and in the meanwhile that unsightly and dangerous hole must remain. That is but an illustration of private property in land.

You may see the same thing all over this country See how injuriously in the agricultural districts this thing of private property in land affects the roads and the distances between the people. A man does not take what land he wants, what he can use, but he takes all he can get; and the consequence is that his next neighbor has to go farther along, people are separated from each other farther than they ought to be, to the increased difficulty of production, to the loss of neighborhood and companionship. They have more roads to maintain than they can decently maintain; they must do more work to get the same result, and life is in every way harder and drearier.

When you come to the cities, it is just the other way. In the country the people are too much scattered; in the great cities they are too crowded. Go to a city like New York, and there they are jammed together like sardines in a box, living family upon family, one above the other. It is an utterly unnatural and unwholesome life. How can you have anything like a home in a tenement of two or three rooms? How can children be brought up healthily with no place to play? Two or three weeks ago I read of a New York judge who fined two little boys $5 for playing hop-scotch on the street. Where else could they play? Private property in land had robbed them of all place to play. Even a temperance man, who had investigated the subject, said that in his opinion the gin palaces of London were a positive good in this that they enabled the people whose abodes were dark and squalid rooms to see a little brightness and thus prevent them from going wholly mad.

What is the reason for this overcrowding of cities? There is no natural reason. Take New York; one-half of its area is not built upon. Why, then, must people crowd together as they do there? Simply because of private ownership of land. There is plenty of room to build houses and plenty of people who want to build houses, but before anybody can build a house a blackmail price must be paid to some dog in the manger. It costs, in many cases, more to get vacant ground upon which to build a house than it does to build the house. And then what happens to the man who pays this blackmail and builds a house? Down comes the taxgatherer and fines him for building the house.

It is so all over the United States—the men who improve, the men who turn the prairie into farms and the desert into gardens, the men who beautify your cities, are taxed and fined for having done these things. Now, nothing is clearer than that the people of New York want more houses; and I think that even here in Burlington you could get along with more houses. Why, then, should you fine a man that builds one? Look all over this country—the bulk of the taxation rests upon the improver; the man who puts up a building or establishes a factory, or cultivates a farm, he is taxed for it; and not merely taxed for it, but, I think, in nine cases out of ten the land which he uses, the bare land, is taxed more than the adjoining lot, or the adjoining 160 acres that some speculator is holding as a mere dog in the manger, not using it himself and not allowing anybody else to use it.

I am talking too long; but let me in a few words point out the way of getting rid of land monopoly, securing the right of all to the elements which are necessary for life. We could not divide the land. In a rude state of society, as among the ancient Hebrews, giving each family its lot, and making it inalienable, we might secure something like equality. But in a complex civilization that will not suffice. It is not, however, necessary to divide up the land. All that is necessary is to divide up the income that comes from the land. In that way we can secure absolute equality; nor could the adoption of this principle involve any rude shock or violent change. It can be brought about gradually and easily by abolishing the taxes that now rest upon capital, labor, and improvements, and raising all our public revenues by the taxation of land values; and the longer you think of it the clearer you will see that in every possible way it will be a benefit.

Now, supposing we should abolish all other taxes, direct and indirect, substituting for them a tax upon land values, what would be the effect? In the first place, it would be to kill speculative values. It would be to remove from the newer parts of the country the bulk of the taxation, and put it on the richer parts. It would be to exempt the pioneer from taxation, and make the larger cities pay more of it. It would be to relieve energy and enterprise, capital and labor, from all those burdens that now bear upon them. What a start that would give to production! In the second place, we could, from the value of land, not merely pay all the present expenses of Government, but we could do infinitely more. In the city of San Francisco, James Lick left a few blocks of ground to be used for public purposes there, and the rent amounts to so much, that out of it will be built the largest telescope in the world, large public baths, and other public buildings, and various costly monuments. If, instead of these few blocks, the whole value of the land upon which the city is built had accrued to San Francisco, what could she not do?

So in this little town, where land values are very low as compared with such cities as Chicago and San Francisco, you could do many things for mutual benefit and public improvement did you appropriate to public purposes the land values that now go to individuals. You could have a great free library; you could have an art gallery; you could get yourselves a public park, a magnificent public park, too. You have here one of the finest natural sites for a beautiful town that I know of, and I have traveled much. You might make on this site a city that it would be a pleasure to live in. You will not, as you go now—oh! no! Why, the very fact that you have a magnificent view here will cause somebody to hold on all the more tightly to the land that commands this view, and charge higher prices for it. The State of New York wants to buy a strip of land so as to enable the people to see the Niagara, but what a price she must pay for it. Look at all the great cities; in Philadelphia, for instance, in order to build their great city hall they had to block up the only two wide streets they had in the city. Everywhere you go you may see how private property in land prevents public as well as private improvement.

But I have no time to enter further into details. I can only ask you to think upon this thing, and the more you will see its desirability. As an English friend of mine puts it, "No taxes and a pension for everybody;" and why should it not be? To take land values for public purposes is not really to impose a tax, but to take for public purposes a value created by the community. And out of the fund which would thus accrue from the common property, we might, without degradation to anybody, provide enough to actually secure from want all who were deprived of their natural protectors, or met with accident; or any man who should grow so old that he could not work. All prating that is heard from some quarters about its hurting the common people to give them what they do not work for is humbug. The truth is, that anything that injures self-respect, degrades, does harm; but if you give it as a right, as something to which every citizen is entitled, it does not degrade. Charity schools do degrade the children that are sent to them, but public schools do not.

But all such benefits as these, while great, would be incidental. The great thing would be that the reform I propose would tend to open opportunities to labor and enable men to provide employment for themselves. That is the great advantage. We should gain the enormous productive power that is going to waste all over the country, the power of idle hands that would gladly be at work. And that removed, then you would see wages begin to mount. It is not that everyone would turn farmer, or everyone build himself a house, if he had an opportunity for doing so, but so many could, and would, as to relieve the pressure on the labor market and provide employment for all others. And as wages mounted to the higher levels then you would see the productive power increased. The country where wages are high is the country of greatest productive power. Where wages are highest there will invention be most active; there will labor be most intelligent; there will be the greatest yield for the expenditure of exertion. The more you think of it the more clearly you will see what I say is true. I can not hope to convince you in talking for an hour or two, but I shall be content, if I shall put you upon inquiry. Think for yourselves; ask yourselves whether this wide-spread fact of poverty is not a crime, and a crime for which everyone of us, man and woman, who does not do what he or she can do to call attention to it and to do away with it, is responsible.

Danish West Indian Islands.

EXTENSION OF REMARKS
OF
HON. AMBROSE KENNEDY,
OF RHODE ISLAND,
IN THE HOUSE OF REPRESENTATIVES,

Monday, February 19, 1917,

On the bill H. R. 20755, being "A bill to provide a temporary government for the West Indian islands acquired by the United States from Denmark by the convention entered into between said countries on the 4th day of August, 1916, and ratified by the Senate of the United States on the 7th day of September, 1916, and for other purposes."

Mr. KENNEDY of Rhode Island. Mr. Speaker, I am in favor of this measure which appropriates the sum of $25,000,000 for the purchase of the Danish West Indian Islands and provides a plan by which they shall be temporarily governed. These islands have been acquired by the United States from Denmark by a treaty entered into between the two Governments on the 4th day of August, 1916, and ratified by the Senate of the United States on the 7th day of September, 1916. By virtue of this convention His Majesty the King of Denmark cedes to the United States all territory, dominion, and sovereignty possessed, asserted, or claimed by Denmark in the West Indies, including the islands of St. Thomas, St. John, and St. Croix, together with the adjacent islands and rocks. The cession includes, moreover, the right of property in all public, Government, or Crown lands, public buildings, wharves, ports, harbors, fortifications, barracks, public funds, rights, franchises, privileges, and all other public property of every kind or description now belonging to Denmark, together with any Government archives, records, papers, or documents which relate to the cession or the rights and property of the inhabitants of the islands ceded, which may now exist either in the islands or in Denmark.

These islands for a number of years have been the subject of negotiations between the United States and Denmark. Our original interest in their acquisition began for the first time to be manifested at the close of the late Civil War. It was this conflict that demonstrated their value as a military outpost of the Nation. Some of our ablest Secretaries of State, notably Seward, Foster, and Hay have strongly urged and recommended the purchase of these islands, but every effort heretofore made to acquire them has been frustrated either by the refusal on the part of the United States Senate or the Denmark Rigsdag to ratify the conventions.

In 1865, in the latter part of Lincoln's administration, the United States endeavored for the first time to acquire the ownership of these islands. In 1866 we offered to Denmark the sum of $5,000,000 for St. Thomas, St. John, and Santa Cruz. Denmark, however, refused to sell the islands for this sum but offered to convey the three islands for $15,000,000, or two of them, namely, St. Thomas and St. John, for $10,000,000. An agreement was finally reached whereby the United States was to pay the sum of $7,500,000 for the islands of St. Thomas and St. John. A treaty was entered into between the two Governments, which was ratified by the Denmark Rigsdag and signed by the King in June, 1868. The question of the transfer of sovereignty was submitted to the people of the islands for their consent. In the island of St. Thomas the vote stood 1,039 to 22 in favor of the transfer and in St. John there was not a dissenting vote. Contemporary writers recount that the people of the islands marched to the polls under the American flag to the tune of our national airs. The treaty providing for the purchase of these two islands was submitted to the United States Senate on December 3, 1867, but after delaying for a period of two years its defeat was secured, largely through the opposition of Senator Sumner, who was at that time chairman of the Senate Committee on Foreign Relations.

The purchase of the Danish Islands was subsequently contemplated during the administrations of Presidents Cleveland and Harrison, and the Republican Party, in its national convention assembled in St. Louis on June 16, 1896, declared that by the purchase of the Danish Islands we should secure a proper and much-needed naval station in the West Indies. At that time it was evidently a foregone conclusion that the United States would in the near future build, own, and operate an interoceanic canal connecting the Gulf of Mexico with the waters of the Pacific Ocean. The anticipated construction of this interoceanic waterway was at that time undoubtedly the cause of the increased emphasis placed on the importance of

acquiring the Danish Islands by the Republican platform declaration.

On that platform Mr. McKinley was elected to the Presidency; and, during his first term in office, the Senate Committee on Foreign Relations reported a bill authorizing the President to purchase the Danish West Indies for the purposes of a naval and coaling station. Not until January 24, 1902, however, was a treaty concluded, upon the acceptance by Denmark of the offer made by President Roosevelt and Secretary Hay of $5,000,000 for all three of the Danish islands, with the adjacent islands and rocks. This treaty was ratified by the Senate of the United States on February 17, 1902, but it failed of approval in the Danish Landsthing by a tie vote, thus concluding the second futile attempt that had been made to acquire these islands.

The brief debate allowed this evening under the motion to suspend the rules and pass this measure providing for the purchase of the Danish West Indies developed some opposition, during which the purchase was characterized as a useless, wasteful, and extravagant expenditure of money. Compared with the sums agreed upon when prior attempts were made to complete negotiations for the purchase, the present price appears to be high; but it is our own fault that we must pay this price, since we did not secure these islands 50 years ago, when we could have done so upon terms considerably cheaper.

To regard this purchase as a territorial acquisition, inspired by imperialistic designs or a sharp land deal, figuring, as it does, about $280 per acre, is an entire misconception of our plain policy and purpose. The fact is this group of islands is a necessary adjunct to our national defense. These islands constitute a strategic point, and are consequently of very great value to us. The most cursory glance at the map of North America is conclusive proof that our ownership of these islands adds mightily to our measure of military preparedness.

Vice Admiral David B. Porter, in a letter to Secretary of State Seward, dated November 6, 1867, stated that the island of St. Thomas, the principal of the Virgin Group, holds the most prominent position in the West Indies as a naval and commercial station; that its harbor, with that of St. John and the harbors formed by Water Island, would contain all the vessels of the largest navy in the world.

In the Journal of the Military Service Institution of January, 1901, Maj. W. A. Glassford, United States Army, Department of Porto Rico, makes the following statement concerning the island of St. Thomas:

The island of St. Thomas offers conditions suitable for developing a first-class military outpost. This island, he says, possesses all the natural advantages enabling it to be converted into a second Gibraltar. The structure of this narrow island, with its long central ridge, having a general elevation of about 1,000 feet, with some points 500 feet high, is especially adapted for the emplacement of fortifications commanding both shores at the same time, making it extremely difficult for an enemy to approach or to obtain a foothold upon the island. The elevated ground in the immediate neighborhood of the excellent roadsteads which this island affords makes the question of harbor defense a comparatively easy one. This position, with its few inhabitants, could easily be provisioned for a long siege. The harbor of Charlotte Amalie and the numerous sheltered places about the island afford 6 and 7 fathoms of water; besides, this harbor and the roadsteads are on the southern side of the island completely protected from the prevailing strong winds. If this place were strongly fortified and provisioned, it would be necessary for an enemy contemplating a descent upon Porto Rico to first take it into account.

This location on the northeast rim of the Antilles is in close proximity to many of the passages into the Caribbean Sea and afford an excellent point of observation near European possessions in the archipelago. While being near other islands, St. Thomas is practically in the open ocean and permits the entrance and egress of a fleet without its being observed. It is also a center of West Indian submarine cable systems, being about midway between the Windward Passage and the Trinidad entrance to the Caribbean Sea. The strategy of a position at St. Thomas in regard to an interoceanic canal across the Isthmus of Panama need not be specially explained further than to say that this point lies in the direct track of European traffic to the Isthmus, and having the same distance as New York from nearly all the ports of Europe.

Whether the value of St. Thomas as a military outpost is as great to-day as it was formerly regarded by naval and military officers may be subject to discussion, because ships have increased in size and navies grown exceedingly larger. It may be true that St. Thomas's commercial value as a port has of recent years depreciated because ships carry more coal to-day and voyage farther without repairs than formerly. But even conceding this commercial and naval depreciation, there can be no question that the acquisition of these islands, and particularly St. Thomas, is of superior value, for the reason that our ownership and possession of them will relieve our fleet from an embarrassing, and, indeed, a menacing, situation in case any other country should use this location as a base for any kind of naval operations.

With respect to the Panama Canal, these Danish West Indian Islands occupy a position in the Atlantic Ocean very similar to that occupied by the island of Guam in the Pacific. St. Thomas, as was stated during the hearings on this bill, is one of the points of the flank of any hostile movement toward the Panama Canal on the Atlantic side. The strategy of its position is, therefore, altogether apparent. This Danish group consists of about 50 islands, but the three islands, St. Thomas, St. John, and St. Croix are the only ones of considerable size. The coast of the island of St. Thomas to the westward contains a number of deep inlets which would afford a safe and natural refuge for torpedo boats and submarines. These islands strengthen the line of defense near the approach to the Panama Canal and are therefore of infinitely greater value to us to-day on account of the construction of that waterway.

The harbor of St. Thomas itself is large and deep and the island can be fortified to command approach from all directions. For a number of years this harbor was the natural port of call in the direct route from European countries to the West Indies, Central America, and the northern part of South America. While we have bought these islands apparently for strategic reasons they may prove to be capable of considerable commercial development. It is estimated that during the current year the production of sugar, which is confined wholly to the island of St. Croix, will amount to about 15,000 tons, and in a few years, through American energy and enterprise, the quantity may be increased to six or seven times that amount annually. The harbor of St. Thomas, prior to the European war, was visited by a number of ships which came into port, one every other day, and the entire business of that island consisted in the various industries that operated about the port.

A report recently issued by the Bureau of Foreign and Domestic Commerce gives the following information concerning the public works and port facilities in St. Thomas Harbor:

The harbor of St. Thomas is the main feature of the island, and commercially is the most important feature of the Danish Group. It is located on the southern side, and in entering it a ship sails practically due north. The mouth is very narrow, probably not over 900 feet for vessels of deep draft. It lies in latitude 18° 20' N. and longitude 65° 56' W.

The harbor is protected by hills which rise to over a thousand feet immediately back of the city. Smaller ones extend in such a way that the harbor has a shape more or less like a pear, with the bulbous part for the harbor itself and the narrow neck for the entrance. It is thus free from weather disturbances, no matter what the direction, unless they are unusually violent. It is commodious enough to afford safe anchorage for many ships, and engineering investigations indicate that by the expenditure of a relatively small sum its size can be nearly doubled. This would be done by enlarging the entrance to a connecting bay which is equally well sheltered by hills on the landward side and by an island on the seaward side.

The south side of St. Thomas Island is comparatively free from outlying rocks, except within half a mile from shore. Very near the entrance to the harbor, however, are two islands, which form prominent landmarks when approaching from the eastward. These are Frenchmans Cap and Buck Island. The former is nearer the shore than Buck Island, which is about 1½ miles from the nearest point of mainland. There is plenty of water on all sides of the entrance, and the first marking is a buoy at Scorpion Rock, on the port side upon entering. It is just off this rock that the pilot is usually picked up.

Buck Island is three-quarters of a mile long, 120 feet high in the eastern part, and lies 1½ miles from the mainland. It is steep-to on its southern side. Off the western end a shallow ledge extends to the distance of 100 yards, and on the northern side the depth is 9 meters at the same distance. Good landing for small boats will be found in the little bay at the western end.

There are six docks from which coal can be taken or upon which cargoes can be discharged. Vessels drawing up to 31 feet can lie alongside any of these docks.

There is a floating dry dock measuring 250 feet long and 70 feet wide. Its maximum lifting capacity is 3,000 tons. Vessels which are not overweight and drawing 23 feet, with a keel of 300 feet or less, can be taken up. The charge for docking varies from 60 cents to 90 cents per ton the first day and for succeeding days it goes as low as 10 cents.

There is also a repairing slip on which small vessels (not over 250 tons) are taken at the same rates.

The facilities for general repairing are excellent, there being many competent ship carpenters, sailmakers, and riggers. There is also a very good machine shop and foundry.

Rock or sand ballast can be obtained for $1 per ton f. o. b.

There are many lighters, owned by various companies, and the usual charge for a lighter of 10 to 15 tons capacity, without labor, is $5 per day.

There are many stevedores, who are always ready to make tenters or estimates for discharging or loading vessels.

On account of the low rate of duty (6 per cent) ship's stores are obtainable at nearly the same prices as in the United States. The principal imports at St. Thomas are coal, fuel oil, lumber, and general provisions. The chief suppliers of coal are the West Indian Co. (Ltd.), the St. Thomas Dock Engineering & Coaling Co. (Ltd.), the Hamburg-American Line.

There are many large warehouses, both on the wharves and in the town. At the present time a warehouse in the town can be rented for $25 to $50 monthly. This includes the store in front and the private wharf in the rear. All warehouses run from the principal street to the water, and the rent varies with the size. They may be had from about 100 to 400 feet long and with an average width of 40 feet.

Water can be supplied either at the docks or from water boats in the harbor, from which it is pumped into the ship's tanks. Rain water is used exclusively, except by the West Indian Co. (Ltd.), which recently has drilled three wells, the water from which will be pumped into storage tanks at the dock. The price at present charged for water is $1 per ton of 250 gallons (September, 1916).

There has been practically no agriculture on this island for the reason that laborers could earn more money in and about the harbor than by devoting their energies to agriculture.

The island of St. John, in former days, prospered along lines of agriculture, but in more recent times it has not been possible to meet world-wide competition in the agricultural industry on account of the high cost of production. The country is mountainous in character, and to-day one of the main agricultural pursuits on the island consists of the raising of bay trees from whose leaves the essential oil of bay is obtained for use in the manufacture of bay rum. The greater part of the bay rum of commerce to-day comes from the Danish West Indies. The distilling of bay rum is done largely at St. Thomas. The above report, recently issued by the Bureau of Foreign and Domestic Commerce, states that the island of St. John is admirably adapted to cattle raising and that practically all of its acreage, if cleared, would afford splendid grazing material. The report states that there are practically no forests on any of the islands, yet the earlier history of them shows that some of these islands were covered with various kinds of trees. The present commercial products of all three islands may be summed up as follows: St. Croix produces sugar, rum, and molasses; St. Thomas, bay rum; and St. John, bay oil, bay rum, concentrated lime juice, and some other lime-tree products.

The fact that these islands have not made more advanced strides along commercial lines may be in a large measure attributed to the failure on the part of Denmark to stimulate industrial development. Two hundred years ago tobacco was the chief product of St. Thomas. About the year 1726 King Christian V undertook the cultivation of sugar at St. Thomas. He populated the island with negro slaves transported from the Guinea coast of Africa. St. John and St. Croix were colonized with the descendants of these slaves from St. Thomas. In 1792 slave trading was forbidden. The sugar industry continued up to about 1800, or a little later, when sugar refining on the island began to suffer and go backward because of the competition presented by the cultivation of beet sugar in other countries. Since then the population has decreased. In 1841 there were 41,000 inhabitants on the three islands. Fifty years later the population decreased to 32,800, and to-day the population of all three islands is about the latter number.

Within recent years an agricultural experiment station had been maintained on the island of St. Thomas for the purpose of determining the character of the soil and its adaptability for cultivation. It has been found that St. Thomas is adapted for cultivating textile plants of commercial value. A large acreage of waste lands has been cultivated into hemp fields, producing a quality equal to that of Mexico and Venezuela.

These islands were discovered by Christopher Columbus during his second voyage to the West Indies in 1493. They were then occupied by a tribe of warlike cannibals known as the Caribs.

Washington Irving, in his Life and Voyages of Columbus, gives the following description:

Weighing anchor on the 10th of November, 1493, Columbus steered along the coast of Guadaloupe, toward the northwest, in which direction, according to his own calculation and the information of the Indians, lay Hispaniola. Continuing along this beautiful archipelago, he gave names to its islands as they successively rose to view. Montserrat, Santa Maria la Redonda, Santa Maria la Antigua, and San Martin; various other islands appeared to the north and extending northwest and southeast, all very lofty and mountainous, with stately and magnificent forests, but the admiral forebore to visit them. The weather proving boisterous, they anchored on the 14th of November at an island called Ayay by the Indians, but to which the admiral gave the name of Santa Cruz. Here the boat was sent on shore, with five and twenty men, to get water and procure information concerning their route.

They found a village deserted except some captives brought hither from other islands. This was likewise an abode for Caribs. Pursuing his voyage, Columbus soon came in sight of a great cluster of islands of various shapes and appearances. Some were verdant and covered with forests, but the greater part naked and sterile, rising into wild cragged mountains; many of the rocks of which were of a bright azure color, and others of a glistening white; these Columbus, with his usual vivacity of imagination, supposed to contain mines of rich metals and precious stones. These islands lying close together, with the sea beating and tossing roughly in the narrow channels which divided them, rendered it dangerous to enter among them with the large ships. Keeping off, therefore, in the broad sea, Columbus sent in a small carrival with latine sails, to reconnoitre, which returned with the report that there were upward of 50 islands, but apparently uninhabited. To the largest of this group Columbus gave the name of Santa Ursula, and he called the others the Eleven Thousand Virgins.

The traditional accounts of the origin of the Caribs, though of course extremely vague, are yet capable of being verified to a great degree by geographical facts, and open one of the rich veins of curious inquiry and speculation which abound in the New World. They are said to have migrated from the remote valleys embosomed in the Apalachian Mountains. The earliest notices we have of them represent them with weapons in their hands; continually engaged in wars; winning their way and shifting their abode, until in the course of time they found themselves on the extreme end of Florida. Here, abandoning the northern continent, they passed over to the Lucayos, and from thence gradually, in the process of years, from island to island of that vast and verdant chain, which links as it were the end of Florida to the cost of Paria, on the southern continent. The Archipelago, extending from Porto Rico to Tobago, was their stronghold, and the island of Guadaloupe in a manner their citadel. Hence they made their expeditions, and spread the terror of their name through all the surrounding countries. Swarms of them landed upon the southern continent, and overran some parts of terra firma. Traces of them have been discovered far in the interior of the country through which flows the Oroonoko. The Dutch found colonies of them on the banks of the Ikouteka, which empties into the Surinam, along the Esquibi, the Maroni, and other rivers of Guayana, and in the country watered by the windings of the Cayenne; and it would appear that they have even extended their wanderings to the shores of the southern ocean, where, among the aborigines of Brazil, were some who called themselves Caribs, distinguished from the surrounding Indians by their superior hardihood, subtlety, and enterprise.

To trace the footsteps of this roving tribe throughout its wide migrations from the Appalachian Mountains of the northern continent, along the cluster of islands which stud the Gulf of Mexico and the Caribbean Sea to the shores of Paria, and so across the vast regions of Guayana and Amazonia to the remote coast of Brazil, would be one of the most curious researches in aboriginal history, and might throw much light upon the mysterious question of the population of the New World.

Abbé Labat, a French missionary, who visited the islands between the years 1700 and 1703, gives an interesting description of the cultivation and commerce of St. Croix and St. Thomas in his work entitled "Noveau Voyage aux Isles de l'Amerique," dated 1724:

He says—

St. Croix is a land almost level; it contains small hills or, in the language of the island, bluffs, toward the middle of the isle. The slopes are gentle. They are covered with the most beautiful trees in the world—mahoganies, logwood, acomas, sapotas, and an abundance of all sorts of redwood. We saw, moreover, some very fine cane, notwithstanding the ravages made by guinea pigs and other beasts. There were quantities of orange and lemon trees. There we discovered more of the cassada plant (its roots are made into a kind of bread, an important article of food among the Caribs when they were first discovered by Europeans) and excellent potatoes.

Speaking of St. Thomas, the Abbé says:

They carried on considerable commerce on this little island which attracted the people who inhabited it. As the King of Denmark is ordinarily neutral, his port is open to all nations. It serves in time of peace as an entrepôt for the commerce which the French, the English, the Spaniards and the Dutch do not venture to carry on openly in their islands. And in time of war it is the refuge for merchant vessels pursued by corsairs. I visited surely more than half of the island. I do not believe the distance around it to be more than 6 or 7 leagues. The plantations—so the estates are called—are small, but well kept and maintained. The soil, though light, is good and produces very good cassada plant, millet, potatoes, all sorts of fruit and grass, and abundant cane. There are very few cattle and horses because of lack of pasturage. They have, however, plenty of meat, the Spaniards of Porto Rico furnishing them with an abundance. They raise excellent cabrittes and quantities of all kinds of poultry.

The vantage point occupied by these islands can not be overestimated. St. Thomas is 1,029 miles distant from Panama on the route of commerce, 3,600 miles from Liverpool, 1,420 miles from New York, and 518 miles from Port of Spain on the island of Trinidad, off the coast of Venezuela. They are located at the crossroads between Europe and Panama and between North and South America. The islands have had many owners since the year they were discovered by Columbus. St. Croix has been Spanish, English, Dutch, Spanish, French, Maltese, French, and Danish. It was purchased by King Christian VI in 1753. St. Thomas has been the headquarters of the Hamburg-American Line in the Caribbean Sea. Several years ago the Germans had planned to lay the foundations for a commercial conquest of this port, knowing that the United States would not allow the islands to be transferred to any European power. The commercial development undertaken by Germany greatly prompted the renewal of our negotiations for the purchase of the islands at the time of the treaty which was signed in January, 1902.

The population of the islands is made up principally of negroes, who constitute the laboring people of the islands. They are descendants of the Guinea slaves, who were imported two centuries ago. English is the language chiefly spoken, except that about the harbor at St. Thomas, the natives speak the modern languages, French being largely the language of commerce. English is taught in the schools.

The government of the islands consists of two districts. St. Croix and the small islands close by constitute one and St. Thomas and St. John, with adjacent islands, the other. Each district is given the name of a commune. Legislative matters are primarily in the power of the Danish Rigsdag, but the lawmaking power is vested in the King and two colonial councils. These colonial councils come one from each commune. The Danish Rigsdag possesses the veto power. The leading officials of the islands are appointed by the King of Denmark. The governor is the leading executive officer, and he possesses the power to appoint minor officers. He has an assistant, the vice governor. Their residence alternate six months at a time between the communes. It is their duty to see that all laws are executed.

Two colonial councils make up the legislative branch of the islands, one furnished by each commune. St. Croix elects by

popular vote 13 councilors from three districts and the king appoints 5. The St. Thomas commune elects 11 councilors from three districts, the king appointing 4. The term of office for members of the council is four years. One-half the number retire biennially. The privilege of voting extends to all males who have attained the age of 25 years and have been residents of the commune for two years, and of the district six months. They must be registered as possessing a small prescribed amount of property. The councils meet every two months at a date set by the governor. The English and Danish languages are used in debate and the journal is kept in both languages. They have inferior courts on these islands but the superior court at Denmark is the high court of appeal.

What the government of these islands will be under the sovereignty of the United States remains to be determined. The present bill appropriating the money for the purchase of these islands also makes provision for a temporary government which provides that all military, civil, and judicial powers necessary to govern the West Indian Islands acquired from Denmark shall be vested in such person or persons and shall be exercised in such manner as the President of the United States shall direct until Congress shall provide for the government of the islands. Whether these islands should be given a union government with Porto Rico is an important question. Such a plan, it is expected, would be objectionable for the reason that the education and training of the people of these three islands have been altogether different from that of Porto Rico. The Danish islanders are an English-speaking people while the Porto Ricans speak Spanish. In 1898, we are told, most of the servants of the Army officers in Porto Rico were St. Thomas negroes because they could speak English. At a mass meeting held at St. Thomas the following protest was passed on the matter of attaching these islands to Porto Rico for the purpose of government:

> The island does not desire to be governed by Porto Rico, but wishes to be permitted to manage its own affairs under the Federal Government, American citizenship to be accorded immediately on the transfer, the port to be free, and natives to be given preference in appointments to Government positions.

The people of these islands voted in favor of the recent transfer. Their decision was unanimous in its favor, and they sent a committee or commission to Denmark in support of it. It appeared at the hearings before the committee in the testimony of Gen. McIntyre that the people of these islands are fully aware that our main reason for acquiring them is for strategic purposes. Gen. McIntyre stated that he had talked with two men recently from St. Thomas who had gone to Denmark to induce the approval of the sale. Both of these men, he says, were interested in the strategic more than in any other aspect of the case. They represented that the establishment of a naval station there will increase the business of this port. Troops sent down there would spend their money there. The people of St. Croix expect a new life in the sugar industry, basing their expectation upon what they know has happened in Porto Rico.

The trade of these islands has decreased greatly since the beginning of the European war. For a number of years, however, the fact that St. Thomas has been a free port attracted trade from all quarters. In the future, after the war, the trade of this port should be greatly increased. The opening of the Panama Canal took place in August, 1914, the same month that war was declared in Europe. Trade, of course, through the canal during the war period has been held back. When the world returns to a settled and normal condition and ships ply from the Atlantic to the Pacific, and vice versa, by way of the Panama Canal, unquestionably the tremendous influence of this great interoceanic highway of commerce on the trade of the world will be realized. The Danish islands recently acquired are right on the main highway of that trade from the Pacific coast to Europe by way of the canal and from Europe back to the Pacific coast.

The only thing, perhaps, that has caused some larger European nation to hesitate about the purchase of these islands for harbor purposes in the Western Hemisphere at a price probably much higher than we have paid for them is the Monroe doctrine, which, though not international law, is nevertheless our established policy. This, undoubtedly, has been the rub, for certainly no European nation believes that the United States would consent to any such transfer.

Under the Monroe doctrine, of course, we would oppose the transfer of these islands by Denmark to any other European power, but how far we should go in that opposition would be a matter of great consideration, especially if we refused to buy these islands ourselves but determined by invoking the Monroe doctrine to stand in the way of their purchase by another European power.

During the late Civil War the United States suffered through the lack of a naval station and a harbor in the West Indies. Then maritime prizes and steamers needing repairs had to be sent a distance of 1,500 miles. At present, of course, we have a naval station at San Juan, Porto Rico, but the harbor there is not as adequate and suitable for deep-draft vessels as the harbor at Charlotte Amalie, St. Thomas. Besides, San Juan Harbor faces in a direction which exposes it to storm. Not so, however, at St. Thomas. The harbor at St. Thomas is deep. Over three-fourths of it ranges from 30 to 90 feet, and it is located on the south side of the island. One of the main things to consider in the high price we paid for these islands is that St. Thomas is naturally fortified and that it would cost an immense amount of money to put any other harbor in the West Indies in as good condition as St. Thomas is now. St. Thomas will be the coaling depot in the future of the whole middle Atlantic, and the Panama Canal will make it so. The possession of this coaling station would save us from martime paralysis in time of war.

Pensions.

EXTENSION OF REMARKS
OF
HON. JOHN A. KEY,
OF OHIO,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. KEY of Ohio. Mr. Speaker, the general provision of this bill—H. R. 655—while it was pending in the Committee on Pensions of the House and in the shape it passed the House of Representatives was, in my opinion, just, wise, and generous, for it provided a pension for those brave soldiers and their widows who, by their pluck, determination, and courage, made possible the rapid, rising development of that vast empire of wealth and population that lies west of the Mississippi. No man admires this type of our soldiers more than I do, or recognizes quicker the obligation the Government owes to him and his. I do not believe that in any country braver or more valiant service, calling for greater hardship, exposure, and danger, than that rendered by the Eighteenth and Nineteenth Kansas Cavalry in 1868 and 1869 was ever given by any soldier. Mr. Speaker, my opposition is based upon amendment No. 9, added to this bill in the United States Senate. In my opinion it is unwise, because it is the first time that the Federal Treasury has been called upon to stand the strain of a Federal pension based upon a purely State service, of which there is admittedly no Federal record.

It is unjust because there are thousands of State troops mustered in for service by their States and honorably discharged at some time during the Civil War, from 1861 to 1865, who performed service of more or less direct benefit to the Federal Government during the Civil War, who have been denied Federal pension of any character ever since said service. There are thousands of such soldiers in my own State—Ohio. There is another situation in my State which renders this amendment even more unjust, to wit, the first 22 regiments of Ohio soldiers called out by President Lincoln in 1861 were enlisted for 90 days. They served 90 days, most of them about 100 days, and were honorably discharged. Records of this service are on file in the War Department, as it was Federal service. They are denied pensionable status, and their wives are denied pensionable status, under the service laws requiring 90 days' service, because the Secretary of the Interior, Mr. Garfield, in what is known as the Joel S. Hopkins decision, held that a furlough could not be counted as actual military service, and most of these men were arbitrarily forced by the Government to take a 30 or 40 day furlough, and even with a 40-day furlough they served 20 days longer than is required by this Senate amendment granting a $20 pension to State soldiers who served 30 days. Of course, the members of these 22 regiments of Ohio troops who received disability due to wounds, injuries, or diseases are entitled to pension and to receive same under the general law.

Now, Mr. Speaker, in conclusion, it was because I believed that the Government having refused a pensionable status for nearly 60 years to the State troops of my State, Kentucky, Kansas, Missouri, Pennsylvania, and other States, it was unjust at this late date to allow this pension provided for in this amendment for State service of only 30 days, every day of which was rendered long after the Civil War closed. As I stated, I believe it was most unwise and unjust, and therefore I opposed it.

A Tribute to the Late Hon. Michael F. Conry.

EXTENSION OF REMARKS

OF

HON. DANIEL J. GRIFFIN,

OF NEW YORK,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GRIFFIN. Mr. Speaker, under the permission granted by the House to extend my remarks I insert in the RECORD an article appearing in the Washington Times of March 3, 1917, written by Mr. Theodore Tiller, one of the brainy newspaper correspondents who daily communicate to the world the doings of this great legislative body. He, like his colleagues in the press gallery, see men come and go in public life, and recognize immediately sterling qualities of heart and mind.

His eloquent article is a sincere tribute to the late Hon. MICHAEL F. CONRY, Member of Congress from the fifteenth New York district, the most beloved Member of the Sixty-fourth Congress, an able legislator, a brilliant member of the Ways and Means Committee.

The article is as follows:

[From the Washington Times, Mar. 3, 1917.]

IF HOUSE DOES SING, 'TWILL BE A TRIBUTE—"MIKE" CONRY, GENIAL, SWEET-VOICED CONGRESSMAN, DIES AS SESSION ENDS—LED IN GOOD-BY SONGS—MEMBERS RECESS IN MIDST OF TASKS WHEN NEWS OF DEATH IS TOLD.

Probably there'll be a song or two in the House of Representatives late to-night or in the early morning hours as this session passes into history. In the lower body there is generally a let-down of business just before the gavel falls, and, somehow, the fellows begin to hum an old-fashioned tune, the chorus swells, and soon half the membership is singing.

It is the mellowing influence of the time for good-bys, the relief from overwork, an outcropping of the sentimental among men who are soon to break pleasant associations, and who, at heart, are still just boys.

But if they sing to-night there will be a missing voice—and that is why this story is written. "MIKE" CONRY—genial, whole-souled, lovable "MIKE" CONRY—is dead, or has "crossed over," as Uncle JOE CANNON, who dislikes the word death, would say if he were writing a story about the passing of a colleague.

VOICE CLEAR, HEART TENDER.

In former years Congressman CONRY has been there to sing as the last hours of Congress slipped by. He had a voice as clear as a bell and a heart as tender as a child's. He was lame—was "MIKE" CONRY—but he would limp toward the well of the House and soon you'd hear him above the rest as his tenor would blend in harmony with other Members who had good voices and sang with feeling under the thrill of good-by scenes.

"Auld Lang Syne," "Tenting To-night," "Old Black Joe," "Suwanee River"—the old favorites, with sometimes a version of "Home, Sweet Home"—were among the songs they sang while CONRY'S voice keyed true to every note.

Or perhaps they'd sing an Irish ballad—something that carried one back to the memories of green hills and clear lakes, to blue-eyed lassies, to cottages where old-fashioned mothers crooned the lullabies that have always put little children to sleep, and to a little isle whose national heart has been as big as the great out of doors.

"MIKE" CONRY STIRRED.

And then, too, "MIKE" CONRY'S voice was heard above the rest, but it had a sort of quaver in it and his eyes had that faraway look that comes when one's feelings are deeply stirred.

Maybe the Members of the House will not get a chance to sing at all before the adjournment comes sine die. But if CONRY were here he'd want them to, and now he is dead and the body is on the way to his New York home. "MIKE" CONRY would not have them refrain from song because of that.

This story might have been told in a few words—but the writer felt it was worth a bit more than that. In these final hours of an epochal session of the National Legislature it can not be amiss to turn a moment from practical things and record that sentiment still exists, that there is not a Member of the House who doesn't miss MICHAEL CONRY to-day, and that if the songs of yesterday are sung again some of his colleagues will seem to hear once more the lead of CONRY of New York.

HOUSE SHOWS SPIRIT.

Persons who have never seen the end of a session in the House of Representatives probably can not appreciate what adjournment means to the Members of the lower body. In the Senate there is always dignity, real or assumed. The farewells are grave, matter of fact, although doubtless sincere. In the House the scenes are entirely different.

House Members somehow are closer in their friendships. The complexion of the lower Chamber is constantly changing. Men come and go every two years. The leader of to-day may be the vanquished of to-morrow. But during his term he has formed friendships that are as true as steel and associations that are hard to break.

Final adjournment in the House is much like the graduation day in a high school or a college. The young fellows assemble in class for the last time. Each one knows that never will they all meet together again. New faces are sure to appear and old faces are certain to be missed. It's a breaking of the ties that bind.

So with the House of Representatives, with its membership that comes "close from the soul of a great people." The end of business comes, the tension is relaxed, Members are saying good-by—perhaps for a day, perhaps forever—and then away over in a corner a song is begun, a hush falls over the crowded galleries, the membership joins in, the Speaker withholds the gavel, there is no word of reproof, and moisture dims the eyes of those who appreciate the note of pathos in it all.

Thus they have sung in the past, and thus they will sing in the future. But "MIKE" CONRY'S voice will never lead them again.

NEWS OF DEATH COMES.

"MIKE" CONRY, beloved of every Member of the House, died last night at Providence Hospital. The end came quickly, unexpectedly.

The House stood in recess for one hour when the death was announced by Congressman FITZGERALD, dean of the New York delegation. The crush of legislation prevented a longer recess, but the tribute of the House was none the less sincere. Tears stood in the eyes of Mr. FITZGERALD as he told his colleagues that MICHAEL CONRY had answered the final roll call.

Should they sing as the sands of the Sixty-fourth Congress run low, there'll be a tribute to CONRY in that, and there'll be proof once more of the fact that the makers of national law have in them the touch of sentiment that makes us all alike.

Methods of Election of Judges of the Courts and of Superintendents of Schools in the Various States.

EXTENSION OF REMARKS

OF

HON. C. BASCOM SLEMP,

OF VIRGINIA,

IN THE HOUSE OF REPRESENTATIVES,

Friday, March 2, 1917.

Mr. SLEMP. Mr. Speaker, under leave granted to extend my remarks in the RECORD I desire to call attention to the selection of judges of State and county courts in the various States of the Union prepared at my suggestion in the Legislative Reference Division of the Library of Congress.

From this statement it is seen that of the 48 States in the Union 36 of these States elect all their judges by the people. In these States no judges are appointed and none are selected by the legislatures, but the people themselves decide who shall preside over their courts. The judges are amenable to the public for their bearing and their conduct. If a judge has been a worthy judge he is usually reelected, but if not the people select another. Of the remaining 12 States there are 5 States where the people in part elect the judges of the courts. There are 7 States in which the people have no voice in the selection of their judges.

I regret to say that Virginia is one of these States.

Mr. Speaker, I favor the election of the judges of our courts by the people for two good reasons:

First. The people are the source of all power, and the exercise of this power in the selection of judges, as in others officers who serve them, is simply the exercise of the right of self-government.

Second. The judiciary in our own State of Virginia has been a part of a political machine. The judges are vested with the appointment of members of the electoral board, who select the judges, clerks, and registrars of election; and the judges of our courts are drawn into every sharp political contest, whether they would have it so or not. Probably the easiest means of political preferment in Virginia would be to be appointed a judge as a return for valuable political service, improve the Democratic machine while a judge, and watch for opportunities to go higher up in politics.

I hope and believe that Virginia will soon align herself with those States in the Union that believe in popular government and where the people really control the affairs of their government, as they certainly do not in the grand and historic Commonwealth of Virginia.

I give the statement, as follows:

METHOD OF SELECTION OF JUDGES OF STATE AND COUNTY COURTS.

ALABAMA.

Supreme court elected by the people. (Const., VI, 152.)
Circuit courts elected by the people. (Const., VI, 152.)
Probate courts elected by the people. (Const., VI, 152.
Courts of chancery elected by the people. (Const., VI, 152.)
Inferior courts of law or equity elected or appointed. (Const., VI, 153.)
The county courts are presided over by the probate judges of the respective counties. (Crim. Code, sec. 6696.)

ARIZONA.

Supreme court elected by the people. (Const., VI, 3.)
Superior county courts elected by the people. (Const., VI, 5.)

ARKANSAS.

Supreme Court elected by the people. (Const., VII, 6.)
Circuit courts elected by the people. (Const., VII, 7.)
County courts lected by the people. (Const., VII, 29.)

CALIFORNIA.

Supreme court elected by the people. (Const., VI, 3.)
District courts of appeals elected by the people. (Const., VI, 4.)
Superior courts elected by the people. (Const., VI, 6.)

COLORADO.

Supreme court elected by the people. (Const., VI, 6.)
District courts elected by the people. (Const., VI, 12.)
County courts elected by the people. (Const., VI, 22.)

CONNECTICUT.

Supreme court of errors selected by the legislature. (Const., V, 3; Amend. XXVI.)
Superior court selected by the legislature. (Const., V, 3; Amend. XXVI.)
Court of common pleas selected by the legislature. (Gen. Stat., 1902, sec. 57.)
Probate courts elected by the people. (Const., Amend. XXI.)

DELAWARE.

Supreme court appointed by governor (Const., IV, 2, 3).
Superior court appointed by governor (Const., IV, 2, 5).
Court of chancery appointed by governor (Const., IV, 2, 3).
Orphans' court appointed by governor (Const., IV, 3, 11).
Court of oyer and terminer appointed by governor (Const., IV, 3, 5).
Court of general sessions appointed by governor (Const., IV, 3, 5).

FLORIDA.

Supreme court elected by the people (Const., V, 2).
Circuit courts appointed by governor (Const., V, 8).
County criminal courts appointed by governor (Const., V, 24).
"County judge" elected by the people (Const., V, 16).

GEORGIA.

Supreme court elected by the people (Const., VI, 2, 8).
Court of appeals elected by the people (Const., VI, 2, 9).
Superior courts elected by the people (Const., VI, 3, 2).
Courts of ordinary elected by the people (Const., VI, 6, 3).

IDAHO.

Supreme court elected by the people (Const., V, 6).
District courts elected by the people (Const., V, 11).
Probate courts elected by the people (Const., XVIII, 6).

ILLINOIS.

Supreme court elected by the people (Const., VI, 6).
Appellate courts elected by the people (Const., VI, 11, 13).
Circuit courts elected by the people (Const., VI, 13).
County courts elected by the people (Const., VI, 18).
Probate courts elected by the people (Const., VI, 20).

INDIANA.

Supreme court elected by the people (Const., VII, 3).
Appellate court elected by the people (Burns' Ann. Stat., 1914, sec. 1398).
Circuit courts elected by the people (Const., VII, 9).
County superior courts elected by the people (Burns' Ann Stat., 1914, sec. 1462).
County criminal courts elected by the people (Burns' Ann. Stat., 1914, sec. 1597).
Probate courts elected by the people (Burns' Ann. Stat., 1914, sec. 1608).

IOWA.

Supreme court elected by the people. (Const., V, 3, 11.)
District courts elected by the people. (Const., V, 5, 11.)

KANSAS.

Supreme court elected by the people. (Const., III, 171.)
District courts elected by the people. (Const., III, 174.)
Probate courts elected by the people. (Const., III, 177.)

KENTUCKY.

Court of appeals elected by the people. (Const., IV, 3.)
Circuit courts elected by the people. (Const., IV, 20.)
County courts elected by the people. (Const., IV, 30.)

LOUISIANA.

Supreme court elected by the people. (Const., 86.)
Courts of appeal elected by the people. (Const., 99, 100.)
District courts elected by the people. (Const., 109.)

MAINE.

Supreme judicial court appointed by governor. (Const., V, Pt. I, 8.)
Probate courts elected by the people. (Const., VI, 7.)

MARYLAND.

Court of appeals elected by the people. (Const., IV., 3.)
Circuit courts elected by the people. (Const., IV, 3.)
Orphans' courts elected by the people. (Const., IV, 3.)

MASSACHUSETTS.

Supreme judicial court appointed by governor. (Const., Pt. II, Ch. II, sec. 1 (9).) (Rev. Laws, 1902, p. 1373.)
Superior court appointed by governor. (Const., Pt. II, Ch. II, sec. 1 (9).) (Rev. Laws, 1902, p. 1378.)
Probate courts appointed by governor. (Const., Pt. II, Ch. II, sec. 1 (9).) (Rev. Laws, 1902, p. 1423.)
"Trial justices" appointed by governor. (Rev. Laws, 1902, p. 1414.)

MICHIGAN.

Supreme court elected by the people. (Const., VII, 2.)
Circuit courts elected by the people. (Const., VII, 8.)
Probate courts elected by the people. (Const., VII, 14.)

MINNESOTA.

Supreme court elected by the people. (Const., VI, 3.)
District courts elected by the people. (Const., VI, 4.)
Probate courts elected by the people. (Const., VI, 7.)

MISSISSIPPI.

Supreme court appointed by governor. (Const., VI, 145.)
Circuit courts appointed by governor. (Const., VI, 153.)
Courts of chancery appointed by governor. (Const., VI, 153.)

MISSOURI.

Supreme court elected by the people. (Const., VI, 8.)
Circuit courts elected by the people. (Const., VI, 25.)
Criminal courts elected by the people. (Const., VI, 30.)
Probate courts elected by the people. (Const., VI, 34.)
County courts elected by the people. (Const., VI, 30.)

MONTANA.

Supreme court elected by the people. (Const., VIII, 6.)
District courts elected by the people. (Const., VIII, 12.)

NEBRASKA.

Supreme court elected by the people. (Const., VI, 4.)
District courts elected by the people. (Const., VI, 10.)
County courts elected by the people. (Const., VI, 15.)

NEVADA.

Supreme court elected by the people. (Const., VI, 3.)
District courts elected by the people. (Const., VI, 5.)

NEW JERSEY.

Supreme court appointed by governor. (Const., VII, 2 (1).)
Court of errors and appeals appointed by governor. (Const., VII, 2 (1).)
Court of chancery appointed by governor. (Const., VII, 2 (1).)
Circuit courts appointed by governor. (Const., VI, 5 (2), VII, 2 (1).)
Prerogative court appointed by governor. (Const., VI, 4 (2), VII, 2 (1).)
Court of common pleas appointed by legislature. (Const., VII, 2 (2).)

NEW HAMPSHIRE.

Supreme court appointed by governor. (Const., II, 45, Chase's Pub. Stat., Supp. 1913, p. 486).
Superior court appointed by governor. Const., II, 45, Chase's Pub. Stat., Supp. 1913, p. 486.)
Probate courts appointed by governor. (Const., II, 45, 79.)

NEW MEXICO.

Supreme court elected by the people. (Const., VI, 4.)
District courts elected by the people. (Const., VI, 12.)
Probate courts elected by the people. (Stat., 1915, sec. 1245.)

NEW YORK.

Supreme court elected by the people. (Const., VI, 1.)
Court of appeals elected by the people. (Const., VI, 7.)
Surrogates' courts elected by the people. (Const., VI, 15.)
County courts elected by the people. (Const., VI, 14.)

NORTH CAROLINA.

Supreme court elected by the people. (Const., IV, 20.)
Superior courts elected by the people. (Const., IV, 20.)

NORTH DAKOTA.

Supreme court elected by the people. (Const., IV, 90.)
District courts elected by the people. (Const., IV, 104.)
County courts elected by the people. (Const., IV, 110.)

OHIO.

Supreme court elected by the people. (Const., IV, 2.)
Court of appeals elected by the people. (Const., IV, 6.)
Court of common pleas elected by the people. (Const., IV, 3.)
Probate courts elected by the people. (Const., IV, 7.)

OKLAHOMA.

Supreme court elected by the people. (Const., VII, 3.)
District courts elected by the people. (Const., VII, 9.)
County courts elected by the people. (Const., VII, 11.)

OREGON.

Supreme court elected by the people. (Const., VII, 1.)
Circuit courts elected by the people. (Const., VII, 1, 8.)
County courts elected by the people. (Const., VII, 11.)

PENNSYLVANIA.

Supreme court elected by the people. (Const., V., 2.)
Courts of common pleas elected by the people. (Const., V., 1, 15.)
Courts of oyer and terminer and general jail delivery elected by the people. (Const., V., 1, 15.)
Courts of quarter sessions of the peace elected by the people. (Const., V., 1, 15.)
Orphans' courts elected by the people. (Const., V., 1, 15.)

RHODE ISLAND.

Supreme court selected by legislature. (Const., X., 4.)
Superior court selected by legislature. (Gen. Laws, 1909, p. 949.)
District courts selected by legislature. (Gen. Laws, 1909, p. 973.)

SOUTH CAROLINA.

Supreme court selected by legislature. (Const., V., 2.)
Court of common pleas selected by legislature. (Const., V., 1, 13.)
Court of general sessions selected by legislature. (Const., V., 1, 13.)
County courts elected by the people. (Civil Code, 1912, sec. 3856.)
Probate courts elected by the people. (Civil Code, 1912, secs. 280, 1360.)

SOUTH DAKOTA.

Supreme court elected by the people. (Const., V., 5.)
Circuit courts elected by the people. (Const., V., 15.)
County courts elected by the people. (Const., V., 19.)

TENNESSEE.

Supreme court elected by the people. (Const., VI., 3.)
Courts of chancery elected by the people. (Shannon's Ann. Code, 1917, sec. 374.)
Circuit courts elected by the people. (Shannon's Ann. Code, 1917, sec. 374.)
County courts elected by the people. (Shannon's Ann. Code, 1917, sec 385.)

TEXAS.

Supreme court elected by the people. (Const., V, 2.)
Courts of civil appeals elected by the people. (Const., V, 6.)
Courts of criminal appeals elected by the people. (Const., V, 4.)
District courts elected by the people. (Const., V, 7.)
County courts elected by the people. (Const., V, 15.)

UTAH.

Supreme court elected by the people. (Const., VIII, 2.)
District courts elected by the people. (Const., VIII, 5.)

VERMONT.

Supreme court selected by the legislature. (Const., II, 42.)
Courts of chancery selected by the legislature. (Pub. Stat., 1906, secs. 1231, 1234, 1342.)
County courts selected by the legislature. (Const., II, 42.)
Probate courts, elected by the people. (Const., II, 35.)
Courts of insolvency elected by the people. (Pub. Stat., 1906, sec. 2412; Const., II, 35.)
Court of claims selected by the legislature. (Pub. Stat., 1906, sec. 465.)

VIRGINIA.

Supreme court of appeals selected by the legislature. (Const., VI, 91.)
Circuit courts selected by the legislature. (Const., VI, 96.)
Corporation courts selected by the legislature. (Const., VI, 96.)
Law and chancery courts selected by the legislature. (Const., VI, 96.)

WASHINGTON.

Supreme court elected by the people. (Const., IV, 3.)
Superior courts elected by the people. (Const., IV, 5.)

WISCONSIN.

Supreme court elected by the people. (Const., VII, 4.)
Circuit courts elected by the people. (Const., VIII, 10.)
Probate courts elected by the people. (Const., VII, 14.)
County courts elected by the people. (Stat., 1915, sec. 2441.)

WEST VIRGINIA.

Supreme court of appeals elected by the people. (Const., VIII, 2.)
Circuit courts elected by the people. (Const., VIII, 10.)
County courts elected by the people. (Const., VIII, 23.)

WYOMING.

Supreme court elected by the people. Const., V, 4.)
District courts elected by the people. (Const., V, 19.)

Mr. Speaker, I also give a statement as to the manner of the selection of the school officials in the several States. Our State of Virginia permits the appointment of all its school officials by the majority party, except the State superintendent, and hence the school system of Virginia is a part of the powerful Democratic machine of to-day. There is not a Republican county school superintendent and there is not a county school superintendent selected except through his political and not educational qualifications. The only relief from such a situation is to place the control of the school officers as well as the judiciary in the hands of the people who are to be served by these officials. This is fundamental in the right of self-government in the State.

It will be observed that Virginia is the only State in the Union that denies every county the right of the selection of its county superintendent of schools.

A candidate for county school superintendent has to visit Richmond, in some instances 500 miles away, to present his claims to a board that has never visited the county and is a stranger to its needs in all of Virginia.

LIBRARY OF CONGRESS,
LEGISLATIVE REFERENCE SERVICE,
Washington, March 3, 1917.

Hon. C. BASCOM SLEMP,
290 House Office Building, Washington, D. C.

DEAR SIR: In response to your request of yesterday, I am inclosing herewith a memorandum showing the method of selecting State and county superintendents of schools in the several States, which has been prepared in the Legislative Reference Division under my direction from the "Digest of State laws relating to education," published as Bulletin No. 47 (1915) of the United States Bureau of Education, supplemented by the statutes in certain cases. This is the best we can do in the time allowed.

Very truly, yours,
J. DAVID THOMPSON,
Law Librarian.

STATE SUPERINTENDENT.

Elected by the people in Alabama, Arizona, Arkansas, California, Colorado, Florida, Georgia, Idaho, Illinois, Indiana, Kansas, Kentucky, Louisiana, Michigan, Mississippi, Missouri, Montana, Nebraska, Nevada, New Mexico, North Carolina, North Dakota, Oklahoma, Oregon, South Carolina, South Dakota, Texas, Utah, Virginia, Washington, West Virginia, Wisconsin, Wyoming.

Appointed by the governor in Delaware, Iowa, Maine, Maryland, Minnesota, New Hampshire, New Jersey, Ohio, Pennsylvania, Tennessee.

Elected by a board in Massachusetts and Vermont, by the State board of education, appointed by the governor; in Rhode Island, by the State board of education, elected by the legislature except for ex officio members; in New York, by the board of regents.

None in Connecticut, whose school system is managed by a State board of education of seven members, which consists of two ex officio members, one appointed by the governor, and four elected by the legislature.

COUNTY SUPERINTENDENTS.

Elected by the people in Alabama, Arizona, Arkansas (if majority of voters in county favor such election), California, Colorado, Florida, Georgia, Idaho, Illinois, Kansas, Kentucky, Michigan, Minnesota, Mississippi, Missouri, Montana, Nebraska, New Mexico, North Dakota, Oklahoma, Oregon, South Carolina, South Dakota, Utah (voters in cities of first and second classes and in county-school districts of first class not allowed to vote), Washington, West Virginia, Wisconsin, and Wyoming.

Appointed by the governor in Delaware.

Appointed by the State superintendent in New Jersey. (Commissioner of education.)

Elected by a board of education: In Louisiana, by a board of directors of public schools; in Maryland, by a board of county-school examiners; in North Carolina, by a county board of education; in Ohio, by a county board of education. (Page and Adams' Gen. Code, Supp. 1916, sec. 4744.)

Elected by convention of township or school district representatives: In Indiana, by township trustees; in Iowa, by representatives of each school, township, city, town, or village, independent district, and independent consolidated district in the county; in Pennsylvania, by school directors.

Elected by a court: In Tennessee, by county court; in Texas, by commissioners' court.

SOURCE.

Digest of State laws relating to public education. Bureau of Education. Bulletin No. 47. January 1, 1915.

In Virginia a State Board of Education appoints division superintendents comprising one or more counties. (Va. Code Ann. 1916, p. 329.)

There are no county superintendents in Connecticut, Maine, Massachusetts, Nevada, New Hampshire, New York, Rhode Island, and Vermont.

Princeton Alumni Association of Maryland.

EXTENSION OF REMARKS
OF
HON. J. CHARLES LINTHICUM,
OF MARYLAND,
IN THE HOUSE OF REPRESENTATIVES,
Saturday, March 3, 1917.

Mr. LINTHICUM. Mr. Speaker, under leave granted to me to extend my remarks in the RECORD, I insert the following resolution of the Princeton Alumni Association of Maryland:

RESOLUTION ADOPTED UNANIMOUSLY AT MEETING OF PRINCETON ALUMNI ASSOCIATION OF MARYLAND, MARCH 2, 1917.

Whereas the Princeton Alumni Association of Maryland believes the present crisis demands fearless and aggressive action on the part of our Government to put an end to the illegal and inhuman attacks of the German Government upon the rights of this country and the lives of its citizens; and

Whereas this association believes that in taking such action the United States would not only be defending the rights of its own citizens, but also be upholding civilization against barbarism: Therefore be it

Resolved, That this association does hereby pledge its most hearty support to the President in any action which he may take to protect American citizens and property from attack on the seas or elsewhere, and does most respectfully urge upon the President and upon Congress that prompt and efficient steps be taken to afford such protection; and be it further

Resolved, That it is the sense of this association that one of the means to be adopted to provide such adequate protection, is the immediate passage by Congress and approval by the President of an act establishing a system of universal military training and service; and be it further

Resolved, That copies hereof be sent to the President, to the chairman of the Committees on Military Affairs of the Senate and House of Representatives, and to the Members of the Maryland delegation in Congress.

Armed Neutrality.

EXTENSION OF REMARKS
OF
HON. CHARLES A. LINDBERGH,
OF MINNESOTA,
IN THE HOUSE OF REPRESENTATIVES,
Thursday, March 1, 1917.

Mr. LINDBERGH. Mr. Speaker, somehow, some place, somewhere, sometime a nation will have to take a step toward civilization or the world will go down in ruin. I had hoped that now had shown the how; that this was the time and that our's was the Nation. But it is not "the law," though it is the moral that would have us lead the world right now. Now is our chance. The President asks us the authority to enforce "the law" now, and Congress can give the power to the President. The President, in his message, says he has the authority without an act of Congress, but I am unable to read the law with that construction.

This day has shown no bitterness among Members. All realize that this is a most solemn day, and that each Member must answer to his God and to his country. No one here is a coward. Some fear the lash of the press and the protests of those who have read only the headlines of the jingo press. But that is insignificant compared with the responsibility, and no one should shirk responsibility. What appeals most to me is the consequences. Not that I fear lack of patriotism anywhere. Five, ten, or even twenty millions of men and as many more women, if it were necessary, would not hesitate to go to the firing line. We all know they would if their country needed them for war. But all of us, whatever we do, must take with us the thing that distinguishes mankind from brute kind—that is reason and common sense.

Of course, everybody knows that the metropolitan press declared war some time ago, and became frenzied because the people, Congress, and the President did not immediately ratify their declaration of war and at once enter upon hostilities. That part of the press libeled the President shamefully whenever he took any measure that promoted peace and demanded of all others to stand by the President only when the President took any step that might lead to war. Go to the press files, for they will prove the truth of what I have stated. You will find them in the library for every day, and there you can see how inconsistent they have been in demanding that we all stand by the President only when his acts happen to suit them. We

need a truly American press to circulate among the people, a press that will publish the whole truth whoever it may concern, and leave the people to determine from the facts what in their judgment is right. Take for instance the recent sinking of the *Laconia*. That ship landed at Halifax, Canada, on its way from an American port to England. It was an English ship, therefore a belligerent. There were 29 women on board, 3 of them Americans. All except the three American women were taken off at Halifax and refused the privilege of going into the war zone. The three American women were killed by the sinking of the ship by a submarine. That fact was published, without the public generally being informed what had happened at Halifax. The three American women had a legal right to go upon the ship. So did the other 26 women. We all sympathize with our American sisters who lost their lives and condemn the means by which they were killed, but why did not our Government warn them to keep off, as the Government of England compelled the other women to get off?

The real question before us to-day is, Is civilization breaking down? The facts upon their face show that it is, or else that we have not had civilization. "The law" has failed, and are we to plunge into war now to maintain "the law" and make its failure more complete, or will we pick up the few remaining threads of reason and build better? The President asks us to give him authority to enforce "the law." Let us inquire what "the law" is.

"The law" is that Americans may travel upon the high seas, and may send American products to other countries and bring back foreign products. That is "the law," and the President will be authorized to enforce it by force of arms. The only question is as to what is the best way to proceed. What are the facts as related to the present conflict? No action toward starting war was taken till the submarine warfare stopped the munition makers sending their goods across the ocean. Americans had, without notice, been killed upon belligerent ships, also upon neutral ships and upon our own ships, but no step toward war was taken until the ships carrying munitions of war were being held in American harbors, because the owners could not afford to take the financial risk incident to sending them through the war zone. Everybody has notice that they will be sunk whenever they can be, and that seems to some persons more serious than sinking them without notice. It is all serious enough—too serious, in fact. None of us dispute the law or the right to free travel and commerce upon the high seas; and no one would surrender any right essential to our national independence, but we should see the necessity of civilization, and that it can not come out of the existing law unless we make different rules of application. Let us see what "the law" has done with our commerce and how it operates against us as we now apply it.

From July 1, 1913, to June 30, 1914, we exported $470,653,491 in value of American products in excess of what we imported. That was before the war. Now let us see what occurred after the war. From July 1, 1914, a few days before the war began, to June 30, 1915, we exported $1,094,419,600 in value of American products in excess of what we imported. From July 1, 1915, to June 30, 1916, we exported $2,135,775,355 in value of American products in excess of what we imported. From July 1, 1916, to September 30, 1916, three months, we exported $924,726,579 in value of American products in excess of what we imported. At the present time—that is, for the last three months—we have exported in excess of what we have imported, at the rate of $400 in value per annum for every man, woman, and child in America. To do that is "the law," but, if I am excused for curt language, it is damned nonsense to apply it that way. To send away $400 worth of goods for every man, woman, and child more than we get back is idiocy as distinguished from right.

No wonder that there are cold and hunger riots in New York, Chicago, and other great cities. "The law" to take the products of our country to foreign lands for barter, trade, and speculation to give the privilege of the barterers to exercise the right to use the profits for travel upon the high seas and involve our people in cold, hunger, and war are abstract rights, but they are not the rights that lead to the exercise of civilization but the rights that lead to barbarism. It is those abstract rights that we are asked to apply power to enforce instead of dealing with them from the common-sense method.

The man who "stands by his country" to-day is tagged by the war jingoes as pro-German, but that does not make him so. The man who reasons and exercises good sense to-day may be hung in effigy to-morrow by the jingoes. The truth will be concealed from the public as long as a few millions out of the billions of profits the few get are paid out for circulating falsehoods.

I discussed this problem at length on February 24, when the high cost of living had our attention, and my speech is in the RECORD of that day. Therefore I shall not discuss the same ground again, except to add that it is cowardly to seek to name the "war-for-profit group" as patriotic, and name the people who seek to apply common-sense rules that would operate for the benefit of all mankind as "peace at any price" and unpatriotic. There are no peace-at-any-price people. I have shown in my speech of February 24 the difference between the two contending factions.

The General Staff Universal Military Training and Service Bill.

EXTENSION OF REMARKS

OF

HON. AUGUSTUS P. GARDNER,

OF MASSACHUSETTS,

IN THE HOUSE OF REPRESENTATIVES,

Saturday, March 3, 1917.

Mr. GARDNER. Mr. Speaker, under the leave granted to me to extend my remarks in the RECORD I include the following:

MEMORANDA TO ACCOMPANY H. R. 21054, SIXTY-FOURTH CONGRESS, SECOND SESSION.

THE GENERAL STAFF UNIVERSAL MILITARY TRAINING AND SERVICE BILL.

Memorandum for the Chief of Staff, February 14, 1917: Subject—System of national defense based upon universal liability to military training and service. WCD 9876–20.

Memorandum for the Chief of Staff, February 14, 1917: Subject—Main features of a statement of a system of national defense based upon universal liability to military training and service, prepared by the War College division of the General Staff. WCD 9876–20.

Memorandum for the Chief of Staff, February 14, 1917: Subject—Statement of a system of national defense based upon universal liability to military training and service, prepared by the War College division of the General Staff. WCD 9876–20.

Draft of an act for providing a system of national defense based upon universal liability to military training and service, and for other purposes. WCD 9876–20.

Memorandum for the Chief of Staff, December 9, 1916: Subject—Statement of a proper military policy for the United States. WCD 9832–1.

Extract copy from the statement of Maj. Gen. Hugh L. Scott, Chief of Staff, United States Army, to the Military Committee of the Senate, December 19, 1916.

Table showing the strength and organization of the land forces of the United States proposed in WCD 9876–20, February 14, 1917.

Cost tables.

[War College Division, 9876–20.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, February 14, 1917.

MEMORANDUM FOR THE CHIEF OF STAFF.

Subject: System of national defense based upon universal liability to military training and service.

1. The War College Division submits herewith a statement and draft of legislation for a system of national defense based upon the fundamental principles of universal liability to military training and service, localization of units, and decentralization of administration.

2. The statement and the draft of legislation for carrying the system into effect, prepared by the War College Division, are essentially the same as proposed by a committee of the War College Division under date of January 27, 1917, except that—

(*a*) The statement makes provision for the appointment of both temporary and provisional second lieutenants, and for the appointment of qualified enlisted men of the Army to commissions in both the permanent and temporary personnel.

(*b*) A limitation has been placed upon the number of officers who under the system of promotion proposed by the committee might be promoted to field grades in the several arms and corps.

(*c*) The section of the draft with reference to the procurement of animals for the Reserves has been omitted.

(*d*) The provision of the draft relative to furnishing liquor and habit-forming drugs to officers or soldiers in uniform has been omitted.

3. In order that Congress may understand what is really involved in such a system, and what is necessary for its success, it is considered desirable to state the details of registration and sanctions. The minimum punishments proposed for failure to register, to submit to physical examination, or to respond to calls for service have been reduced.

4. The War College Division considers it inadvisable to make exemptions from training on account of occupation of young men of training age. Such exemption would open a way to evasion of military training. The best procedure would be to train all young men who are fit for and liable to military training and to employ them in time of war as soldiers upon necessary work for which they are best fitted.

5. The statement contains some data not given by the committee relative to the reduction in cost which might be effected by training a smaller number of men each year or by training the full number required for only six months. The effect of these alternatives upon the generation of trained reservists is also stated.

6. The system of training as outlined in the statement and covered by the proposed draft of legislation is one adapted to normal peace conditions when ample time is available for deliberate preparation. If such a system should be inaugurated in time of emergency with the view of providing an army in a minimum of time, the plan should be modified in certain essential particulars. The War College Division has in preparation a modified plan adapted to emergency conditions.

JOSEPH E. KUHN,
Brigadier General, General Staff,
Chief of War College Division.

[War College Division, 9876–20.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, February 14, 1917.

MEMORANDUM FOR THE CHIEF OF STAFF.

Subject: Main features of a statement of a system of national defense based upon universal liability to military training and service prepared by the War College Division of the General Staff.

I.—*Purpose.*

A reasonable measure of defense of the United States from successful invasion requires that there be available and ready for mobilization at all times a large number of trained, equipped, and organized men. It is the purpose of this plan to provide for the raising, training, and organization of the required number of men in such manner as to distribute the burden of national defense equally over the whole population and to provide for mobilization and service in war in accordance with the same principle.

II.—*Basic principles.*

The plan is designed to effect universal liability to training in peace and to service in war, decentralization of administration in peace and war, and localization of organization.

III.—*Training and service.*

1. Training in peace: To effect universality of training in peace and efficient service in war it is proposed to call out all able-bodied male citizens in their nineteenth year for 11 months' continuous training to be followed by two repetition courses of two weeks each, one in their twentieth year and one in their twenty-first year. It is proposed that only the following classes should be exempted from such training:

(a) Those permanently physically or mentally unfit for service of any kind. Such men will be permanently rejected.

(b) Those temporarily physically or mentally unfit. Such men will be temporarily rejected, but will be reexamined each year until they reach the age of 25 years, when they are permanently assigned to the unorganized reserves. If in any year during this period they are found fit for service, they will be called out for training in peace and service in war with the class of that year.

(c) Those who are the sole supports of destitute dependents. Such men will be exempted for one year, and so on from year to year until they reach the age of 25, when their liability to training ceases and they are assigned permanently to the unorganized reserves. If they should cease to be the sole supports of destitute dependents during any year before they reach the age of 25 years they will be called out for training and service with the class of that year.

2. Service in war: All nonexempted physically and mentally fit male citizens who have completed their prescribed 11 months' continuous training are liable for service in the reserves as follows:

(a) In the first reserves for four years and one month.

(b) In the second reserves for seven years.

(c) Thereafter until they reach the age of 45 years in the unorganized reserves.

In case of actual or threatened war the first and second reserves will be called out in the order named, together with many permanent officers and enlisted men of the training forces. Thereafter other men required for war service would be called out from the unorganized reserves by classes, according to age, beginning with the youngest. Only men permanently physically or mentally unfit would be permanently excused from service in war. Those temporarily unfit will be called out as soon as their disabilities have disappeared. Exemptions from war service will in every case be in the nature of postponement of liability and whenever the causes upon which they were *based have* become nonexistent, the exemptions will cease and the persons concerned called out for service. The following will be temporarily exempted from service in war:

(a) Those who are the sole supports of destitute dependents.

(b) Those whose civil official positions are indispensably necessary for the conduct of the Federal and State Governments and for the prosecution of the war.

All persons commissioned, enlisted, or enrolled in the military service at the outbreak of war or when war becomes imminent may be retained in service until the end of the war or until danger of war shall have disappeared.

IV.—*Permanent personnel.*

1. Over-sea garrisons, frontier forces, and training forces: Under this plan the soldiers of the United States are to be the young men of the Republic who, after temporay military service for purposes of training, will be definitely organized into a localized national army. Permanent soldiers are to be employed only for those duties which can not be performed by citizen soldiers, and the permanent personnel is, therefore, reduced to a minimum consistent with efficiency.

Permanent personnel will be required for the following purposes:

(a) To form the necessary garrisons of our naval bases and other over-sea possessions. The organizations required for these purposes constitute the over-sea garrisons.

(b) To form a small detachment for frontier guard duty and for the mine defense of our fortifications at home. These detachments constitute the frontier forces.

(c) To form the administrative and teaching personnel required for the training of annual contingents of reservists and for the maintenance of the reserve organization in time of peace. This portion of the permanent personnel, together with the recruits under training, is to be formed into training units and constitutes the training forces.

Each tactical unit in the training forces is essentially a school for training reservists. Its permanent personnel is to be limited to the officers, noncommissioned officers, and enlisted specialists required for training the annual contingent of reservists assigned to it and for the maintenance of the necessary training plant and equipment.

2. Increase in permanent personnel: In order to provide the permanent personnel necessary for these purposes, considerable expansion of our present Military Establishment will be necessary, especially in the number of officers and noncommissioned officers. In order to utilize existing military resources to the fullest extent, it is proposed to recruit the present establishment so far as practicable by receiving qualified officers and noncommissioned officers of the National Guard, Organized Militia, and suitable enlisted men of the Regular Army.

In like manner it is proposed to invite graduates of military schools and colleges and all other citizens of former military training and experience to apply for appointment in the permanent establishment, subject to proper tests as to capacity and character.

3. In order to protect the interests of the Government in these particulars, it is proposed that all such appointments and all original appointments in the future be temporary or provisional, and that permanent appointment be deferred until after a period of practical test as to aptitude and qualification.

4. Promotion: In view of the great expansion of the officer corps and in order to assure flexibility of organization, it is necessary to place the promotion of officers on a uniform and permanent basis that will be unaffected by changes in the relative strength of the several arms and corps. In order to accomplish this object it is proposed to promote officers to the several grades below that of brigadier general after stated periods of service in the lower grades, but with a reasonable limit upon the total number of officers in field grades. This will make it practicable to transfer officers from one arm to another in order that substantially the same number of trained and experienced officers may be assigned to each regiment or regimental equivalent in the combatant branches of the Army.

5. Elimination: In order to assure the maintenance of the high degree of efficiency demanded of the Army officer in his main function as a military instructor of the youth of the country, it is proposed to provide practical and prompt, but equitable, machinery for eliminating from the active list officers who are incompetent or otherwise unsuitable.

V.—*Creation of reserves.*

The problem of preparedness is not met by merely providing a large number of trained individuals. Trained soldiers must be formed into definite tactical organizations before they can be employed in war, and in order to meet modern conditions these units must be trained, organized, and equipped in time of peace.

1. The first reserve: In order to meet these conditions the trained reservists in their first four years and one month of reserve service will form the personnel of the first reserve. The first reserve is to be a definitely organized and localized national army, complete in every unit. Each reservist during his service in the first reserve will be a member of a tactical unit of the first reserve, in which he will serve with all of the other reservists in his neighborhood who belong to the same arm of the service. The first reserve is to be fully armed and equipped, and its organization, training, and preparedness for mobilization are to be tested by an annual assembly and muster with a short period of training and maneuver. All reservists in their first and second years of reserve service will attend these maneuvers. Thereafter attendance at these annual maneuvers will be required only of those reservists who aspire to become officers and noncommissioned officers.

2. The second reserve: After 4 years and 1 month service in the first reserve the reservist will pass into the second reserve. The second reserve will be a localized national army, organized like the first reserve, but as it will not be required for immediate mobilization, it need not be so fully equipped, and it will not be called out for annual maneuvers. In any given region the younger reservists of less than 4 years' reserve service will belong to a first reserve regiment ready for immediate mobilization, the reservists of more than 4 years and 1 month and less than 12 years' reserve service will belong to a corresponding second reserve regiment, while the reservists of more than 11 years' service will belong to the unorganized reserve.

3. Reserve officers: When the system first goes into operation all citizens who have had military training in the National Guard or from any other source, and who do not elect service in the permanent establishment, will be invited to qualify for appointment as reserve officers. As a rule, successful candidates will be immediately assigned to the reserve organizations ultimately to be formed in the region of their homes. After all such initial appointments and assignments have been made future vacancies in the reserve officer personnel will be filled by appointment from trained reservists and from the Reserve Officers' Training Corps.

Each reserve organization will receive its trained reservists each year from the training forces, and each reserve regiment and higher unit will be commanded in time of peace by a selected permanent officer, who will be charged with all arrangements necessary for its preparedness for war. After war begins promotion will be open to reserve officers to the highest grade consistent with their ability and capacity, as demonstrated in active service.

4. Enrolled personnel: All organizations of the first and second reserves will ultimately be filled with trained reservists who have served for a training period of 11 months with the training forces. On the inception of the system volunteers past the training age, who have had military experience in the Army, the National Guard, or elsewhere, should be received into the reserve organization. Those qualified for appointment as officers should be received as such, and others as noncommissioned officers. These will form the nucleus of the reserve organizations. If war should come before there are sufficient trained reservists, the deficiency in the strength of these organizations should be filled by calling out young men past the age of liability for training who are nevertheless liable for military service. This definite, localized organization of the national war force is in any event a necessary step toward preparedness, and should be accomplished before the system of training is put into operation.

VI.—*Reserve supplies.*

The supplies estimated for include those necessary for the training and organization of the required forces and also the minimum reserve of such supplies required in case of war. All of these supplies are necessary, even though no attempt is made to provide trained men. They can not be obtained in sufficient quantities after war occurs, and their absence would place the country absolutely at the mercy of an invader.

VII.—*State militia.*

The plan contemplates a strictly Federal Army for national defense, but some provision must be made for the States until they will have organized forces of constabulary or some other power to prevent domestic disorder. For this reason it is proposed to continue to the States for a period of five years the financial support provided by the so-called Dick bill, as amended prior to the passage of the national-defense act of June 3, 1916.

It is proposed to continue such support indefinitely to the Hawaiian Militia and to that of Porto Rico.

JOSEPH E. KUHN,
Brigadier General, General Staff,
Chief of War College Division.

STATEMENT OF A SYSTEM OF NATIONAL DEFENSE BASED UPON UNIVERSAL LIABILITY TO MILITARY TRAINING AND SERVICE.

[Prepared by the War College Division of the General Staff, Feb. 14, 1917.]

[War College Division 9876-20.]

WAR DEPARTMENT,
OFFICE OF THE CHIEF OF STAFF,
Washington, February 14, 1917.

MEMORANDUM FOR THE CHIEF OF STAFF.

Subject: Statement of a system of national defense based upon universal liability to military training and service prepared by the War College Division of the General Staff.

1. Under date of December 12, 1916, the Chief of Staff directed the War College Division to submit a plan for training a national army along the lines of its recent report (WCD 9832-1), but going more into detail. An abstract copy of this report with extracts from the Chief of Staff's hearing on the same subject are hereto attached. He indicated that the plan, based upon one year's intensive training, should include the following features:

"(a) A description of the method by which the desired number of men are to be obtained. This will include registration, selection, exemptions, etc. He believes it to be impracticable to train, at the beginning, the whole yearly contingent who would be available and thinks provision should be made for a gradual increase of the number called for training yearly until the desired number is attained.

"(b) Method of obtaining and training officers for the national army.

"(c) Organization of the national army in training and in reserve."

In connection with this plan, the Chief of Staff desired an estimate of the cost of such a force and a comparison of such cost with that of the Regular Army and National Guard as they would ultimately be under the national defense act. He also suggested that consideration be given to a scheme for sending men selected for training in the most northern portions of the country to places where outdoor training could be continued in winter, together with an estimate of the cost of such a project.

2. The plan, therefore, must provide for the raising, equipping, and training within a reasonable time of about 4,000,000 men, and for the organization of 1,500,000 men who must be ready to take the field at the outbreak of war and of 1,500,000 others who must be available for active service within three months after war is declared. It must also provide for the proper utilization of some 1,000,000 unorganized reserves whose organization prior to the existence of a national emergency is considered unnecessary and undesirable. Moreover, this plan must include methods which will make it certain that the burden of national defense will bear equally upon all classes of persons. In other words it must be democratic in every respect. It should also, wherever consistent with the furtherance of the ultimate object to be effected, namely, national security, take into consideration the convenience and welfare of the individual citizen. It should ignore the individual whenever his interests conflict with those of the Republic.

3. Scope of the plan: Taking into consideration the requirements both of peace and war it is obvious that this plan must provide the following separate organizations: The over-sea garrisons comprising the forces necessary to hold our positions in the Philippines, Oahu, and Panama, and the garrisons of Alaska and Porto Rico; the frontier forces comprising the personnel of the mine defense at home and a small mobile detachment for emergency use in time of peace; and the national army of trained reservists, as described in paragraph 2 above.

4. Permanent personnel: In order to meet the requirements of the three forces above described it will be necessary to provide a sufficient permanent personnel for the following purposes:

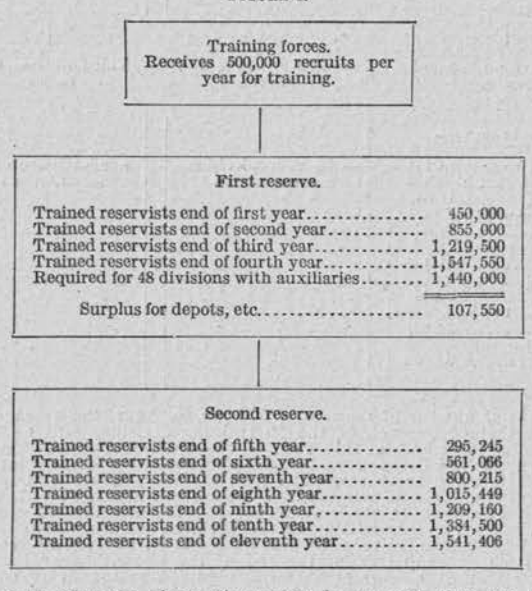
(a) Over-sea garrisons: This force will be composed of permanent soldiers and will consist of the organizations necessary to garrison the Philippines, Oahu, Panama, Alaska, and Porto Rico. The garrisons assumed for this purpose are the same as those outlined in the military policy (W C D 9053-90), September 11, 1915, with a total strength of about 97,000. It is possible that, due to future changes in our relation to the Philippines, the garrison for that possession may be materially reduced, but in that event troops no longer needed there may be required for other over-sea garrisons. For the present it is assumed that the total strength of the over-sea garrisons will remain as above stated.

(b) Frontier forces: These forces will comprise a mobile detachment consisting of two Infantry brigades and a Cavalry brigade, with the necessary auxiliaries required for emergency purposes. It will also include the mine defense of the fortifications at home, which it is believed should be composed entirely of permanent soldiers, as it will be necessary for this force to function at full efficiency at the very outbreak of hostilities. The total strength of the frontier force is estimated to be about 29,000. It is believed that this emergency force will be of sufficient strength to meet all small emergencies which do not justify calling out trained reservists. During the period of transition, before trained reservists become available, and especially in view of the present situation along the Mexican border, the force indicated is probably too small. This condition is met in the plan by the assumption that those organizations of the present Regular Army ultimately destined for the over-sea garrisons but now stationed in the United States will be retained in the United States until quarters are prepared for them at their proper stations, and that some of them may be retained even longer if the situation on the border makes this necessary.

(c) Training forces: The training forces will comprise those units which are necessary for the training of the large army of reservists who are to form the first and second reserves of the national war Army. The permanent personnel of these forces will be limited to those officers and enlisted men who are necessary for purposes of training. The strength of the training forces must, of course, be measured by the number of reservists to be trained each year, and they will be given in more detail after a consideration of the requirements of the first and second reserves.

(d) Other forces: These include the officers and enlisted men of the various staff departments required for the administration of the Military Establishment as a whole and which can not be properly included in any of the three categories above mentioned.

II.—*The training forces.*



1. Relation to the reserves: In order to arrive at the strength of the training forces it is necessary, first, to consider the general strength and organization of the first and second reserves. Under the conditions of the problem it is assumed that the first reserve shall consist of an Army of 1,500,000 men capable of immediate mobilization, and that the second reserve shall consist of a similar force capable of mobilization within 90 days after the outbreak of hostilities. Taking 1,500,000 men as the strength of the first reserve, it is proposed to organize this force into a Coast Artillery reserve of 60,000 men and a mobile field army consisting of 48 divisions, with proper corps and field army auxiliaries, and having a total strength of about 1,440,000 men.

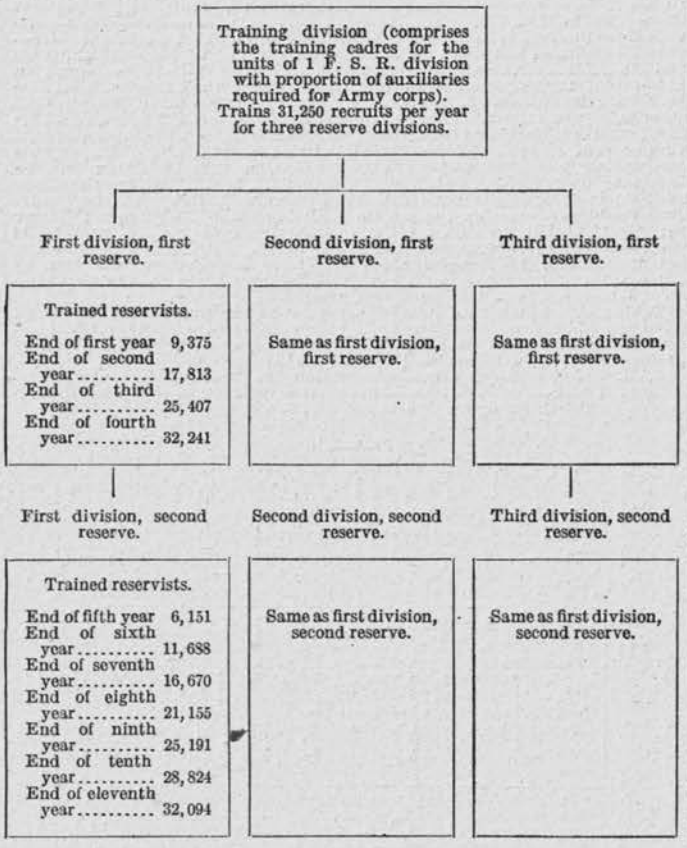
2. Numbers available for training: It is estimated from a study of census statistics that in the year 1917 about 1,000,000 young men will reach their nineteenth year. This includes native-born males and foreign-born males who are sons of naturalized parents. It is almost impossible to make an exact estimate as to the number of these who will be actually available for military training. There must be a considerable number who will be rejected on account of physical unfitness and, in addition thereto, a certain number who will be exempted on account of the dependency of relatives. The actual number available may vary from 55 to 75 per cent, depending largely upon the physical standards prescribed. For the purposes of present discussion it is assumed that the total rejections and exemptions will include about 42 per cent, leaving 58 per cent available for training. Under this assumption the total number actually available for training will be 580,000. Taking from this number 60,000 to be trained for the Navy and Marine Corps, we have 520,000 to receive training in the Army, or 500,000 per year for the mobile field Army and 20,000 per year for the Coast Artillery. This estimate is very conservative, and it is probable that the actual numbers available for training will be greater, but an increase in these numbers will have no effect on the plan of organization, and the general effect will simply be to fill the first and second reserves in a less period of time.

Taking this number of 500,000 per year as the number to be trained for the mobile field Army, we will now consider the further organization and composition of that force and will leave the Coast Artillery problem for consideration in Paragraph II, 8, below.

3. Graphical representation of relations of training forces with reserves: The general relation between the training forces and the reserves is shown in figure 1 below:

FIGURE 1.

In constructing the above diagram it is assumed that the training forces will receive 500,000 recruits per year for training and that the annual loss thereafter, due to casualties and exemptions of all kinds, will be 10 per cent per annum. Under these assumptions it is seen that at the end of the fourth year the first reserve will contain 1,547,550 trained reservists, or 107,550 in excess of the number required to form the first field army. Similarly, it is seen that by the end of the eleventh year the second reserve will have attained its full strength with a surplus of nearly 100,000 trained reservists. At the end of the eleventh year, then, we would be able to mobilize the first and second reserves at full strength with a surplus of over 200,000 trained reservists and with 500,000 recruits undergoing training. At the end of the thirteenth year we would have trained personnel for the first and second reserves with about 1,000,000 men undergoing training, or in depots, and prepared to replace losses.



It is also seen from an examination of figure 1 that, in order to supply the necessary strength of the first reserve in four years, the training army must train approximately one-third of that strength each year. This fixes, in a general way, the proper numerical relation between the strength of the training forces and the strength of the first and second reserves. Having this relation in mind, it appears that for each division of the first reserve the training forces must train about one-third of the war strength of that division each year. This fixes the number of divisions of the training forces at about one-third the number to be formed in the first reserve, or, as 48 divisions with a proper proportion of field army and corps auxiliaries are required for the first reserve, there should be training cadres for 16 such divisions in the training army.

If it should develop that more than 500,000 recruits will be available for training each year, there will be no modification in the organization suggested above. The training forces should be so organized as to handle this overstrength, and, so far as the reserves are concerned, the effect will be simply to diminish the time required for service in the first and second reserves. For example, if 75 per cent of the total military population should be found available for training, the training forces of the mobile field army would train 670,000 recruits per year. In this event it would only be necessary for the reservists to serve

three years in the first reserve and five years in the second reserve in order to furnish the necessary numbers. The organization of the training forces proposed herein is sufficiently flexible to provide for a considerable increase in the number of reservists to be trained as the population increases.

4. Relation between divisions of the training army and the first and second reserves: Figure 2 below shows the relation that will exist between a training division and the corresponding divisions of the first and second reserves:

FIGURE 2.

If the total number of recruits is 500,000 per year, the average number to be trained by each of the 16 training divisions will be 31,250. The training division in this case is assumed to comprise one field service regulations division with a proper proportion of auxiliaries required for forming army corps and field armies. Figure 2 shows that such a training division will supply three reserve divisions with trained reservists, and that at the end of the fourth year the three reserve divisions taken together will be able to mobilize an army corps or field army of 90,000 men, with a surplus of about 6,700 trained reservists to form depots. Similarly, at the end of the eleventh year there will be enough trained reservists to form a corresponding army corps or field army in the second reserve.

It is considered important that this definite relation between training divisions and reserve divisions should be definitely established when the plan first goes into operation. While the organization of the first reserve will not be complete until the end of the fourth year, it is regarded as a distinct step in preparedness to begin the organization at once and to establish and localize all tactical units in the reserve so far as practicable. At the end of the first year each reserve divisional area would comprise a strong trained nucleus for a war-strength division. If time permitted, each of these divisions would be completed by the absorption of untrained men liable to military service. Or, if necessary, by a transfer of trained personnel, one division in each group of three could be immediately mobilized at full combatant strength and still leave a training nucleus for the other two.

In its study of this question, the War College Division has given consideration to the desirability of proposing a smaller infantry division than the typical division authorized in the national-defense act of June 3, 1916. This will be necessary if greater experience in the maneuver of larger units should justify the adoption of an army corps organization similar to that in vogue in Europe. It is quite evident that our present typical division is too large to form a component of an army corps constructed on the principle of maximum economy of road space. On the other hand, having in view the character of average American roads, it is possible that greater experience will confirm the wisdom of retaining large divisions as components of field armies without forming an intermediate unit like the European army corps. As the national-defense act authorizes the President to modify the number of smaller units in brigades, divisions, and army corps, and as the auxiliaries recommended for the 16 divisions under this plan can be adapted to a modified divisional organization, either in the training force and the reserves, it is not considered desirable to recommend legislative changes relating to organization until after we have had greater experience in the actual handling of larger units. In this connection it should be remembered that our present arrangement of three brigades to the division and three regiments to the brigade has decided tactical advantages.

5. Relation between smaller units in the training forces and the first and second reserves: The general relation shown between training divisions and reserve divisions in figure 2 also governs smaller tactical units. Wherever practicable a training brigade will furnish reservists to three first-reserve brigades, a training regiment to three first-reserve regiments, and a training battalion to three first-reserve battalions. This general relation is indicated in figure 3, which shows the relation between the infantry regiments of the training forces and the corresponding infantry regiments of the first and second reserves.

FIGURE 3.

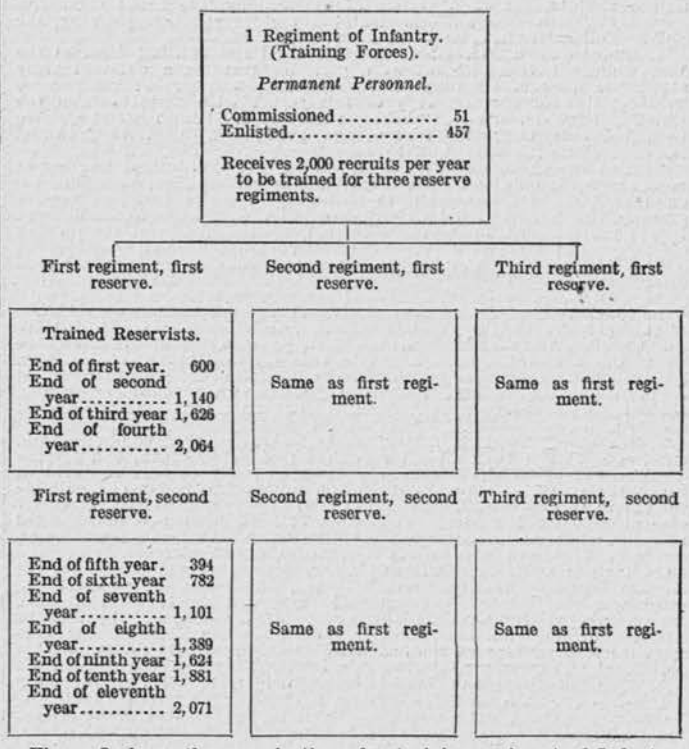


Figure 3 shows the organization of a training regiment of Infantry. It's permanent personnel is seen to comprise 51 commissioned officers and 457 permanent enlisted men. It receives about 2,000 recruits per year to be trained for the reserve. It is seen further that at the end of the first year each regiment of the first reserve will contain 600 trained reservists, and that at the end of the fourth year, the number of trained reservists in each first reserve regiment will be in excess of the number required for mobilization. It is also seen that at the end of the eleventh year the second reserve regiments will be completely filled with trained personnel. During war the training regiment will continue the training of recruits and will furnish a depot to supply trained men to replace casualties at the front.

6. The permanent personnel required for training purposes in the different arms: Figure 3 shows that each training regiment of infantry should have about 457 permanent enlisted men, in order to furnish an effective training cadre for the 2,000 infantry reservists. Table 1 below shows this relation in a general way for all arms.

TABLE I.

Units.	Permanent commissioned.	Permanent enlisted.	Minimum number of recruits.	Number of units maintained in first reserve.
Regiment of Infantry	51	457	1,970	3 regiments.
Regiment of Cavalry	52	414	1,487	Do.
Regiment of Field Artillery	41	414	1,267	Do.
Gun Company, Coast Artillery	3	27	100	
Regiment of Engineers	33	396	1,162	Do.
Field Battalion, Signal Corps	13	77	239	3 battalions.
Aero Squadron	18	68	150	3 squadrons.
Balloon Company	15	68	150	
Field Hospital	6	16	75	3 field hospitals.
Ambulance Company	5	32	150	3 ambulance companies.

The above table shows the number of permanent commissioned officers and enlisted men that are believed to be necessary for forming efficient training cadres in the several specified organizations.

It is possible that experience may justify a reduction of this training personnel after the system is in operation. But it is not believed that the proposed numbers can safely be reduced at the start, for upon the inauguration of the system a considerable portion of the training personnel will be officers and enlisted men of limited training.

At the start a considerable number of the commissioned personnel of the training units will be "temporary" officers appointed under the provisions of section 40 of the accompanying draft of legislation. After the first annual class has been trained "temporary" officers will be selected from those trained reservists who are willing to serve for a period of at least one year in the officer corps of training units. From these officers a limited number will be appointed into the permanent

establishment after a year of service and the bulk of them will pass to the reserve. This system will be of such intrinsic value to the first and second reserves that it may be desirable to continue it as a permanent feature of the system. In this event the total number of permanent officers might be reduced.

Section 3 of the accompanying draft of legislation provides for an enlistment period of one year in training units. This feature is considered necessary in order to recruit the training cadres promptly upon the inauguration of the system. This may also become a desirable permanent feature of the system, as it will result in further training for a considerable number of reservists. Reservists who have served an additional year with training units, either as temporary officers or enlisted men, will be of great value as officers and noncommissioned officers in the organized reserve.

7. Number of units required for the first reserve army and the corresponding number required for the training forces: In order to give the first reserve army its proper organization of 48 Infantry divisions, with six Cavalry divisions and other auxiliaries required for forming higher commands, the first reserve army should comprise the tactical units given in the first column of table 2 below. In order to train the required number of units for the first reserves it will be necessary for the training army to comprise the training cadres for the tactical units shown in column 2 of the same table.

TABLE 2.

	Number of units required for first reserve.	Number of cadres of units required for training forces.
Regiments of Infantry	432	144
Regiments of Cavalry	96	32
Regiments of Light Artillery	144	48
Regiments of Heavy Artillery	48	16
Regiments of Horse Artillery	6	2
Regiments of Engineers	48	16
Mounted battalions of Engineers	6	2
Field Signal battalions	48	16
Field Signal battalions, mounted	6	2
Aero squadrons	78	26
Balloon companies	24	8
Ambulance companies	240	80
Field hospitals	240	80
Field bakeries	66	22

It will be noted in the examination of table 2 that training units are not provided for ammunition and supply trains. In this plan and in the estimates based upon it, the field trains of organizations only are provided, as it is not considered desirable to give the ammunition and supply train personnel one year's training as such. It is considered better to train the necessary personnel as an overstrength of tactical organizations and to form the divisional and corps trains either from teamsters and chauffeurs in civil life or from reservists who have been drawn into such avocations after completing their military training, or from both these sources.

The training of personnel for the engineer train is provided by increased personnel in the training regiments of engineers.

The field trains of regiments will give a sufficient amount of transportation for the training forces in peace and a sufficient nucleus for forming train units in war. The estimates include one truck company for each training division.

8. Coast Artillery troops: After the fifth increment has been added to the Army under the provisions of the act of June 3, 1916, the regular Coast Artillery personnel will provide one complete manning body for the existing oversea fortifications, all mine defenses, and one-half the gun defense at home. The policy of the War Department has heretofore contemplated that one-half of the gun defense at home shall be provided from the National Guard of the seaboard States.

It is estimated that the full manning requirements for the existing fortifications and for additional new batteries under approved projects of the Board of Review will be as follows:

	Enlisted men.	Officers.
United States, gun defense	42,790	1,740
United States, mine defense	[1] 5,885	214
Total, United States	48,675	1,954
Over-sea fortifications	8,361	326
Total, United States and over-sea	57,036	2,280

[1] Includes enlisted specialists.

In this plan it is proposed to provide a permanent personnel to man fully the gun and mine defenses of the oversea fortifications, the mine defense at home (including enlisted specialists) and to provide a training cadre for one-half the gun defense at home. The Coast Artillery training force with the colors to consist of a permanent personnel and a temporary personnel; the permanent personnel to consist of all the officers and 25 per cent of the number of enlisted men required to man one-half of the gun defense at home; the temporary personnel (recruits undergoing 11 months' training annually) to number about 90 per cent of the enlisted men required to man one-half of the gun defense at home. The average personnel of each of the 198 companies or administrative units in the training force to consist approximately of the following personnel:

Permanent cadre: One captain, 1 first lieutenant, 1 second lieutenant, 1 first sergeant, 1 supply sergeant, 1 mess sergeant, 8 sergeants, 12 corporals, 2 cooks, and 2 mechanics; total, 30.

Temporary personnel: One hundred recruits undergoing training for 11 months annually.

The Coast Artillery personnel with the colors will be as follows:

	Officers.	Enlisted men.	Companies or administrative units.
PERMANENT PERSONNEL.			
Over-sea fortifications	326	8,361	71
United States, mine defense	214	5,885	47
United States, training cadre for one-half gun defense	870	5,349	198
Total permanent personnel	1,410	19,595	319
TEMPORARY PERSONNEL.			
Recruits undergoing training for 11 months per year with training cadre	.....	20,000	.....
Total with colors	1,410	39,595	319

Provision is made for calling to the colors annually for 11 months' training 20,000 Coast Artillery recruits. Under the assumption that there is an annual loss of 10 per cent, approximately the following number of trained men will be available at the close of the successive years:

First year, 18,000; second year, 34,200; third year, 48,780; fourth year, 61,902; fifth year, 73,712; sixth year, 84,341; seventh year, 93,907; eighth year, 102,516.

Assuming that the permanent Coast Artillery personnel required for the fortifications at home and oversea and for the training cadre will be recruited from the trained reservists, there will be available at the close of the fourth and eighth years for replacing losses and for duty as Coast Artillery supports approximately the following number of trained Coast Artillery reservists:

	Fourth year.	Eighth year.
Total trained men available	61,902	102,516
Enlisted men required to man all mine and gun defenses	57,036	57,036
Available for replacing losses and for duty as Coast Artillery supports [1]	3,866	45,480

[1] Approximately 47,000 Coast Artillery supports are required for the fortifications in the United States.

In general, the Coast Artillery reservists will be assigned to coast-defense commands and forts in the vicinity of their homes for training, mobilization, and service.

9. General scheme of organization: As soon as the military organization proposed herein is authorized by law the country should be divided into 48 reserve divisional areas. Each three of these reserve areas should comprise one divisional training area and within each such training area a training division should be formed. In addition to the tactical units required for the Infantry division, each such divisional training area should contain a portion of the auxiliary units required for the formation of higher commands.

The distribution of these auxiliaries can not be uniform. For example, divisional areas on the seaboard will include certain units of the Coast Artillery, in addition to mobile army auxiliaries. Certain divisional areas located in or near great centers of population will probably not be suitable for the training of cavalry and other mounted troops. In such divisional areas, therefore, certain units should not be organized and an increased number of them should be organized in adjoining rural areas. Each divisional area should, so far as practicable, contain its own divisional cavalry, but the cavalry for cavalry divisions should be distributed, after due consideration, in regions most suitable for obtaining and training cavalry personnel. In practice, therefore, while each divisional area should normally contain an infantry division and a proportionate share of auxiliaries, there will be some variation in the total number of troops to be raised in each such area and a corresponding difference in military population. The division of the country into divisional areas should be prescribed by the War Department after a careful survey of all the conditions of the problem. After the divisional areas are formed and the composition of training forces therein determined the further subdivision of divisional areas should be regarded as a local problem to be worked out in each case by the commander of the divisional training area.

10. The functions and duties of commanders of divisional training areas: After the 16 training areas are formed and division commanders assigned each such commander should have the fullest power to control all of the military administration within the limits of his area. It must be quite obvious that with forces as large as we are now considering centralized administration in the War Department would necessarily break down. It should be understood that the commander of the divisional area is to organize and administer all of the military resources within the territory assigned to him and that he should have all necessary powers to perform these duties. The War Department should give him a general policy embodied in proper orders and regulations. It should give him his proportionate share of available personnel and his proper allotment of funds and the details of solving the problem should be left to him.

A considerable interval must elapse between the passage of a law authorizing universal service and the actual beginning of the system of universal training. During this interval the preliminary organization must be effected and the commander of the divisional area should use this interval for the recruitment and organization of the permanent training personnel and for the location and preliminary organization of reserve units. When it is considered that 51,000 reserve officers will be required for the first reserve alone it must be recognized that steps to form a corps of such officers should be undertaken at once.

11. Subdivisions of the divisional training area: So far as practicable the tactical units of the first reserve army should be localized. The

divisional training area should be subdivided into three reserve divisional areas and within each of these areas it should be understood that a reserve division is to be formed in war. Similarly each reserve divisional area should be divided into three infantry brigade areas and each reserve brigade area should be divided into three regimental areas. It may not be practicable always to raise definite units in definite areas, but this should always be done whenever conditions permit. The boundaries of the different subdivisions should be defined by the commander of the divisional training area, and in order to meet changes in population and changes in distribution he should have the power to change such boundaries when necessary or to transfer surplus reservists in one area to areas in which a deficiency may occur. General provisions governing the formation of divisional areas and subdivisions are contained in sections 36 and 51 of the draft of legislation hereto attached.

III.—*Permanent personnel required for the whole army.*

1. Table 3 hereto attached gives an estimate of the total commissioned and enlisted personnel of all grades that will be required in order to provide the oversea garrisons, the frontier forces, the training forces, and the administrative personnel outlined in this report. In preparing this table the personnel of the Infantry, Cavalry, Field Artillery, and Coast Artillery is computed by considering the requirements of the total number of regiments proposed for each arm. The tactical units of the oversea forces and the frontier forces are taken to be at maximum strength, and all units in the training forces are assumed to have only such strength as is necessary for the training of the annual contingent of reservists.

The personnel for the staff corps and departments is computed in the following manner. It is assumed that the authorized strength of the Army after the fifth increment under the national-defense act will provide the personnel for the foreign garrisons, four Infantry divisions, and two Cavalry divisions, and for the administrative services of the various staff corps and departments. To this strength is added enough personnel for the cadres for the units of 12 additional divisions for the training forces and the personnel required for the mobile troops in the frontier forces.

The numbers of general officers of the line given in Table 3 are based on actual requirements; that is, one major general as chief of staff, one assistant chief of staff, and one for each actually organized division. Similarly there is one brigadier general as assistant chief of staff and one brigadier general for each actually organized brigade and Coast Artillery district. The draft of the law submitted will provide for the appointment of corps commanders for the first and second reserves, such appointment to give increased grade without increase of either pay or allowances.

It will be noted that Table 3 comprises 866 enlisted men in recruiting parties, 1,334 enlisted men in recruiting-depot attachments, and 14,247 unassigned recruits. It is obvious that this full recruiting force will probably be required at the inception of the proposed system, but it is believed that the adoption of the principle of universal service will ultimately so modify the problem of recruiting as to make it possible to dispense with all or most of these detachments. It will still be necessary to recruit the permanent enlisted personnel under the voluntary system, but it is believed that after we have trained the first 500,000 recruits the permanent establishment will be recruited from those trained reservists who desire further military experience, and that they will be recruited by the permanent personnel of the training forces.

It will also be noted that Table 3 includes the detached officers and additional officers now authorized by law. After the system is established it is quite possible that a number of these officers will not be required for their present duties, but they will still be necessary for duty with the reserves if not with the training forces, and, if there should be any surplus, they will be available for supplementing the personnel of staff departments. The plan for reorganization of the officers' corps, to be discussed in Paragraph III, 4, below, will contain a flexible provision for assigning officers to any duty for which they may be qualified without reference to their connection with particular arms or corps.

2. Expansion of the Officers' Corps: An examination of Table 3 will show that in order to provide the officers for the proposed army there must be a very great expansion of the present Officers' Corps. In order to show this in more detail, Table 4, below, is compiled from Table 3:

TABLE 4.—*Expansion of commissioned personnel.*

	Present authorized strength.	Officers required.	Increase.	Number of present officers available for each regiment.
Whole Army, exclusive of Philippine Scouts and Military Academy	7,275	24,400	17,125	.....
Infantry (exclusive of chaplains)	1,903	9,129	7,226	10.41
Cavalry (exclusive of chaplains)	860	2,080	1,220	21.5
Field Artillery (exclusive of chaplains)	372	3,088	2,716	5.05
Coast Artillery (exclusive of chaplains)	801	1,404	603	28.61
Engineer Corps	302	978	676	.....
Signal Corps	139	1,290	1,151	.....
Ordnance Department	96	244	148	.....
Medical Corps[1]	1,122	2,933	1,811	.....
Quartermaster Corps	283	546	263	.....

[1] Exclusive of dentists and veterinarians.

The first column of the above table shows the present authorized strength of the several arms and corps. The third column shows the increase or expansion required.

An examination of this table reveals the following essential facts:

(a) There must be a very great expansion of the officer corps taken as a whole.

(b) The actual ratios of expansion vary greatly in the several arms. For example, if the Cavalry should be expanded without reference to the requirements of any other arm, each regiment in the new establishment would have 21 or 22 officers from the present establishment and would have to absorb about 30 officers from other sources. Each regimental equivalent of Coast Artillery would contain 28 or 29 officers of the present Coast Artillery and would have to absorb about 22 new officers. Each Infantry regiment would have 10 or 11 officers from the Infantry force now authorized and would have to absorb from 40 to 41 new officers, while each Field Artillery regiment would have only 5 officers of the present establishment and would have to absorb from 36 to 39 new officers, depending upon the type of regiment. As a matter of fact, the actual condition in the Field Artillery is even more serious than is indicated by these figures. On account of the recent 50 per cent expansion of the Field Artillery, only two-thirds of its present officer corps were in the service prior to July 1, 1916. It is probable, therefore, that the present corps of Field Artillery officers would not be able to furnish more than 3 experienced officers to each of the regiments required in the new establishment.

It is quite apparent, therefore, that the very great expansion required makes it necessary to redistribute the present officer corps in these arms, so that the number of experienced officers shall be substantially the same in each regiment. If we take the total number of officers now authorized in these arms and redistribute them over the total number of regiments proposed, we will have about 12 experienced officers for each regiment. Under these conditions, the Coast Artillery and Cavalry, having more than the required average, would furnish enough experienced officers to the Field Artillery and Infantry to bring the number of trained officers in each regiment approximately to the proper average of 12 trained officers per regiment. This involves requiring certain officers to acquire the technique of a new arm, but if this is an evil, it is a necessary evil and is much better than attempting to fill the Field Artillery with 88 per cent of raw officers of no experience whatever. As will be seen further on, there will be ample time to prepare transferred officers for their new duties in the considerable interval that must elapse between the passage of necessary legislation and the actual beginning of universal training. During this interval the military population must be registered, barracks and quarters and other structures must be provided, and armament and equipment accumulated and distributed. It is quite evident that this interim must be of considerable duration—quite long enough to permit a full reconstitution and reorganization of the officer corps, and quite long enough for very material progress in the special training of transferred officers and the increment of junior officers. The details of this period of preliminary training for officers will be discussed in Paragraph III, 5, below.

3. The problem of obtaining new officers: The problem is first to absorb upward of 17,000 additional officers from civil life for the permanent establishment. The first step toward accomplishing this is to receive into the Army as many citizens as possible who have already had military training. As the universal-service army proposed in this plan, with its reserves, will displace the present National Guard as a national war force, it is obvious that the first sources of officers for the enlarged army are the present National Guard and the Organized Militia. National Guard and Organized Militia officers of proper age and with suitable character and qualifications must be received into the corps of permanent officers. As will appear later, it is proposed, subject to proper examination, to receive them in the permanent officer corps in the grades of second lieutenant, first lieutenant, and captain, according to age and qualifications. Similarly, those officers of the National Guard and Organized Militia who do not accept commissions in the permanent establishment will be received into Reserve Officers' Corps and assigned to the first and second reserves, according to their qualifications, due regard being given to their National Guard and Organized Militia records.

In addition to the corps of National Guard and Organized Militia officers, the following other classes of citizens should also be regarded as sources for recruiting the officer corps:

Former officers of the Regular Army, the Navy, the Marine Corps, and the Volunteers.

Qualified enlisted men of the Regular Army.

Members of the Officers' Reserve Corps.

Members of the Reserve Officers' Training Corps.

Former officers of the National Guard and Organized Militia.

Graduates and students of military schools and colleges and all others who are eligible for appointment in the Reserve Officers' Corps.

Qualified citizens who have served as enlisted men in the Regular Army or Volunteers.

Qualified enlisted men of the National Guard.

Citizens who have had military experience abroad during the existing war.

All other classes of citizens who have had military experience and who offer themselves as candidates for commission, subject to proper examination and test. Those who elect service in the permanent officers' corps and are qualified therefor should be received therein, and those who desire service in war only should be commissioned in the Reserve Officers' Corps and assigned to reserve units as soon as the organization of reserve units can be undertaken.

Steps to expand the officer corps should be undertaken immediately on the passage of the law and should be well under way before it is practicable to begin the training of the first class liable to military training.

For convenience, the methods proposed for expanding the permanent officer corps will now be considered. The methods proposed for providing reserve officers will be presented after further consideration of the problem of forming, organizing, and training the first reserve.

4. Proposed new legislation affecting the officer corps: In view of the great expansion required in the permanent officer corps and in order to provide the utmost flexibility in the assignment of commissioned personnel, it is believed that the plan of organization should include a complete change in the methods of promoting and assigning officers.

In the new organization the chief function of permanent officers in time of peace will be to train reserve officers and enlisted men, and it is believed that we should once for all adopt an equitable system of promotion and compensation that will be uniform in all arms and corps, and one that will facilitate the utmost flexibility of organization. Investigation of this subject leads to the conclusion that the present organization of our officer corps is unsound in many particulars: that it is inconsistent with economy; and that the best way to provide for a better and more economical organization in the future is to place the promotion and compensation of officers on an equitable basis entirely independent of the organization, composition, and strength of the several arms and corps.

In order to accomplish these objects it is proposed to adopt the general rule, subject to limitations in field grades, that permanent promotion in the future should be based upon length of service. This will make it more practicable to adjust the organization of the Army to actual requirements without conflict of personal interests. If in the progress of military art the relative importance of any arm should diminish, that arm can then be decreased and its surplus personnel transferred to some other arm which should be increased or distributed

over several arms for absorption. Under such a system no officer would find personal profit in an undue expansion of his corps and, conversely, no officer would suffer personal loss if it should be in the public interest to reduce the numbers in his arm or department. In short, with the promotion question separated in this way from the question of organization, it would make it possible for Congress to maintain the minimum number of permanent officers consistent with efficiency. This is particularly important, because as soon as a corps of reserve officers has been properly trained it is probable that the employment of reserve officers on temporary duty with the training force will make it possible to reduce the number of permanent officers. It is also probable that changes of organization will prove desirable after we begin to have actual experience with larger units, and if so, it will be desirable to eliminate questions of personal interest that might tend to retard or resist reorganization.

The method of promotion herein proposed will have this apparent disadvantage: That the number of officers in any grade will be determined by length of service and will not bear any fixed relation to the number assigned in each grade in the several tactical organizations. This might be a serious objection if we were considering the present military establishment alone; but it is not believed that this is a matter of serious importance when we consider the fact that the great majority of these officers will be employed in time of peace in the training forces and that there is no special reason why an officer charged with the conduct of a military training unit should be of a particular grade.

Under the proposed system the main peace function of an officer of the permanent establishment will be to act as a military educator, and there is no reason why his rank or his pay should depend upon arbitrary arrangement of the officers in the different grades.

Under the proposed plan there will be a variation in the number of officers in the several grades of an arm or corps but the total number of officers in any arm or corps will remain constant.

The immediate promotions under the proposed plan will be much less than would result from a large expansion of the Army under the present system. For example, it is proposed to promote officers to the grade of colonel after 27 years of commissioned service. Lieutenant colonels of less commissioned service will not be promoted to the grade of colonel even though vacancies exist in that grade, but will continue to serve in the lower grade, and, for the time being, some officers of the grade of lieutenant colonel will command regiments or perform other duties normally assigned to colonels. Similarly officers will be promoted to the grade of lieutenant colonel after 24 years of commissioned service; to the grade of major after 19 years of such service; to the grade of captain after 9 years of such service; and to the grade of first lieutenant after 4 years of such service, due credit being given to members of permanent Staff Corps whose initial commissions in such Staff Corps were above that of second lieutenant.

While some variation in the number of officers in the several grades may be permitted without serious inconvenience, it is possible that under the proposed plan of promotion, there may ultimately be an excessive number of officers in the higher grades, especially in view of the large number of new officers who must be appointed upon the inauguration of the system. The plan includes several features which will tend to diminish the probability of this contingency. In the first place it is proposed to appoint all new officers, except those appointed from the National Guard and from enlisted men of the Regular Army, as temporary officers. Temporary second lieutenants will be appointed for one year and at the end of one year not to exceed 20 per cent of the most efficient of them will receive permanent appointment as second lieutenants. Of the remainder some will be permanently rejected as unsuitable for appointment as commissioned officers; some will be reappointed for another year; and the remainder will be passed to the reserve. In this manner it will take at least five or six years to fill the original vacancies in the grade of second lieutenant. This arrangement tends to reduce the number of new officers who will finish any given length of service in any one year. It also affords a more gradual and better method of filling the large number of original vacancies, and at the same time strengthens the reserve by giving increased military experience to a large number of reserve officers. This feature also results in a reduced expenditure for pay of commissioned personnel.

The plan also includes a system of eliminating inefficient officers which, though proposed purely as a means of efficiency, will have the effect of increasing the number of officers who pass off the active list before attaining high rank.

It is believed that the above-described features, supplemented by the casualties incident to the sevrice, will greatly reduce the number of officers who will actually serve long enough to attain high rank under the proposed system. But in order to avoid the possibility of excessive promotions into the higher grades, the following additional safeguard is proposed: When an officer has finished 27 years of service he is eligible for promotion to the grade of colonel, under the plan, but he is not promoted thereto if the existing number of colonels in the branch or branches of the service in which he is eligible for promotion is 5 per cent more than the number of colonels authorized for such branch or branches of the service. A similar limit is likewise placed upon promotions to the grades of lieutenant colonel and major.

For purposes of equalizing promotion and assignment to duties, the plan provides that officers of Cavalry, Field Artillery, Coast Artillery, and Infantry shall be placed upon one list arranged according to total length of commissioned service. The plan of promotion herein outlined is given in detail in section 29 of the accompanying draft of legislation. Section 40 of the accompanying draft of legislation provides for the selection and appointment of provisional and temporary officers in the permanent establishment from the National Guard, the Organized Militia, and from qualified enlisted men of the Regular Army.

5. Method of obtaining the additional permanent personnel required in the training forces: It is assumed that as soon as practicable after the inception of the proposed system, 16 divisional training areas will be formed and division commanders and staffs assigned thereto. It is also assumed that each of these general officers will be given his proper share of the present personnel. It is assumed that in this way he will ultimately receive about 12 regular officers for each training regiment to be formed in his area and about 50 enlisted men per regiment to become noncommissioned officers. He will also receive such proportion of staff officers and detached officers as can be spared. The proposed readjustment of the officer corps so as to provide an average of 12 experienced officers for each regiment of the new establishment can not be accomplished at once. Officers on duty with existing organizations can not be made available for duty with training organizations until they are relieved by newly appointed officers. For this reason the first of the newly appointed provisional and temporary officers who are qualified for such duty should be assigned to existing organizations and, as they report, a corresponding number of experienced officers can be relieved and made available for the training organizations. The first of the new officers available for assignment to existing organizations will be those appointed from noncommissioned officers of the Regular Establishment. A special provision for the appointment of Regular noncommissioned officers as provisional officers is contained in section 40 of the proposed draft of legislation.

Immediately upon the passage of this act department commanders will cause boards of officers, in such number and in such places as may be most convenient for the performance of the duty assigned them, to examine into and report upon the qualifications of noncommissioned officers of the Regular Army for appointment as provisional officers in the permanent personnel of the Army. Such boards shall report the names of all noncommissioned officers examined by them who are found qualified for appointment as provisional officers.

The first task before the division commander, after a sufficient number of experienced officers have reported will be to obtain the additional commissioned and enlisted personnel required for the establishment of the several training units in his area. This must be done before the training of reservists can begin, and as a considerable time must be required for registration and enrollment of the military population and the establishment and the construction of barracks and quarters, it is quite evident that a considerable period will be available for this purpose. During this period it is believed that the commander of the divisional area should form the available personnel into provisional training regiments and schools of application. As new officers and enlisted men are enrolled, they can be sent to these training centers and prepared for their new duties for a considerable period before it is necessary to organize permanent training units. The method of securing additional officers and enlisted men for this purpose and the method of examination and the assignment of officer candidates is contained in sections 40 and 41 of the proposed law. It is quite evident that this system must be completely decentralized, and that the details of the process within each divisional area must be under control of the commander of the divisional area. The theory of the plan is simply this: That in each such area there will be a considerable number of citizens of former military training and that it should be the policy of the commander of the divisional area to secure as many of these as may be practicable for the expansion of the permanent personnel of each training division. In a similar manner he will recruit the Reserve Officers' Corps from those citizens of prior military training who are not available or suitable for the permanent establishment. Section 40 of the law shows the method proposed for enrolling, training, appointing, and assigning officer candidates.

It will also be necessary for the commander of the divisional area to recruit a considerable number of enlisted men for each training unit. Here, too, so far as practicable, he should draw upon those classes in civil life who have already had military training. Here, too, he should employ the provisional training regiment and the schools of application in order to give this new enlisted personnel additional training. In order to make it possible to obtain a sufficient number of suitable enlisted men for this purpose, section 3 of the proposed law authorize an enlistment period of one year for organizations in the training forces. The enlistment period for the regiments on the over-sea garrisons and the frontier forces is fixed at three years.

It is quite possible that the permanent personnel of the training units will at first be somewhat under strength, even under the methods described above; but after the first year of training, the trained reservists themselves will provide a new source for the recruitment of the training cadres. Under the conditions surrounding service in training cadres there is little or no objection to enlistments for one year in the training force. From the standpoint of the efficiency of the reserves there is a positive advantage in giving additional training to as many reservists as possible before assignment to reserve units.

However, in case it is found that for any reason it is impracticable at the outset to train 58 per cent of the persons annually liable to training and service, this percentage can be lowered to some extent by increasing the physical requirements, and this without in any way departing from the principle of universal liability to service. An increase of an inch or two in the minimum height of recruits would cause the rejection of quite a number of men. In any event, it can not be doubted but that sufficient training cadres must be organized and thoroughly trained for their duties before any call is made for training and service.

In order to develop 3,000,000 reservists before they lose to a great extent the military value of their training and become too old for efficient field service, the War College Division is of the opinion that it is advisable to have 16 training divisions, as proposed in this plan. If the cost be considered too great, it may be reduced by reducing the number of training divisions. The first cost of necessary supplies and cantonment construction at peace prices for a training division is $12,684,852. Annual cost of maintenance, $20,641,249. It would require 12 divisions to develop 3,000,000 reservists while men are of military age—18 to 45. It would require six years for 12 divisions to develop the first reserve of 1,500,000 and 20 years more to develop the second reserve of 1,500,000. Having 12 instead of 16 training divisions would reduce first cost of the entire military system by $50,739,408 and reduce the annual cost of maintenance to $389,693,750—$50,145,750 more than would be required under the national-defense act (see Table III, estimate of cost) and $82,564,996 less than would be required in case we should have 16 training divisions.

Besides the disadvantage of taking 26 years to develop the necessary forces, it is believed this would result in much dissatisfaction throughout the country—about one-fourth of the young men fit for and liable to militia training escaping it entirely. If there should be any reduction in the number trained, the youngest who are fit in each class should be taken instead of employing any system of selection that could result in any favoritism whatever. If the country be divided into 12 training-division areas and necessary accommodations provided therein, it would be expensive and inconvenient to readjust areas and accommodations for four or less additional training-division areas. From this consideration it appears quite inadvisable to begin with training only a part of the young men fit and liable for training each year and gradually increasing the number.

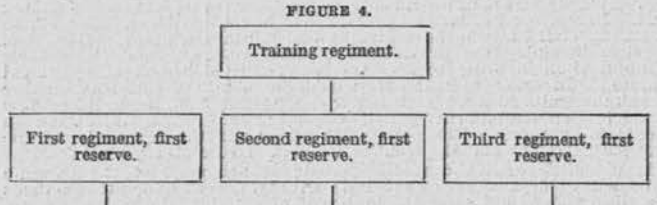
All things considered, it would unquestionably be the best policy to delay calling out the first class for training and service until trained cadres are available to train all persons who by a reasonable physical standard are available for such training in any one year.

Another but less effective method of reducing cost would be to give reservists but six months' training. That would result in practically no reduction in first cost of equipment and cantonment accommodation,

but would result in a reduction of about $76,450,491 in the annual cost of maintenance.

While such a system would result in training cadres being employed in training recruits only half the year, a greater—a vital—objection to such a system would be its failure to solve the problem of adequate training. The War College Division adheres to the opinion that 12 months' training is the minimum required for military efficiency.

6. Elimination: The conditions of the problem before us make it imperatively necessary to absorb a large number of officers in a somewhat limited time; and even if the greatest care is exercised, it is quite probable that a large number of those accepted will not be satisfactory for service in the permanent Military Establishment. It is also possible that a considerable number of officers now in the Army will not be perfectly adapted to the exacting requirements of service in the national training force. Having in view the cost of the Military Establishment and the imperative demand for a high degree of efficiency, it is quite apparent that a sound military system must include some sensible and practical method of eliminating unsatisfactory personnel. In this connection it is quite apparent that duty with the training forces will demand officers of the most efficient type, and that the retention of inefficient officers will be most prejudicial to the success of the system. An attempt partially to meet this situation has been made in section 28 of the proposed bill, in which it is proposed that all original appointments in the enlarged Army shall be provisional, and that permanent commissions shall not be given to officers until after two years of satisfactory and tested service. In order to assure the maintenance of a high degree of efficiency throughout the entire officer corps, a general system of elimination is proposed in section 35 of the act.



Sections 28 and 35 together provide for efficient elimination.

7. Manchu law: Having in view the limited number of officers available for the inauguration of the new system, it is evident that the President must be able to employ the present officer personnel with the utmost freedom and without any arbitrary restrictions. It is therefore believed that the provisions of law restricting the detail or assignment of officers, and commonly known as the Manchu laws, should be inoperative during the first four years under the new system. In order to permit a proper flexibility in the assignment of commissioned officers as their services may be required, a proposed modification of the law covering details and assignments is contained in section 33 of the proposed draft of legislation.

IV.—*The organization of the reserves, etc.*

1. Arrangements for peace administration and mobilization in peace and war: The relation between a training regiment and the corresponding regiments of the reserve are shown in figure 4 below.

FIGURE 4.

It is to be understood that these reserve regiments are assigned to adjacent regimental areas, and that the training regiment is located within or near the area occupied by the reserve brigade.

The training regiment draws its recruits from all three regimental reserve areas, and after 11 months' training returns them to their reserve regiments as trained reservists.

If these three regiments are to be promptly mobilized in war, it will be necessary in time of peace to provide some system of administration that will look out for the equipment and mobilization plans of each regiment, and also for the training and qualification of its officer personnel. It is believed that the simplest and most effective means of accomplishing these objects is to provide that upon mobilization the colonel of the training regiment is to become the commander of the corresponding reserve brigade, and that the headquarters of the training regiment will also be the peace headquarters of the entire reserve brigade. Upon mobilization this colonel will take command of the reserve brigade and will take with him from the training regiment a junior officer to act as brigade adjutant. Similarly one of the field officers of the training regiment will go to each of the three first-line reserve regiments as colonel, and each such field officer will take with him a trained officer as adjutant and supply officer. By this arrangement we are able to provide a trained commander and staff for each regiment of the reserves and the headquarters of the training regiment becomes the headquarters for the peace administration of the corresponding reserve units. Each officer of the training regiment designated as a reserve colonel should have full charge of all plans for the equipment, training, and mobilization of his reserve regiment and should have general supervision of its reserve officers and their qualifications for promotion. It is believed that the efficient performance of these functions requires the constant attention of an experienced officer of the permanent personnel, and that these duties can not be performed by a citizen reserve officer who ordinarily is actively engaged in civil pursuits. Similar arrangements should also be made for providing reserve units of the other arms with experienced commanders from the permanent personnel. Higher reserve units such as divisions and army corps will draw trained staffs as well as commanders from the permanent personnel.

Upon mobilization for war or for maneuvers it thus appears that a considerable number of trained officers will pass from the training unit to reserve units. Therefore in order to maintain the efficiency of the training establishment, which must keep up its function of training recruits in time of war, the plan provides that whenever a given number of officers are transferred from the training units to reserve units they are to be replaced by a corresponding number of reserve officers. Under this arrangement without any depletion of the strength of the training personnel we are able to provide for an efficient supervision of all of the reserve organizations. As before stated it is believed that the efficiency of the system depends upon having each reserve regiment and higher unit under the supervision of a Regular officer, who will be definitely responsible for the maintenance of its equipment, the provision of its mobilization plans, and the supervision of the training and qualification of its officer personnel. Under this system the training regiment not only trains reservists and reserve officers, but also keeps in touch with the personnel of the reserve unit in time of peace. The officers of the Permanent Establishment thus assigned to reserve regiments will have an especially important duty in keeping track of reservists who change their residence from one reserve area to another.

As the maintenance of the reserve organization in time of peace and its preparedness for prompt mobilization depend upon the direct supervision of an experienced officer connected with the training regiment, it is believed that all reserve commissions higher than that of lieutenant colonel should, in time of peace, be held by Regular officers. This will assure a qualified trained officer for each regimental and higher command upon mobilization and during the initial strategic deployment for war, but after military operations once begin and after reserve officers have been tested in active service, the avenue of promotion should be open to reserve officers and to Regular officers alike. During war, officers should be free to rise to the highest rank consistent with their capacity as determined in active service.

In a normal divisional training area there will ultimately be three first reserve divisions and three second reserve divisions, with the necessary auxiliary units to form a complete army corps of three divisions in the first reserve and a corresponding army corps in the second reserve. The total permanent personnel of such a training division will be 972 commissioned officers and about 7,500 enlisted men, and the total strength of each of the two reserve army corps upon mobilization will be 3,058 officers and about 93,000 enlisted men. If the commanders of separate battalions and higher units and the staffs of brigades and higher units in the reserves are drawn from the permanent personnel it will be necessary for about 150 officers to pass from the training division to each of the two reserve army corps and for at least 300 reserve officers to replace them in the training units. But it will be both practicable and desirable to employ an even greater number of regular officers in the reserve organizations, and this can always be done by the same arrangement of transferring a corresponding number of reserve officers to the training units. If upon mobilization any of the reserve units below the regiment are not provided with citizen reserve officers qualified to command them, they should be commanded by officers from the permanent establishment under reserve commission, and for this purpose the number of available professional officers can be increased by giving reserve appointments to qualified noncommissioned officers in the permanent personnel. There will also be an important place for enlisted men of the permanent personnel to serve as noncommissioned officers of the reserve, especially in positions requiring more administrative experience than can generally be expected of reserve noncommissioned officers appointed from civil life. The capacity of the training units to furnish experienced officers and noncommissioned officers to the reserve army is limited only by the requirement that the training units must continue their function of training recruits during the progress of war, and the actual numbers transferred will depend upon the requirements of the situation. The commander of the divisional training area will be responsible for the preparedness of the first and second reserve army corps, which may ultimately be mobilized in his area, and he should be guided by the general principle that he is to draw upon the permanent personnel for higher commanders and staffs, and that he is to employ other members of the permanent personnel to perform all functions that can not be efficiently performed by citizen reservists at the beginning of military operations.

After the system is in full operation it is believed that at least 75 per cent of the experienced personnel of the training division can be passed to the reserve war army upon mobilization without seriously impairing the efficiency of the training service. After operations begin still more of the experienced personnel can be sent to the front, as their duties with the training establishment are taken over by convalescent officers and enlisted men.

It should be noted that the proposed organization of reserve divisions and army corps involves no increased expense in time of peace.

2. Repeating seasons: In the plan under consideration it is proposed that each reservist should serve 11 months with the training forces, that thereafter he should be passed to the first reserve, and that at the end of his first and second years in the reserve he should be required to attend a short repeating course of about two weeks. It is not considered that these repeating seasons are solely necessary for the further individual training of the soldier, but it is believed that they are essential to the training of the reserve units as organized teams. By means of these repeating seasons it will be possible to actually assemble reserve organizations long enough to test their equipment, their mobilization arrangements, and the capacity of their officers and noncommissioned officers, and their qualifications for promotion.

Without these repeating seasons the reserve is merely a paper organization, with no peace test of its efficiency as an organized team. With these repeating seasons, even though short, it will be possible each year to actually mobilize each regiment at substantially war strength. Even if regiments are not assembled in larger units this annual assembly has very great advantages, and if from time to time the regiments are brought together for brigade and divisional maneuvers an opportunity will be given for higher commanders to actually demonstrate their capacity or incapacity to handle their war commands. The cost of these annual mobilizations of reserve units is very small compared with the total cost of the training, as will be seen from the following figures:

3. Cost of one regiment of Infantry in the training forces:

Cost of 51 officers at $2,400	$122,400
Cost of 457 permanent personnel enlisted at $600	274,200
Cost of 2,000 recruits for 11 months	800,000
Total cost of training regiment one year	1,196,600

Now, as indicated by the diagrams above, this training regiment is really nothing but the training nucleus for a reserve brigade, and if this reserve brigade is to have any peace practice, it will be necessary for 3,420 reservists in their first and second years of reserve service to attend a repeating season for two weeks. During this period the class of recruits just trained, added to the 3,420 repeating reservists, will give us substantially a war-strength brigade. The additional cost will simply be the additional cost of maintaining 3,420 reservists for two weeks, which, at $20 per reservist, will be $68,400, or about 5½ per cent of the annual cost of the training regiment. It is believed that this

cost is very small compared with the advantages to be derived from the annual assembly.

In order to secure the advantages of this annual test of the reserve organization it will be necessary for reservists to repeat for two weeks in the first year of reserve service and again in the second year. This completes all compulsory service in time of peace in the reserve, but it is assumed that noncommissioned officers and officers who aspire for promotion will be required to attend such additional repeating seasons as may be necessary in order to test their capacity. This is an additional burden, but it is imposed only on those who have an aptitude for military service and who volunteer in consideration of opportunity for increased rank and for further promotion.

4. Successive steps in the organization of the reserve: In order to make the reserve organization more intelligible, the successive steps in the formation of the reserve are summarized as follows:

(a) Immediately on the passage of the act the divisional training areas are formed and divisional commanders are assigned thereto, with such commissioned and enlisted personnel as may be available.

(b) Upon arriving in his divisional training area the divisional commander divides it into three reserve areas, and, so far as conditions permit, subdivides these into brigade and regimental districts.

(c) As provided in section 42 of the proposed law, the commander of the divisional training area now invites all citizens of former military training to offer themselves for appointment as reserve officers.

(d) Examining boards for reserve officers are appointed as provided in section 39 of the proposed law.

(e) Competent officers of the permanent establishment are designated as commanders of reserve divisions, brigades, and regiments, and other professional officers are designated to undertake the organization of auxiliary units.

(f) The examinations of reserve officers are completed and successful candidates are appointed and assigned to reserve units to be formed near their homes.

(g) Qualified noncommissioned officers are enrolled and assigned to units.

Without reference to its relation to any plan of universal service, it is believed that the above preliminary organization is a most important step toward preparedness. Even if it should be necessary to organize an army of untrained men, a preliminary localization of units and the assignment of qualified reserve officers and noncommissioned officers thereto would be of great value.

All this is done before the beginning of the first training year, and such vacancies in the commissioned and noncommissioned personnel as may exist in reserve organizations will be filled as soon as the first class has finished its year of training. Two weeks before the end of the first training season each newly organized reserve infantry regiment will receive 600 trained reservists. The maneuver period this year will probably be devoted almost exclusively to the completion of the reserve organization. This reserve regiment will not be fit for active service until after it absorbs a large number of trained men, but it now has a complete training cadre and is prepared, if necessary, to train raw men with considerable facility. At the end of the second training season each of these reserve infantry regiments will receive another 600 trained reservists, and will now have over eleven hundrd in all. At the end of the third training season the regiment will contain 1,626 trained reservists, and at the end of the fourth year it will contain 2,064 trained reservists.

5. Future source of reserve officers: Upon the initial organization of reserve units it will be necessary to enroll therein as many officers and enlisted men of previous military training as it will be practicable to draw from civil life, but after this organization is once completed and the training of annual contingents has begun reserve officers will normally be recruited from men who have had the prescribed 11 months of military training and from graduates of the Reserve Officers' Training Corps. During their service with the training unit their capacity and aptitude will be noted and certain men will be designated as suitable for further promotion as vacancies occur. These will be appointed noncommissioned officers, and if efficient as such will ultimately be appointed officers.

The Reserve Officers' Training Corps, as provided in the national-defense act, should be continued in its present form until all members now enrolled have completed their prescribed training for appointment as reserve officers. After the system of universal training has gone into operation the regulations for the Reserve Officers' Training Corps will undergo modifications in so far as they relate to young men who have completed the prescribed 11 months of training before entering college. For these men it will not be necessary to provide formal military drills in school.

6. Mobilization during the transition period: It has been indicated above that there will not be enough trained reservists to fill the reserve organization until after the end of the fourth training season, but as an emergency might come before the conclusion of that period, it is important to consider whether the proposed plan of organization will meet requirements during the transition period. Within six months after the passage of the act the skeleton of the reserve organization should be complete and all available reserve officers and noncommissioned officers in the country should be examined, appointed, and assigned to reserve organizations. This in itself is an important step in preparedness, as each reserve officer will then know definitely what would be expected of him in the event of sudden emergency and will have his duties connected up with a particular unit of a particular arm to be organized in a particular region. At the end of the first training season each reserve regiment would receive a number of reservists equal to about 30 per cent of its combatant war strength. Should an emergency occur this year, and time permitted, each of these regiments would be filled with raw men and would have a competent training force for that purpose. If a certain number of regiments should be required on short notice, it would be possible to transfer trained reservists in such a manner as to form one regiment of trained combatants in each brigade district. At the end of the second training season each reserve regiment would have considerably more than half of its war strength in trained reservists and would have to absorb less than 50 per cent of raw men in the lower grades. In this way it would be possible to immediately mobilize a trained regiment in each brigade district and still have a considerable training nucleus for the other two regiments. At the end of the third year each reserve regiment would be but little short of war strength and would be able to fill all purely combatant grades with trained reservists, absorbing only enough raw men to complete its regimental train. At the end of the fourth year each regiment of the reserve will be over strength, and thereafter would be prepared for complete mobilization.

Figure 5 below shows the arrangements for mobilization of a regiment of Infantry in each reserve brigade should an emergency occur during the year after the first class has passed into the reserve.

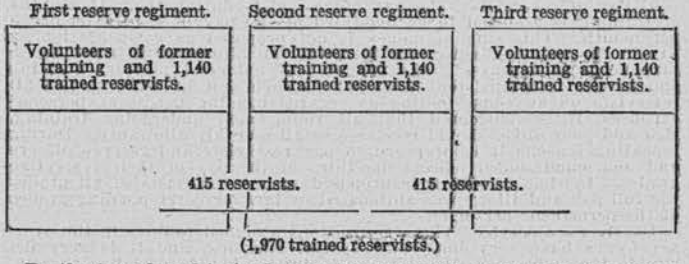


FIGURE 5.

Figure 5 shows that by transfers of trained reservists from the first and third regiments the number of trained reservists in the second regiment is increased to 1,800.

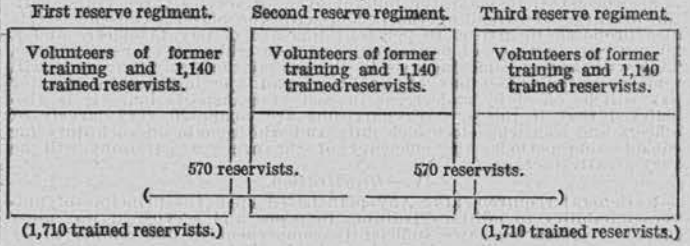

Figure 6 shows the emergency arrangements for the year after the second class has passed into the reserve.

FIGURE 6.

By the transfer of trained reservists indicated in figure 6, the second regiment is given its full maximum enlisted strength in trained reservists, with 725 trained reservists remaining as a nucleus in each of the other regiments. Or any two of the regiments of the brigade may be given a total strength of 1,710 trained reservists by receiving all of the trained reservists from the third regiment as shown in figure 7 below.

FIGURE 7.

7. The training season: It is proposed that the training season should begin November 1 and extend to September 30. During the winter months the course should be largely restricted to the individual training of the soldier and his physical development. This course should include the school of the soldier, physical drill, care of equipment and clothing, gallery practice, and bayonet fighting for the Infantry, and the care of animals for the mounted services. During this period the work should be in the open air as much as possible, but in the northern portions of the country it will be necessary to provide enough shelter to continue instructions at all times. This is largely a question of a suitable curriculum, so arranged as to provide winter instruction in those subjects in the soldier's education which can be taught as well indoors as out of doors. After spring opens, the work should be almost exclusively in the open air. After the winter's course in physical development and the school of the individual soldier, the school of the company, battery, and troop should progress rapidly, and should be followed by the school of the battalion and squadron and ultimately by the school of the regiment and brigade. The work should be made as practical as possible and each individual and each unit should be fully trained for every possible military situation. The season of training should culminate with the annual maneuver period, extending from September 15 to September 30. During this 15-day interval the newly-trained recruits would be absorbed in their reserve units and the period would be devoted primarily to testing the efficiency and preparedness of the reserve. The interval from October 1 to November 1 would be occupied in preparing for the next season's training and in necessary repairs of equipment and plant.

It is very important that the courses of instruction suitable for compulsory military service should be most carefully studied before the plan is inaugurated. Each training unit should begin its first season with a curriculum as sound and as well settled as those of the best schools. The preparation of these curricula is a task of very great importance and should engage the best talent in the army for a considerable period before any system of military training is undertaken.

8. Transfers to the southern part of the United States for training in winter: The committee has been instructed to consider the advisability of transferring recruits from the northern part of the United States to the south, in order to avoid the winter work under shelter that would be required in the northern climate. It is the opinion of the division that this transfer of personnel is not necessary for purposes of instruction and that a considerable part of the necessary individual training can be conducted in the winter even in the north. But when this question is considered in connection with the organization and training of the first reserve, it is believed that such transfers are subject to very serious objection. In developing this plan it has become very evident that in time of peace the training personnel should be in close contact with the reserves and that the higher officers of the training personnel should be closely identified with the reserve organizations they are to accompany to war. If the training personnel should be in the south and the reserves in the north, it would be very difficult to maintain this relation and very difficult to make satisfactory arrangements looking toward the mobilization of the first reserve. Fur-

thermore, the training of reserve officers and the maneuver training of reserve units should be based upon their probable war missions and therefore the training, even in the winter, should be in the region which will probably be the initial theater of war of such reserve units. The reserve units organized in New England and New York, in the event of a war with a European power, will be called upon in all probability at the outbreak of hostilities to occupy positions on the coast adjacent to their homes, and their peace training and instructions should be of such a nature as to familiarize them with this war mission. In a similar way the reserve divisions located along the Great Lakes should be primarily responsible for the defense of our northern frontier at the outbreak of hostilities, and it is believed that the correct organization of these reserve units and their preparation for mobilization would be seriously affected if each contingent of reservists and the corresponding training personnel should be detached from the proper reserve areas and transferred for a portion of the year to some position in the south. As troops may have to operate in the winter in actual war, their training should include winter operations. While troops at a northern station may have some days when outdoor work is impossible, such work is everywhere practicable for a considerable portion of the winter season.

9. Pay of reservists: The pay of reservists during their 11 months of training is assumed to be one-third of the pay of a private, or $5 per month. This sum of money is not proposed as compensation or pay in the ordinary sense, but is merely an allowance to meet necessary personal expenses. The principle of universal military training and service is inconsistent with pay as such, but in order to put all reservists on an equal footing as regards meeting necessary personal expenses, it is considered that all young men undergoing training, rich and poor alike, should receive a small monthly allowance. During repeating seasons it is proposed to pay reservists and reserve officers and noncommissioned officers one-third of the pay of their respective grades. In time of war it is proposed to pay reservists of all grades the full pay and allowances authorized by law for corresponding grades of the permanent personnel.

10. Over-sea service: The organizations assigned to duty in the over-sea forces have very important special missions, and it is very desirable that officers assigned to such duties should specialize therein. With the very large increase in the number of officers proposed in this plan, it is believed that there will be a considerable number who will prefer over-sea service, and that such officers will be most suitable for that duty. In section 34 of the proposed draft of legislation it is proposed, as far as practicable, to make details for over-sea service for those officers who volunteer for such duty, and not to apply the roster, unless there should be an insufficient number of volunteers. It is also proposed to make the tour of over-sea service three years, with the privilege of extending the period with the officer's consent. It is also proposed to give a 10 per cent increase of pay to officers and a 20 per cent increase of pay to enlisted men while on over-sea service. This will involve some increase in the pay of the Army, but as it will tend to prolong the tour of service abroad, the increase in cost for pay will be offset by a decrease in cost of transportation. It is also believed that if the over-sea garrisons are composed very largely of officers and men who elect such duty and who remain on such duty for considerable periods, the efficiency of the over-sea garrisons will be very greatly increased.

V.—*Registration.*

1. General requirements: Any plan based upon the principle of universal liability to military training in peace and service in war must include registration laws sufficiently comprehensive and supported by such sanction as will make it improbable that any person liable for either training or service will escape listing by the agency charged with registration. This means not only that all persons between the ages when liability for training begins and liability for service ends should be registered, but also that all foreigners residing within the jurisdiction of the United States who are capable of harm should likewise be accounted for. Unless foreigners are so registered it will be impossible to determine whether persons liable for training or service are escaping their duties under such liability. Furthermore, the registration of foreigners would in itself be a measure of preparedness, because in time of war or threatened hostilities the Government can ascertain from the registration lists just what enemies are in our midst and take steps to neutralize their possible attempts to do us harm.

2. Purpose: The purposes of registration are:

(a) To secure complete and accurate lists of all persons liable for personal military service, by means of which the burden of national defense can be equally distributed.

(b) To secure complete and accurate lists of all aliens temporarily or permanently within the jurisdiction of the United States, and who have in them the possibility for harm to the Nation in time of war.

(c) To provide means for keeping in touch with the movements of all registered persons, so far as it may be necessary to effect an equitable distribution of the burdens of national defense and the reasonable security of the country.
